In the Australian colonies, where an accession of population can only be gained by direct emigration from the mother country, where the expense of passage is too great to admit of persons undertaking the voyage, even upon moderate private means, where the supply of labourers at wages is far below the demand, and where the immigrants on their arrival must of necessity join the class of labourers, and have no possibility of retreat from the country, the pecuniary calculation of profit upon the introduction of an emigrant population at public expense, is as plain as the interest of a West India Island in the importation of slaves.

But in this province the only certain, and by far the cheapest, mode of procuring labourers is, by competing with the United States in the rate of wages. If labour were in demand in that country, it would be scarce and dear in the province; and now that in the United States labour is not in demand, there are plenty of labourers in Canada; and there is no possibility of preventing the ingress or exit of persons having no ties of property in either country.

If, on the other hand, the expense of the voyage be made a charge on the land to be acquired by an immigrant, and if he is expected to repay all advances made to enable him to settle on land, together with the price of the land, including its cost to the company, their expences and profits, the immigrant will find that he has made a bad bargain, which he has a manifest advantage in breaking, and which he can break effectually by crossing the boundary.

The Canada Company have never engaged in a speculation of this nature; they have sold land to people in the country, who possessed at least the means of feeding themselves in the first instance. Payments of the price of the land will probably be made after a lapse of time, and when the territory thus disposed of becomes thickly populated, the roads good, and markets attainable. If the company had undertaken to send out poor emigrants at its expense, and to furnish them with supplies, their capital would, ere this, have been hopelessly sunk. Yet an extensive outlay of this nature must take place before destitute labourers can be sent out, and placed upon land; and therefore an extensive influx of labourers,—the public works being shown not to be an available permanent resource,—must be calamitous, in proportion as it happens to exceed the current means of employing the immigrants at wages.

Those who possess means of settlement within themselves, require no care on the part of the Government, or of private associations. Inducements to prefer one country to another, held out under such circumstances, are invariably set down as arising from interested motives. They expose the parties offering them to reproach, in all cases of disappointment, whether of reasonable or absurd expectations; and to such reproach and the claims accompanying it, the provincial government should, on no account, render itself liable.

It appears from the report of the emigrant agent and from other sources, that the ease with which so large an immigration as that of last year was provided for, arose very much from the fact, that in numerous instances persons already settled in the country wrote to induce friends and relatives to come and join them; and even when the new-comers required assistance from the government fund to enable them to reach the place of their destination, yet there the aid which the preceding settled emigrants could at small expense afford, always

awaited

## CANADA.

awaited them, and their further advancement became easy. This quiet and natural course of procuring immigration is one from which the province will gain very great and yearly increasing advantage, provided no distress shall happen to be created by other emigration movements, made with the purpose of getting rid of surplus and destitute population, either for the advantage of the mother country or for the pecuniary profit of parties embarking their capital in the speculation, without care of what may afterwards become of the emigrants.

These considerations have led me to the conclusion, that it would not be advisable for the Government, by means of agents, or otherwise, to force an emigration of destitute labourers to this province. If money can be furnished to those who come, or if they have it of their own, they would not stand in the predicament of being destitute; but advice or persuasion is not sufficient for a beneficial purpose, and can scarcely be offered without an implied pledge which this province has no means of redeeming.

The opinion above expressed does not, however, extend to deny to the subjects of Great Britain who require information, any that Her Majesty's consul at the port of New York may be placed in a position to afford them. The progress of population in the province, the price of government land, the state of the immigrants of the past season, and of the current year, can be reported to him periodically, and I concur most fully in your Lordship's opinion, that every pains should be taken to keep him furnished with such returns as will enable him to satisfy those who may make inquiries of him. Such information has been periodically transmitted to England, and might, perhaps, be advantageously published at shorter periods than hitherto for the use of intending emigrants; and thus, while all knowledge essential to enable the latter to choose a place of destination will become attainable by them without difficulty, all reality and appearance of holding out interested and undue inducements for emigration to this province, and all hazard of an event so calamitous as the arrival of a numerous and destitute body of emigrants, beyond the means of the country to relieve, will be avoided.

I have, &c.  
(signed) *Charles Bagot.*

*P. S.*—It is almost unnecessary to state that there is at present no person in England holding the situation or authority of emigrant agent from this government, a fact which is perhaps as necessary to be publicly known there as it is in this province.

Sir *C. Bagot*, G.C.B.

Sir,

Downing-street, 30 Nov. 1842.

SOME doubts having arisen as to the extent to which the privileges hitherto granted to military and naval settlers in acquiring portions of the public lands in Canada, may be affected by the Land Sales' Act recently passed by the Provincial Legislature, and it being desirable that full information on the subject should be possessed by the authorities in this country, I request that you will have the goodness to report to me, at your earliest convenience, 1st, Whether, under the present law regulating the disposal of lands in that country, any privileges in the acquisition of land are granted to military and naval settlers; and 2dly, If such be the case, whether a fixed extent of land is granted to them according to their rank, or a certain amount of purchase-money remitted to them.

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot* to  
Lord *Stanley*.

No. 35.  
Right hon.  
Sir C. Bagot to  
Lord Stanley,  
23 Feb. 1843.

My Lord,

Government House, Kingston, 23 Feb. 1843.

HAVING taken the opinion of my council upon the questions proposed in your Lordship's despatch (No. 16) of the 30th November last, relative to the extent to which the privileges hitherto accorded to military and naval settlers continue to subsist under the present law for the regulation of the sale of lands in the province, I have the honour to submit the following report for your Lordship's information.

By the second section of the Provincial Act, 4 & 5 Vict. c. 100, intituled, "An Act for the disposal of Public Lands," it is enacted that, except as thereafter provided, no free grant of public land shall be made to any person or persons whomsoever.

By the 13th section it is enacted, that no new claims to land, founded upon any regulation or order of the government, shall be allowed or entertained, unless made before the 1st day of January 1843, except where the parties originally interested and claiming shall be under the age of 21 years on that day.

By the third section it is enacted, that all claims to free grants of land arising out of, or under the authority of, an order in council or regulation of the government now in force, shall be adjudged of, and determined by the governor, by and with the advice of the Executive Council.

And by the fourth section, provision is made for the commutation of such claims into scrip for nominal sums of money to be received upon sales of all lands of the Crown, the proceeds of which are not, or shall not be, set apart for any particular purpose.

Thus it is apparent that the second section above quoted takes away the power of the government to make any new regulation or order for the free granting of land to officers.

And that the 13th section put an end, on the 1st January last, to the preferring of new claims to free grants of land arising out of any regulation or order of the government then in force.

And that the third and fourth sections provide, not for the allowance of new claims preferred after the 1st day of January last, but for the allowance of old and new claims preferred before that time, which had become vested interests.

The order from the Colonial-office of the 15th August 1834 provided that, in buying land from the government, officers who should retire from the army and navy for the purpose of settling in the colony, should be entitled to certain remission in the purchase-money of lands bought from the Crown.

The distinction to be drawn between free grants of land and remission of purchase-money seems immaterial; and if any such distinction could be drawn, the surrender of the land revenue to the provincial Parliament would certainly make the concession illegal, in the shape of a remission of purchase-money belonging to that revenue.

I therefore agree with my council in the opinion that no new claim of any officer to a free grant of land or remission of purchase-money, not preferred before the 1st day of January last, can now be allowed.

The policy of the putting an end to free grants of land, except in particular cases specially mentioned in the Act, is obvious to any person who is acquainted with the land-granting system, and has had an opportunity of observing its effects on Canada. By way of rewarding services and of promoting settlement in the country, vast quantities of land have been conceded, beyond the means or inclinations of the grantees to occupy them. The lands thus conceded are uninhabited

CANADA.

inhabited and unimproved, and form a great obstacle to the settlement of the lands, remaining the property of the Crown; and a very large amount of claims for land remain to be made good in scrip, sufficient to prevent any revenue from sales of land for several years to come. This scrip will probably in many instances fall into the hands of persons actually wanting land for the purposes of settlement, and thus the evil of ownership without occupation of land, will in some measure be avoided; but much of it will no doubt be employed in speculative purchases, which will long remain an inconvenience and drawback to the province.

If this wasteful system, pursued for many years, had not deprived the Government of lands, in, or near the actual settlements, and had the provincial government now in its possession lands eligible for the occupation of officers, it would be desirable to encourage their settlement in the province by allowing them to acquire land upon favourable terms. But the sale of all the Crown reserves to the Canada Company, and the lavish and useless grants above alluded to, have left the Government destitute of land, unless in remote positions, where officers would not reside, and where, if they were granted land, these grants would be almost useless to them, and would form a serious obstacle to any settlement of the new country.

The officers who have come into Canada, and who have succeeded best, are those, who purchased from private landholders cultivated farms, or lands within the settled country. The lands which they procured for remission-money, remain in most cases in a state of nature; and in most of the instances where officers have undertaken settlement in the wilderness, they have spent all the money arising from the sale of their commissions, and have been reduced to poverty.

The provincial government has been for some time past endeavouring to place the back country in a condition for settlement. Its distance from the inhabited parts is the greatest difficulty; this is to be overcome, at a considerable expense, in making, or rather in opening roads, in building bridges, in supplying provisions to be sold to settlers, probably by building mills, and by giving small free grants of land on the new communications. All this would have been unnecessary, but for the improvidence of the early governments in divesting the Crown of lands not wanted for actual settlement, as well by grants made in early times, as by pledges to grant lands to classes of claimants then unborn. All attempts to form prosperous settlements in the interior must be in vain, if large tracts of land are permitted to be acquired by individuals, not to be occupied, but to remain wild, on speculation of a future price. The allowance made by the order of the 15th August 1834 does not seem large as a sum of money; but were even one officer of the army of each of the ranks therein mentioned to obtain land in a new township, the remission-money would purchase upwards of 7,000 acres, which if selected, as it would be, in favourable positions, would form a most formidable impediment in the way of actual settlers, while it would not to the officers be worth half the nominal remission-money. The continuing such a grant would be conferring a very small favour at a very great loss to the giver; and therefore, however deserving the retiring officers may be of reward for services, or of encouragement to colonise, the granting lands remaining in the possession of the Crown in Canada is not the mode of serving them. These observations seem necessary, to show that it was by no inadvertence that the grants to officers were discontinued. If officers choose to settle in Canada, lands can be purchased on easy terms from individual holders; and if the back woods should be chosen by any one of them as a residence, a very small sum will purchase from the Government more land than the officer can ever use or cultivate; but he will at least be in a country rapidly improving, instead of inhabiting a wilderness, caused by free grants to non-residents of his own class.

I have, &c.

(No. 11.)

COPY of a DESPATCH from Lord *Stanley* to the Right honourable  
Sir *C. T. Metcalfe*, Bart. G. C. B.

No. 36.

Lord Stanley to  
Right hon. Sir  
T. Metcalfe,  
31 March 1843.

Sir,

Downing-street, 31 March 1843.

I HAVE the honour to acknowledge the receipt of Sir Charles Bagot's despatch of the 26th January, No. 16, transmitting the annual report of the chief agent for emigration to Canada for the past year, accompanied by an appendix and other enclosures.

Pursuing the practice adopted in former years, this Report upon Canadian Immigration has been presented to both Houses of Parliament.

It appears that on the whole the result of the emigration to Canada during the past year is satisfactory; and that, although the infractions of the late Passengers' Act have been numerous, they were for the most part of that description which will be obviated by the provisions of the new law. With the view of affording increased protection to the emigrants, it will be desirable that you should instruct the agent at Quebec to send to the Commissioners of Colonial Lands and Emigration in this country an immediate report of all cases of infraction which may hereafter occur, together with the result of the proceedings, if any have been taken in the province, in order that it may be determined what further steps it may be requisite or advisable to adopt in England, where the parties connected with the ships are under bond to the Crown.

It is intended to apply to Parliament for the sum of 2,244 *l.* sterling, in aid of the amount raised by the provincial tax for the relief of sick and destitute emigrants. It has appeared to Her Majesty's Government that the assumptions of Mr. Buchanan in respect to the emigration of this season, were sufficient to justify the reduction of the vote hitherto taken for this service; and that, as that officer did not consider that the expenditure of the present year could possibly exceed that of the past season, it was proper to reduce the estimate to the actual amount which was found to have been required during the last year. The proceeds of the emigrant tax being computed by Mr. Buchanan at 8,500 *l.* currency, and the amount required according to the expenditure of the last year, at 10,993 *l.* currency, a grant from Parliament of only 2,493 *l.* currency, or 2,244 *l.* sterling, was necessary to make up the probable deficiency of the tax fund.

£.	8,500	Estimated Provincial Tax.
	2,493	Imperial Vote.
	1,671	= £. 1,500 strlg. Imperial Vote.
	12,664	Currency.

You will observe that it is not proposed to make any alteration in the grant for defraying the expenses of local agents in Canada.

Sir Charles Bagot having stated in his despatch that the charge for the quarantine establishment at Grosse Isle ought to have been included in Mr. Buchanan's estimate of expenses, I would remark that there appears to me to be no charge which could with greater propriety devolve upon local resources, than that which is incurred in protecting the province from the introduction of infectious disorders; I should therefore recommend the exclusion of such an expense from the fund appropriated to the relief of the emigrants. I am also of opinion that the charge incurred in printing Mr. Abbot's pamphlet should not be borne upon the fund which is voted to defray the expense of local agents.

I have, &amp;c.

Letter from  
Commissioners of  
Colonial Land and  
Emigration to  
J. Stephen, Esq.

LETTER from the Commissioners for Colonial Lands and Emigration to  
*James Stephen, Esq.*

Colonial Land and Emigration Office,  
9, Park-street, Westminster, 24 March 1843.

Sir,

WITH further reference to your letter of the 23d ultimo, we have the honour to state that we have perused and considered the various annual Reports therewith transmitted to us from Mr. Buchanan and the other emigration agents in Canada.

These documents, together with the well-digested statistical tables by which they are accompanied, furnish a complete view of all the circumstances connected with the immigration into the province during the past year. The following is a very brief summary of the principal results.

The emigration from the United Kingdom to Canada,

In 1842, was	-	-	-	-	-	-	-	44,374
In 1841, was	-	-	-	-	-	-	-	28,086
Increase last Year	-	-	-	-	-	-	-	16,288

To the whole number last year must also be added more than 6,000 persons who appear to have arrived from the United States; and the increase accordingly to the population of the province in one year cannot be stated to have been less than 50,000. Of the number who came from the United Kingdom only 2,529 were aided to emigrate by their parishes, by societies, or by friends; the remainder came out by their own means.

The proportion of Irish emigrants to those from Great Britain appears to have diminished. Last year it was about five to four, whereas in the preceding year there had been nearly double the number of Irish compared with English and Scotch; and on an aggregate of the last 14 years, the proportion appears to have been about six-and-a-half Irish to four of the others.

The proportion which the sexes bore to each other amongst the adult emigrants appears to have been about ten males to seven females.

The amount of tonnage employed is not given; but the number of ships appears to have been 322 in 1842, and 293 in the previous year; showing an increase of 39 in 1842.

The emigrants arrived for the most part in good health, having had favourable passages, and the mortality upon the whole does not appear to have exceeded three-fourths per 100 souls; the larger proportion of deaths occurring, as is usual in the removal of large numbers of people by sea, amongst infants and children under seven. 800 persons received medical relief upon their arrival, at the quarantine station, and at the hospital at Quebec.

The infraction of the Passengers' Act were numerous, but they were for the most part of that nature which, we hope, will be obviated by the provisions of the new Act. In one sense they may have seemed more numerous in proportion to other years than they really were, because owing to a recommendation from our Board, measures were agreed upon, and, we observe, were very efficiently carried out in Canada, for enforcing that provision of the Passengers' Act, which requires the number of emigrants to be limited, not merely by the tonnage of the ship, but by the size of the deck on which they live.

A proportion appears to have come of persons possessed of the means of living, and even of settling themselves upon land; but the majority of emigrants were in a state of great destitution. And a sum equal to not less than 12,388*l.* sterling was expended in relieving their wants, and in enabling them to proceed to the parts where their labour was required. Of this sum, however, it is right to mention that a sum equal to about 7,701*l.* sterling, was drawn from the proceeds of the emigrant tax.

The emigrants who settled in Canada West appear to have been nearly six times more numerous than those who remained in the eastern division. This great and almost sudden influx of labouring people caused, as might have been expected, a reduction of wages; but we are happy to observe that the chief agent is able to report his having reason to think that, at the conclusion of the year, few of the industriously disposed of the population remained without employment.

As

For the annual  
Reports of the  
Emigration Agents  
in Canada, vide  
Emigration Papers,  
ordered by the  
House of Commons  
to be printed,  
17 March 1843,  
No. 109.

As regards the future, the same officer entertains the opinion that the emigration of the present year to Canada will not fall short of that of the past. At the present moment we have reason to believe, that in this country much less activity prevails than at the corresponding period last year; but, on the other hand, Mr. Buchanan's anticipation would seem to be supported by the circumstances, first, That emigration to all the Australian colonies is for the present suspended; and next, because the greatest discouragement must have been given to emigration to the United States by the remarkable fact, which we find recorded in these documents, on the authority of Her Majesty's consul at New York, that from that port alone there returned to the United Kingdom during the past year, no fewer than 9,500 emigrants.

The prospect which Canada offers for those who are possessed of present means of support, and to a fair proportion of artisans who understand their business, appears to be as good as ever. Very small encouragement, however, or hope of employment is held out to the entirely destitute and unskilled labourer. Even as regards the public works to which such persons might naturally have looked, it appears that the contractors invariably prefer labourers accustomed to the country and to the usual mode of working, of whom they can obtain an abundance from the United States.

We have the honour to state that we shall take every means in our power to make generally known the information which we have here obtained concerning the prospects of emigrants during the ensuing year.

In conclusion, the only practical remarks which we find it necessary at present to offer, are as follows:

First, We have adverted to Mr. Buchanan's suggestion, that in consequence of the prevalence of contagious diseases on board of emigrant vessels, there should be a medical inspection of the emigrants previous to embarkation, and that persons supposed to be infected should be prevented from embarking. But we have to report that there are no funds for defraying the expense of such inspection, or for supporting the persons who should be prevented from emigrating after having secured their passages; nor, in the next place, is there any power by which such persons could be detained on shore if they wished to proceed.

Secondly, With reference to the infractions of the Passengers' Act, we would suggest that the chief agent at Quebec should be instructed to transmit to this country an early report of all cases which may occur, with the result of the proceedings, if any, in respect to them in the colony, in order that we may be able to judge how far any further steps may be requisite and advisable in this country, where the parties connected with the ships are under bond to the Crown.

We have, &c.

to Lord John Rus-  
sell, 3 May 1841.

COPY of a DESPATCH from the Right Honourable Viscount *Falkland* to  
Lord *John Russell*.

My Lord,

Government House, Halifax, 3 May 1841.

I HEREWITH transmit a copy of some resolutions of the House of Assembly  
of Nova Scotia, having relation to the present system of selling the public  
lands at auction.

I have, &c.  
(signed) *Falkland*.

Encl. in No. 1.

Enclosure in No. 1.

In the House of Assembly, 10 April 1841.

*Resolved*, THAT it is the opinion of this House that the system of selling public  
lands at auction ought to be modified or abolished, so that grants thereof may pass at once,  
and without the present delays, which are found to operate to the injury of immigrants  
from the United Kingdom, and to retard the settlement of the country.

*Resolved*, That it is the opinion of this House that it would be of great public advantage  
were his Excellency the Lieutenant-governor and the Executive Council authorised, as here-  
tofore, to permit the sale of public lands, under peculiar circumstances, at the minimum  
price of one shilling sterling per acre.

*Resolved*, That his Excellency the Lieutenant-governor be respectfully requested to  
bring the foregoing resolutions to the notice of Her Majesty's Government.

Lord John Russell  
to Viscount Falk-  
land, 22 May 1841.

COPY of a DESPATCH from Lord *John Russell* to the Right Honourable  
Viscount *Falkland*.

My Lord,

Downing-street, 22 May 1841.

I HAVE received your Lordship's despatch, No. 72, of the 3d instant, enclosing  
some resolutions of the House of Assembly of Nova Scotia, relating to the  
present mode of disposing of the Crown lands.

You will inform the House that I am quite ready to agree to any plan for  
making the grants of land pass without delay, and I should not object to the  
minimum price being fixed in the same manner as in Canada. I enclose for  
your information copy of a Parliamentary paper, containing the regulations  
adopted by Lord Sydenham.

Whatever change may be decided upon, I apprehend it can only be effected  
by an amendment of the provincial law, 3 Vict. c. 12, relating to Crown lands.

I avail myself of this opportunity to remark that the Lieutenant-governor of  
Nova Scotia is deprived by that law of the power of granting the remission  
of purchase-money, formerly enjoyed by naval and military officers on settling  
in the province. I would wish your Lordship to consider the propriety of  
affording special encouragement to that class of settlers, and, if you should  
think it advisable, to propose to the Legislature a remission in their favour,  
according to the practice in New Brunswick.

I have, &c.  
(signed) *J. Russell*.

## CORRESPONDENCE RELATIVE TO EMIGRATION.

77

Enclosure in No. 2.

NOVA SCOTIA.

NOVA SCOTIA, 3 Vict. Cap. 12, No. 2,053.

Encl. in No. 2.

AN ACT to establish sundry Regulations for the future Disposal of Crown Lands within the Province of Nova Scotia, passed the 27th day of March 1840.

WHEREAS numerous settlers, subjects of Her Majesty in this Province, have gone into possession of lands belonging to the Crown, and have built on and otherwise largely improved the same, and it is just and proper that such persons should be enabled to acquire title to the lands so occupied and improved by them, on paying a reasonable purchase-money therefor. And whereas it will greatly facilitate the settlement and cultivation of other portions of the Crown lands in this Province, to establish regulations for the valuing and disposal thereof:

Preamble.

1. Be it therefore enacted, by the Lieutenant-governor, Council and Assembly, that it shall and may be lawful for the Governor, Lieutenant-governor, or Commander-in-chief for the time being, by and with the advice of Her Majesty's Executive Council, to appoint three or more persons in each and every county, who shall constitute a Land Board within the same, and the said persons, or any of them, from time to time, at pleasure, to remove, and to supply any vacancies caused by such removal, or by death, resignation or absence, by further and other appointments. And it shall be the duty of such Boards respectively to receive and collect all information within their said counties, touching the ungranted lands therein, their quality and description, and the real and *bonâ fide* value of the buildings and improvements on such portions thereof as are occupied by any person or persons whomsoever, and to receive all applications that may be made for grants thereof; and to ascertain and determine what ought, to the best of their judgment, to be the upset price of each and every lot so applied for, when the same has not been occupied or improved as hereinafter mentioned. And when the same has been occupied and improved to the value of not less than 20*l.* sterling money of Great Britain, by a subject or subjects of Her Majesty, occupying the same previous to the 1st day of January, in the year of our Lord 1840, then to ascertain and determine, to the best of their judgment what ought to be the price or purchase-money of said lot, with reference to its original value, independently of such improvements. And it shall further be the duty of such Boards respectively to transmit from time to time, to the Lieutenant-governor, or Commander-in-chief for the time being, all such information, applications and reports as to the value and price of ungranted lands, accompanied with such remarks as in their judgment will tend to facilitate the acquiring of title by *bonâ fide* and actual occupants as aforesaid, and the settlement and improvement of such portions of land as are fit for cultivation, and the sale for the best price of timber lands within each county respectively.

Three or more persons in each county to constitute a Land Board.

Boards to collect information and to receive applications for grants.

Information relative to ungranted lands to be transmitted by the Board.

2. And be it further enacted, That it shall and may be lawful for the Governor, Lieutenant-governor, or Commander-in-chief for the time being, by and with the advice of Her Majesty's Executive Council, to determine and settle, by an order in that behalf, the price or purchase-money, to be estimated as aforesaid, of all such lots of ungranted land as have been actually and *bonâ fide* occupied and improved to the value, and at the time herein mentioned, by a subject or subjects of Her Majesty, on the payment of which said price or purchase-money, so to be determined and ordered, within 12 months from the date of such order, by such *bonâ fide* and actual occupants, such occupants, their respective heirs or assigns, shall be entitled to receive a grant of such number of acres, not exceeding 200 in all, as may be specified in such order.

On payment of purchase-money occupants entitled to a grant not exceeding 200 acres.

3. And be it further enacted, That it shall and may be lawful for the Governor, Lieutenant-governor, or Commander-in-chief for the time being, by and with the advice of Her Majesty's Executive Council, to determine and settle, by an Order in that behalf, the upset price of all such lots of ungranted land as have been applied for, and have not been occupied and improved as aforesaid, such upset price to be in no case less than 1*s.* sterling per acre, at which said upset price, so to be determined and ordered, all such lots shall be offered for sale to the highest bidder at public auction, within the county wherein the lands respectively lie, due notice having been first given thereof in the Royal Gazette, and in three of the most public places of the county. And the purchaser or purchasers at such sales, their respective heirs or assigns, shall be entitled to receive a grant of the several lots knocked down to them at such auction, on paying the full consideration money therefor, in such manner as the Governor, Lieutenant-governor, or Commander-in-chief for the time being, by and with the advice of Her Majesty's Executive Council, may direct and appoint.

Unoccupied and ungranted lands to be offered for sale at an upset price.

4. And be it further enacted, That this Act shall be and continue in force for three years, and from thence to the end of the then next Session of the General Assembly.

To continue three years.

By his Excellency Lieutenant-General C. Campbell, Knight Commander of the Most Honourable Military Order of the Bath, Lieutenant-Governor and Commander-in-Chief in and over Her Majesty's Province of Nova Scotia and its Dependencies, &c. &c. &c.

I hereby certify that the above is a true copy of an Act passed in the last Session of the General Assembly.

Given under my hand at Halifax, this 10th day of April 1840, in the third year of Her Majesty's Reign.

sell, 18 June 1841.

COPY of a DESPATCH from the Right Honourable Viscount *Falkland* to  
Lord *John Russell*.

My Lord,

Government House, Halifax, 18 June 1841.

I HAVE the honour to acknowledge the receipt of your Lordship's despatch, No. 54, dated May 22d, 1841, stating that you have no objection to the minimum price of lands being fixed in this province in the same manner as in Canada, and enclosing, for my information, a copy of a Parliamentary Paper containing the regulations adopted in this respect by Lord Sydenham.

I will immediately bring the subject under the consideration of the Executive Council, in order that such improvements in the existing system of disposing of Crown lands as shall be found practicable, without an amendment of the provincial Act of 3 Vict. c. 12, may be at once made; and I shall be prepared, on the meeting of the legislature, to submit for adoption any further modifications which may be necessary to prevent delay in the passing of grants, but which cannot be effected without the aid of the provincial parliament.

In reference to the latter part of your Lordship's despatch, I would beg leave to direct your attention to the correspondence between this government and the Colonial Office, noted in the margin, by which it will be seen that to encourage the settlement of officers of the army and navy in Nova Scotia, that class of persons are allowed in this province free grants of land on the same terms as formerly, instead of the remission of part of the purchase-money, to which in other colonies they are entitled; and any alteration of the existing practice in the sale of Crown lands in this colony will not therefore be required to meet your Lordship's views of affording special encouragement to such settlers.

I have, &c.  
(signed) *Falkland*.

(No. 61.)

COPY of a DESPATCH from Lord *John Russell* to the Right Honourable  
Viscount *Falkland*.

My Lord,

Downing-street, 19 July 1841.

I HAVE received your Lordship's despatch, No. 84, of the 18th June, reporting the measures which you have taken for executing my instructions relative to the price to be set on waste land in Nova Scotia, and to the issue of title deeds to the purchasers.

On referring to the resolutions of the House of Assembly which occasioned those instructions, I perceive that the Assembly are desirous that you should be authorised "to permit the sale of public lands under peculiar circumstances at the minimum price of 1 s. sterling per acre." I am not aware what may be the peculiar circumstances contemplated by the House of Assembly, but I observe by the official Return for 1839, that upwards of 19,000 acres were sold in that year, and are reported to have fetched about 2 s. an acre. So long, therefore, as any sales could be effected at that price, it would seem injudicious to lower it. Looking at the price of land in New Brunswick, and to the still higher price established in Canada, and generally to the increased interest attaching to the North America colonies, I should be inclined to think that it might, at no distant period, be found expedient to raise the price of land in Nova Scotia. It also appears to me that if one universal price be adopted in that province, it ought, as in all other colonies where that system has been introduced, to be higher than the minimum at which land had been offered to the public at auction. Upon this point, however, local knowledge is of so much importance, that I would wish you to consider and report to me your opinion how far it might be expedient to give effect to the wish of the House of Assembly.

I have apprised the General commanding in chief of the encouragement held out to officers of the army to settle in Nova Scotia.

I have, &c.  
(signed) *J. Russell*.

COPY of a DESPATCH from the Right Honourable Viscount *Falkland* to Lord *Stanley*.

No. 5.  
Viscount Falkland  
to Lord Stanley  
21 December 1841.

My Lord,

Government House, Halifax, 21 Dec. 1841.

LORD JOHN RUSSELL having desired in his despatch, numbered 61, dated 19th July 1841, that I will give my opinion as to how far it may be expedient to give effect to the wishes of the House of Assembly here (as expressed in the Resolutions of that House, transmitted by me on the 3d of May last, with my despatch No. 72,) in regard to the sale of Crown lands, I have given the subject my best attention, and beg to offer the following observations for your Lordship's consideration.

The attempt to decide in what mode the disposal of Crown lands should be regulated, is attended, in as far as relates to Nova Scotia, with difficulties which are not felt, or at any rate not felt in an equal degree, in the other North American colonies; these difficulties arise from the inferior quality of the disposable land, and from the poverty of the greater number of settlers who come to this country, they being generally of a different class from those who emigrate to New Brunswick or to Canada, and possessing frequently no wealth but their labour. Emigrants of this description squat as a matter of course, nor has the Government in general the means of preventing their doing so even on Government lands, as they proceed at once to the wilderness, where it would be difficult to track, and next to impossible to dislodge them, for if traced and driven from one spot by means of an expensive and tedious legal process, they would immediately occupy a lot of land a few yards distant, and the same measures would have to be again resorted to until far more than the value of the land had been expended in its protection, which after all would not be secured against the very next intruder. But the settler who wishes to establish himself without paying for the ground he occupies, can do so unembarrassed by any fear of opposition on the part of the Government: enormous grants of wild land having been made to absentees, who have no representatives in Nova Scotia; he has only to fix his habitation on one of these tracts, and reside in security, undisturbed either by the Crown or by the legal owner of the soil.

The foregoing remarks are more particularly applicable to the island of Cape Breton, and an illustration of the statement I have made with regard to the poverty of the emigrants who visit that part of this colony, and their disposition to settle illegally, is afforded by what has lately taken place there. Having received intelligence from the member for the county of Cape Breton that a body of strangers amounting to upwards of a thousand had landed, and that it was probable they would, if not located according to law, spread themselves over the island, and take possession of unoccupied lands without authority, I consulted the Executive Council, and with their concurrence directed notice to be sent to the deputy surveyor-general resident at Sydney, that the usual regulations with respect to sales by auction should be dispensed with, and, as will be seen by a copy of a letter of the provincial secretary, which I now enclose (see paper marked No. 1), instructed that officer to establish the new-comers without delay on Crown lands, charging the usual upset price of 2*s.* 6*d.* sterling per acre.

Mr. Crawley in his answer, (see paper marked No. 2) states, and his statement is corroborated by the letter of Mr. Dodd, a member of the Executive Council resident at Sydney, a copy of which I enclose (see paper No. 3), that the number of emigrants who have arrived during the present year in Cape Breton is about 1,500; that they are chiefly natives of the Hebrides, of the poorest class; that they have neither power nor inclination to purchase land; and that the greater number of them are already settled on one of those large grants held by absentees, to which I have before alluded. But too many of the emigrants who resort to Cape Breton are of the class of these poor people, the evils of whose condition Mr. Dodd truly describes; nor am I able to point out any regulations, in respect of Crown lands, which could either beneficially affect them, or promote, in their instance, the interest of the province.

The reason of the difference between the circumstances of those who come

No. 1.

No. 2.

No. 3.

NOVA SCOTIA. as settlers to this colony, and the circumstances of those who go to the other North American Provinces, is not very apparent; but this difference appears to me to spring from several causes, such as the fisheries that are established all round the coasts of Cape Breton, and on the western shore of Nova Scotia, which at once afford a subsistence to those accustomed to similar pursuits in Europe; the inferiority of the disposable land in this province, as compared with that to be obtained either in Canada or New Brunswick; and, lastly, the greater obstacles which are here opposed to the speedy settlement of the agricultural emigrant, by the want of general surveys and the system of sales by auction. The regulations I am about to propose would remove some of these obstacles, although they could of course neither improve the character of the soil nor mitigate the inconvenience arising from the want of sufficient surveys, which inconvenience is felt here infinitely more than in either Canada or New Brunswick, the local legislatures and land companies having caused extensive surveys to be made in each of those governments. The evils existing here, and arising from a deficiency in this respect, cannot be remedied (unless indeed the Imperial Government should interfere) without the action of the House of Assembly, and of this there is but little hope; for although what is stated of the Canadas in Appendix (B.) to Lord Durham's Report on the Affairs of British North America, p. 30, may with equal truth be asserted of the greater part of Nova Scotia, viz. that "with very few exceptions no man can be said to possess a secure title to his land, or even to know whether the spot upon which he is settled belongs to himself, his neighbour, or the Crown;" the evils which must arise from this cause will be perpetuated, on account of the expense to be incurred in their removal, 'a strong disinclination existing in the House of Assembly here to grant money for surveys, which disinclination arises from the fact that little or no revenue is derived from the sale of Crown lands, only 2,720*l.* 11*s.* 6*d.* currency, or 2,176*l.* 9*s.* 3*d.* sterling, having been paid to the casual revenue from this source during 10 years, as the produce of sales in Nova Scotia Proper, the expenses of the surveyor-general's department absorbing the remainder, while nothing whatever has been derived from Cape Breton during the same period; added to this, the feeling is very general throughout the community, that a settler, however poor, is a benefit to the province, and that settle in what manner he may, he ought to be encouraged and not molested. Further, it is thought that the land is not in general of sufficient value to pay by its sale the additional expenses of accurate general surveys, as, surveyed or not, Nova Scotia would probably be visited only by the same description of settlers as at present, the better soil and climate of Canada and the United States still continuing to attract the more opulent. These conclusions may be just or not, but it is certain that so long as such sentiments influence the public mind, no grants for surveys are to be expected from the local legislature.

It may be a matter of doubt whether it is desirable to encourage emigrants who have not the means to buy land, to come to a country where it is to be obtained (legally) only by purchase, where such strong temptations to illegal occupation subsist, and in which, unless they do by some means or other establish themselves as cultivators, destitution must inevitably be their portion, fishermen only being exempted from the general calamity. Independent, however, of its being uncertain that any laws or regulations, could prevent their coming in times when a succession of bad seasons and failing crops at home has left them no alternatives but emigration or starvation, the medium through which the question is viewed by the provincial politician would render it most difficult to carry through the legislature any provisions having such a tendency.

The feeling is almost universal, that vast portions of the best land in the province, which would be most likely to tempt the emigrant in easy circumstances to fix himself permanently, and the improvement of which would conduce to the general advantage, are held by individuals who contribute in no way to the prosperity of the colony, with which in many instances they are totally unconnected, except in so far as their legal rights interfere with the public interests; while the squatter brings with him, if he bring nothing else, at least the ability to support the privations incidental to the settlement of a new country; and that although he may probably lead a life of poverty and hardship himself, the children of such an individual will form a valuable addition to the population, and therefore if not absolutely fostered and protected, he should at all events not be severely dealt with.

The

The Nova Scotian is thus naturally inclined to look with indulgence on the unlawful appropriation of land unprofitably kept out of cultivation, and the public sympathy is enlisted in favour of the offender. What the ultimate consequences will be to the squatter himself, or to the public, does not seem ever to be thought of: the endless lawsuits, and the numerous acts of oppression which must take place, when the owner of the land, long unlawfully occupied, but cleared and improved by the occupier, shall claim his own, and take advantage of the years of toil bestowed upon it, the odium which must attend the enforcement of the law, and ultimately rest on the government, being all lost sight of by the native of the colony in his desire to see his country advance with rapidity.

Having found my inability to cope with the difficulties arising from the want of sufficient general surveys, or from the sudden influx of emigrants of the description of those who have lately come to Cape Breton (and it will be presently seen that few with greater means come to Nova Scotia proper), I have applied myself to remedy such obstacles as I could hope to remove by new regulations in the case of emigrants arriving with the intention of becoming settlers by purchase, or of natives wishing to become proprietors. Returns which I now enclose (see papers marked No. 4) show that these latter form a very great majority of the purchasers of Crown lands in Nova Scotia proper, during the years 1839, 1840, and 1841; 224 persons having become purchasers of Crown lands, to the extent of 26,165 acres, during those three years; while the number of emigrants or strangers among the buyers is but 18, or only about eight per cent., the number of acres sold to Nova Scotians being 24,569, and to strangers 1,596, or in the proportion of more than 15 to 1. Returns of a like nature relative to Cape Breton (see paper marked 5) show a dissimilarity in this respect, the number of purchasers of Crown lands in the island during the years 1838, 1839, and 1840 (it having been found impossible to get an accurate return for the present year in time to forward it by the next packet) having been 164, of whom 116 were strangers, and only 49 natives; while the total number of acres sold is 16,188, the quantity bought by strangers is 11,831 acres, and by natives 4,357. But it will be seen by Mr. Crawley's letter, attached to these returns, that the majority of those reckoned as strangers have been from 12 to 18 years in the country, and many had arrived while children with their parents, and may therefore be considered as Nova Scotians, the immediate descendants of settlers, a class to which I have already referred as constituting a most valuable portion of the population of a new country. The purchasers alluded to by Mr. Crawley were, it appears, though illegally, occupiers of Crown lands, which they have now bought, and are therefore contradistinguished from the 3,000 stated to have arrived within the last three years, of whom not a single individual has purchased land; and I learn from the best authority that they never can buy the land on which they are located, unless at an exorbitant price, as they have fixed themselves not on Crown lands, but on tracts already granted to others, who, in the price they may hereafter demand, will add to the original cost of the land the value which the squatter will have himself given to it by his labour. Mr. Crawley has received information that 3,000 more pauper emigrants may be expected in Cape Breton next summer; and if, as will doubtless be the case, there being no means of preventing their so doing, they settle on land already granted to absentees, there will be in that island a population of 6,000 so settled, whom the enforcement of the rights of the original grantees, or of their representatives, would consign to the most abject misery, after perhaps many years of toilsome industry, and who would in consequence be rendered discontented subjects.

Taking the facts set forth in the above returns in conjunction with what I have before said as to the quality of the land, and adverting to the amount actually received from the department of the surveyor-general, it seems impossible to regard the question as one of any material importance as connected with the revenue; and I have therefore looked at it with a view to determine by what mode of disposing of Crown lands the greatest benefit may be derived to the province in other respects.

There can be little doubt that the more immediate the settlement of these lands the greater will be the advantages resulting from them, provided always that the settlement is conducted on principles sound in themselves, and adapted to the local peculiarities of the colony. I have endeavoured by every means in

NOVA SCOTIA.

No. 4.  
A. to C.No. 5.  
A. to C.

No. 6.

NOVA SCOTIA. my power to arrive at a just conclusion as to what those principles should be, and I am of opinion, that considering the comparative sterility of the soil, and the impediments offered by the climate to agricultural pursuits, and having regard to the better climate of a great part of Canada and the United States, that in the regulations to be established here, three things should be specially kept in view, and these attained, that the emigrant should receive every possible encouragement, being allowed to obtain the land of Nova Scotia at the lowest price which the expenses attendant on the local surveys necessary to his own security will admit of.

The first thing to be aimed at is the maintenance of the relative proportionate value which the soil bears to that of the neighbouring provinces and states.

This value is, I have every reason to believe, so low, that the mere expenses of the local surveys nearly equal it, and therefore I need dilate no further on this point.

The next point to be looked to is the prevention of large purchases of land by speculators; and the third to which attention should be directed, after having removed every vexatious impediment to the speedy acquisition of land by the settler, is

The discouragement of a desire on his part to become possessed of more than he can occupy and cultivate, profitably to himself.

I think these objects may all be compassed, and I am prepared to recommend, for reasons which I shall presently state,

First, That sales of Crown lands by auction should be discontinued, as is already the case in Canada.

Secondly, That one fixed and uniform price of 1 s. 9 d. sterling should be adopted as a general rule in respect of all agricultural lots, the Crown reserving the right, to be however cautiously exercised, of selling by auction, or by private sale, at an enhanced price, quarries, mill seats, or such portions of land as circumstances have endowed with an adventitious value, care being taken that when the superior value of a lot is discovered by an individual, but for whose enterprise or exertions it would have remained unknown, that he should in such case have the full benefit of his discovery.

Thirdly, That the price should in all instances be paid at once, the title to the land being perfected and delivered at the time of sale. I conceive that sales by auction should be discontinued here, for the reasons given by Mr. Baldwin Sullivan in his evidence, published at page 108, Appendix (B.) to Lord Durham's Report on the affairs of British North America, viz. that "the sale by auction is, in as far as relates to the raising the value of the land, in reality a cumbrous dead letter, from which the public derives no advantage, while the settlers are seriously delayed in their locations; the minimum price in this country being in fact the maximum, competition rarely if ever taking place, the bidders at these sales considering it a duty they owe to each other not to bid up these lands where there is so much choice." That these reasons apply to Nova Scotia experience has fully proved. It has been found likewise that the difficulty in obtaining land at once encountered by the settlers, causes them often to expend their means before they have an opportunity of purchasing, when being destitute, they squat; the facilities for doing so that are afforded by the vast grants of unoccupied land, I have already described. I think 1 s. 9 d. sterling per acre is a fair price.

High enough; because experience has proved it to be sufficiently so to prevent extensive tracts being bought up by speculators, or to deter the emigrant from seeking to acquire land in greater quantities than his means will allow him to cultivate with profit, (if, however, it were hereafter found to be necessary, regulations that would ensure this latter effect might easily be framed,) while I believe it to be the full value of the land, in proportion to the price paid for the better soil of Canada and the United States, the value of land in which countries, more especially the latter, must always have an influence on the price here.

Not too high; because it has not prevented the purchase of land by the most valuable class of agricultural settlers, born Nova Scotians, and because a less amount than that produced by the sale of land at this rate would scarcely defray the expenses of the Surveyor-general's department; surveys of isolated lots being rendered expensive by the distance it is sometimes necessary to travel in order to make them.

Whether

Whether or not the purchase-money should be payable at the time of sale is a question which cannot be determined here on the same grounds that appear to have led to its decision in Canada, the land in this province being never "purchased for the mere sake of the timber, and then abandoned;" a practice to which Mr. Buller alludes, p. 34, Appendix (B.) to Lord Durham's Report, as having prevailed to a considerable extent in other colonies, there being no timber in Nova Scotia of sufficient value to induce such a custom; neither is there any danger of converting, by the indulgence of instalments, a number of people into "indigent and useless farmers," who, without such indulgence, "would become useful labourers," (p. 25. Appendix (B.) as this country would not absorb labourers, the labouring emigrant (except in the case of fishermen) being, as I have before stated, unable to procure money by his labour, which is only productive to him in case he obtains land. The advantages or disadvantages likely to result from the system of prompt payment must, therefore, be weighed apart from these considerations; and I have had no difficulty in arriving at the conclusion that prompt payment should always be insisted on, were it only because it has been found to be next to impossible to obtain payment by instalments in the great majority of instances, not only here, but in Canada, and that while a class of national debtors is thus created, and the emigrant is induced to acquire land in too great quantities, the uncertainty of ultimately enjoying the reward of the labour he has expended upon it, has a disheartening effect, and renders him less strenuous in his exertions.

By what I have said it will be evident, that while I agree with the House of Assembly as to the propriety of abolishing sales by auction of Crown lands, except in very peculiar cases, I would advise that the price of Crown lands in Nova Scotia should be reduced from 2*s.* 6*d.* to 1*s.* 9*d.* sterling per acre, being the price at which land was, until lately, sold here; and that I do not concur in opinion with the House that it would be a great public advantage were "the Lieutenant-governor and Executive Council authorized, as heretofore, to permit the sale of Crown lands under certain circumstances at the minimum price of 1*s.* per acre," because the cases are very few in which it would be right to grant such an indulgence, and when they do occur, may easily be referred by the Lieutenant-governor to the Secretary of State; and because I am apprehensive that such a practice once introduced, augmenting by degrees, would tend to lower the price of land generally to 1*s.* per acre, and thus produce many of the evils to be dreaded from too low a price, while a sufficient sum would not be afforded by the money paid for the lots to defray the expenses of such surveys as are absolutely necessary even for the partial security of the purchaser.

I have, &c.  
(signed) *Falkland.*

Enclosures in No. 5.

Encl. in No. 5.

(No. 1.)

Sir,

Provincial Secretary's Office, Halifax,  
20 October 1841.

REPRESENTATIONS having been made to his Excellency the Lieutenant-governor, that many emigrants have arrived this season in Cape Breton, who are desirous to become settlers upon Crown lands, and who would be put to great expense and inconvenience should they be obliged to go through the regular routine of application and waiting for the sale of lands, besides which, the season would elapse in which it is highly desirable the preliminary steps for clearing the lands should be taken. His Excellency has fully considered the subject in Council, and has commanded me to give you directions to make immediate private sale of lands at the disposal of the Crown in Cape Breton, to such persons, emigrants, as may have arrived in the island during the current year, for the purpose of becoming settlers; the land to be disposed of at the upset price of 2*s.* 6*d.* sterling per acre, in lots not exceeding 200 acres to any one head of a family, or single person desirous of making a settlement by himself, and payment to be made in the same manner as is now done upon the sale being made at auction. I am also directed by his Excellency to request you, without delay, to make for his information a report as to what lands are at the disposal of the Crown, and may be made available for the above purpose, and stating what measures may in your estimation be most advisable on the part of Government,

NOVA SCOTIA. ment, in relation to persons situated as those alluded to, arriving in the island, and wishing to become settlers without delay.

H. W. Crawley, Esq.,  
Commissioner of Crown Lands, &c. &c. &c.  
Sydney, Cape Breton.

I have, &c.  
(signed) John Whidden.

(No. 2.)

Sir,

Sydney, C. B. 27 Oct. 1841.

I HAVE the honour to acknowledge your letter of the 20th instant, signifying to me the Lieutenant-governor's permission to dispose at private sale of such lands as may be required by emigrants arriving in this island during the present year, and requiring for his Excellency's information, a report of the Crown lands which may be free for settlers, and a statement of the measures which may appear to me advisable to facilitate their settlement.

As far as I have been able to learn, the emigrants who arrived during this year amount to about 1,500 in all, children included, and are chiefly natives of the Hebrides of the poorest class. There has not been an inquiry for land made at this office from more than two or three of these people, and they confessed that their intentions were not to purchase, but to ascertain where vacant land was to be found, in order that they might immediately settle on it, without purchase or permission. I understand that the greater number of them repaired, soon after their debarkation, to the tract of land known as the old Mira Grant, which is the common resort and resource of those Scotch emigrants, who are not in circumstances to acquire land by purchase, and where, as the proprietors are absent and the government does not interfere, the strongest helps himself, and the weak takes what is left him.

It is therefore, I think, improbable that the people who have arrived the present season will avail themselves of his Excellency's considerate permission. I have nevertheless prepared a list of the principal tracts of land fit for settlement remaining at the disposal of the Crown, deducting such portion as I consider may be already occupied by persons settled without leave; but I should distinctly state, that in making this deduction I am obliged to proceed, in a great measure, by conjecture.

These lands are nearly altogether what is called rear land, not having a front on the water or on a road; and, in my opinion, the most efficacious mode of assisting inquirers for suitable lots, would be to cause the several tracts to be explored in the first instance, in order to determine the most advantageous localities in each tract; afterwards to run direct lines through the best land thus ascertained, marking the trees conspicuously along the whole length of the lines, which would serve as base lines for future surveys, and on which the width of the lots, on either side of the lines, should be pointed out, by cutting the numbers on the trees at intervals of a quarter of a mile. These lines would unerringly conduct the stranger through the forest; and he could at any time indicate the lot he had chosen, by taking note of the nearest number.

This measure might be very advisable, if purchasers were to be found to repay the outlay; but, as matters stand at present, I fear that its adoption would but conduce to the seizure of the remaining Crown lands, by persons who set the Government at defiance, in the same manner as possession has been already taken of so great a portion of those lands throughout the island.

John Whidden, Esq.  
&c. &c. &c.

I have, &c.  
(signed) H. W. Crawley.

(No. 3.)

Sir,

Sydney, Cape Breton, 14 November 1841.

I HAVE the honour to acknowledge the receipt of your letter of 20th October, requesting me to communicate, for the information of his Excellency the Lieutenant-governor, the state of the emigrants that arrived at Sydney this season, and how their intentions of becoming settlers may have been affected by the present Crown Land Regulations; and, in reply, I beg leave to state that, with few exceptions, all the emigrants arriving this season at Sydney, came from the Western Islands of Scotland, possessing means the most limited, and, with few resources within themselves, beyond the ability to undergo privations peculiar to the settlement of a new country. The little property they possessed in Scotland was sold to realize a sufficient sum to defray the expenses of their passage to Cape Breton, and the emigrant agents, as they are called, were heartless enough to impose upon these poor people, by making them pay before their embarkation, the head money formerly levied by an Act of the Legislature of this province, but which was repealed last winter, and thus leaving them, on their arrival here, so perfectly destitute of means as to throw them on the bounty of others for the expense of transporting their families and luggage to the residence of their friends in the interior of the country, who will be obliged to support them until next year: fortunately the potato crop has been abundant this season, and consequently there is no apprehensions of their being in immediate want; nearly the whole number, 1,500 that arrived this year, are now residing in the county of Cape Breton, and the only portion

CORRESPONDENCE RELATIVE TO EMIGRATION. 85

portion of them requiring the assistance of Government, are those at Cape North, whose NOVA SCOTIA. case is already under the consideration of his Excellency.

The operation of the Crown Land Regulations do not at present affect these poor people, for to purchase land is quite beyond their means, indeed, so much so, that if Government allowed them to settle on Crown lands, by merely paying the former price of a ticket of occupation, they could not do so, and, like hundreds of their countrymen that have preceded them, they settle without permission upon any lands they find unoccupied; the tendency of which will be eventually to involve them in litigation with private proprietors, or otherwise, if the present system of sale of Crown lands is continued, of having their improvements sold to any person disposed to make the usual application, and who will risk the purchase at public auction by the Commissioners of Crown Lands, and thus after several years of extreme suffering and hardships they will find themselves deprived of their only means of support, and again be compelled to undergo all the misery incident to the settling upon wilderness lands. How those evils are to be altogether remedied it is difficult to suggest, but I cannot help thinking, if an accurate survey of all the ungranted lands in the island capable of cultivation was made, that some regulations might afterwards be enforced by Government, which would secure to those unfortunate persons the extent of their improvements, and at the same time give to the Crown an equivalent.

That some immediate measures on the part of the Government are necessary is evident, from the fact, that at the present time there are several thousand persons in this county settled upon Crown lands without authority; and next year, I am informed, double the number that arrived this may be expected in Sydney, whose circumstances are not likely to be better than those that have preceded them, and who will follow the example of settling upon any lands they find unoccupied.

John Widden, Esq.  
Deputy Secretary, &c. &c. &c.  
Halifax.

I have, &c.

## CORRESPONDENCE RELATIVE TO EMIGRATION.

89

NOVA SCOTIA.

(No. 6.)

Sir,

Sydney, Cape Breton, 8 December 1841.

IN pursuance of his Excellency's commands, conveyed to me in your letter of 31st ult., I transmit returns of the Crown lands in this island sold during the years 1838, 1839, and 1840, by which it appears that the number of purchasers in that period was only 164, of whom 115 were strangers, and 49 Nova Scotians. Although the greater number of those persons are set down as strangers, I do not believe that any of them were emigrants lately arrived. The majority were Scotch Highlanders, or Islanders, who had been some years in this country, and a part arrived while children with their parents from Scotland.

With the exception of very few, I do not consider that any of the purchasers enumerated had been less than five or six years in the country at the time of their obtaining their land, and most of them, probably, had been resident twice or thrice that number of years.

The number of emigrants arriving in Cape Breton during those three years was perhaps not short of 3,000, of all ages, not one of whom do I think has yet purchased land.

The persons set down in the returns as Nova Scotians were, with few exceptions, natives of Cape Breton.

I observe a trifling discrepancy between the returns now transmitted and those already sent to your office, in the number of acres, but as to investigate the cause would delay me till after the closing of the mail, I judge it best not to make the attempt at present.

I have, &amp;c.

(signed) *H. W. Crawley.*

John Whidden, Esq.  
&c. &c. &c.

— No. 6. —

(No. 32.)

COPY of a DESPATCH from Lord *Stanley* to the Right hon. Viscount *Falkland*.

No. 6.  
Lord Stanley to  
Viscount Falkland  
15 March 1842.

My Lord,

Downing-street, 15 March 1842.

I HAVE received your Lordship's despatch, No. 20, of the 21st December last, with its enclosures, reporting the result of your inquiry into the present mode of disposing of the waste lands of the Crown in Nova Scotia, and pointing out the modifications which you are prepared to recommend, with a view to meet the wishes expressed by the House of Assembly on the subject.

Having referred your despatch to the Commissioners for Colonial Lands and Emigration, I have received from them a Report, of which the enclosed is a copy. In recommending to your attentive consideration the important observations and suggestions contained in that Report, I beg to state that I am disposed generally to concur in the views expressed by the Commissioners. But, with regard to the resumption by the Crown of land for non-fulfilment of the conditions on which it was granted, I must impress on you the necessity of being very careful how you exercise the powers given to you by the local law of escheat.

I have, &amp;c.

(signed) *Stanley.*

February 1842.

Enclosure in No. 6.

Encl. in No. 6.

Sir,

Colonial Land and Emigration Office, 9, Park-street,  
Westminster, February 1842.

IN obedience to the instructions contained in your letter of the 31st ult., we have perused and considered the despatch from the Lieutenant-governor of Nova Scotia therewith transmitted to us relative to the settlement of the waste lands of that province.

From this full and able despatch much valuable information may be derived on the subject to which it relates. It appears that the amount of Crown land which has been sold during the last few years has not been considerable, and that it has been purchased chiefly by the resident inhabitants; that the immigration which annually takes place into the colony consists almost exclusively of persons in a completely destitute condition; that

NOVA SCOTIA. the means do not exist of affording employment to these persons, nor, indeed, does it appear that they seek it, for the facilities for unauthorised occupation of land are so great, or, rather, the means of preventing it so inadequate, that they immediately spread themselves over the waste portions of the colony, which belong, for the most part, to absentee proprietors, or, in some instances, congregate on particular spots, but in either case are exposed to the risk of want and misery. It further appears that the boundaries of all lands, whether belonging to the Crown or to individuals, have been so imperfectly ascertained, that the account which was given by Lord Durham's Commissioner of the state of Canada in this respect may be considered applicable to Nova Scotia; viz. that "with a very few exceptions, no man can be said to possess a secure title to his land, or even to know whether the spot upon which he is settled belongs to himself, his neighbour, or the Crown."

Upon a review of these circumstances it has appeared desirable to Lord Falkland, as the first step to improvement, to render the acquisition of the Crown lands as free from difficulties and impediments as the means at his disposal and the nature of the case will admit. For this purpose he proposes that, subject to the reservation of such portions as the Governor might think proper to reserve, all Crown land should be sold at a fixed price; that this price should, for the present, be 1 s. 9 d. per acre; that the payment should be prompt, but that the proper title to the land should be immediately granted.

With reference to the chief feature of this plan we may remark, that it will be in entire accordance with the wish of the House of Assembly of Nova Scotia that the public lands of the colony should be sold at a fixed price; and this consideration, joined to the arguments by which the plan is supported in Lord Falkland's despatch, render it desirable, we think, that it should now be adopted. It may be right to mention that an Act, to be in force for three years, regulating the disposal of the public lands in Nova Scotia, passed the local Legislature in the autumn of 1840, and that in that Act it is provided that the waste land shall be put up to auction in lots as applied for, and at an upset price to be fixed by the Governor in Council. We presume that before Lord Falkland's plan can be carried into operation this Act must be amended.

With regard to the actual price which it is proposed to put upon all public lands, although it certainly appears to be very low, when it is considered that a fixed price is a maximum as well as minimum, and should therefore always be higher than an upset price, we are not insensible to the deference that is due to the local knowledge of the Governor, and to the reasons connected with the inferior soil and climate of Nova Scotia, as compared with the neighbouring settlements, which have led to its being fixed at that sum. There are, however, some considerations connected with the subject to which we should wish to be sure that the Governor had fully directed his attention.

By the evidence of the surveyor-general, given before Lord Durham's Commissioner of Inquiry, it appears that the price at which lands belonging to private individuals were sold was generally from 3 s. to 3 s. 6 d. per acre. It also appears, from the evidence of the same gentleman, and from official returns, that from the year 1827 to the present time a large amount of Crown land has been sold at a price varying from 2 s. to 3 s. per acre. The effect, therefore, of offering all the remaining Crown lands for sale at a fixed price of 1 s. 9 d. per acre might, we fear, perhaps be to lower the value of landed property in the colony, and be considered as unjust by those who have so recently been required to pay a higher price for the lands which they obtained from the Crown.

In the next place, we are not sure whether it is intended that the fixed price now proposed should cover the expense of the grant, and the cost of the survey. The surveyor-general has stated that those expenses are about 12 l. for a grant of 100 acres, and from 22 l. to 25 l. for one of 200 acres. We think that it would advance the object which Lord Falkland has in view, of promoting the sale of Crown lands, if all charges connected with the survey and grant of the land were to be included in the price per acre at which the land was offered to the public. The purchaser would then at once know the whole extent of the charges which he would have to meet. The cost of survey for this colony is estimated, we observe, at from 3 d. to 5 d. per acre, and it might be sufficient perhaps that the former sum should be added to the proposed price of the land, thus raising the fixed sum to 2 s. per acre. We have no doubt that to these considerations on matters of detail, should Lord Stanley think they ought to be forwarded to the colony, the Lieutenant-governor will give the proper weight; and it is far from our wish to urge them as objections to the general character of the measures which he has recommended.

But although it may be hoped, by thus facilitating the sale of the Crown Lands, to render the colony attractive to a less poor description of emigrants than at present resort to it, and to improve its general condition by the introduction of capital, there are evils existing, of which the nature and magnitude are forcibly delineated in Lord Falkland's despatch, and to which it is urgently requisite that a direct remedy should if possible be applied. We shall proceed therefore to submit any views that have occurred to ourselves for this purpose.

1. We would allude first to the state, described to be one of utter destitution, in which emigrants find themselves upon their first arrival in the colony. Fifteen hundred persons, chiefly from the Hebrides, arrived last year in Cape Breton alone, all of them of the poorest

class,

class, who had parted with everything they possessed in order to find the means of paying their passage. Mr. Dod, a member of council, residing in Cape Breton, informs the Lieutenant-governor, that on their arrival these emigrants were thrown on the bounty of others, for the expense of transporting their families and baggage to the interior of the country. A remedy for this evil, though we admit in such an extreme case possibly an inadequate one, may be effected, by requiring the master of every vessel bringing emigrants to pay a certain sum per head on all the emigrants before they are allowed to land. Up to the year 1841, there appears to have been a local enactment authorizing the levy of this duty, and we think it most desirable that it should be renewed. As Lord Stanley is aware, the payment is made by the emigrant himself before he leaves this country, the amount of the duty or head-money being included in the money he pays for his passage, to which however it makes but a very slight addition. The expediency of requiring this payment on account of all immigrants on their arrival was strongly urged by the late Governor-general of Canada, and for that colony the tax has been lately renewed by one of the first acts of the legislature of the united province.

NOVA SCOTIA.

2. We would next advert to the system, which is perhaps more prevalent in Nova Scotia than in any other of the North American colonies, of the unauthorised occupation of land. Whatever may be thought of its present operation, the evil which is likely to result from it in future can hardly be exaggerated. As appears from Lord Falkland's statements, all the emigrants who arrive during the year become squatters as a matter of course. Even if they selected Crown lands for this purpose, the Government could never undertake to track them through the wilderness, nor bear the expense of ejecting them by any formal process; but in point of fact, nearly all the good land of the province having been alienated from the Crown, it is upon the grants belonging to absentee proprietors, who have no representative in the colony, that these immigrants settle themselves. Of 1,500 persons who arrived last year at Cape Breton, the greater number are reported to have at once taken possession of private land in this way. It appears from the report of the Commissioner of Crown Lands that few of these immigrants ever made inquiry about Crown land at his office, and those who did, confessed that their intention was not to purchase, but to ascertain where vacant land was to be obtained, in order that they might immediately settle on it without purchase or permission. Lord Falkland states that from recent information there is reason to expect the arrival, during this summer, of 3,000 more pauper emigrants, who will immediately become unauthorised occupiers of land, and that there would then be in that island alone, 6,000 newly-arrived persons so settled, whom at some future period "the enforcement of the rights of the original grantees would consign to the most abject misery, after perhaps many years of toilsome industry, and who would in consequence be rendered discontented subjects." In the evidence taken under Lord Durham's Commission of Inquiry it appears, that the secretary of the province estimated that the whole number of persons in Cape Breton who were seated on land to which they had no title, or merely a license to occupy, then amounted to not less than 20,000, or one-half of the population of the island. Throughout the whole of the province, indeed, the same feature is remarkable. Vast tracts of the best land, which alone is available for settlement, are the property of individuals who, as Lord Falkland observes, contribute in no way to the prosperity of the colony, with which in many instances they are totally unconnected, except in so far as their legal rights interfere with the "public interests." If the proprietors should eventually allow persons who have squatted on portions of these lands to purchase them, it may be expected that in the price which they demand, they will add to the original cost of the land the value given to it by the labour of the individuals; or it is possible that they may avail themselves of the improvements effected by representing them to the local government as a compliance with the original conditions of their grants, and then eject the persons by whom those improvements had been made. Lord Falkland most justly calls attention "to the endless law-suits, to the unnecessary acts of oppression, which must take place when the owner of the land long unlawfully occupied, but cleared and improved by the occupier, shall claim his own, and take advantage of the years of toil bestowed upon it, and to the odium which must attend the enforcement of the law, and ultimately rest upon the Government." It is impossible to dwell upon all the evils which have resulted, and which will still further, and to a greater extent result, from this mode of settling the waste lands of a colony, without arriving at the conviction that they are of such magnitude and importance, as urgently to require the application of any remedy which it may be in the power of the Government or the Legislature to afford.

The surveyor-general of the province stated in his evidence, to which we have before referred, before Lord Durham's Commissioner, that of lands more immediately known to himself there were upwards of one million acres liable to escheat from neglect and non-fulfilment of the terms of the grants. The first remedy therefore to which it would be natural to have recourse, would be the recovery by the Crown of the lands thus liable to forfeiture. There does exist a law of escheats in the colony, and from the evidence of the surveyor-general before Lord Durham's Commissioner it appears, that by means of it more than two million acres have been recovered, though chiefly at a very distant date; much of it so far back as 1783, and the greater part of the remainder between 1816 and 1820. The form of proceeding under the law is expensive, and the Government do not appear to have the means, or to be disposed, to put the law in force, nor are individuals apparently willing to undertake the task, even though the land should be offered to them on easy terms, if they succeed in obtaining its forfeiture from the original proprietors. We are unable

NOVA SCOTIA. therefore to suggest that any further steps should be taken in this direction, but we doubt not that the question will receive due consideration from the Governor, in what manner it may be possible, and to what extent advisable, to enforce the rights of the public under the present law, or under any modification of it.

With reference in the next place to the hardship which it is feared might be inflicted upon occupants of the soil by the assertion at a late period of the proprietary rights of absent grantees, we are not aware whether there is in force in Nova Scotia the Statute of Limitations, or some analogous law which would protect parties after a long possession, but if not, some legislative enactment may very possibly be deemed desirable. It would appear to be so in all new countries where the public welfare is so deeply involved in the proper settlement of the waste lands, and where the appropriation of large tracts by non-resident and non-improving proprietors, places an insurmountable obstacle to the progress of cultivation and the general prosperity of the country. We therefore would beg to draw attention to the question whether the undisturbed and unquestioned occupation, during a definite number of years, of land which was waste at the time of occupation, should not be declared by law to confer a valid title on the occupant. Again, whenever the proprietor should exercise his rights in the ejectment of an unauthorised occupant of the land, after he had been for some moderate period in undisturbed possession of the same, the law ought perhaps to secure to such occupant payment from the proprietor of the value of any improvement which he may have effected on the land.

In those cases on the other hand in which the intrusion has taken place upon the Crown lands, the intruders should, we think, always have the preference shown to them of purchasing, before any other parties, the land they have occupied; and, to any extent to which they have *bonâ fide* occupied and improved it, at the fixed price of ordinary waste lands of their district. By the law at present in force, we observe that such parties are merely allowed to purchase the land when they have proved a certain amount of expenditure upon it, and then only to the extent of 200 acres.

Lord Falkland observes, that sympathy for the squatters is in Nova Scotia the prevailing feeling throughout the community, and it appears therefore probable that the Legislature would be disposed to sanction any measures, such as we have above suggested, which were calculated to afford them due protection, and encourage them to continue their labours in effecting improvements on the land they occupy.

3. We cannot but think, looking to the very peculiar circumstances of this colony as regards the settlement of its lands, and to the very great social evils which threaten to result from them, that it would be right to submit to the Legislature the expediency of imposing a tax, however small, upon all the appropriated land in the colony, whether waste or cultivated. To make distinction between those two classes of land would be difficult and invidious in practice, and unnecessary if the amount of the tax were so small as to be scarcely felt by the *bonâ fide* cultivator of the land. The unanimity in favour of such a measure, on the part of all the witnesses connected with the province who were examined by Lord Durham's Commissioner, was most remarkable. The surveyor-general, with reference to the extent to which large grants had obstructed the settlement of the country, said, "That a general tax on all wild lands would seem to be the only remedy" for the evil complained of. Mr. Titus Smith, a resident in the province for above 50 years, considered that the large blocks in the hands of proprietors and not under any improvement were a decided check to the advancement of the country, but that "a tax would cause those lands to be settled and disposed of." Mr. Brown, a settler and engineer intimately acquainted with the state of the colony, considered that for the great drawback to improvement caused by the large grants to absentees, a tax on land "would be the best remedy." Mr. M'Kenzie, a cultivator of land for nearly 20 years and a surveyor considered that a remedy for the evils which he described as having resulted from the vast amount of private land kept in a wild state would be "to require parties holding wild lands to pay a tax towards general improvement." Mr. Fairbanks, a native of Nova Scotia, thought a tax on wild land to be "absolutely called for." Mr. Hartshorn, also a native of the province, considered that a tax on wild lands "would no doubt have a most beneficial effect;" and Mr. Cunard, a gentleman of whom we need not say how intimately he is acquainted with the province and interested in its welfare, expressed his opinion in favour of a tax; and when asked, as a large proprietor, to state what the amount of the tax should be, replied, "I do not feel myself competent to say what the tax should be, but I should think large proprietors should be compelled to contribute towards the general improvement of the country."

The sum named by these different witnesses as that which it would be proper thus to levy annually from land varied from 2 s. to 15 s. per 100 acres, but they all agreed that the tax should only be imposed upon unimproved lands. We think, as we have before said, that it would be better to impose a very low amount, and to require all lands to pay it. A payment, for instance, of 2 s. per 100 acres, which is less than a farthing per acre, could scarcely be felt by persons who were raising a crop from the ground, while it would still be sufficient, being repeated each year, to induce absentee proprietors either to commence clearing their lands or to abandon a portion of them in redemption of the rest from the tax. It may be remarked, as diminishing any hardship which might be supposed to attach to the imposition of such a tax, that a large proportion of the lands of the colony are  
subject,

subject, by the terms of the grants under which they are held, to the payment of quit-rents; and though the House of Assembly has agreed to pay to the Government an annual sum in lieu of these rents, yet it appears to be fully understood that it has reserved to itself the right of imposing upon all granted lands the charges to which they from the first were liable, whether in the form of quit-rents, or in any other form which may be thought most expedient. NOVA SCOTIA.

All money derived from this tax should, we think, be applied, first, to completing the surveys of land, and next to local improvements of a public nature; all the witnesses under Lord Durham's Inquiry spoke of the great evils which had resulted, and which were likely to result, from the total want of accurate surveys in the colony. Lord Falkland also considers that the inconvenience from this cause is felt infinitely more in Nova Scotia than in Canada or New Brunswick; he enumerates it among the chief sources of discouragement to settlers with capital, to resort to the colony, and he apparently contemplates the possibility of assistance from the Imperial Government in the matter, seeing that decided indisposition prevails, from a variety of causes, in the House of Assembly to make any effectual provision against the evil; it is probable, however, that if a new fund were raised by the proposed land tax, the same objection would no longer be felt in making an appropriation to the purposes of a general survey.

4. If it should prove that the legislature of Nova Scotia are unwilling to impose the tax in question, we would then suggest whether it would not be expedient that land should be made liable to assessments for local purposes: one of the greatest obstacles to the improvement of the colony is the want of roads; at present each person is required to contribute towards their construction, three days' statute labour, or money in lieu of it. This system the surveyor-general, in common with other witnesses, condemns; it produces no satisfactory results, while, from the principle upon which it rests, the absentee proprietors who in so many ways inflict injury upon the colony, and effectually bar its progress, are relieved from all payments on account of it, in the same way as they escape from every other form of contribution to the exigencies of the community to which they belong. It is competent to the Governor under the Land Act at present in force, to appoint local land Boards in each county of the province, and to these, in concert with the commissioners whom we find by the evidence of the surveyor-general are appointed annually by the Governor to attend to roads, might be entrusted the regulation of these assessments, and the application of the money derived from them; they should be payable, we think, in land, in the same manner as was proposed for the tax.

In conclusion, we have the honour to state, first, that we have no objection to offer to the measures proposed by Lord Falkland respecting the mode of disposing of Crown lands in Nova Scotia, but would merely request attention to some points of detail that we have noticed in the part of our report which relates to that subject; and secondly, that in bringing before Lord Stanley, in the remainder of this report, some additional measures which a review of the evils so clearly described in the Governor's despatch suggested to our minds, our object has been, should his Lordship deem them deserving of further inquiry, to obtain an opportunity of their being considered and reported upon by Lord Falkland.

We have, &c.

COPY of a DESPATCH from the Right hon. Viscount *Falkland* to Lord *Stanley*.

My Lord,

Government House, Halifax,  
3 February 1843.

No. 7.  
Viscount Falkland  
to Lord Stanley,  
3 February 1843.

I HAVE the honour to transmit herewith, for the information of the Commissioners for Colonial Lands and Emigration, Returns of immigrants who have arrived in this province during the year 1842, made up according to the revised printed forms which accompanied your Lordship's despatch of the 25th March 1842, No. 33.

I have, &c.  
(signed) *Falkland.*

(No. 4.)

1. What funds have been placed at your disposal during the past quarter for the relief of immigrants?—None.
2. State the description of labour which is in request in the colony?—Any but such as of late have been landed in the colony, being generally of the lowest order of paupers.
3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—The immigration of the last quarter, being chiefly of the above description, exceeded the demand for labour, even during that season of the year in which employment can be obtained, and after which period they become, to a serious extent, a burden on the country.
4. State any particulars relative to immigration, the demand for labour, and the means of remunerating it, which you think may be useful?—I am of opinion that the labourers who arrive here from Newfoundland and St. John, New Brunswick, are sufficient for any demand for labour in the colony, the native population of which being all that is required; very few ever settling in the colony, having the United States generally in view for their final settlement.

Thos. N. Jeffery,  
Collector.

QUARTERLY RETURN :—PRICES.

RETURN showing the Average Retail Price of Provisions and Clothing in the Colony of  
in the Quarter ended 10th October 1842.

ARTICLES.	Quantity.	Average Prices (in Sterling).
-----------	-----------	----------------------------------

N. B.—Name the ordinary Articles of Consumption and of Clothing in use by Labourers  
in the Colony.

The labourers in this country are usually clothed in coarse woollens and cottons, the manufacture of Great Britain, purchased at various prices, depending entirely on the mode of payment. If purchased with cash, at an advance of from 75 to 80 per cent. on the sterling cost; if at a credit, 100 per cent.; if payable in produce, 135 to 140 per cent. advance; and if in labour, frequently 200 per cent. is paid.

The price of foreign provisions vary in the same ratio, depending on the mode of payment.

The present prices of country produce, with cash, are :—

		£. s. d.
Pork, salted - - - - -	barrel	2 - -
Beef, salted - - - - -	ditto	1 - -
Ditto, fresh - - - - -	lb.	- - 2

Whitesmiths - - - -	-	-	none employed.		

Pictou, 10 October 1842.

J. G. Boggs, Acting Sub-Collector.

(No. 8.)

1. WHAT funds have been placed at your disposal during the past quarter for the relief of immigrants?—None.
2. State the description of labour which is in request in the colony?—Farm labour is in the greatest request; mechanics and tradesmen are principally supplied by the natives of the county or province to an extent that leaves but little demand for immigrants of that description, although occasionally they find employment.
3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—From the depressed state of trade, the small immigration of last quarter was sufficient to satisfy the demand for labour.
4. State any particulars relative to immigration, the demand for labour, and the means of remunerating it, which you think may be useful?—From the low prices of produce of every description, and the total stop to ship-building, a total reaction must take place before any means of remunerating labour can be pointed out for this port.

Pictou, Nova Scotia, 10 October 1842.

J. G. Boggs.

(No. 12.)

1. WHAT funds have been placed at your disposal during the past quarter for the relief of immigrants?—None.
2. State the description of labour which is in request in the colony?—There appears to be no demand in this county for labourers, excepting that those engaged in agricultural pursuits occasionally require extra help.
3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—Yes.
4. State any particulars relative to immigration, the demand for labour, and the means of remunerating it, which you think may be useful?—There are still disposable Crown lands in this county on which immigrants might be located. Labourers are generally remunerated in money.

CORRESPONDENCE RELATIVE TO EMIGRATION.

101

NOVA SCOTIA.

(No. 16.)

1. WHAT funds have been placed at your disposal during the past quarter for the relief of immigrants?—None.
2. State the description of labour which is in request in the colony?—Farm labourers.
3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—No.
4. State any particulars relative to immigration, the demand for labour, and the means of remunerating it, which you think may be useful?—The emigrants which arrive at Cape Breton (being chiefly from the islands of Scotland) make but indifferent farm labourers, not having sufficient knowledge of agriculture; but a better class would both benefit themselves and the colony.

(No. 17.)

Custom House, Sydney, }  
10 October 1842.

H<sup>y</sup> Davenport,  
Acting Collector.

(No. 20.)

1. WHAT funds have been placed at your disposal during the past quarter for the relief of immigrants?—None.
2. State the description of labour which is in request in the colony?—Farm labour.
3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—The immigrants settle upon their allotments, and labourers are as difficult to be had as if none ever landed in the colony.
4. State any particulars relative to immigration, the demand for labour, and the means of remunerating it, which you think may be useful?—Farm servants, domestic (female) servants, and several kinds of mechanics are required. The persons who come hither, except as clearers of the forests, are the very worst; bad farm labourers, and know nothing of agriculture; a better class of farmers would be of great service. The fisheries and agriculture of the island would profitably employ several thousand families who would emigrate.

(No. 21.)

H<sup>y</sup> Davenport,  
Collector.

(No. 23.)

1. WHAT funds have been placed at your disposal during the past quarter for the relief of immigrants?—None.
2. State the description of labour which is in request in the colony?—Agricultural labour.
3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—There has been none.
4. State any particulars relative to immigration, the demand for labour, and the means of remunerating it, which you think may be useful?—A better class of agriculturists would be of great service to the island, and it is believed farm labourers with a small capital would find a profitable source of employment. Fishermen from the Scotch islands are also required.

H<sup>y</sup> Davenport,  
Collector.

(No. 157.)

No. 8.  
Viscount Falkland  
to Lord Stanley,  
3 April 1843.

COPY of a DESPATCH from the Right hon. Viscount *Falkland* to  
Lord *Stanley*.

My Lord, Government House, Halifax, 3 April 1843.

I HAVE the honour to transmit herewith the Blue Book of the province of Nova Scotia for the year ending the 31st December 1842, with the usual yearly Report on the state of the province.

I have, &c.  
(signed) *Falkland*.

GENERAL REPORT relative to the Province of *Nova Scotia*, for the Year ending 31st December 1842; made in pursuance of Directions from Her Majesty's Principal Secretary of State for the Colonies.

CIVIL ESTABLISHMENT.

THE Civil Establishment is supported chiefly by duties levied in the province, also partly from The Queen's casual revenue, and in a minor degree from the post-office revenues applied towards paying the expenses of that department; the Home Government, in aid of the customs' establishment, furnishing a sum through the Receiver-general of the Customs in England, in addition to the amount of the old Crown duties, and the proceeds of seizures, &c. made by the customs' department, which are likewise applied to the maintenance of that establishment:

	£.	s.	d.
The charge on the duties collected in the province being - - -	15,294	5	-
On the casual revenue, including 1,000 <i>l.</i> salaries of commissioners of Crown lands - - - - -	4,991	19	8
On post-office revenue - - - - -	1,235	5	5
From the receiver-general of the customs, old Crown duties, seizures, &c. - - - - -	3,437	5	1
£.	24,958	15	2

Making the whole of its ordinary expense, including that of the custom-house and post-office department and the legislature, 24,958*l.* 15*s.* 2*d.*

All the officers on this establishment are personally discharging their respective duties, except the provincial secretary and the officer holding the situations of surveyor-general and commissioner of Crown lands, who are in Europe on leave of absence.

REVENUE AND EXPENDITURE.

	£.	s.	d.
The revenue for the year ending 31st December 1842 amounts to -	84,869	2	8
And is derived as follows:			
From duties collected under provincial statutes - - - - -	38,185	10	10
From duties under Acts of the Imperial Parliament - - - - -	30,937	15	2
From rent of the coal-mines and other royalties - - - - -	4,389	17	3
From miscellaneous sources;—Such as the sums paid from the military chest, and by bills drawn on Her Majesty's Treasury in support of the ecclesiastical establishment; deposits in the savings bank, paid into the treasury; the payments into the casual revenue, from proceeds of Crown lands, fees received at the secretary's office, &c. &c. - - - - -	11,355	19	5
£.	84,869	2	8

JUDICIAL ESTABLISHMENT.

The following courts of judicature are established in Nova Scotia:

1. Court of Chancery.

The Lieutenant-governor is chancellor *ex officio*. No salary is attached to the office; but fees are received by him upon hearings and decrees, amounting, in the year 1842, to 28*l.* sterling. He is assisted by a master of the rolls, with an annual salary of 650*l.* sterling, and by four masters in Chancery, who are entitled to certain fees, but receive no salaries; and on appeals from the decisions of the master of the rolls he is also assisted by the judges of the Supreme Court, as he may think proper to require their services respectively, who receive no remuneration therefrom.

2. Court of Error.

The Lieutenant-governor and Executive Council constitute this court, to which appeals from the Supreme Court are allowed, if the sum exceed 300*l.* No business has been done in this court during the year, nor for some years past. An appeal lies from this court to the Privy Council in England.

## NOVA SCOTIA.

3. *Supreme Court.*

Consists of a chief justice, with a salary of 1,000 *l.* sterling, and of four assistant or puisne justices, three of whom receive a salary of 650 *l.* sterling each, and the fourth 560 *l.* sterling. In addition to these salaries, the chief and assistant justices receive one guinea per day each for travelling expenses while on their circuits, averaging about 50 *l.* sterling to each. This court sits three times in the year at Halifax, and twice in the year in every other county, exercising civil functions as regards the collection of debts, &c., and those of a criminal nature, as a court of oyer and terminer and general gaol delivery.

4. *Courts of General Sessions of the Peace.*

These courts, established in each county, are similar in constitution and practice to the courts of quarter sessions in England, except in as far as the trials by jury for misdemeanors, &c. have been transferred to the Supreme Court by a recent Act of the Legislature.

5. *Court of Vice-Admiralty.*

The master of the rolls in chancery is the judge in this court, the chief business in which consists in proceedings in regard to seamen's wages, and the prosecution of charges against foreign vessels, chiefly American, for infractions of the treaty in relation to the fisheries on the North American coasts. But little business has been done in this court during the current year (1842), owing principally, as it is believed, to the prevention of the trespasses of the American fishing vessels, by the employment of provincial cutters to guard the British fishing grounds, under a liberal provision of the provincial legislature for that purpose. There is no salary attached to the office of judge of this court; but certain fees are received by him, amounting in this year, according to his return, to about 20 *l.* sterling.

6. *Court of Marriage and Divorce.*

Under a recent Act of the Legislature this court is now so constituted, that the Lieutenant-governor, or, in his absence, the chief justice of the Supreme Court, or the master of the rolls in Chancery, may preside, with two members of the Executive Council. The chief justice, under the provisions of the Act, having been appointed vice-president of the court, sits as, and is, *de facto*, chief judge of the court, assisted by two members of the council. There are no salaries attached to those offices, but some trifling fees are payable upon hearings.

7. *Courts of Probate of Wills, &c.*

These courts, which were established on their present footing by a provincial Act, passed in the session of 1842, and specially confirmed by the Queen in Council, exist in each county of the province, taking cognizance of the settlement of the estates of deceased persons. The judges and registrars of the courts have no salaries, but are remunerated by fees specified in the Act.

In addition to the foregoing, there are courts of minor jurisdiction, under provincial Acts, by which justices of the peace throughout the province (and in Halifax, as an incorporated city, the mayor's court), determine civil suits when the sum in dispute does not exceed 8 *l.* sterling, and impose fines, not exceeding 4 *l.* sterling in amount, for certain criminal offences, such as assaults, &c., with imprisonment in some cases.

The whole ordinary expense of the judicial establishment in this year, charged on the revenues, is 6,334 *l.* 13 *s.* 4 *d.* exclusive of 720 *l.* for pensions of judges of the courts of common pleas, abolished by a recent provincial Act.

## ECCLESIASTICAL ESTABLISHMENT.

This consists of a bishop, with a salary of 2,000 *l.* sterling per annum, besides 400 *l.* sterling as a missionary allowance; of one archdeacon, who is also ecclesiastical commissary, his salary being 300 *l.* sterling, with an allowance of 175 *l.* sterling as a missionary, and of about 30 other missionaries, each receiving from the Society for Propagating the Gospel from 100 *l.* to 200 *l.* sterling per annum, the whole ordinary expense being 7,640 *l.* sterling, nothing of which, however, falls on the provincial revenue.

## EDUCATION.

King's College, at Windsor, was founded under a Royal charter in 1802. The Archbishop of Canterbury is the patron, the bishop of the diocese the visitor, and the Lieutenant-governor, bishop, and other provincial officers form a Board of directors or governors. Its statutes are similar to those of Oxford. It has an annual allowance from the provincial treasury of 400 *l.* sterling, under a permanent Act, and is otherwise supported by benefactions from societies in England and other sources, to the amount of 1,000 *l.* sterling per annum. It is under the immediate management of a president, who has a salary of 368 *l.*

368 *l.* sterling per annum, including his allowance as chaplain. The president must be a clergyman of the Church of England; but religious tests formerly existing in regard to graduates have been removed many years past. There are at present 22 students. In connexion with this college, there is an academy or grammar school, with at present about 58 scholars. The principal of this academy has an annual salary of 160 *l.* sterling, and an assistant 80 *l.* sterling, those salaries being exclusive of tuition fees.

Dalhousie College, in the city of Halifax, is an institution originally founded under the patronage of the late Earl of Dalhousie, when Lieutenant-governor of the province, in the year 1819, and was intended to be upon the model of the Edinburgh University; the funds requisite for the buildings and endowment of the establishment being derived from the duties of customs received at Castine, an American port in the temporary occupation of His Majesty's Government during the war with the United States, to the amount of 8,500 *l.* sterling, in addition to which, aid was granted by the Provincial Government to the amount of 6,400 *l.* sterling. A fine building was erected of freestone, but owing to the want of sufficient funds and other causes, the institution did not go into operation until the year 1838, when an Act of the Assembly was passed by which the principal professor in the Picton Academy was transferred to this college, and one-half of the sum theretofore allowed from the provincial treasury for the support of the academy, namely, 160 *l.* sterling out of 320 *l.* sterling, was also transferred to the college for the support of that professor, who was assisted by two others. In the year 1842 an Act of the Assembly was passed (which has since received the assent of Her Majesty in Council), authorizing the Lieutenant-governor to appoint a new Board of Governors of this college (the trust having been previously confined to a few persons of an official character), with powers of conferring degrees, in addition to the corporate capacity which had before existed, and providing that no religious tests should be required from the governors, professors, graduates, or others. As this was done with a view of removing from this college every thing of a denominational or sectarian character, a Board of Governors has been formed, consisting of a number of influential gentlemen of different denominations; statutes have been framed; and the present number of professors is two, in addition to which a professor of modern languages, much required, is to be added as soon as a suitable person can be procured. Under the present system of constitution and government, the number of students has already increased (being now 24), and when the college shall have been put upon the efficient footing contemplated by the governors, it is confidently anticipated that a very large addition will be made to the number. The funds of this institution are at present about 300 *l.* sterling per annum from dividends on account of sums invested in the three per cent. consols, and 320 *l.* sterling per annum granted from the provincial treasury.

Acadia College, incorporated by Acts of the General Assembly passed in 1840 and 1841, is situated at Horton, in King's County, having been established by the Nova Scotia Baptist Education Society. There are in this institution three professors of the Baptist denomination, and 33 students. There is connected with the college an academy with two teachers and 45 pupils. £.400 sterling is granted by the Legislature in aid of private contributions towards the support of this college, which is under the more immediate superintendence of the above-mentioned Baptist Society. Both institutions are open to all denominations, and no religious tests are required from either professors or students. The power of conferring degrees is given by the Act of Incorporation.

St. Mary's Seminary or College was founded by the Roman-catholics about three years since, and was incorporated by an Act of the Provincial Legislature in the session of 1841, which has received Her Majesty's assent. The Act gives the power of conferring degrees, and provides that no religious tests shall be required from any of the trustees or students. The principal professor is a Roman-catholic priest, assisted by other professors and teachers of the same persuasion. The students in the college and seminary, which have not as yet received distinctive characters, are about 72. This institution receives an annual grant from the provincial treasury of 326 *l.* 5s. sterling, and is otherwise supported by subscriptions and tuition fees.

It may be remarked in regard to these collegiate institutions, that there appears to be an increasing inclination throughout the province that they should all be merged in one common university, divested of any sectarian or denominational character, upon a similar footing to that of Dalhousie College.

The minor academies and grammar schools throughout the province are numerous. Besides the grammar school at Halifax, receiving by a permanent endowment 100 *l.* sterling annually from the provincial treasury, and the Picton Academy, receiving from the same source 160 *l.* sterling per annum, there are in each of the other counties of the province an academy or grammar school, with an annual provincial allowance each of 80 *l.* sterling; and in addition to these the General Assembly, by an Act of 1841, granted 4,800 *l.* per annum for four years for the support of common schools.

The several enactments in regard to colleges, academies, and common schools provide for the admission of free scholars, thus liberally affording the means of education to all classes.

#### COMMERCE.

Commerce has in this province, as in the other British North American possessions, suffered some depression during the past year, to which depression the diminution of the revenue is to be attributed. But the public credit has been maintained, all demands upon

108 CORRESPONDENCE RELATIVE TO EMIGRATION.

NOVA SCOTIA. the provincial treasury having been discharged; and although doubtless the same cause will affect the public income for 1843, it is yet to be confidently anticipated that, by a provident reduction of the expenditure for local objects, there will be no serious inconvenience sustained during the coming year.

IMPORTS into the Province for the Year ending 31st December 1842.

The balance of trade against the province is not so great as may appear from the foregoing tables; the value of exports being placed very low in proportion to the returns, and the West India trade being exclusively carried on by vessels owned in the province, as is generally that with Great Britain.

MANUFACTURES.

The manufactures of Nova Scotia are few in number; among them may be named cordage, coarse woollens and chocolate; tobacco is also manufactured in different ways. The grinding of wheat and other grain is universal throughout the country, and to some extent the preparing of deals for exportation. Grindstones are made and exported from the county of Cumberland, in which there are extensive quarries supplying the material. The value of this latter export is about 10,000*l.* sterling per annum. Mills for the grinding of plaster of Paris or gypsum have been established in the county of Hants, but their operation is very limited, from the restrictions imposed upon the trade by the American government. Manufactured articles in common use are generally obtained from Great Britain, and in a lesser degree from the United States, the high price of labour in the colony preventing the embarkation of capital in manufacturing speculations.

## AGRICULTURE.

Agriculture is steadily advancing ; it has already received some impulse from an Act of the General Assembly of 1841, under the provisions of which importations of improved breeds of live stock, and implements of husbandry, to serve as models, have been made ; and it is expected that further benefits will accrue when the system established by that Act, which gives encouragement, by provincial grants, to local societies throughout the country, under the superintendence of a central board at Halifax, shall have come more fully into operation. This year the crops have proved very abundant ; the plenty thereby occasioned, and the general depression of trade, have caused prices of agricultural produce to be lower than usual ; but this branch of industry may be considered as prosperous, the lands being mostly held by proprietors in fee simple, who having no rents to pay, are, with a good harvest, not much affected by a reduction of prices.

*Vide Act annexed.*

## GRANTS OF CROWN LANDS.

The quantity of land sold by the Commissioners of Crown Lands, in Nova Scotia Proper and Cape Breton, during the year ending 31st December 1842, is 5,893 acres. The gross amount of purchase-money upon sales made during this and former years, and received in this year, being 1,232 *l.* 18*s.* 2*d.*, the Commissioner of Crown Lands for Nova Scotia not having received sufficient to pay his salary up to the maximum amount, there being by his account 263 *l.* 6*s.* 4*d.* due to him, and the Commissioner for Cape Breton having paid into the casual revenue fund 20 *l.* 16*s.* 9*d.*, as the balance received by him after payment of his salary and contingent allowances. The regulations in regard to the sales of these lands having been found inconvenient and oppressive, the subject has been brought under the consideration of Her. Majesty's Government, and a report thereupon, made by the Land and Emigration Commissioners, will be brought under the consideration of the Legislature in 1843, with a view to a modification of those regulations, affording greater facilities to settlers.

## PUBLIC WORKS.

During this year the following public works have been completed, or partially advanced ; namely,

1st. The bridewell, or penitentiary, near Halifax ; a large stone building, upon which 5,840 *l.* sterling have been already expended, and it is estimated that it will require upwards of 2,000 *l.* sterling additional to complete it. The expense is wholly defrayed from the provincial treasury.

2d. A lighthouse at the entrance of Louisbourg Harbour, Cape Breton. This has been completed at an expense of 1,140 *l.* 7*s.* 4*d.* sterling, and put into operation. The building for the light was constructed for a lighthouse contemplated in the previous year at Partridge Island, near the head of the Bay of Fundy ; but objections having arisen as to the latter site, it was deemed advisable to transfer the work to Louisbourg Harbour, where a light was much needed, and approved of by the Legislature.

3d. A lighthouse at the north entrance of the Strait of Cauno, completed at an expense of 897 *l.* 9*s.* 2*d.* sterling, paid from the provincial treasury, the light being now in efficient operation.

4th. Large sums have been expended, drawn from the provincial treasury, for the improvement of the roads of the province, especially to facilitate the transit between Halifax and Canada of the mails received and sent between Halifax and England by the steam-packets. With this view, the roads between Halifax and Picton, and from the latter place to New Brunswick, have been altered, by avoiding the larger hills on those routes, and making a tolerably level and good road the whole distance, which however will require a considerable annual expenditure to keep it in good repair.

## POPULATION.

No census has been taken since 1838, and, owing to the way in which that was made, under the provisions of an Act of the Legislature, the returns were very imperfect. Taking into account the probable increase by births and immigration, the population of the province may be estimated at about 220,000. Nearly 2,000 emigrants have arrived in the course of the year, chiefly from Scotland, who have settled in Cape Breton.

## PROTECTION OF THE FISHERIES.

In the protection of the fisheries on the coast of Nova Scotia, about 1,500 *l.* sterling has been annually expended from the revenues of the province for several years past, to prevent the aggressions of American fishermen. This has been found so effectual, that during this year there has been but little complaint of the encroachments of foreigners, who from the effect of seizures made in former years, have generally avoided fishing within the proscribed limits, and consequently there have been no seizures in the course of this year. The mackarel fishery on the eastern coasts of the province has been unusually productive, and it is generally attributed to the protection thus afforded.

NOVA SCOTIA.

SABLE ISLAND, AND HUMANE ESTABLISHMENTS FOR THE RELIEF OF SHIPWRECKED SEAMEN AND PASSENGERS.

THE establishment of Sable Island for the saving and relief of shipwrecked persons and property, continues in the most effective state: 320*l.* sterling is granted by the provincial legislature for this establishment, in addition to 400*l.* from the Imperial Government. There are humane establishments, affording provisions for the same purposes, at the islands of St. Paul and Scattarie, where the occurrence of shipwrecks is frequent, and at the Seal Islands, which are supported by the provincial government; the two former receiving in part aid from other provinces of British North America, towards the expenses of the light-houses and humane establishments upon them, under the charge of the government of this province.

(signed) *Falkland,*  
Lieutenant-governor.

ANNO QUARTO VICTORIÆ REGINÆ, CAP. 2.

An Act for the Encouragement of Agriculture and Rural Economy in this Province.  
(Passed the 29th day of March. A. D. 1841.)

Central Board.	BE it enacted, by the Lieutenant-Governor, Council, and Assembly, that it shall and may be lawful for the Lieutenant-Governor, or Commander-in-Chief for the time, by and with the advice of Her Majesty's Executive Council, to appoint and commission a central Board of agriculture at Halifax, consisting of 11 fit and proper persons, of whom seven shall be resident in Halifax, or its vicinity, and one selected from the eastern, western, and middle divisions of Nova Scotia, and one from Cape Breton, four of whom shall be a quorum, and from time to time, as vacancies occur in the commissioners composing such Board, by revocation, death, resignation, or continued absence from the province, to supply such vacancies by new appointments.
Annual grant of 500 <i>l.</i> for four years. How to be expended. Salary of clerk.  Importation of implements, seeds, live stock, &c.	2. And be it enacted, that there shall be granted and paid to the said commissioners, out of the public funds of this province, the sum of 500 <i>l.</i> annually, for four years, from and after the passing of this Act, whereof the said Board shall be at liberty to expend a sum not exceeding 100 <i>l.</i> annually, for the salary of a clerk or secretary, to be appointed by them, and removed at pleasure, and a further sum for their incidental expenses; and shall lay out and expend the balance, during the aforesaid period of four years, in the importation from abroad of the most improved implements of husbandry; and also of seeds and live stock of various kinds, in the encouraging and circulating of agricultural publications, and the diffusion of knowledge on the different branches of husbandry, and in such other objects, for the agricultural improvement of the province, as the said Board may from time to time approve; and that the said Board shall be at liberty to expend the balance on any one or more of such objects, in every year, as their experience and judgment may from time to time suggest; and shall exhibit an account of such expenditure to the Legislature in each year, verified by the oath of one of the members of the said Board, and by proper vouchers in that behalf.
Importations how to be disposed of.	3. And be it enacted, that the said Board shall be at liberty to dispose of all implements, seeds, or live stock, imported by them from time to time in such way as may appear to them most conducive to the general improvement of the province, either by offering such importations, or any of them, for sale, in such counties and on such terms as they may direct; or by distributing the same, or any of them, gratuitously, or placing the same under the charge of any societies or individuals whom they may select, and on such conditions as they shall from time to time prescribe; and in case such importations, or any of them, shall be offered for sale, all instruments or bonds that may be directed by the said Board to be taken in respect thereof, shall be in the names of the commissioners for the time being, and shall be valid and binding on the parties executing the same, for the purposes to be therein declared; and the net proceeds of such sale shall be applied and accounted for by the said Board in manner aforesaid; and until such sales shall be had, all implements, seeds, live stock, or other articles, imported by the said board, shall be accounted the property of the commissioners for the time being, and be held by them for the purposes of this Act.
To correspond with agricultural societies, &c.	4. And be it enacted, that the said Board shall open and carry on a correspondence with the several agricultural societies already formed, or which may be hereafter formed in this province, and shall aid and direct them, as far as may be required, in prosecuting their several objects; and shall import for the said societies, out of funds to be provided by them, such implements, seeds or live stock, as they may respectively want from abroad; and shall likewise inspect and audit the accounts to be rendered by the several societies, of the application and expenditure of their funds, as hereafter mentioned; and from

## CORRESPONDENCE RELATIVE TO EMIGRATION.

111

from the reports to be furnished by the said societies, and from such other sources of information as may be accessible to the said Board, shall furnish to the Legislature, at every session, a general report of the progress of agriculture throughout the province, and of the expenditure of all monies granted therefor.

To report to the Legislature.

5. And be it enacted, that it shall and may be lawful for the Lieutenant-Governor or Commander-in-Chief for the time being, to grant his warrant on the public treasury of this province, annually, for the period of four years, from and after the passing of this Act, for the sum of 1,275*l.*, being at and after the rate of 75*l.* for each of the 17 counties in this province, to be applied and expended as hereafter mentioned.

Annual grant of 1,275*l.* for four years for the several counties in this province.

6. And be it enacted, that the said Board, in each and every year, shall ascertain whether agricultural societies that now are, or hereafter may be, formed in the several counties, ought to receive a proportion; and shall likewise determine what proportion, if any, each one of such societies shall receive out of the aforesaid grant of 75*l.*, such proportion to be regulated by the said Board, with reference to the numbers and contributions of the members of each society, and to its local position and usefulness, and so as one society, if there be no more than one in any of the said counties, may receive, with the assent and approval of the said Board, the whole of such grant; and that the president and secretary of each society shall be entitled to draw out of the treasury, for the purposes of this Act, the sum that may have been assigned to it as aforesaid by the said Board; provided always that no society shall be entitled to any portion of the said grant which shall not raise annually, by private contribution, the sum of 10 *l.* at the least; and that no more than three societies shall receive any proportion of the said grant in any one county: and provided also, that in all cases where a Central County Society, with a branch or branches in the county, shall be formed and approved of by the Central Board, that the said sum of 75*l.* shall be given to the said Central Society for distribution, for the purposes of this Act, in all cases where the sum of 20 *l.* shall have been raised by the Central Society, and the branch or branches thereof, jointly, in manner before mentioned.

How to be apportioned.

7. And be it enacted, that the sums so assigned and paid to the several societies, shall be applied and expended by them in the importation of live stock, implements or seeds, the offering of judicious premiums, or in such other agricultural objects and uses as in the judgment of each society may be best adapted to its local position and wants; and that such objects may be varied or altered, from time to time, at the discretion of each society; but no part of such sum shall be applied in the expense of managing the said societies.

How to be expended by the societies.

8. And be it enacted, that each one of the said societies throughout the province shall render to the said Board, on or before the 31st day of December in every year, a full and exact account, verified by the oath of the president or secretary thereof, to be administered by any one of Her Majesty's justices of the peace, of the expenditure of the sum so assigned and paid to such society out of the aforesaid grant, as also of the amount and appropriation of the funds contributed by or belonging to such society, with a report of its proceedings for the past year; and that any society which shall neglect or refuse to furnish such account and report, unless excused therefrom by the said Board, shall not be entitled, in any future year, to receive any proportion of the aforesaid grant.

Societies to render account to the Central Board.

9. And be it enacted, that this Act shall continue in force for the period of four years, and from thence to the end of the then next session of the General Assembly.

To continue for four years.

(L. S.) By his Excellency the Right honourable Lucius Bentinck, Viscount Falkland, Knight Grand Cross of the Guelphic Order, and Member of Her Majesty's Most Honourable Privy Council, Lieutenant-Governor and Commander-in-Chief in and over Her Majesty's Province of Nova Scotia and its Dependencies, &c. &c. &c.

I hereby certify that the above is a true copy of an Act passed in the last session of the General Assembly.

Given under my Hand and Seal at Arms, at Halifax, this 15th day of April, A. D. 1841, and in the fourth year of Her Majesty's reign.

(signed) *Falkland.*

## NEW BRUNSWICK.

BRUNSWICK.

— No. 1. —

No. 1.  
Lord Stanley to  
Lieut.-Governor  
Sir W. M. G. Cole-  
brooke,  
24 April 1842.

(No. 53.)

COPY of a DESPATCH from Lord *Stanley* to Lieutenant-Governor  
Sir *W. M. G. Colebrooke*.

Sir,

Downing-street, 24 April 1842.

I ENCLOSE herewith the copy of a placard containing the names and addresses of the principal emigrant agents in British America, which has been printed for the information of emigrants, with a view to protect them from the misrepresentations of designing individuals.

Copies of this placard will be delivered to the master of each vessel, with the other papers which he receives on clearing from the custom-house. It is desirable that similar placards should be supplied to the agents at the usual places of disembarkation in New Brunswick, stating the names and addresses of the agents and sub-agents, or other persons selected to advise with the immigrants on their passage through the country, and that the agent at the port of landing should be instructed to distribute the placard among the passengers on the arrival of emigrant ships.

I have therefore to request that you would issue the necessary directions on the subject.

I have, &c.  
(signed) *Stanley*.

brooke to Lord  
Stanley,  
27 May 1842.

(No. 56.)

COPY of a DESPATCH from Lieutenant-Governor Sir *W. M. G. Colebrooke* to Lord *Stanley*.

Fredericton, New Brunswick,  
27 May 1842.

My Lord,

REFERRING to my despatch, No. 46, April 30, I have the honour to enclose to your Lordship, a report from the emigrant agent in St. John's.

The notification contained in your Lordship's despatch, No. 53, dated April 24th, has been duly transmitted to St. John's and the outports. Where emigrant agents have not been appointed, the deputy treasurers are required to officiate. But as it would be desirable that such agencies should be appointed at Miramichi, St. Andrew's, and probably at other ports, I submit whether it would not be advisable to insert a clause in the Act of Parliament, for imposing the charge

For Sir W. M. G. Colebrooke's Despatch, 30 April 1842, vide Correspondence respecting Emigration, ordered by the House of Commons to be printed 7 June 1842, No. 301, page 336.

## CORRESPONDENCE RELATIVE TO EMIGRATION.

113

charge of head-money on emigrants in the colonial ports, to authorise the payment of the emigrant agents from that fund.

A few of the emigrants who have arrived have found employment in the province, but the greater proportion have proceeded to the United States, and will, I hope, be attracted to Canada by the public employment held out to them in that quarter.

I have, &c.

NEW  
BRUNSWICK.

## Enclosure in No. 2.

Encl. in No. 2.

Sir,

St. John's, New Brunswick, 18 May 1842.

OF the vessels advertised with emigrants at sea, only two have arrived at this port, whither those noted are destined. The Andover, from Cork, came into harbour yesterday. The Londonderry is detained at the quarantine ground, having fever on board, but only to a very limited extent.

In the details of my arrangements to instruct emigrants, the accompanying printed notice is put on board of every vessel as she is boarded in the bay; and I have been in the habit of giving copies to masters of regular traders, as preliminary instruction for those embarking at home. The "Emigrant's Hand Book" is also put on board by the medical officer, and copies deposited for their information in the wards of the "Reception House," and hospital, and every means in my power used to meet their inquiries and views; and I respectfully hope that his Excellency the Lieutenant-governor will believe, that almost every case of our promiscuous and voluntary immigration is truly (or very often) *sui generis*, and has to be treated accordingly.

The people on board the Andover generally engaged their passages with the view to proceed immediately to Boston. I had the honour to intimate on a former occasion, for the consideration of his Excellency, that the navigation laws of the United States restricting numbers on board, and the municipal and state imposts for head-money, &c., induce the emigrants, by a saving, to take a British colonial port *in transitu*.

Alfred Reade, Esq.  
&c. &c. &c.

I have, &c.  
(signed) *A. Wedderburn, G.E.A.*

NOTICE to Emigrants arriving at the Port of *St. John, New Brunswick,*  
and Out Bays.

WHEN the medical officer has inspected the emigrants, and discharged the vessel with a clean bill of health, they will be visited by Mr. Wedderburn, the Government emigrant agent for the province, who will afford them instructions and assistance in procuring employment, public lands, and private farms, as their cases may require.

Immigrants are earnestly cautioned not to remain idle in town, where the expenses of living will greatly impair whatever means they may possess. These should be carefully husbanded, to enable them to settle in the country without delay.

Facilities of conveyance are found by steam-boats and other vessels, to many of the most eligible points for settlement and employment in the country. Steamers leave this place or Indian Town (close by), every morning and evening, for Fredericton, the capital, passing Gagetown, the shire town of Queen's County; and Oromocto, of Sunbury. After leaving Fredericton, conveyances are found by water, &c. to any part of Prince William and adjacent parishes; onward to Woodstock, Brighton, and county of Carleton. Between St. John and Fredericton are the extensive farming districts of Sheffield and Mangerville, with the lakes of Grand Lake and Washademaak, inlet Bellisle, river Kennebecasis, and surrounding settlements, accessible at all times in summer by covered wood boats. Besides the Kennebecasis River, there is a main post road to Kingston, Hampton, Norton, and Sussex Vale, in King's County, which leads to Petitcodiac, Sackville and Dorchester, in Westmorland, whither also there is water communication on the Bay of Fundy, with opportunity of land at Quaco (St. John's County), Shepody or Hopewell, Memramcook, and the Bend of Petitcodiac, from which there is a land carriage to Shediac, of about 14 miles, on the way to Richibucto and Miramichi. To the westward steamers and sailing-vessels also ply regularly, viz. to Campo Bello, St. Andrews, and St. Stephen, in the county Charlotte, where emigration societies are established, and by whom every attention will be shown to forward the emigrants' views.

The Crown lands are sold by the Government here on very moderate terms, and the emigrant agent earnestly recommends them to form themselves into associations for immediate settlement, before leaving the vessels; they will then, without delay, be enabled to proceed either to the vicinity of friends who may reside in the country, or form locations on the several surveys recently made for that purpose, by order of his Excellency the Lieutenant-governor in Council; viz. the Victoria, Oregon, and Albert settlements.

The industrious of all classes of immigrants need apprehend no want of success in this province, if they steadily persevere in their avocations. The emigrant agent will also afford any

NEW  
BRUNSWICK.

any aid in arranging for passages from Great Britain and Ireland, for any parties who may be desirous to join their connexions or others, in this province.

It is very desirable that those arriving should bring with them testimonials of character, from persons of known respectability at home.

(signed) A. Wedderburn,  
G. E. A. for N. B.

N. B.—The Emigration Society, of which his worship the mayor, is president, will furnish passes for employment to the respective district agents in the country.

A. Wedderburn,  
Secretary to Emigration Society, St. John.

Government Emigration Office, St. John's, New Brunswick,

Lieut.-Governor  
Sir W. M. G. Cole-  
brooke to Lord  
Stanley,  
13 June 1842.

— No. 3. —

(No. 59.)

COPY of a DESPATCH from Lieutenant-Governor Sir W. M. G. Colebrooke to Lord Stanley.

Fredericton, New Brunswick,  
13 June 1842.

My Lord,

I HAVE the honour to enclose to your Lordship the copy of a letter from the emigrant agent in St. John, with a further return of emigrants who have embarked for the province chiefly from the ports in Ireland.

These persons, when they quit their homes, probably repair to the nearest ports, where they are induced to embark in the ships bound to this province, without any accurate information, and possibly in many cases without any settled views of their future destination. Single men, and those who have any resources and who could readily find a settlement in the province, are influenced by designing or interested persons to proceed on their arrival to the United States; but families in a state of destitution are landed, who have no other resources than such scanty relief as can be obtained from parochial funds or charitable contributions. Of the numbers thus chargeable in St. John, I have no report, but in Fredericton there are at this time from 60 to 70 women and children wholly unprovided for, while the men have gone into the country in search of employment; and in some cases, where the families have accompanied them, they are dependent for their support on the hospitality of the farmers.

Their patient endurance under the severe trials and privations to which they are often exposed, is creditable to these poor people; and not less so the numerous instances where they apply the resources they acquire by their industry, in assisting their parents and relatives at home.

Left

CORRESPONDENCE RELATIVE TO EMIGRATION.

115

Left to the spontaneous influence of their natural feelings, there are dispositions in the Irish peasantry giving them the strongest claim to protection and sympathy.

Referring to the suggestion contained in my despatch, No. 56, of the 27th ult. I beg leave to urge on your Lordship's consideration, the advantage of raising, under the authority of Parliament, an emigrant tax, to provide for the establishment of agencies in the colonial ports.

The tax now levied under an Act of this province is inadequate to meet the charges which are annually incurred, for the relief of the emigrants, by the guardians of the poor; and the heavier tax to which the masters of ships are subject who take them to the United States, operates as an inducement to bring them to this province, from whence those who have any funds proceed to Boston by the steam-vessels. When they are landed at Miramichi, they are often exposed to a fatiguing journey across the country to St. John or St. Andrew's.

The presence of an officer in each of the ports where they arrive, whose advice and assistance they might claim, would thus enable them to avoid much of the difficulty and distress to which they are now exposed. Those who possess resources would be directed where they could settle advantageously in the province, and others would be advised where employment could be obtained.

From the tenor of the concluding observations in your Lordship's despatch, No. 60, of the 18th of May, I find that I have omitted to report that I have abstained from taking any steps for the introduction of British emigrants from the United States, although I am informed that many have arrived in the present year, who would have proved valuable settlers in the British colonies.

I have, &c.  
(signed) *W. M. G. Colebrooke.*

Enclosure 1, in No. 3.

Government Emigrant Office, St. John,  
New Brunswick, 4 June 1842.

Sir,

I HAVE the honour to transmit, for the information of his Excellency the Lieut.-governor, a report of vessels having sailed with emigrants from home for the port, amounting to 1,596 souls on board.

None of the vessels have yet appeared; but as they do arrive, numerical corrected returns will forthwith be submitted to his Excellency.

The instructions communicated to me by Mr. Odell, under date 23d April last, to "transmit the returns quarterly," seemed to supersede other arrangements; but with as little delay as the service admits of, such reports as the Lieut.-governor requires will be forwarded to you after arrivals.

The placards sent from the secretary's office have been posted, and in part issued, according to his Excellency's commands.

NEW  
BRUNSWICK.

Encl. 2, in No. 3.

Enclosure 2, in No. 3.

COPY of an ACT passed by the Legislature of *New Brunswick*, intituled, "An Act to regulate Vessels arriving from the United Kingdom with Passengers and Emigrants."

Anno Secundo Gulielmi 4, Regis.

Preamble.

WHEREAS the practice of landing passengers and emigrants from the United Kingdom who are in a destitute and diseased condition has become extremely burthensome, and sometimes dangerous to the health of the inhabitants of this province. And whereas such disease and distress are often occasioned by the practice of taking on board ships in the ports of the United Kingdom more passengers and emigrants than can be comfortably accommodated; and whereas it is just and expedient that the inhabitants of this province should be relieved from some of the heavy burthens thus imposed upon them.

Masters of vessels, arriving from the United Kingdom, to pay 5 s. for each passenger when the vessel is sanctioned by His Majesty's Government to take out emigrants to the North American Colonies, and 10 s. when not so sanctioned.

1. Be it therefore enacted, by the Lieutenant-governor, Council, and Assembly, that the man or person having charge of any ship or vessel, which may arrive at any port or place in this province, from any port or place in the United Kingdom with passengers and emigrants shall, at the time of reporting such ship or vessel, pay to the treasurer of the province, or any deputy treasurer, at the port or place where such ship or vessel may arrive, the sum of 5 s. for each and every such passenger and emigrant, when the master or person having charge as aforesaid, shall make it appear, by a certificate from the officers of the customs, at the port of clearance in the United Kingdom, that such ship or vessel had the sanction of His Majesty's Government to take out passengers and emigrants to the North American Colonies; and when no such certificates are produced to the said treasurer or deputy treasurer, as the case may be, then and in such case the master or person having charge of such ship or vessel as aforesaid, shall pay to the said treasurer or deputy treasurer the sum of 10 s. for each and every passenger and emigrant on board such ship or vessel; all which sum or sums the said treasurer and deputy treasurers respectively are hereby authorized and required to demand and receive: provided always, that two children, each being under the age of 14 years, or three children, each being under the age of seven years, or one child being under the age of 12 months, with the mother of such child, shall in all such cases be computed as one person for the purposes of this Act.

Proviso, as to children.

Separate accounts to be kept of the money arising under this Act.  
Application of the Act.

2. And be it further enacted, that the treasurer of the province, and deputy treasurer respectively, shall keep a separate account of all monies received under and by virtue of this Act; which sums so received shall be applied from time to time, by grants from the Legislature, towards relieving destitute and diseased passengers and emigrants, and in assisting them to reach their several places of destination within the province, and paid by warrant of his Excellency the Lieutenant-governor, or Commander-in-chief for the time being.

Mode of recovering the duty in cases of neglect or refusal to pay.

3. And be it further enacted, that upon the refusal or neglect of the master or person having charge of any ship or vessel arriving with passengers and emigrants as aforesaid, to pay the sum or sums for each and every passenger and emigrant aforesaid, it shall and may be lawful to and for the treasurer, or deputy treasurer, as the case may be, to sue for and prosecute the same before any two of the magistrates of the county where the vessel may be; and on conviction, the said magistrates shall and may levy the same by warrant of distress under their hands and seals, directed to any sheriff, marshal, or constable, at or near the place where the vessel may be, and by sale, under the said warrant, of the guns, boats, tackle, apparel, and furniture of such ship or vessel, and the overplus (if any) of such distress and sale, after deducting the costs, shall be paid to the master or person having charge of such ship or vessel.

Suspending clause.

4. And be it further enacted, that this Act shall not be in force, or come into operation until His Majesty's Royal Assent be first thereunto had and declared.

(signed) *Archibald Campbell*,  
Lieut.-Governor.

*Note.*—This Act has been confirmed by His Majesty in Council.

— No. 4. —

(No. 65.)

COPY of a DESPATCH from Lieutenant-Governor Sir *W. M. G. Colebrooke* to Lord *Stanley*.

My Lord,

Fredericton, New Brunswick, 28 June 1842.

REFERRING to my Despatch, No. 53, May 14th, I regret to have occasion to report that, notwithstanding the precautions taken by your Lordship to discourage the emigration of indigent persons to this province under the present depression to which all classes are subject, large families have come out, and especially to the Port of St. John, who, from their indigence, have seriously aggravated the pecuniary distress of the community. When they arrive it has been found impracticable to discriminate between those who are possessed of any resources or who may be entirely destitute, and they are indiscriminately thrown on the charity of the country already overburthened by the destitution arising from general want of employment. From these circumstances the men sometimes proceed in search of employment through the province or to the United States, leaving their families to be supported when the resources of society are already exhausted and the Government is destitute of funds. Some whole families set out to travel through the country, depending for subsistence on the casual hospitality of the distressed farmers, and often refusing employment, their object being to proceed to the United States by crossing the frontier. By this expedient the heavy charges to which the masters of emigrant vessels are subject in the American ports are evaded.

It was my intention by the present mail to have replied to the observations contained in your Lordship's Despatch, No. 66, of the 31st of May; but from the importance of the subject, I am desirous of entering more fully upon it than I can at this time. That it is practicable to devise means for averting the evils attendant on the system of colonization heretofore pursued, I have no doubt; and I will take this opportunity of explaining that the disposal of lands otherwise than by public sale has at no time entered into my views for the settlement of the colonies.

I have, &amp;c.

(No. 71.)

COPY of a DESPATCH from Lieutenant-Governor Sir *W. M. G. Colebrooke* to Lord *Stanley*.

My Lord,

Fredericton, New Brunswick, 9 July 1842.

I HAVE the honour to forward to your Lordship the return of emigrants who have arrived in the principal ports of this province, from the United Kingdom, in the quarter ending the 30th of June.

From these returns your Lordship will perceive that the number in the present season has been greater than usual; and although many respectable settlers have come out, and, from the prevalence of temperate habits, there is a marked and general improvement in the condition of the emigrants, the more indigent have been exposed to great suffering, in consequence of the general distress to which the inhabitants of all classes are at present exposed.

Since the date of my Despatch, No. 59, of the 13th of June, the influx of so great a number of people, many of whom are ascertained to be paupers, has been a serious aggravation of the difficulties to which the province is still subject, with no prospect of abatement in the present year; for representations have been made to me that many farmers are without the means of subsistence, and that in several instances they had been obliged to consume the seed corn and potatoes required by them for planting in the spring, while the banks have been obliged to suspend their usual accommodation, partly owing to the large advances of capital they had already made to the Government.

No. 10.

For Sir W. M. G. Colebrooke's Despatch, No. 20, 26th February, and Lord Stanley's, 31 May, No. 66, vide Correspondence respecting Emigration, ordered by the House of Commons to be printed, 7 June 1842, No. 301, pp. 330-333.

The check given to the timber trade in the last year, did not lead to a corresponding change in the habits of the people; and the lumbering parties having continued their pursuits under an expectation of the markets being relieved, they obtained on credit their usual supplies from the farmers and merchants, for which they cannot now make payment, being unable to dispose of their lumber except at a great loss.

From the reports of which copies are inclosed, your lordship will comprehend the extent of the pressure which the influx of an unusual number of indigent emigrants has occasioned.

This pressure has fallen with the greatest severity on Saint John and the outports; and also on this town, in consequence of the numbers who come up in search of subsistence by the river steamers from Saint John. In explanation of the condition of the people, I enclose an extract of a petition from a respectable farmer, and the affidavit of an emigrant who came out from Ireland, with his family and 60 other emigrants to Miramichi; also a report from the magistrates in the county of Carleton.

In recurring to my despatch, No. 20 of the 26th of February, and to that of your Lordship, No. 66, of the 31st of May, I am prompted, from the importance of the subject, to offer such further observations as may assist in determining the extent and manner in which the assistance of the Government may contribute to the effective settlement of the colonies.

To any one who has had an opportunity of observing the effects of the ancient mode of colonization still prevalent in eastern countries, and contrasting it with the system adopted in the British colonies, must be apparent the practical advantages attending the former.

The policy of the ancient governments having been to hold out the highest encouragement to agriculture, from which it was early discovered that resources could alone be derived to avert the pressure of increasing population, the occupation of new lands was effected by a skilful application of means for reclaiming them.

The district to be reclaimed and occupied might require to be cleared of wood or to be irrigated by waters to be conducted from distant rivers, by the excavation of tanks or reservoirs, or the construction of them by dams or dykes raised across the gorges of hills: the ruins of the most ancient works, as well as those which still exist, afford proof that they were executed with extraordinary skill and judgment.

That capital, in the modern sense, might have been in some instances employed in their execution, is probable; that they were as often the result of the co-operative industry of colonies of free settlers who reclaimed the lands, is shown from the enterprises of this nature which are still in progress in various countries of the East.

When the reclaiming of lands was thus effected by co-operative industry, the settlers necessarily carried with them their implements and the means of subsistence, and were organized under such intelligent direction as rendered their labour effective; the division of the land or of the produce, when cultivated in common, being regulated by a consideration of the arrangement under which the lands might be rendered in the highest degree productive. By carrying out at once all the arts applicable to their situation, and by the participation of all classes in the profits of various industrial pursuits, their independence of extraneous resources was in a great degree secured, and they were able to make the contributions required for their defence and for the maintenance of their public works.

The organization of such colonies, united as they usually were by a common faith and with bye-laws adapted to their various circumstances, will account for the remarkable fact that countries thus settled should have survived the violent conquests and revolutions to which several of them have for ages been subject, and have retained so much of their organization.

From the superiority of the common law of England, and its adaptation to the varied circumstances of society in its progress, it was to have been expected that the English colonies would have acquired the same advantages in a high degree; and the early success and expansion of the colonies of New England, may be mainly referred to this source.

It is, however, remarkable that the arts and improvements of the older communities have been slowly carried to the colonies; and as it was impracticable

to

to realize the means of obtaining the productions of these arts by exchange, the desire for them was lost, and a rude system of agriculture and mode of life obtained, which the more indigent classes, forming the great body of the emigrants, were unable to improve. Hence too the wealth acquired in commerce continued to be accumulated in the towns, and was not to any extent employed in reclaiming the country, whereby territorial influence might have been acquired, and the general condition of society ameliorated and improved.

The settlement of the French Canadian colonies under a feudal organization secured some of the advantages derivable from such a system, but it has been unfavourable in other respects to the advancement of society. Such settlements would, however, by the example of others organized on better principles, have improved their system; and it is to be apprehended that this improvement has been retarded by the desultory influx of indigent settlers from the United Kingdom, especially since the war, and the absence of all organization amongst them. That such settlements could be successfully formed by individual or associated capitalists, I entertain no doubt; but it would be much facilitated by the adoption of a system of home colonization on the same principle, when the skilful occupation of land might be successfully combined with the practice of various arts and trades, which it would be desirable to carry to the colonies.

Such colonies would provide for their support and make a return for the capital invested in them, and they would become the means of training the people of every class for emigration to the colonies, and of cementing the bonds with the parent country. I need hardly add that the formation of such colonies in the United Kingdom would operate as a signal relief to the distressed labourers and operatives who are suffering at home, or who emigrate to the colonies without resources; and there is no part of the British colonial possessions, with which I am acquainted, in which such organized settlements might not be carried out with advantage.

Even in tropical countries, the formation of such settlements is the only practical mode of improving the colonies, and avoiding the evils incidental to the desultory introduction of indigent settlers of whatever class. And whether we advert to the evils of what was called "the redemption system," in the West Indies, which was succeeded by the African slave trade, or to the modern expedient of introducing labourers, chiefly males, from Africa or India, the same defects were inherent in them, and are such as will be found to have retarded the improvement of the colonies.

A primary advantage would attend such a system of organized colonization, that provision would be made for the spiritual care of settlements so formed, and for the education of the young, the neglect of which has been so unfavourable to the moral condition of the colonies.

In support of these views, I enclose to your Lordship an extract of a letter I have recently received from a gentleman of property in Antigua, now in England, who had opportunities of judging of the practical advantages of the village system in operation in that island; and which, under the principles of the common law, I would be glad to see introduced into all the colonies.

Your Lordship has justly remarked that the Government can do little more than, by regulating and diminishing the cost of conveyance of settlers, facilitating the acquisition of lands, and circulating correct information, to leave such undertakings to the operation of private interest. I am aware also that the intervention of the Government beyond these has, in some cases, involved the public in expenses, and ended in failure. It is, therefore with no object of directly engaging the Government in such projects that I have entered into an explanation of these views, but in order to promote them by the means which your Lordship has indicated, and to discourage undertakings not founded on such principles. The prosecution of useful public works on the credit of the colonies would tend greatly to facilitate their settlement; and the advantage which the local communities would derive from the support of Her Majesty's Government, would chiefly be in the opportunity of obtaining the funds required by them on more favourable terms, when large loans were negotiated. For this purpose, and to provide for the gradual redemption of the debt of this province, I am still of opinion that 500,000*l.* will be required, for which adequate provision may be made. If the half of this sum had been raised in the present year, not only would the country have been relieved from the existing distress by enabling the banks

120 CORRESPONDENCE RELATIVE TO EMIGRATION.

NEW  
BRUNSWICK.

to resume their accommodation, and by affording employment to the people, but the revenue would have been largely augmented, and have sustained the public credit.

I have, &c.

St. John, New Brunswick, 4 July 1842.

Sir,  
I HAVE the honour to transmit a return of the vessels that arrived at Partridge Island on the 30th of June, with emigrants. I recently submitted to Mr. Odell, for his Excellency the Lieutenant-governor's consideration, whether I should include them in the return closing on that day, or open the current quarter's account with them as they enter at the public offices here. All the other reports are ready, and only wait a private opportunity to be transmitted, the postage being very heavy.  
The numbers arrived up to the 1st of July, are 5,599 souls, all ages included; and the accompanying abstract shows 1,387 more; total, 6,986, coming in 40 sail of British vessels. The printed forms of Ship Reports are exhausted.

Remarks.—A melancholy accident took place yesterday afternoon (Sunday). A number of the emigrants (supposed 18), in their anxiety to get on shore, went on board in a small boat, in a thick fog, now prevailing, and in coming up the harbour got in contact with the steam ferry-boat, and upset. I was immediately among them with aid for the survivors, on shore; five are believed to be drowned; one body, a man's, was found this morning. Fortunately Dr. Boyle was on board the steam-boat, and by his benevolent professional exertions was enabled to resuscitate the sufferers, who would otherwise have died. As soon as the case was known, Drs. Paddock and E. Smith gave kind attention to them on shore and on landing. They are all doing well.

Closed, 4 July.

CORRESPONDENCE RELATIVE TO EMIGRATION. 121

(A. No. 3.)

NEW  
BRUNSWICK.

Sir,  
I HAVE the honour to state for the information of his Excellency, that last evening I received accounts of two more vessels coming to this port with emigrants; viz.:—

Government Agent Office,  
St. John, New Brunswick, 6 July 1842.

VESSEL'S NAME.	WHERE FROM.	SAILED.	MEN.	WOMEN.	CHILDREN.		TOTAL.
					AGE. 14	AGE. 7	
Friendship - -	Londonderry -	14 June -	25	48	8	18	99
Defiance - -	Cork - -	2 -	45	54	5	24	128
			70	102	13	42	227

Another vessel, the “Aisthope,” of which I began to entertain apprehensions, she having sailed from Sligo with 144 emigrants on the 22d April; she was dismasted, and returned to Londonderry, and sailed again (being repaired) on the 13th June, with 104 passengers, for this port. I have no detail of the latter, but the former was laid before his Excellency.

I have, &c.  
Alfred Reade, esq. (signed) Alexander Wedderburn,  
&c. &c. &c. G. E. A.

The foregoing two, with two others that were for this port, by post entry consent, went to St. Andrews, make 50 sail cleared for St. John with emigrants within three months.

(A. No. 4.)

Government Emigrant Office, St. John,  
New Brunswick, 1 July 1842.

Sir,  
I HAVE the honour to acknowledge the receipt of your note of the 28th June. I should have yesterday closed the quarterly accounts of immigration for his Excellency's information, but while doing so the signal was made for a fleet, and I found no less than 13 sail having emigrants on board, which are at anchor off Partridge Island, therefore coming immediately within the quarter ending 30th June. Up to their arrival 5,405 had been entered, and 1,256 l., at 5 s. head money, paid. These arrivals will raise the number to about 7,000; of which circumstance I pray you to have the goodness to acquaint his Excellency the Lieutenant-governor. Although the printed forms are not sufficient for the number of ships, I shall endeavour to make intelligible detailed reports.

Sickness has yet been very little among the emigrants, and the mortality six or eight. We have heard here that there is a want of men and women at Woodstock; but in obedience to recent instructions, I have abstained from sending any to Fredericton.

I have, &c.  
Hon. W. F. Odell, (signed) Alexander Wedderburn.

(B. No. 5.)

LETTER from the Provisional Overseer of the Poor respecting Distress of Emigrants in St. John's.

Sir,  
A SHARP illness, contracted in the exercise of severe public duty, had disqualified me for acknowledging in a proper manner before this date, the communications I have had the honour of receiving under date 9th and 14th instant (received here on 13th and 16th), informing me of his Excellency the Lieutenant-governor's desires in regard to emigrants forwarded to the upper part of the province for employment, and forbidding any more families being sent up to Fredericton at present. In reference to the same, I beg to state in reply for the information of his Excellency, that I had ceased myself granting passages for emigrants to Fredericton on the 7th instant; consequently any passengers of this description arriving there after such period, must have proceeded under another agency, or were aided in so doing by means of their own. On becoming acquainted in such precise terms with the wishes of his Excellency, I have not failed, so far as I have yet been afforded opportunity, of advising all parties concerned accordingly; and will continue the same course until the interdict is removed. While submitting the foregoing, I must at the same time venture earnestly to entreat that the benevolent notice of his Excellency may be directed to the pitiable state of distress which prevails amongst the crowd of unemployed new passengers filling the city at present, destitute of the means for leaving this, and without the smallest chance of obtaining any work to support themselves here; and I feel bound to add that unless some prompt and efficient steps be taken more than is presently allowed or provided

NEW  
BRUNSWICK.

by the local authorities, either for giving emigrants public employment here, or dispersing them through this province or elsewhere before the summer heats set in, the greatest accumulated misery and disease must ensue, not only to the unfortunate and destitute strangers pent up here under such unusual restrictions, but also to the resident labouring population of the city, already steeped in the deepest poverty, and for some length of time past suffering the extremest privations in every shape. I would further beg leave to state that the public buildings in the city, including five hospitals for sick emigrants, are overpressed now with the sick and indigent, while the numbers assisted besides with provisions weekly on the outside already exceed considerably 100 families, and yet fresh passenger vessels are daily arriving, and adding to this desponding and helpless mass of human beings. Such a state of things here presently, and at this early period of the season, must fill every mind concerned for the lives of the inhabitants of this seemingly devoted city with alarm, at the possible and indeed too probable evil effects likely to result therefrom affecting the health of the population, if not corrected in season by a rapid dispersion of the increasing host of poor from abroad. It may be proper that I should mention here also, for the information of his Excellency, in case the same may not have already been given from other sources, that the number of emigrants arrived in port up to this period amount to about 5,000 souls, and that more than half of the whole number landed yet remain in and about the city.

Trusting that the importance of the interests concerned will plead as an excuse for the length into which I have been drawn in this letter,

Hon. W. F. Odell,  
&c. &c.

I have, &c.  
(signed) *Geo. Matthews,*  
Pl Or Poor, City of St. John.

---

(B. No. 6.)

TO His Excellency Lieutenant-Colonel Sir *William Macbean George Colebrooke*, K.H.  
Lieutenant-Governor and Commander-in-Chief of the Province of New Brunswick,  
&c. &c. &c.

The Petition of *James W. Chandler, Peter Smith, Thomas Berry, Thomas Sime, and John Parkinson*, Commissioners of the Poor for the Parish of St. Andrew's, in the County of Charlotte:

Humbly sheweth,

THAT the legislature of the province of New Brunswick, at its last session, voted to your petitioners the sum of 383*l.* 4*s.* 6*d.* to reimburse them for outlays and expenditures made for the support of emigrant poor at St. Andrew's, during the preceding year:

That having been informed that the warrant for the above sum had been issued, and was in the hands of *Beverley Robinson*, esq. provincial treasurer, your petitioners applied for it, and received a formal answer from him, merely stating that such warrant was in his hands, bearing interest from the date of their said application:

That the warrant, in its present state, is utterly useless to your petitioners; inasmuch as they cannot realize one shilling thereupon.

Your petitioners further beg leave respectfully to draw your Excellency's attention to the fact, that they have recently had a great accession of emigrant poor to their almshouse, amounting to over 60 persons; and that your petitioners have no means of supporting them unless they furnish the funds from their own private resources; and that, in addition to this state of affairs, the contractor for the supplies of provisions for the almshouse has refused to make any further advances, owing to the inability of your petitioners to pay him the amount of his last year's bill; and under such circumstances they apprehend that no person will be inclined to contract in his stead, in which case the emigrant poor must be removed from the establishment, and either suffer the privations of extreme distress, or be relieved by the private charity of individuals.

That formerly a board of health existed in St. Andrew's, which was authorized to draw for sums of money to meet its wants in providing for the sick emigrant upon his arrival here; but since the dissolution of that board the duty of providing for such sick has devolved upon your petitioners, who have been obliged to hire a hospital therefor.

Your petitioners conceive that the law never contemplated that the commissioners of this or any other parish should, in addition to their ordinary duties, be obliged to take charge of the emigrant poor who arrive upon their shores distressed: nor do they imagine that they would be justified in anticipating the wants of the emigrant pauper, and have their parish assessed to provide sufficient means for such contemplated emergency; though it is their duty, by representation to the court of sessions, to have an amount raised through the same channel to meet the requirements of their own poor.

That owing to the natural position of this town in its contiguity to the United States, it has become an understood place of deposit for the wives and children of emigrants, who either from choice or necessity leave them here while the husbands and fathers proceed elsewhere for employment; and your petitioners from charitable feelings have been induced to admit into their almshouse such families so left, where they remain expensive to the parish for many months.

That this and other seaboard parishes will be always subject to such burdens, is a fact too well known to be disputed; and your petitioners most earnestly solicit that a fund may be

## CORRESPONDENCE RELATIVE TO EMIGRATION. 123

NEW  
BRUNSWICK.

be placed at their disposal, to enable them to meet the current expenses of such emergencies.

And in conclusion, your petitioners beg to submit most respectfully to your Excellency, that in case no relief should be granted to aid them in their present difficulty, that they will be compelled, however reluctantly, to open the doors of the almshouse, and expel from thence the present emigrant inmates of the establishment; a step which the humane feelings of your petitioners revolt at, but one imperative upon them under the circumstances, if no pecuniary relief can be afforded.

May it therefore please your Excellency to take the premises into your favourable consideration, and devise such means of relief as you in your wisdom may deem fit.

And as in duty bound will ever pray,

(signed)	<i>James W. Chandler,</i> <i>Peter Smith,</i> <i>Thomas Berry,</i> <i>Thomas Sime,</i> <i>John Parkinson,</i>	}	Commissioners of the Poor and Overseers of the Almshouse for the parish of St Andrew's, in the county of Charlotte.
----------	---	---	--

We the undersigned take the liberty of saying, we have read the foregoing petition, and believe the statements therein contained to be true.

*William Garnett, J. P.*  
*C. R. Hatheway, J. P.*

(B. No. 7.)

May it please your Excellency,

Fredericton, 4 July 1842.

I BEG to state to your Excellency that I have been requested by a number of the inhabitants residing in the parish of Perth, and in the upper part of the county of Carleton, to come down to Fredericton, to represent their distressed situation at the present time.

In the parish where I have resided for the last 30 years, and in all the upper part of the country, the population generally are in a most deplorable state of destitution for want of bread. In many instances known to me, whole families are entirely without food, and actual starvation must take place unless some relief can be promptly afforded them.

There is little or no provision in the country for sale; and from causes generally affecting all sections of the province, from the withholding of the bye-road appropriations upon which they were accustomed to depend, and the general depression throughout the country, no employment can be afforded them; and thus being unable to earn any means, they are obliged to throw themselves upon the merciful protection of the government to afford them immediate relief, and save them and their families from actual suffering.

(signed) *William Hallett, J. P.*  
 Carleton County.

(C. No. 8.)

EXTRACT of a PETITION from a respectable, but distressed farmer, in York County.

BUT your petitioner is at a loss how to approach your Excellency in a proper manner to show the reduced state he and his family are come to; he set himself down upon a lot of land, the uppermost occupied farm in this settlement, surrounded on three sides by woods. Your petitioner landed in this province in the month of July; therefore had one whole year to support himself before he could expect to raise anything upon his land, and the farm being so much exposed to the woods in various ways, that strange cattle broke in and destroyed the whole of my first crop; although I had more than eight acres sown that year I did not get 1s. worth of it; I have also met with considerable loss in horses, but never had any fear of getting bread till now. I have been obliged to send a year-old wether 12 miles to Fredericton, and sell it for the trifling sum of 8s. to purchase a few pounds weight of meal for my family; and since compelled to send a young man two journies, amounting to more than 40 miles, with 16 pounds of butter, which produced only 10s. 4d., to buy a few pounds of flour, which is now made use of. Your petitioner has a good crop in the ground, nearly 30 bushels of seed sown and 40 bushels of potatoes planted, with an expectation of 25 tons of hay or more; but it is quite impossible for him ever to secure this crop unless he can raise the sum of 10*l.* required for tools and provisions to support nature.

New Brunswick, 14 July 1842.

(D. No. 9.)

COPY of Affidavit of a Poor Emigrant.

E. C. late of Rockfield, in the parish of Adair and county of Limerick, Ireland, maketh oath and saith that he, this deponent, is of the age of 42 years or thereabouts; that some time in April in the present year this deponent, who had for the last

NEW  
BRUNSWICK.

20 odd years been living at Rockfield, on about six acres of land which he rented as tenant, was induced (in consequence of the failure of his potatoe crop for the last five or six years, and from representations and reports which were spread throughout the country, and recommendations to the poorer classes throughout the neighbourhood where he lived, by notices printed in handbills stuck up in the chapels and everywhere on the road side, circulated by a Mr. —, a Mr. —, and Messrs. —, all merchants of Limerick, about 10 miles from Rockfield, and owners of ships for passengers) to come out to this country. That this deponent is a married man, and has with his wife a family of seven souls; three sons, the eldest in his 21st year, and the youngest about 13. The eldest daughter out here is about 23 years of age, is a widow, and has an infant at the breast. That some time in April last, this deponent with his family went to Limerick to Mr. —, and took passage in the —, Captain —, bound for Miramichi; that he paid Mr. — 12*l.* sterling for the passage of himself and family out. That after a six weeks' voyage, the vessel arrived at Chatham, Miramichi; 65 emigrants being the whole number of passengers. That as soon as this deponent could land, both himself and his sons sought for work in every direction, but the two eldest sons only could get employment, and that at the rate of 2*s.* a day each, and to find themselves, and this only for two days; that this deponent himself could get no work, and that the only means he had of supporting his wife and young children was from a sum of 30*s.* which was the extent of his pecuniary means when he landed.

That having remained about Chatham and Newcastle for nearly a month and being unable to get any employment for himself and family, this deponent set out for Fredericton, being advised that he could get work along the road, and do better for his family by coming here; that he has been travelling from Miramichi here with his family on foot, for the last 10 or 12 days; that on the journey, his eldest boy hired out at Bois town, with one Pond, as a farm labourer for 20*l.* a year; that the second boy, aged about 18, hired with one M'Loud for 18*l.* a year; and the youngest boy was bound out for a twelvemonth to one Mr. Nimie, for his board and lodging. That on the journey this deponent and family subsisted entirely on the charity of the farmers and others on the road-side, and at times suffered much from fatigue and want of food, one day being entirely without any; that this deponent has sought for work since he came here, and can get none for any price whatever, and his eldest daughter, who would make a good house servant, cannot find a place, and at the present they are living with another family in a crowded room; and being unable to procure employment and without any means whatever, unless they get relief from some other source they know not where to get a morsel to eat.

That among other inducements which Mr. — held out was his saying, that if they could not get work in Miramichi, the Government would give them support, and have them removed to where they could get it in the province at the Government expense. That the rest of the passengers who came out with deponent, with the exception of five or six individuals, have scattered throughout the country, and made to the United States (as deponent believes), seeking for employment.

Sworn at Fredericton, in the county of York, this 12th day of July, A. D. 1842, before me,

(E. No. 10.)

## MINUTE of Special Session respecting Distress in Carleton County.

At a special Session of the Peace, holden in and for the county of Carleton, at the Clerk's Office, on Tuesday, 12 July 1842:

Present:—John Dibblee, James Upham, John Bedell, Rufus S. Demill, Asa Upton, Jeremiah M. Connell, Charles Perley, esquires, justices.

N. B. Read a communication from the Hon. W. F. Odell, under date of 7th July, enclosing copy letter from William Hallet, esq. addressed to his Excellency the Lieutenant-governor, representing the distress existing in this country, and requesting the attention of the magistrates to the situation of the inhabitants as represented.

Whereupon resolved, that the distress, as represented in the above letter, is not at all exaggerated; but this court, from information derived to them, are of opinion that unless relief can speedily be afforded, a large portion of the settlers must be reduced to the utmost state of despair, if not positive starvation. Indeed, instances are not now wanting where fathers of families, respectable men and of hitherto acknowledged honesty, have, to secure sustenance for starving wives and children, been actually driven to steal. There are other numerous instances where large families have for some time past been obliged to subsist on milk and greens; and where contiguous to streams, some of them have been enabled to procure fishes. With these facts unhappily existing, resolved, that it be humbly solicited of his Excellency to take the above into consideration, and to be mercifully pleased to extend such relief in such way as to his Excellency may seem meet.

Extract from the minutes.

NEW  
BRUNSWICK.COPY of a Letter from Mr. *Moses*, Trustee for Parish Schools at West Isles.

Sir,

West Isles, Charlotte, 8 June 1842.

I HEREWITH enclose the licence of Richard Delany, the only licensed teacher in the above parish. He has for the last three years taught a school in the parish in school-house No. 2; but was, on the 1st of June last, appointed by the subscribers and trustees to a new school-house lately erected in Clam Cove, in said parish, being No. 5. I am personally acquainted with him. He is a capable teacher in every respect, and of good moral character, and sober.

I am sorry it is not in my power to say that the schools in the parish have been visited quarterly. I have never till the present year been in office as a trustee, and am quite certain that for the last seven or eight years no quarterly visitations have taken place.

The parish is deplorably off at present; only one school being in operation, when there might, from the population, be at least six or seven. We have no minister of any denomination, nor is there a place of worship in the whole parish; but I believe a Baptist meeting-house is at present being built. The people are all Baptists; I believe, in a great measure in consequence of no clergyman of the Established Church, with one solitary exception, ever having performed Divine service in the parish for upwards of eight years.

I have, &amp;c.

To the Hon. William F. Odell,  
&c. &c. &c.  
Fredericton.

(signed) *Thomas Moses*,  
Trustee for Parish Schools in West Isles;  
and by desire of the other two Trustees,  
*Walter Calder*, and  
*Thomas Lord*.

(G. No. 12.)

EXTRACT of a private Letter to Sir *William Colebrooke*, dated 13 May 1842.

THE date of this letter will tell you that we are on a visit to our old friend, who is in expectation of being examined by the Committee of the House of Commons respecting the working of freedom in Antigua. His views are pretty much the same as my own.

\* \* \* \* \*

The first and great cause of our success was undoubtedly the moral and religious instruction which for a long period had, perhaps contrary to the wish of the majority of the planters, yet nevertheless faithfully and effectually, been given to the negroes. The next was the Act of immediate abolition, without the intervention of the apprenticeship; and the third, the perfect freedom of the labourers to seek a domicile wherever they please. The two former were absolutely wanting to Demerara, Jamaica, and most of the other colonies; and the latter was virtually impracticable, while at the same time it was in practice the most essential of all. The villages, for which we are much indebted to your exertions, rendered it, however, perfectly practicable with us, and the discontented labourer had only to give a monthly notice, and he might at once migrate to one of these. The stimulus also which these villages gave to his labours, by fostering the hope of his one day becoming the owner of a house and land, was most salutary; and perhaps, as an immediate cause, did more to retain the discontented at work than any other. I am glad to hear that these villages are prospering and extending; and I hope that they will ere long render the planter independent of the resident labourers. Then, but I fear not till then, the negro houses may become villages. A great step has been made towards this consummation by the agreement of a large number of the proprietors to give the same rate of wages to the residents as to the independents. This brings the people back to the estates; as they find it better for themselves to labour near their homes than to wander over the island for employment. When this has become general and is fully established, the proprietor will soon discover that it is better for himself and for all parties to have a flourishing village on his property than an assemblage of decaying and decayed huts. The locality will in some instances require to be changed, and I think that if we go back to Antigua I shall seriously set about the foundation of a village; I mean not of tenants, but of small proprietors. Proprietors will not become emigrants; and if there were no other reason for the preference, this alone would be sufficient to vindicate the policy of the measure. But proprietors are better in every respect than tenants. It was the yeomen of England that made her what she is, and it is the destruction of this independent peasantry that is now threatening her with dissolution. This most powerful work of the political and moral chain has given way, and neither centralization nor universal suffrage will supply its place. The power of the few will be hated and opposed; the power of the many will be tyrannical and oppressive; but the general voice of an independent and moral population will always be heard and attended to. In this sense the adage is true, "*vox populi, vox Dei*;" and I hope and trust Sir R. Peel will soon make the experiment in England.

BRUNSWICK.

—No. 6.—

No. 6.

Lieut.-Governor  
Sir W. M. G. Cole-  
brooke to Lord  
Stanley.  
28 July 1842.

(No. 73.)

COPY of a DESPATCH from Lieutenant-Governor Sir *W. M. G. Colebrooke* to Lord *Stanley*.

My Lord,

Fredericton, New Brunswick, 28 July 1842.

REFERRING to my despatch, No 71, dated the 9th instant, I have the honour to enclose to your Lordship the Quarterly Abstract and Ship Returns in the forms required by your Lordship's despatch, No. 42, of the 25th of March, together with a copy of a Report from the emigrant agent at St. John.

These documents will confirm to your Lordship my observation as to the undue pressure to which the province, and especially the port of St. John, has been subject, in consequence of the arrival of so large a number of indigent settlers; and recurring to the observations and suggestions contained in my despatches, No. 59, of the 13th, and No. 65, of the 28th of June, I hope it will appear to your Lordship that the advantages taken by interested persons of the ignorance of the people, would justify the appointment of agents in the ports of the United Kingdom, to whom those desiring to emigrate might address themselves for information and advice. As a provision would require to be made by Parliament for such appointments, your Lordship may object to my proposal to provide in this manner for the agencies I have recommended to be established in the provincial ports; and having, since the date of my despatch above-mentioned, had an opportunity of referring to your Lordship's correspondence laid before Parliament on the subject of an Act of the Canadian Legislature, "to create a fund for defraying the expense of enabling indigent emigrants to proceed to their places of destination, &c.," I have been led to consider that the provisions of this Act might be advantageously substituted for those of the Act of this province, and that the provincial agencies might be defrayed from the emigrant tax now raised. By the Canadian Act a tax of 5s. currency is imposed on account of every passenger, and as the tax levied in this province is also 5s. a head for each emigrant, I conceive that it would be inadvisable to increase this charge; but in order that it should be applied to the purpose contemplated by the Canadian Act, some alteration in the provisions of the Provincial Act, 2 Will. 4, c. 36, would be desirable. By this Act a separate account of the revenue received is required to be kept by the treasurers, from which payments are made from time to time by grants of the legislature for relieving destitute and diseased passengers and emigrants, the practice having been for the guardians of the poor to make advances in anticipation of such grants, the aggregate of which has often exceeded the amount collected. Not only have the emigrants who have sought assistance been thus relieved as paupers, but there have been no available funds to assist them in proceeding to their places of destination. The guardians of the poor at the sea-ports have, in some cases, to relieve their respective counties, defrayed the expenses of the emigrants in proceeding to Fredericton, sending whole families to prevent them from becoming chargeable. A similar course had been adopted by the guardians here; but on my suggestion they have latterly provided employment at reduced wages for such as could not immediately find work for themselves.

The amount collected from the emigrant tax in 1840 was 1,965 *l.* currency, and in 1841, 1,742 *l.* In the present year, from the increased number who have arrived, it will probably exceed 2,000 *l.*; and if 400 *l.* should be set apart for the expenses of agencies which are required at Fredericton, St. Andrew's, Miramichi, and Bathurst, I would recommend that the officers so appointed should be associated with local Boards, and authorized to provide for the prompt removal of emigrants to their destination, or to places where they could obtain work. The fund, which is altogether inadequate to relieve the distressed emigrants as paupers, would be found ample to provide for their removal, if measures should be taken in England to discourage pauper emigration, and to afford information to emigrants of the situations where employment would be open, or where facilities might be afforded them of proceeding to their destinations, the sufferings

of

Enclosure, No. 1.

Enclosure, No. 2.

CORRESPONDENCE RELATIVE TO EMIGRATION. 127

of many being occasioned by the difficulties they experience in joining their relations in Canada and the United States.

NEW  
BRUNSWICK.

Your Lordship is aware that in the last year I promoted the formation of emigrant societies in the several counties, and an effort was made by those formed in St. John and St. Andrew's to assist the removal of the emigrants. In the present year, owing the prevalence of distress throughout the province, it has been found impracticable to obtain the co-operation of the people in these undertakings, and an attempt to organize societies that would facilitate the employment of all classes in farm work has also failed, although I am convinced that the distress so much complained of might be materially alleviated by a combined effort.

Enclosure, No. 3.

From the various and urgent appeals made to me, I called the attention of the magistrates of the several counties to the subject, as well to ascertain the real extent of the distress as to obtain their assistance in devising a remedy for it. The resolutions passed at meetings of the magistrates in Fredericton and St. John are herewith enclosed, and I hope the result of these proceedings will be to induce a spirit of co-operation in the people, and a disposition to support such measures as are calculated to relieve the affairs of the province, and to revive its prosperity. There is every prospect at present of a favourable harvest, and as the coasts and rivers abound with fish, the destitution of the people, to whatever extent it exists, may in a degree be ascribed to their dependence for so long a time on sources of employment which have failed them. The improvidence and indigence of the Indian race is proverbial, and they are exposed in common with others to many privations; but as they depend on the fisheries at this season, I do not find that they suffer any unusual distress.

Enclosure, No. 4.

Enclosure, No. 5.  
Enclosure, No. 6.

In the last year a public hospital was established in Fredericton under the direction of an able physician, and which has proved a valuable resource in cases of sickness.

I have, &c.  
(signed) W. M. G. Colebrooke.

Enclosure 1, in No. 6.

(No. 1).—GENERAL ABSTRACT.—QUARTERLY RRETURN.—IMMIGRANTS.

Months composing the Quarter.	Number of Vessels arrived.	Number of Deaths on Board or in Quarantine.	Number of Births on Board or in Quarantine.	Gross Number of Emigrants arrived.	Number of Adults.		Number of Agricultural Labourers.	Number of Domestic Servants.		Number of Mechanics and Tradespeople.	Numbers for whom Cost of Passage defrayed by		Number employed on Government Works.	Number assisted out of Public Funds.	Total Amount paid.
											Parochial Funds.	Private Funds.			
April - - -	1	none	none	224	M. 89	F. 95	no list	M. no list	F. no list	no list	unknown		none	none	£. s. d. none required.
May - - -	18	7	7	2,625	1,178	919	405	99	174	123	- -	307	none	-	(*)
June - - -	23	none	none	3,483	1,364	1,217	336	77	67	11	4	112	-	-	( )
TOTALS - -	42	7	7	6,332	2,631	2,231	741	176	241	134	4	419	-	-	-

(\*) These questions cannot be satisfactorily answered until the accounts of the parochial officers are made up at the end of the year; but relief is afforded to bring emigrants in need, annually absorbing a large sum beyond that arising from the emigrant fund, and paid by a local legislative appropriation.

To 30th day of June 1842.

Note.—The Return from Richibucto, Bathurst, Shediac, and Bay Verte, called for in ample time, but not received up to date, July 29, 1842. Supplemental Return for the month of July called for from emigrant agent at St. John, but not received at date, July 29, 1842.

(No. 4.)

1. WHAT funds have been placed at your disposal during the past quarter for the relief of immigrants?—None.
2. State the description of labour which is in request in the colony?—Agricultural.
3. Would the rate of immigration of the last quarter satisfy the existing demand for labour?—During the last quarter it has been almost impossible to procure employment for emigrants in town or country, owing to the general depression in the province; much distress therefore prevails among them.
4. State any particulars relative to immigration, the demand for labour and the means of remunerating it, which you think may be useful?—It is very desirable that steps should be taken to give immediate employment, at low wages, to immigrants on their arrival in public works, under the control of Government, particularly in opening roads, &c., the cost of which would in a great measure be eventually defrayed by the increased value of the adjoining lands.

Enclosure 2, in No. 6.

May it please your Excellency,

Government Emigrant Office, St. John,  
New Brunswick, 16 July 1842.

Encl. 2, in No. 6.

IN obedience to the commands of you Excellency, I have the honour to acquaint you, that the ship returns and quarterly abstract for immigration here for the past quarter have been transmitted to the provincial secretary for submission to your Excellency; and I now respectfully beg leave to offer some observations, induced by duty and the circumstances of the times.

While I was in the act of making up the report on the 30th June, a signal was made for a fleet; I immediately repaired to Partridge Island, and found 14 sail having emigrants on board, anchored at the quarantine ground, raising the numbers arrived during the two latter months to about 7,000 souls; the detail of those arrivals will appear in the current quarter's report. From the great and general depression in business here, it is impossible to procure labour for the able immigrants in either town or country, consequently they are in much distress, and as the season advances and winter arrives, it is painful to contemplate the misery that will ensue amongst them. To relieve it there are no adequate means. The Emigrant Fund raised by the Local Passengers' Act, 2 Will. 4, c. 26, s. 2, falls annually greatly short of the expenditure necessary on the legitimate objects contemplated in it. To add to the emigrants' distress, they have been, and are subjected, to most gross and reprehensible delusions by the shipping agents throughout Ireland; they not only induce the poor people to believe that they will get lands here for nothing, but that they will also receive provisions for settling on them. The readiness with which the uninstructed receive this flattering, erroneous, and cruel encouragement only augments their subsequent disappointments; and the more particularly so, as they are further assured that there is a Government fund provided here to convey them to any part of British North America or elsewhere; and under this delusion there are now really here parties whose destinations were

NEW  
BRUNSWICK.

parts of Lower Canada, and as far as Toronto and Dundas in the upper country. Another evil to emigrants now existing, and, I regret to say, gaining ground, is through the cupidity of ship-masters and their coadjutors, the shippers persuading the emigrants that the quantity of provisions required for the voyage is much less than it really is. This deceit enables the master at sea to supply the needy on exorbitant terms, for their own or for their employer's speculation in provisions, and thus the passengers are stripped of every farthing they may possess. The consequence is, that they land here without money and without food, and being unable to work, are driven, through necessity, to dispose of, for a trifle, their bedding and their clothes to procure sustenance for themselves and their families. I am well aware that it is difficult to check the actions of such persons as are engaged in the emigration recruiting parties for ships in Ireland; nevertheless, very decided notices of their nefarious practices may be circulated through the public prints, or otherwise, and with good effect; for, apart from the general and individual interests of emigrants, I apprehend that such a course would prove provincially and politically useful. The deluded emigrants now inveigh, though unjustly, yet in no measured terms, against the government for the disappointments created by the actions of those agencies at home, and their already formed predilections to go to the United States are confirmed, and they pass from the provinces with ill feeling never again to return to their country; whilst, on the other hand, the communities here complain of being made the fiscal support and reservoirs of the pauperism from parishes and poorhouses of the United Kingdom. Private industry, too, is at present paralysed here, and the public exchequer having nothing wherewithal to originate and advance public works, the thoughts of all classes are earnestly turned to the metropolitan Government for some means to put such works into operation (but to what particular they should be directed can be better and more properly stated by the executive authority than by me), and beneficial employment given to immigrants.

I, however, respectfully claim leave (in the event of any donative system of emigration being contemplated and pursued at home) to refer your Excellency to that system of amelioration acted upon by the late Lord Egremont, which in the provinces whither the emigrants were sent has proved eminently successful; and if so to an individual estate, is reducible to a like practice in any other private, parochial, or governmental courses of emigration. It was also reported that the late Earl of Derby adopted a similar mode of emigration from his estates; but I am unacquainted with the detailed *modus operandi* of those patriotic and benevolent noblemen. There is no doubt, however, but that such a course would prove highly advantageous to all interests, if directed to this province, where there is yet great abundance of excellent vacant soil for settlement of solvent immigration to much extent; and here, indeed, is also an ample field of reward afforded for the industry of all such.

By solvency for the above purpose is meant those who on arrival here in health have means for obtaining their lands on the terms prescribed by the provincial executive, and to support their families with necessary provisions for at least one year; but without such means, it is only abetting misfortune to carry the poor into wilderness locations in even ordinary or more successful seasons, but far more indeed would it be in seasons such as this.

I have to plead an apology to your Excellency for the inconvenient length of this communication, but humbly hope that my responsibility for an ingenuous discharge of my duty will not be overlooked in vindication of the extent of this report.

I have, &c.

His Excellency Sir W. M. G. Colebrooke, (signed) A. Wedderburne, G. E. A.  
&c. &c. &c.

---

Enclosure 3, in No. 6.

Encl. 3, in No. 6.

At a special Sessions of the Peace for the County of York, convened pursuant to Notice, and holden at the County Court House, in Fredericton, on Monday the 19th day of July 1842.

WHEREAS very great distress prevails in many parts of this county, and unless immediately relieved, very serious consequences may be apprehended; therefore,

Ordered, that the credit of this county be pledged to the extent of 200 *l.*, in order to meet the distress; and that the said sum be distributed in such parishes as may apply for relief through the overseers of the poor thereof respectively; and the relief so afforded under the direction of the magistrates of the several districts, shall be chargeable upon the said parishes, in proportion to the amounts received by each parish.

And further ordered, that the following persons be a Committee to negotiate the said loan, and to carry the contemplated objects into effect; viz. Mr. Justice Pickard, Mr. Justice Taylor, Mr. John Simpson, Mr. Spafford Barker.

(Extract from the Minutes.)

Geo. J. Dibblee,  
Clerk of the Peace, York.

For

## CORRESPONDENCE RELATIVE TO EMIGRATION.

131

NEW  
BRUNSWICK.

For the purpose of carrying into effect the resolutions entered into by the magistrates of the county on Monday, published in to-day's Gazette, and by which the distress and destitution alleged to exist in some of the parishes will be relieved, a sum of money sufficient for this object has been advanced to the Sessions, on the guarantee of the magistrates, with which Indian meal and Indian corn has been purchased and placed in the hands of Thomas Pickard, esq., and Mr. Spafford Barker, of Fredericton, which will be distributed agreeably to the following list, on the order of George J. Dibblee, esq. clerk of the peace for the County.

The attention of the magistrates and overseers of the poor in the different parishes is particularly requested to the circular letter to the overseers of the poor hereto subjoined, in which specific directions are given as to the manner and the terms on which the supplies of meal and corn will be furnished.

These supplies will become a parish charge, and whatever amount remains unpaid by the individuals to whom the relief is extended, will be included in the assessment of the poor rate of the parish, to be made at the January Sessions.

## SCHEDULE.

Parish of *Douglas*, to be furnished by Mr. *Pickard*, viz.—

12 barrels corn meal ; 10 sacks (2 bushels each) corn.

*Queensborough*, to be furnished by ditto.

10 barrels corn meal ; 6 sacks (2 bushels each) corn.

*Southampton*, to be furnished by ditto.

10 barrels corn meal ; 6 sacks (2 bushels each) corn.

*St. Mary's*, to be furnished by Mr. *S. Barker*.

8 barrels, corn meal ; 5 sacks (2 bushels each) corn.

*Dumfries*, to be furnished by ditto.

8 barrels corn meal ; 10 sacks (2 bushels each) corn.

*Prince William*, to be furnished by ditto.

8 barrels corn meal ; 5 sacks (2 bushels each) corn.

*Kingsclear*, to be furnished by ditto.

12 barrels corn meal ; 8 sacks (2 bushels each) corn.

The price to be charged by the overseers of the poor is 22 s. 6 d. per barrel for meal, and 11 s. 3 d. per sack for corn, not to be delivered by Messrs. Pickard and Barker in less quantities than a barrel of meal or sack of corn.

Gentlemen,

Fredericton, 21 July 1842.

At the meeting held by the magistrates on Monday last, a resolution was made, sanctioning a loan for the several parishes of this county, with the view of relieving those persons who may be destitute of the means of providing themselves and their families with food. To carry into effect this object, several of the magistrates have procured, on their present personal guarantee, the advance of a sum which it is hoped will be sufficient to relieve actual want and destitution. The extent of relief each parish will be allowed, if required, is stated in the accompanying schedule ; but it will only be advanced on the undertaking of the overseers of the poor for your parish, and of one of the resident magistrates.

The form of the undertaking is hereby enclosed, and is made payable to the clerk of the peace for the county, which must be executed before the advances are made.

From all persons whose circumstances you may consider such as to render them fit subjects of relief, you will be required to take notes, payable on the first day of November next, agreeably to the printed forms enclosed ; and from such persons as may possess property, repayment will be rigidly enforced.

The deficiency which may exist, and which cannot be collected from the persons thus relieved, will be assessed next January sessions on the parish for the support of the poor thereof ; and when collected, your undertaking to George J. Dibblee, esq. the clerk of the peace, will be cancelled.

You will, in conjunction with the resident magistrate or magistrates of your parish, endeavour to relieve such persons as are incapable of getting food for their own support from any other source, as the assistance is to be extended only to such as are entitled to be relieved by the parish in which they reside.

(signed) *George J. Dibblee*, Clerk of the Peace.

To the Overseers of the Poor of the Parish of ———.

NEW  
BRUNSWICK.

*Form of Notes taken from Persons receiving Relief, by Overseers of Poor.*

For value received in provision promise to pay overseers of the poor for the  
parish of \_\_\_\_\_, in the county of York, or to their order, the sum of \_\_\_\_\_ on  
the 1st day of November next, with interest from the date hereof.  
Dated this \_\_\_\_\_ day of \_\_\_\_\_ 1842.

*Form of Securities taken from Magistrates and Overseers of Poor, by Clerk of Peace.*

£.

For value received in provision, we promise to pay George J. Dibblee, esq., clerk of the  
peace for the county of York, or his order, the sum of \_\_\_\_\_ payable on the 1st day  
of January next.  
Dated this \_\_\_\_\_ day of \_\_\_\_\_ 1842:

HEADS OF REGULATIONS for the Establishment of a Loan and Labour Fund in each County,  
proposed to be raised by a Society to be called "The Land and Emigration Society  
of the County of \_\_\_\_\_."

At a period when distress is so prevalent throughout the country, from the failure of the  
ordinary resources on which the people have depended for subsistence, and when, consequently,  
the difficulty of obtaining employment, and, to employers, of paying for the labour required  
on their farms, may injure the prospect of a good harvest, it is proposed to raise a fund from  
which every inhabitant, having a demand for labour on his farm, may derive immediate  
accommodation. The ordinary farm work at the present time, and till the hay harvest, being  
chiefly in hoeing and weeding, it is probable that many persons, men, women, and children,  
could be advantageously employed at once, and continuously, throughout the season,

The wages of labour, it is proposed, should be fixed at 1s. 6d. a day for men, 1s. for  
women, and 6d. for boys and girls under 12 years of age, and able to perform light work.  
The labourers, also, to be subsisted, and their wages agreed to be paid weekly in money.

All persons desirous of procuring labourers on these terms, are to send in to the treasurer  
or trustees of the respective county society, their names, specifying the number of labourers  
(men, women, and children), whom they desire to employ, and for what period, at those  
rates, from which return the amount required to be advanced may be estimated. It being  
understood that such persons are to give security in themselves, and one collateral surety, for  
the sum, as a loan, to be repaid to the trustees, with interest at six per cent. per annum, at  
the end of three months from the date of the advance when made.

When 60*l.* have been subscribed and lodged in the hands of the treasurer or trustees of a  
county society, the premium of 60*l.* granted for emigration societies, to be applied for.  
This fund, in 12 counties, will amount to 720*l.*, and the government to be requested, under  
the circumstances, specially to authorize the payment, in cash, to the trustees, on the terms  
of the grant.

This emigration premium of 60*l.* in each county, to be employed in co-operation with the  
labour fund, in defraying the expenses of emigrant labourers and families, in proceeding to  
those parts of the country where labour offers for them, and to be expended by granting  
billets at such houses on the roads as may agree for a reasonable charge to subsist the  
emigrants, of which charges a tariff to be fixed and published. All transactions of the  
society being prompt payment in cash.

The labour fund in each county to be raised either by donations, or by loans on debentures  
at six per cent. per annum; the advances for labour to be made through the banks,  
and the subscribers to the fund to have a preference in such advances, to the extent of their  
donations or deposits.

By the co-operation of these societies in every county, the expense now incurred in the  
removal of labourers and their families may be effected without the pressure on the farmers  
in the country, and the inhabitants of the towns, which at present obtains from the great  
influx of indigent emigrants at the sea-ports, when immediate employment for the number  
who seek it cannot be found, and who must, consequently, when destitute, be subsisted.

Secondly, Those who require labour, may be assisted in procuring it at reasonable rates;  
and a more abundant harvest, by reason of the application of such labour, will furnish in  
itself the means of reimbursement.

It will be understood that labourers will only be forwarded to a district when applied for,  
and that the people in the country who require employment at the rates proposed, will have  
the first offer of it. The societies proposed to be established at Fredericton, at St. John, and  
the out-ports, to co-operate with the other county societies. Although it is proposed that the  
assistance of the societies should be given only on the terms stated, it would be open to  
employers and labourers to make their own terms by contract or otherwise.

If the loans should be punctually repaid after the harvest, the fund might again be advantageously  
employed, under proper regulations, as a loan fund, to aid industrious persons of  
good character, with small loans during the winter, on proper security; and an Act might  
be obtained in the next Session, modelled on the English Loan Fund Act, to provide for  
the incorporation of the society, and for the prompt recovery of small loans by instalment.

Enclosure 4, in No. 6.

NEW  
BRUNSWICK.

(Circular.)

Encl. 4, in No. 6.

Sir,  
Secretary's Office, Fredericton, 18 July 1842.  
VARIOUS and urgent representations having been made to the Lieutenant-Governor, from different counties, of distress prevailing in the rural districts, I am directed by his Excellency to desire you to call a special meeting of the magistrates in your county, with a view to ascertain the real condition of the people, and to consider what measures can, with advantage, be adopted for their relief, if assistance be required.  
As no available means have been placed at the disposal of the Government, it may be proper to consider how far it may be in the power of the magistrates to guarantee funds to be raised in the county, and advanced for the purpose of alleviating any urgent present distress; and how far it may be practicable for the government to aid in carrying out any suggestions on the subject, will be duly considered when the reports are received.

To the Clerks of the Peace of  
the several Counties.  
I have, &c.  
(signed) Wm. F. Odell.

Enclosure 5, in No. 6.

MEETING of the Magistrates of the City and County of *St. John*.

Encl. 5, in No. 6.

A SPECIAL meeting of the magistrates, convened by direction of his Excellency the Lieutenant-Governor, was holden at the Court-house on Monday, the 25th July. The following Resolutions were unanimously passed.  
Resolved unanimously, That this Board regret to learn, from his Excellency's circular, that so much distress exists in various parts of the province; that in the city of *St. John* it prevails to a great extent, but the justices have no available means to meet any extraordinary emergency which may arise for supplying the wants of the unemployed poor; that they view with much alarm the present year's assessment in the city and county of *St. John*, amounting, for various purposes, to the enormous sum of 8,000 *l.*, besides an unrealized sum of about 3,000 *l.* yet due for the past year, and thereby inducing the apprehension that those taxes, although short of what must be required, will only be partially collected; that any pledge of the city and county credit for repayment of a temporary loan, it is considered would, on the part of the sessions, be illegal, and if it were not so, under the present universal embarrassment of the mercantile community, they think there is not a possible hope of obtaining the aid of funds by local loan.  
The justices are therefore of opinion, that if distress so generally prevails, as his Excellency's circular induces them to believe, the relief will not fall within the province or power of the sessions, but it is rather a matter which can only be provided for by legislative enactment.

COPY of a DESPATCH from Lord Stanley to Lieutenant-Governor  
Sir W. M. G. Colebrooke.

No. 7.  
Lord Stanley to  
Lieut.-Governor  
Sir W. M. G. Cole-  
brooke.  
15 Sept. 1842.

Sir,  
Downing-street, 15 September 1842.  
I HAVE considered with the most anxious attention your two despatches of the 9th and 28th of July, Nos. 71 and 73, in which you report the unusually large number of emigrants who had arrived in New Brunswick in the course of the present season, the distress and suffering which had resulted to themselves and  
291. to

NEW  
BRUNSWICK.

---

to the community, the steps which you had taken for the relief of that distress, and the further measures which you recommend for the sanction of Her Majesty's Government. The questions involved in these despatches are of the deepest, and in some respects, of very painful interest; and require that the principles in which the Executive Government proceeds should be most carefully considered, lest its over-interference, with the most praiseworthy motives, should have a tendency to aggravate the evils which it seeks to mitigate.

I do not think that it would answer any useful purpose that I should enter upon the discussion opened in your despatch of the 9th of July, of the comparative merits of various systems of colonization, although you there lay down several positions in which, with great deference for your authority, I could not with truth signify my acquiescence. We have to inquire rather what is practicable, than what would be abstractedly and theoretically desirable, and to consider the mode of most advantageously availing ourselves of existing circumstances, rather than the benefits which might be derived from a state of things which we cannot create. It is undoubtedly true that to the wellbeing of a society a due proportion between the labour supplied and the capital capable of employing that labour is of primary importance; but I cannot, with any hope of promoting that end, hold out encouragement to the idea of establishing "home colonies in the United Kingdom", "with a view of training the people of every class for emigration to the colonies." On this subject I must refer you to my despatch of the 31st of May, the principles contained in which you do not appear to me to controvert, and I conclude therefore that while you consider the formation of "home colonies" to be a desirable object, you abandon it as an impracticable one. In point of fact, emigration from this country, especially to North America, will at all times be composed mainly of the poor and indigent class, seeking to carry their labour to countries where it may command a better remuneration than in the overstocked market of the mother country; and it is to the gradual accumulation of capital in the colonies, the produce of that labour, that we must look for the means of employing, in successive years, successive bands of immigrants. But this accumulation of capital must be real and substantial; and the attempt to swell it unnaturally to forced and artificial dimensions, though for the moment it may have the effect of apparently relieving a temporary pressure, can hardly fail, in the end, of leading to disastrous consequences. For this reason, as in colonies to which the facility of access from the United Kingdom is so great as to those of British North America, there is always some risk of the supply of labour exceeding the means of the capital of the colonies to absorb and to employ it; so it is peculiarly incumbent in the Executive to take no steps which, by giving an artificial stimulus to the introduction of mere labour, may tend to aggravate this disproportion.

Bearing this in mind, it may not be unprofitable to review the course of events for the last 18 months, in order that the experience of the past may lead us to sound conclusions as to the policy to be pursued for the future.

I find that in the year 1839, the emigration to New Brunswick was to the extent of 3,123 persons; in 1840, it increased to 7,777, without apparently causing any particular distress; and again in 1841, the number exceeded 7,000, without any ill consequences. But in this latter year, I find that more than one-half re-emigrated to the United States, where many of them had relations, by whose advice they came out, passing through New Brunswick, as stated by you in your despatch of 28th July, No. 65, partly with a view of avoiding the emigrant tax imposed in the ports of the United States, and partly to avail themselves in passing of the opportunity of "obtaining, at high wages, the temporary employment," "which usually terminates with the departure of the spring ships." The extent of this re-emigration probably indicated with tolerable accuracy the degree to which the influx of that year exceeded the capability of the province to furnish employment; though I do not deny that absence of correct information might lead some to quit the province for whom there existed the means of profitable employment, had they known in what quarters to seek it. Actuated no doubt by this opinion, and with a laudable desire to promote the settlement and improvement of the province committed to your care, you informed my predecessor on the 29th of May 1841, that you had taken measures for the settlement of the province which you hoped would "greatly augment its strength and resources, and induce those emigrants to remain in it who have hitherto been accustomed to transfer their industry to the United States." From the enclosures

to

to that despatch it appeared that emigrant societies had been formed at the instance of the government throughout all the counties of the province, to collect funds and publish information, and that the government agent at St. John's had issued a notice warning all persons against being led astray by the idea that they would not get employment in New Brunswick, assuring them that the contrary was the case, and enjoining them not to "listen" to advice of an opposite character; and the notices to this effect were sent on board the emigrant ships as they arrived, by the quarantine officers or the pilots, before any other parties could be permitted to board them.

Acting upon the same views, and carrying them still further into operation, you informed me, in your several despatches of the 15th of September, 12th of October, and 30th December, of the steps which you contemplated taking, and had taken, with the cordial concurrence of Her Majesty's Consul at New York, for reversing the course which had previously prevailed, and for inviting from that city and from Boston great numbers of destitute emigrants, who were then suffering great privations, having been disappointed in their hopes of obtaining employment.

I confess that I received the intimation of these projects not without serious misgivings as to the result of carrying them into operation, more especially when I considered them in combination with the disordered state of the finances of the colony, to which you called my attention by your despatch of the 12th November 1841; and accordingly, on the 5th of December, I stated thus pointedly the condition on which alone I was prepared to give my assent to the experiment: "Having given my best consideration to the general question of promoting the removal to the North American provinces of such subjects of Her Majesty resident in the United States as might be desirous of living under British institutions, I am of opinion that there would be no objection to the measure, provided there was a fair probability that, on their arrival, they would be able to obtain permanent employment. This point, however, I think ought to be carefully attended to and satisfactorily ascertained, in justice to all the parties concerned." I further observed: "The employment of emigrants in New Brunswick seems to depend, in great measure, on public works, and these on the funds which may be available for their execution. The financial question must, therefore, be first solved, before any measures can properly be taken for attracting labourers to the province." At a subsequent period, when the plan of inviting back emigrants from the States was again brought forward, the Commissioners of Land and Emigration, on the 24th of February 1842, made the following remarks: "We should be disposed to consider the general aim of the plan, supposing that the individuals affected by it are out of employment and in distress, and that it will give no offence to the Government of the United States, may be deemed good or bad, in proportion as the means exist in New Brunswick for giving employment to the persons whom it may introduce into the colony. If they can be employed at good wages upon public works, or by private parties, they will not need in their distress in a foreign land to be tempted by diagrams of well-circumstanced lands, and by offers of free grants. The use of diagrams, especially, we must note as specious in appearance, but in reality quite a useless expense, since no man of sense who is going to a new locality would choose his land before he sees it. If, on the other hand, the means of paying the immigrants remunerating wages do not exist in New Brunswick, we are satisfied, by the experience which has universally attended the location of paupers upon waste lands, that their introduction into the colony ought not to be encouraged." In a dispatch of the 29th March 1842, you first mentioned your fears of a want of capital for the employment of labour. On the receipt of this despatch, I immediately caused a warning paragraph to be inserted in the daily newspapers; and a similar caution was introduced into the pamphlet published about that time by the Emigration Board. I at the same time instructed you forthwith to countermand, if you had not already done so, all proceedings at Boston and New York for inviting emigrants back from the United States, and strictly prohibited you from expending any public money, during the distress, in facilitating a removal of British settlers from that country into New Brunswick. In another later despatch (Private, 2 April 1842), I declared to you strongly the impossibility, especially in the then state of the provincial funds, of complying on the part of Her Majesty's Government with your proposal for an advance of 500,000 l.

Notwithstanding these precautions, however, it is obvious that the immigration

---

tion of destitute persons in search of employment has, in the course of the present season, been far greater than the capital of the province could absorb, and that severe suffering to the immigrants, and heavy pressure upon the inhabitants, has been the result.

I have recapitulated these facts, not so much for the purpose of reflecting upon what has been done, as with the view of aiding our consideration of the direction in which we are to look for the remedy.

I am aware that several causes have combined to render the pressure in the province peculiarly severe in the present year. The destruction of property in the disastrous fire at St. John's no doubt largely diminished the funds for the employment of labour. You state, in your despatch of the 9th of July, that the banks, partly owing to the large advances of capital which they had already made to the Government, have been obliged to suspend their usual accommodation; and that the lumbering parties, notwithstanding the check given to the timber trade during the previous year, had continued their pursuits, under an expectation of the market being relieved, and obtained upon credit their usual supplies from the farmers and merchants, for which they cannot now make payment. Taken in conjunction with this circumstance, and with previous overtrading, I fear that the alteration of the timber duties may, for the moment, have added to the difficulties of the province, augmenting the supply of labour seeking employment, while it diminishes the available capital to employ it; and in such a state of things, it is obvious that even a small excess in the number of immigrants may add, disproportionately, to the public distress.

That the excess of this year's immigration has been, of itself, inconsiderable, I think I am warranted in saying. In 1840 the province received nearly 8,000; in the first half of 1841, notwithstanding an influx of 7,000, you considered yourself warranted in taking active measures for largely increasing the numbers; in the first half of 1842 the total number has only been 8,514. If this excess be the whole addition made to the ordinary ratio of increase of the population, it is difficult to conceive that to it alone, or even mainly, is the existing distress to be attributed. But I cannot avoid entertaining some apprehension, that neither in the former nor in the present year was New Brunswick capable of employing an additional population of 8,000 to 9,000 immigrants; and that while in the former year re-emigration to the United States in some degree counterbalanced the excessive importation, the inducements which have been held out by the Government to remain in the province have produced the unusual pressure experienced in the present year.

I proceed to consider the steps which you recommend, and the course of policy which, in my judgment, it is necessary to pursue, for the relief of this admitted pressure.

It is admitted that for the moment the supply of indigent labour, seeking employment, exceeds the effective demand for such labour. You propose, in the first instance, to meet this excess by a loan from this country of 500,000*l.*, to be expended in public works; and you state, that "if half of this sum had been raised in the present year, not only would the country have been relieved from the existing distress, by enabling the banks to resume their accommodation, and by affording employment to the people, but the revenue would have been largely augmented, and have sustained the public credit." On this subject I cannot too strongly or too earnestly press upon you the caution which I conveyed to you more than once last year, not to build upon the expectation of being enabled to have recourse to such an expedient. I do not deny that the raising of an additional quarter of a million to the public means of expenditure for the year would, for the time, have dispelled distress, and produced the temporary appearances of prosperity to which you refer. But even if I could overlook, as I cannot, the consideration that New Brunswick, in the present disordered state of her finances (the annual expenditure exceeding the annual revenue), can give no valid security even for the payment of interest upon such a sum; if I could be thoroughly convinced that such an outlay, if security could be given to the parties advancing it, would be of sufficient advantage to the province to outweigh the additional heavy annual burthen imposed upon her, I should yet seriously doubt the policy, not so much of the outlay itself, as of the principle on which it would be avowedly founded, of giving an artificial stimulus to the employment and introduction of labour. I conceive that its inevitable tendency would be, by creating high expectations, to bring upon the province, in succeeding years, more formidable

formidable bodies of destitute claimants for employment. When it is considered that in the first half of the present year, according to the official returns, very nearly 100,000 persons, of whom a large proportion may be considered as bordering on destitution, have emigrated from the United Kingdom to British North America and the United States, I need hardly point out to you the imminent danger to New Brunswick of calamities far greater than she has yet experienced if a general rumour should become prevalent that that colony is prepared to undertake, and the credit of Great Britain is to be pledged for carrying on, public works to such an extent as may be necessary to provide for the employment of all who may resort thither with nothing but their labour to dispose of.

You proceed in your despatch of the 28th of July, in reference to your former despatches of the 13th and 28th of June, to express your "hope that the advantage taken by interested persons of the ignorance of the people would justify the appointment of agents in the ports of the United Kingdom, to whom those desiring to emigrate might address themselves for information and advice." I need hardly remind you that this measure was carried into effect when last I had the honour of holding the seals of the Colonial Office, in 1833; that at this moment officers, charged with the very duties you point out, are stationed in every port of the United Kingdom from which emigration is carried on to any extent; and that the amended Passengers' Act of the late session gives to these officers additional powers, and to intending emigrants additional protection, and increased means of enforcing the penalties of the law.

With reference to the appointment of provincial emigration agents at the ports of St. Andrew's, Miramichi, and Bathurst, I have to observe that as the payment of such agents, and the purposes for which they should be established, would be matters of peculiarly provincial interest, I should hardly feel myself justified in expressing more than an opinion upon the subject. I must, however, suggest for your consideration, how far it would be desirable to impose upon the colony a charge for the maintenance of salaried officers for the superintendence of immigration at ports at which the number of immigrants in 1841 were respectively 681, 212, and 13. I do not find that there has hitherto been any difficulty in carrying on the necessary duties at Fredericton through the ordinary officers of government; and I confess I do not see, in the present circumstances, sufficient reason for burthening the province with a new appointment in that city.

I entertain decided objections to the payment of emigration agencies out of the proceeds of the emigrant tax, and to the proposition which you have made in your despatches of the 13th and 28th June, that the Imperial Parliament should impose an emigrant tax to provide for the establishment of agencies in the colonial ports. It appears to me that the legitimate objects to which an emigrant tax should be applied are the relief of sick and destitute emigrants and the forwarding of unemployed emigrants to places where their services are required; and that the latter, wherever there is a choice, is in my opinion the preferable application of the fund. Both these objects are provided for by the existing Act of New Brunswick, 2 Will. 4, c. 36.

The evils of which you complain appear rather to be the results of the vicious practice which has sprung up under the Act than of the Act itself. If the guardians of the poor at the different outports have the power of making advances at their discretion in anticipation of grants of the Legislature, it is not extraordinary that abuses should have prevailed in the application of the funds, or that large sums should have been expended, and yet that there should have been no funds available towards the primary and legitimate object of the tax—the forwarding of emigrants absolutely destitute to the place of their destination. I take it to be indisputable, that with a view to the impartial and economical administration of these funds, their distribution should be entrusted to officers immediately responsible to the Government, and free from all local interests and prejudices; but I very much doubt whether the amount of business to be transacted at the outports would justify the appointment of officers charged exclusively with that duty.

You observe that "the fund which is altogether inadequate to relieve the distressed emigrants as paupers, would be amply sufficient to provide for their removal, if measures should be taken in England to discourage pauper emigration, and to afford information to emigrants of the situations where employment would be open, or where facilities might be afforded to them of proceeding to their

NEW  
BRUNSWICK.

---

their destinations." I conceive that to afford such information is the peculiar duty of the Land and Emigration Commissioners, and it is one which I know they are anxious to execute scrupulously and faithfully ; but in order to execute it, it is necessary that they should be furnished with detailed and accurate information from the local authorities in the various colonies: they can be little more than the channel for the diffusion of the intelligence which it is the duty of those authorities to collect and to transmit; and there is no subject more deserving of your serious attention than the means of obtaining accurate and trustworthy information on these points, of transmitting it through me for the benefit of the classes in this country who may be disposed to emigrate, and making arrangements, with the concurrence, if necessary, of the Provincial Legislature, by which emigrants on their arrival may be furnished with authentic advice as to their proceedings, and, in cases of absolute emergency, but in such only, with the means of proceeding to their destination.

For this object, it is no doubt desirable to secure the co-operation of local Boards, composed of persons on whose reports full reliance may be placed; but I am very much inclined to the opinion, that the functions of those Boards should be as much as possible confined to furnishing information, and restricted from the administration of private, and still more of public, funds for the relief of distress. Entertaining this opinion, I cannot bring myself to share in the regret which you express at the failure of the attempt to renew country emigration societies, with the object of raising funds to make loans to farmers, proportioned to the number of people they were willing to employ, and of forwarding labourers to such persons, to work at a reduced rate of wages. I cannot look upon it as a misfortune that a plan should have failed which contemplated the application, on so large a scale, of an artificial stimulus, the ultimate consequences of which could, I think, hardly have been foreseen when it was recommended.

I observe that a circular had been addressed to the magistrates of the several counties of New Brunswick, suggesting that they should adopt measures to endeavour to meet the most urgent distress. And whenever public aid becomes indispensable, I should certainly be disposed to think that, if the laws admit, it is well that the funds should be raised and applied locally, because this seems to afford most probability of vigilance and economy. But it is impossible to be acquainted with the administration of relief funds in any shape, and not be conscious how many dangers they involve, unless there is both much experience in their management and also an established agency for the purpose. It would seem very desirable, therefore, that such funds should not be set on foot except to the extent to which there is an unequivocal necessity for them; that every endeavour should be made to secure their being only distributed amongst those who truly require their aid; and that in such a country as North America, they should in all practicable cases be rather applied to forwarding emigrants to situations where they are wanted, than to maintaining them at places where there is no private demand for their labour. In the present instance, I remark an allusion in the rules established for the county of York, to strictly enforcing repayment from such persons having received provisions from the public, as are possessed of property of their own: possibly due precautions against abuse will be taken in practice; but in so far as the above allusion conveys information, it is scarcely necessary to observe that persons possessed of property do not seem fit objects for public relief.

You will probably observe that I have hitherto confined myself to remarking upon the steps which have been taken, or which you have recommended, and that, in objecting to them, I have not myself suggested any measures for the relief of the distress of which the colony, not without reason, complains. I will confess to you that it appears to me that in such a case the duty of a government is rather negative than positive; that its active interference is more likely to be productive of injury than of advantage; and that, upon the whole, it is wiser and safer to trust to the operation of individual self-interest (always supposing sufficient information as to facts) for the application of labour, than to attempt to force it into any particular channel.

You state that the expected produce of the emigrant tax for the present year is 2,000 *l.*; a sum certainly wholly insufficient to maintain, as paupers, a large body of emigrants, but adequate, I should hope, to meet the demands upon it, limited, as they ought to be, within the bounds of the most urgent necessity. But in order that they may be adequate, I hold it to be indispensably necessary

that

that all expenditure should take place under the immediate control of an officer directly responsible to yourself, reporting to you in detail from week to week, and tied down by such restrictions as you may think it right to impose upon him. Emigration societies, particularly if they are entrusted with the disposal of public money, are too apt, with the best motives, to be lavish in their expenditure, from a desire to avoid the appearance of harshness, and from mistaken views of charity. The government agent should be authorised, in cases of proved destitution, and in those alone, to furnish the means of conveyance to districts where labour may be in demand; and, as a test, even to find for the emigrants any laborious work, to be paid for at less than the ordinary rate of wages; but he should on no account assist any one who having been offered either work or conveyance shall have refused to avail himself of it; nor should he permit the wives and families of those who may absent themselves on the plea of seeking work to be maintained in the almshouses, or otherwise, at the public expense. Some deviation from the rules may be allowed in cases of sickness, or of females or children whose husbands or fathers may have died on the passage and left them wholly destitute; but these cases will be comparatively few. Your aim for the present must be the dispersion of the emigrants as speedily as possible where work may be found for them, whether within or without the limits of the province; and for the future, the land agents and others whom you may employ in the various districts should periodically, and especially at the season when emigrants may be expected to arrive, keep the agent at St. John's fully informed of any particulars, each in his own district, of the demand for labour, the rate of wages, the price of provisions, the means of conveyance, and generally such information as may enable the agent at St. John's to advise and direct arriving emigrants. The summary of this information should be transmitted to me in every year by the month of March at latest, and thence throughout the season, that timely warning of the probable state of affairs may be circulated in this country, and that if no effective demand for labour exists, emigrants without capital may be dissuaded from resorting to New Brunswick. I must for the future absolutely prohibit any inducement being held out on the part of the Government to destitute persons to enter the province from any part of the United States. If there be fair prospects of employment, they will find their way in sufficient numbers; but it is necessary to give no colour to a claim for being maintained at the public expense, founded on an allegation that their distress has been caused by listening to an invitation from the Government itself. The same prohibition of course applies equally to dissuading any persons from quitting the province as to inviting them to enter it.

The summary of my advice to you is, to limit the intervention of Government as much as possible to obtaining and diffusing correct information on all points which may be useful to enable the immigrant to decide upon his own course; to carry this to as great an extent as the means within your reach will allow; but steadily to set your face against all artificial stimulus, by loans or otherwise, to the employment of labour, and to restrict within the narrowest possible limits all direct interference, and especially all pecuniary aid.

The extent of the means which the province may have of employing labour must depend upon its internal prosperity, and its accumulation of capital; and it would be most dangerous for the Government to seek to enhance the apparent amount of this accumulation by the creation of fresh debts, ultimately adding to its embarrassments. Your object should rather be directed to a rigid examination of the real financial condition of the colony; to placing its expenditure upon such a footing as to be fairly met by its revenue, and thus maintaining the public credit upon a solid foundation. Until this is done firmly and decidedly, I fear that New Brunswick, with all the advantages of her geographical position, with all her facilities for commerce, and her freedom of access to the market of Great Britain, with all her agricultural capabilities, imperfectly as they are at present developed, cannot look for any real and lasting prosperity. I cannot but fear that the present distress is much aggravated by previous financial improvidence, of which no one is more sensible, and no one has been more anxious to check than yourself; and if this be so, the remedy is to be found, not in a continuance of the system which has produced the evil, not in seeking to obtain fresh means for increased expenditure, not in inviting additional labour, and endeavouring to give it forced employment by the creation of fictitious capital; but in retracing steps proved to have been erroneous; in limiting lavish expenditure;

NEW  
BRUNSWICK.

ture ; in proportioning the public outlay to the public means ; in economising and accumulating capital ; and trusting to the natural inducements of self-interest, and the nearness of the redundant population of this country, always to furnish you with as large a supply of labour as there is capital to employ ; a supply which you may usefully direct and regulate by the diffusion of correct information, but which if you seek unnaturally to force and stimulate, I am afraid your efforts, with the best intentions, will prove ultimately injurious rather than beneficial to the permanent interest of the province.

I have, &c.

COPY of a DESPATCH from Lieutenant-Governor Sir W. M. G. Colebrooke to Lord Stanley.

My Lord,

Fredericton, New Brunswick, 12 Sept. 1842.

For Sir W. M. G.  
Colebrooke, De-  
spatch, 14 May  
1842, No. 53, vide  
Correspondence re-  
specting Emigra-  
tion, ordered by  
The House of Com-  
mons to be printed,  
7 June 1842,  
No. 301, p. 338.

REFERRING to my despatch, No. 53, dated the 14th May last, I have the honour to enclose copy of a letter which I have received from Mr. L. A. Wilmot, explanatory of the condition of the settlement which was formed under his superintendence during the last winter, and which, considering the pressure upon all classes throughout the year, may be regarded as favourable to their prospects. The only assistance received by the settlers has been in the advance of 100*l.* for opening a road to the settlement, which was executed early in the season ; and they are now proposing to erect a school-house for the benefit of their children.

From the distress still prevailing among the mechanics in St. John's, a number of them who are without employment, and who possess some means, have organised themselves with the object of forming a settlement upon the same plan, their co-operation being found to facilitate the labours of a first settlement ; and being accustomed to the use of the axe, they have great advantages over the emigrants, who from their poverty and inexperience are unable to maintain themselves in the wilderness, or labour in it with the same advantage ; and where, unable to obtain employment, they are in great distress.

Some English farmers who had emigrated to Rhode Island have recently settled in the province, encouraged by those who came here in the spring, and they have found no difficulty in purchasing improved farms.

The settlement of this class is calculated to improve the agriculture of the province ; and their anxiety to settle in situations where they can obtain the means of education for their children, attests the advantages which the colonies derive from receiving an improved class of settlers, whose attachment to the institutions of their country is not less strongly evinced by their voluntary removal hither after a two years' residence in the United States. The present circumstances of the province being favourable to the views of this class of settlers, I am induced to state these particulars for your Lordship's information.

I am glad to be able to report that the crops are abundant in the present season, and that more land has been cultivated than in any preceding year.

I have, &c.  
(signed) *W. M. G. Colebrooke.*

Enclosure in No. 8.

Sir,

Fredericton, 31 August 1842.

Encl. in No. 8.

I HAVE the honour to inform your Excellency that I returned to town last night from an inspection of the Teetotal Settlement.

The result of the encouragements given to those worthy settlers is, so far, of the most gratifying and surprising character. In the month of January last scarcely a tree had been felled on one of the lots ; now there are 41 lots, averaging from six to seven acres each, partly under crop, and partly prepared for a crop for the ensuing year ; while there are 17 log-houses erected (besides several camps), and others about being built.

Some of the potatoes and oats are looking well, and promise a good return ; but in several instances the seed potatoes have failed to such an extent that the produce will be very small.

The

## CORRESPONDENCE RELATIVE TO EMIGRATION.

141

NEW  
BRUNSWICK.

The settlers have turnpiked the whole of the road, a distance of almost  $4\frac{1}{2}$  miles; and I am happy to inform your Excellency that the work has been done in a very satisfactory manner, and that the road throughout is equal, if not superior, to the best parts of the great road from Fredericton to St. Andrew's.

It was truly gratifying and delightful to me to drive over so fine a road, and to witness such extensive clearances where, in December last, I saw only a vast wilderness, a boundless contiguity of shade, and where at that time it was with great labour and fatigue I made my way through the forest as one of the chainbearers in laying off the lots.

As it was a part of the original arrangement with the settlers that they should have the making of the road at a specified price, I have assumed the responsibility of advancing supplies and seed on account of the work, the accounts whereof I shall immediately lay before your Excellency; and I have every reason to hope they will meet with your Excellency's approval.

The superintendence and management of this settlement has caused me much trouble and anxiety; but I assure your Excellency that the astonishing results more than compensate me for all my labour.

The tract of land is generally superior to my expectations, and the men are filled with hopes of future success. At present many of them are compelled to look for labour in different parts of the country, and I regret to say that some of them have failed in procuring employment at any rate. The coming winter will, no doubt, bear hard upon some of them; but another year, under the blessing of Providence, will find them abundantly supplied, and in a condition to be classed with the most thrifty settlers in the province.

One practical case of this kind is worth a thousand theories; and with a similar expenditure similar settlements may be formed in many parts of this and other counties of the province.

I have, &amp;c.

His Excellency Sir Wm. M. G. Colebrooke,  
&c. &c. &c.

(signed) L. A. Wilmot.

## —No. 9.—

(No. 89.)

EXTRACT of a DESPATCH from Lieutenant-Governor Sir *W. M. G. Colebrooke* to Lord *Stanley*; dated Fredericton, New Brunswick, 27 September 1842.

DURING my visit to the city of St. John's a deputation of the most respectable mechanics waited on me to represent that having no prospect of employment, they desired to settle in the country, and all who have the means of maintaining themselves in the wilderness during the winter have been encouraged to do so.

They have selected blocks of land some miles distant from the city, which I have caused to be laid out; and they have associated themselves in parties, under the direction of gentlemen whom I have appointed to superintend the new settlements. I enclose copies of two petitions.

The impulse having been thus given, I entertain no doubt that their example will be followed by others. Provision will be made for the establishment of schools in these settlements; and when employment again offers in St. John's they will be prepared to take advantage of it, either by letting or selling their farms. By the operations of these skilful men, locations may be cleared during the winter, and disposed of at a profit to agricultural settlers emigrating with capital, who would find it advantageous to purchase their improvements. It is probable, however, that experience will have taught the mechanics of St. John's the advantages of possessing lands which may afford them the means of support when unemployed, and contribute to their resources at other times; and if the habits they acquire should lead the mechanics and the labouring classes ordinarily to derive a part of their subsistence from the cultivation of allotments in the environs of the city, it would improve their condition, prevent pauperism in seasons of distress, and facilitate a reduction of wages, without a diminution of comforts. The advantage, though important to the employer in a new country, where wages are ordinarily high, is of even greater consideration to the labourers themselves. It has been justly remarked, that "no man can be accounted poor who has anything growing for himself under the sun;" a truth which has been strongly impressed on the people of this province by the events of the last year. The failure of public and private credit, the consequent suspension of employment, and the reduction of the country to a condition of barter, has led all classes to look to agriculture as the only available

NEW  
BRUNSWICK.

able resource ; and the lands which have been broken up and planted for subsistence in the winter having yielded abundant crops, others have been encouraged to come forward, who are preparing land for cultivation in the next year.

The parties formed in St. John's, including as they do men of different trades, will be able to interchange the products of their labour and industry, and thereby possess many advantages over the unskilled settlers, who for the most part emigrate to these provinces, and who would find the advantage of settling amongst them, whereby many of the inconveniences attending a settlement in the wilderness would be obviated.

Encl. in No. 9.

Enclosure in No. 9.

TO his Excellency Sir *William MacBean George Colebrooke*, К.Н. Lieut.-Governor and Commander-in-Chief of the Province of *New Brunswick*, &c. &c. &c.

The Petition of *Azor W. T. Betts*, of the City of *St John*, Master Joiner, on behalf of himself and Associates,

Humbly sheweth,

THAT your petitioner is a native of the city of St. John, where, since the expiration of his apprenticeship, he has carried on the business of a joiner, somewhat extensively: that he is a married man with a family, and possesses some means: that being out of employment, owing to the pressure in St. John's, he is desirous of settling in the country without delay, that he may be prepared to support his family by the cultivation of the soil, before his means are expended in idleness.

That several tradesman and others who are in a similar situation with your petitioner, have associated themselves with him, for the purpose of forming a settlement: that having examined some wilderness land on the Pollet River, in the county of Westmorland, they find it of good quality, and are desirous of settling upon it as soon as the necessary survey and allotment can be made.

That the associates of your petitioner, 17 in number, are all at present residing in the city of St. John, and are described as follows:—(For Names, see Abstract at foot.)

That all the said persons (with one exception) are natives of New Brunswick and Nova Scotia, possessing sufficient means of their own to form a settlement, and are all persons of good character and standing: that several others, desirous of joining the association, have been refused, as not possessing the requisite means, or being otherwise objectionable; but your petitioner fully expects that others will join them who do possess means, and are unexceptionable.

Your petitioner now prays, on behalf of himself and associates, that a tract of land on the east side of the Pollet River aforesaid, commencing near the outlet of the Pollet Lake, and extending down stream, may be surveyed into lots for settlement on the established terms. And your petitioner further prays, that the order of survey may be issued at once as himself and associates are prepared to start on the instant to take up their respective locations, and commence chopping, for which they are fully prepared, and have ample means.

And your petitioner, as in duty bound, &c.

St. John's, 19 August 1842. (signed) *Azor W. T. Betts*.

127 in all; principally Wesleyan Methodists.

A SURVEYOR to be immediately appointed to survey the location pointed out, and Mr. Freeze, the member of King's County, has been required to assist in forming the settlement. A school lot to be reserved, and a church lot, and such other reserves as may be necessary. Alternate lots to be sold by auction. The parties, who are highly respectable, will go into immediate possession, and commence work, having means for their support.

## CORRESPONDENCE RELATIVE TO EMIGRATION.

143

NEW  
BRUNSWICK.

May it please your Excellency,

St. John's, 22 August 1842.

With reference to the petition of Azor W. T. Betts, presented on Friday last, praying for a tract of land on the Pollet River, for immediate settlement by himself and 17 associates, I beg to represent to your Excellency that two other persons, namely, John G. Ray, ship carpenter, married, and family, Thomas Proud, plasterer, married, and family, have applied for leave to join Mr. Betts and associates, to which Mr. Betts, on behalf of the petitioners, has consented, being satisfied as to their characters and sufficiency of means. I therefore pray that the names of John G. Ray and Thomas Proud may be added to the list in Mr. Betts's petition.

I beg respectfully to suggest to your Excellency's consideration the propriety on this occasion of laying out a large body of land on the Pollet River and its vicinity (provided it should be vacant and of good quality), and of erecting the same into a town, borough, or municipality, with reserves for churches, schools, public buildings, and common lands for general use; such reserves to be held by the Crown in trust for such town, borough, or municipality, until it shall be incorporated by general or special enactment.

The persons who have now applied for lands on the Pollet River are natives of this country, active, intelligent tradesmen, with means quite sufficient for forming a good settlement. They have entered into an agreement to assist each other this autumn in clearing the land and erecting houses. Until fairly established, they will be almost as one family. An excellent opportunity is therefore offered of establishing a borough or municipality, by laying out and designating the settlement as such, and transacting all business with the settlers as if they were a body having common interests, which would be strengthened and improved by their acting on all occasions in concert. A habit of acting thus together, and speaking with one voice, would be productive of many advantages, and lead to the establishment of a corporation by legal authority as a natural consequence, for which the settlement would be in every way fully prepared.

If a tract of land should be laid out as proposed, it would attract to it many persons of equally good standing with the present applicants, possessing the same, or perhaps more ample means. With a due degree of caution in the admission of associates, and some little arrangement as to the manner of conducting their general business, an association might be very soon formed, at the present time, which would serve as a model to the whole colony. It would lead to other settlements of the like stamp throughout the province, and by degrees change the whole of the present imperfect mode of settling the wilderness into a sound, healthy, and effective system, which would relieve the country from the burthen of supporting new settlements, to which it is now constantly subjected.

As such settlements grew up into strength and opulence, a due proportion of the labouring classes might be admitted into them, who, by receiving occasional employment from their more wealthy neighbours, would soon establish themselves.

With a humble hope that these suggestions may obtain consideration,

His Excellency  
Sir W. M. G. Colebrooke, K.H. Lieutenant-Governor,  
&c. &c. &c.

I have, &c.  
(signed) W. H. Perley.

May it please your Excellency,

St. John's, 23 September 1842.

With reference to the petition of David Collins, for himself and 50 associates, which I forwarded on the 19th instant, praying for allotments of land on the Pollet River, in The Mechanics' Settlement, I crave leave to represent to your Excellency that the undermentioned persons, mechanics and others, are desirous of being added to the list of Mr. Collins's associates, and to have allotments of land in the same line of country, on the like terms and conditions.

The present applicants are as follows:—

[For Names, see Abstract.]

On behalf of the foregoing parties, 57 in number, and with the approbation and consent of David Collins the petitioner, I pray that these names may be added to the list of 50 set forth in Mr. Collins's petition, and may be considered included therein as applicants for lands in the same township or line of country, being persons of sufficient means desirous of actually settling on the lands which may be allotted them.

I also beg to represent, on behalf of all the applicants for lands in The Mechanics' Settlement, that they are all stated to be Protestants, the greater part belonging to the Wesleyan Methodist connexion, and that they earnestly desire suitable lands to be reserved for churches and schools in convenient situations.

His Excellency  
Sir W. M. G. Colebrooke, K.H. Lieutenant-Governor,  
&c. &c. &c.

I have, &c.  
(signed) W. H. Perley.

Abstract not received.

Let additional allotments be laid out, and reserves made in the Pollet settlement for these settlers, and put up to public sale.

(signed) W. M. G. C.

—No. 10.—

(No. 97.)

COPY of a DESPATCH from Lieutenant-governor Sir *W. M. G. Colebrooke* to Lord *Stanley*.

Fredericton, New Brunswick,  
14 October 1842.

No. 10.  
Sir W. M. G. Cole-  
brooke to Lord  
Stanley,  
14 October 1842.

My Lord,

ON my return on the 12th instant from a tour through the northern districts of this province, I had the honour to receive your Lordship's despatch (No. 98) of the 15th September, in acknowledgment of mine of the 9th and 28th July (Nos. 71 and 73), on the subject of emigration.

As my despatches of the 12th and 27th September (Nos. 85 and 89) relate to the progress which has since been made in the settlement of provincial mechanics and others, who had been thrown out of employment, and by British emigrants who had arrived with means of self-support, I shall proceed to communicate to your Lordship such observations as have occurred to me in my progress through the districts I have lately visited.

In the summer of 1841 I made an extensive circuit through the southern counties; and in my despatch (No. 37) of the 15th July 1841, I stated the result of my observations on the capabilities of the province.

At that time the distress, which subsequently occurred to discourage its enterprise and to impair its resources, had not been developed; and although anticipating, from the financial situation of the province, as reported in my previous despatch of the 21st June (No. 28), that difficulties were likely to arise, I had hoped that, by the prudence of the Legislature in the adoption of a sounder system, the embarrassments which have since occurred might have been averted.

Your Lordship is aware that these hopes were disappointed; and I have since been anxious to complete the circuits, which have enabled me partially to appreciate the effects upon the country of the pressure which ensued, and which your Lordship has justly referred to the various occurrences which conspired for a time to paralyse the industry and enterprise of the people.

The counties of Gloucester and Restigouche, although partially settled soon after the separation of the province from Nova Scotia, remained a part of the county of Northumberland until a recent period.

The inhabitants were chiefly engaged in lumbering and the timber trade, carried on in the Bay of Chaleur and the Miramichi river, and which gave employment to a great number of large ships, many of which were built in those ports.

The check given to these operations within the last two years, added to the financial embarrassments of the province, had led to a suspension of the resources on which the people had mainly depended for their subsistence; and as all hope of an early revival of the timber trade was necessarily abandoned, as well as the prospect of obtaining advances from the Government for roads, under the grants of the Assembly, the attention of the people was directed to the only available resource in the cultivation of the land; and I have the gratification to state, that throughout the province their efforts, under Providence, have been blessed with an abundant harvest,—the supplies raised being adequate to their plentiful subsistence through the winter, and in many cases with a considerable surplus.

Besides the productions of oats and potatoes, a considerable quantity of wheat has been grown, which will lessen the importation of flour from the United States, and may be expected to lead in future years to a surplus sufficient for exportation.

Although agriculture will henceforth constitute the leading pursuit of the inhabitants, and the foundation of its future prosperity, it would be wrong to overlook that the spirited improvements which have been effected in roads and bridges, by which the settlement of the country has been facilitated, have been mainly the results of the efforts of gentlemen engaged in the shipping and timber trade; and that although the system pursued has been erroneous in drawing too largely on the public revenues of the province, its progress will, in a material degree, be referable to their exertions.

The main roads from Fredericton to Newcastle, and thence to Bathurst, Dalhousie and Campbelltown on the Restigouche, are nearly completed and bridged, and several bye-roads are partially opened from them to detached settlements.

The

The lands traversed by these roads are for the most part favourable for settlement ; and it was gratifying to me to find that the people were prepared to appreciate the advantage of settling together.

The limited number of persons possessing education, and the means of directing their operations, and of providing for the administration of the country, constitutes a formidable obstacle to its progress.

There are extensive parishes in which it has hitherto been impracticable to appoint a single magistrate, and others where the appointments made are not satisfactory to the people, from the extensive powers conferred on the magistracy, especially in the local courts.

Sometimes single families are met with who are prosperously settled in the wilderness, and whose numerous families are growing up without education, or the means of spiritual communion.

Where such efforts have been made to open communications through the country, it may be expected in time that these insulated settlements will be connected by the influx of new settlers, and this will probably ensue from the increasing attention to agriculture, except where large tracts of land along the lines of road and the margins of rivers have been taken up on speculation by persons not disposed or possessed of the means of improving the country.

The practice in the neighbouring states of laying out the wilderness lands in townships, and of imposing on the purchasers a moderate rate to provide for schools and roads, has induced a habit with the settlers of providing for these essential objects, which the practice in this province of contributing to them so largely from the public revenue has discouraged.

The inability to provide so lavishly for them in future I have endeavoured to impress on the people, and I hope the effect will be to induce a disposition to bear the local charges on which their future execution and maintenance must depend.

A moderate rate upon property, as a commutation of statute labour, would be adequate to support the annual disbursements hitherto made under the grants of the Assembly, and the capital advanced on such securities, and invested in the execution of roads, and perhaps the erection of schools, would be progressively redeemed in a term of years, without imposing the whole burthen on the first settlers. Such a principle also is just, as these improvements are permanent.

The issue of funds on such securities, for objects so essential to the improvement of the country, has been the only application of the public credit which I have at any time contemplated, and which, under a guarantee for the due execution of the works in question, by placing them under the superintendence of an efficient department, holds out the only means by which they can be provided for until private capital can be applied to them. From these observations, I trust your Lordship will perceive that, so far from leading the inhabitants to rely on the continuance of the system of anticipating the public revenue for these objects, I have uniformly impressed on them the necessity of relying on themselves, and have afforded to them such an exposition of their financial affairs, that they are enabled to judge of the ruinous consequences of pursuing a system which has impaired the provincial credit. My views in the last session were limited to the establishment of a guarantee fund for the existing debt, and for the completion of the works already in progress, under proper superintendence.

For these the public revenues would have been ample, notwithstanding the commercial depression and the heavy losses sustained on Government warrants from the depreciation of the public credit; and the pressure on the money market, from the amount unpaid, would have been obviated; neither would the banks have been so restricted in their operations by the large amount of these warrants held by them, on which no provision had been made for the payment of the interest accruing.

The suspension of this accommodation, added to other causes, led to the unusual pressure on all classes of the inhabitants; and the urgent appeals made to me to issue warrants for bye-road appropriations, regardless of their certain depreciation, from the inability of the Government to take them up, induced me to propose to the county magistrates to devise the means of assisting the inhabitants, on their own responsibility, to whatever extent might be required.

Their proceedings appear to have been judicious; and the result has been, that the funds, which to a very limited extent were applied in small loans, to enable the people to plant their lands, and which, under ordinary circumstances, they could

NEW  
BRUNSWICK.

---

could have obtained from the banks, have been amply secured in the result of the present harvest.

It was not intended that such assistance should be rendered to those classes who had a claim to aid from the commissioners and guardians of the poor, either as emigrants or paupers, and who generally resorted to the towns for relief, from the absence of employment in the country. I should also observe to your Lordship, that the settlement of this class of persons, except where funds for their employment might be provided, has never been regarded by me as favourable to the prospects of the colonies. The exertions made by American agents in the United Kingdom to induce those who possessed resources to settle in the United States, and the disappointments to which many have there been subject, I have formerly alluded to; and as lands have been laid out in locations adequate for the settlement of many thousands, if they should possess the means of maintaining themselves till their lands could be made productive, there was no ground to apprehend inconvenience from the influx of such a class, although the introduction of indigent settlers was calculated to aggravate the public distress.

Indeed, the arrival of several farmers from Rhode Island, induced by the troubles in that state, has been hailed as a benefit, and the settlement of the mechanics of St. John on wilderness lands is regarded as a change in the views of that class highly favourable to the agricultural prospects of that province.

There can be no doubt that its great natural resources will, in time, be appreciated by others of the same class, whose views have been directed to other quarters.

I regret to have overlooked that emigrant agents in the United Kingdom had been appointed during your Lordship's former administration of the colonies. There can be no doubt that they are able to render valuable assistance and advice to the emigrants.

The erroneous information given to them by interested persons may in this manner be counteracted, and especially where they are induced to embark for ports from which they cannot conveniently remove to their ultimate destinations.

I am fully impressed with the importance and justice of your Lordship's observations regarding the administration of the emigrant funds, and, I hope, for the support of the Legislature, in directing their application more strictly to the purposes for which they are raised. It is just, however, to observe, that much praiseworthy zeal has been evinced by the local commissioners in assisting and relieving destitute emigrants and their families. The appointment of an emigrant agent (Mr. Ward) at Fredericton by my predecessor originated in the number who came up from St. John's in the river steam-boats, which ply daily, and where many are induced to repair in consequence of the practice of selling the public lands at the Crown Land Office, and which are bid for either by the settlers themselves or by their agents.

Mr. Ward has exerted himself to obtain employment for the emigrants in the country, but no salary has been granted to him.

I am of opinion that it would be desirable to make some provision for these duties at Fredericton and at the outports; and where the numbers arriving are insufficient to call for a separate appointment, a small allowance to the officer of customs might with advantage be granted.

The funds raised by emigrant societies, under the premiums granted by the Legislature to the counties, were intended to afford assistance chiefly to the families of indigent emigrants, who often arrive in a state of destitution, until they could obtain employment. The distresses of the country in the last year have unavoidably rendered them inoperative. I am impressed with the justice of your Lordship's remark, that all adventitious stimulus should be as far as possible withheld; but in seasons of distress at home and abroad, when multitudes of destitute people repair to the colonies, the adoption of means of relief, which is often required for the preservation of the lives of women and children, cannot always be regulated by prudential considerations, affecting the community on which they are cast. The hospitality of the people of the province towards the emigrants is a creditable feature in their character.

I am happy to have your Lordship's concurrence in my opinion, that the introduction of labourers, without adequate capital for their employment, it is of primary importance to discourage; and as emigrants are naturally prone to seek a settlement on land, and as such condition of the labouring class I conceive to be the most favourable for their social improvement, and for the advancement of the

the colonies, I have been naturally led to consider of the means of promoting this object in a manner the best calculated to secure the advantage of the emigrant, and of the country to which he transfers his labour.

Having in a long course of public service in the colonies been impressed with the defects of the systems adopted, and having witnessed the failure of several praiseworthy undertakings both public and private, I have been attentive to the causes which produced them.

Looking, as I have done, to the means of preserving those social advantages to which Englishmen justly attach so much importance, I have been accustomed to regard with regret that the settlement of the colonies should so entirely depend on the immigration of the poor and indigent classes; and during my occasional residence at home, I have been attentive to the means by which other classes of people could be induced to take part in such undertakings, and thus to provide for the settlement of the colonies under the most favourable circumstances. Having been associated with several gentlemen in an attempt to carry out these views in the United Kingdom, I only relinquished them when I proceeded to the West Indies in 1834, but not before I had assured myself of the practicability of establishing such colonies at home, and of the advantages to be derived from them as auxiliaries to a system of colonization abroad.

I trouble your Lordship with these observations only that I may contribute, so far as the expression of my opinion can avail, in the promotion of an object which I consider would reward the exertions of those who might undertake to promote it; but, apart from such views, it is not unreasonable to hope that the natural advantages of this province are such as to prove, at least, as attractive as the Canadas and Prince Edward's Island, where settlements are understood to be forming by emigrants of a superior class, who possess not only the resources required for the employment of the indigent emigrants, but who are able to contribute their valuable assistance in the preservation of those habits and institutions on which the prosperity of society more essentially depends.

I need not add, that they would find in the old inhabitants of the province a disposition cordially to co-operate with them in the promotion of objects calculated for their common benefit, and to perpetuate the connexion with the parent country on terms reciprocally advantageous.

I have, &c.  
(signed) *W. M. G. Colebrooke,*

---

—No. 11.—

(No. 100.)

COPY of a DESPATCH from Lieutenant-governor Sir *W. M. G. Colebrooke* to Lord *Stanley*.

Fredericton, New Brunswick,  
28 October 1842.

My Lord,

HAVING since the date of my despatch (No. 97) of the 14th instant revisited the southern districts of the province, I proceed to offer to your Lordship such further observations as have occurred to me in the course of my circuit.

A direct road from Fredericton to St. Andrew's on the St. Croix river having been opened in 1839, I proceeded by that route, passing through a prosperous settlement which had been formed by a party of agricultural emigrants from Northumberland in that year. These persons had been induced to come out by the prospect of employment in the settlement of the New Brunswick Land Company at Stanley, and, disappointed in this, their views were directed to the formation of a settlement on the projected line of road, to which their labour with that of others was usefully applied; and a direct mail communication has thus been opened from hence through St. Andrew's and St. Stephen's to the United States. Adjacent to this line has been formed the other settlement alluded to in my despatch (No. 85) of 12th September.

Along the entire route which I pursued, I had occasion to observe the successful efforts which had been made to improve the agriculture of the province, and, under the depression to which the trade in all the commercial ports has been subject, it was gratifying to observe the prosperous condition of the farmers, notwithstanding the disadvantages arising from the suspension of public and private credit, and their inability to obtain a present market for their surplus produce.

No. 11.  
Sir *W. M. G. Colebrooke* to Lord  
*Stanley*,  
28 October 1842.

NEW  
BRUNSWICK.

The number of able hands heretofore annually withdrawn to engage in lumbering operations has been seriously injurious to the agricultural districts, not only in the neglect of such farm-work as could be performed in the winter, but from the loss of the early part of the summer season, which, being short, demands promptitude and the unremitted exertions of the farmer in order to secure his crops. In the present year, extensive preparations are making for the improvement of the land by composts, of materials which can be readily obtained; it having been ascertained that the negligent husbandry which settlers from necessity have recourse to when isolated, can thus be superseded with advantage under a system of combined labour and its intelligent application.

3*l.* currency.

The practice heretofore has been for the isolated settler to cut down the forest trees, leaving the roots in the ground for several years, and cultivating the intervening spaces with the hoe; but wilderness land has recently been completely cleared and improved with compost manure under the plough, at 2*l.* 8*s.* sterling per acre.

Efforts are being made to introduce machinery for the abridgment of labour in the fabrication of the woollen clothing commonly used by the farmers and their families. A factory of this description in a district favourable for sheep-farming promises to be successful, affording as it does a market for the wool, in exchange for the articles of clothing required.

The command of water-power facilitates the introduction of such works, as well as the establishment of corn and grist mills. In the establishment I have alluded to, the machinery has been obtained from the United States, the duties having been remitted to the importer.

Common manufactures of this description, which are essential to the prosperity of every country, and ought therefore to be encouraged, are favourable to general commerce, augmenting the resources of communities, and thereby facilitating the interchange of their varied products, directly or circuitously. In reference to this subject, it would be inappropriate in this despatch to enter on the subject of the trade of the province as it is affected by the British and American tariffs, on which I shall have occasion separately to address your Lordship.

As the period approaches when the Legislature will resume its labour, I feel it to be important that the views of the Government in regard to the financial interests of the province should be clearly understood.

In my despatch of the 21st June 1841 (No. 28), I observed that from the great disproportion between the extent of the lands granted and the domains of the Crown, it was obviously impossible that the inhabitants of the settled parts of the province could defray, from their own resources, the expense of opening so large an extent of wilderness; but the works required being reproductive, there could be no difficulty in raising the funds required for the purpose, and of providing for the payment of the interest, and the ultimate redemption of the principal. On this principle, I proposed in my despatch (No. 37) of the 15th July 1841, that a capital should be raised on the credit of the province, and on the security of a guarantee fund to be provided, with the object of continuing the works in progress, and of carrying out such further improvements as might be recommended.

In the formation of such a fund, it was not my intention that it should constitute an exclusive charge on the provincial revenues; the attempt to carry out local improvements by such means having involved the province in debt, for which no provision had been made; and as I stated in my despatch of the 21st June, that the import duties should be lowered to protect the fair trader and to prevent smuggling, I considered that no greater sum could be available for such fund than the surplus which might remain after defraying the expenses of the Government.

No charge, however, being imposed on the lands for local improvements, and many such works being in progress, a contribution from this source for their completion might be obtainable, and from the commutations of forced labour; and if the fund thus raised should be adequate to redeem the capital advanced in a moderate term of years, it could be considered not otherwise than just that future settlers should thus be made to contribute to works necessary to the settlement of a thickly-wooded country intersected by rivers and streams, the banks of which were already occupied.

The establishment of tolls at a more advanced period of settlement might relieve the inhabitants in part from these charges.

In illustration of these remarks, I may observe that extensive works have been executed

executed or are in progress from no other funds than annual contributions from the public revenue; and while the spirit of improvement is to be applauded, the mode in which it has been sustained is manifestly objectionable.

The commercial distress which arose towards the end of the last year, leading as it did to a decline of the revenue, induced me to limit my views in the last session to a provision for the redemption of the provincial debt, and for the completion of the works already in progress; and if a guarantee fund had been formed, on security of which capital could have been raised for these objects, the loss occasioned by the non-completion of such works, and much of the difficulties which have since been experienced, would have been obviated.

In the present circumstances of the province, it would be impossible to calculate on any available surplus from the public revenue, and although it may be expected gradually to improve, a guarantee fund can only at present be derived from such rates or tolls as may be imposed for the execution or completion of works, for which the inhabitants are willing thus to provide; and when the Legislature has restored public credit by redeeming its engagements, the effect on the provincial revenue cannot fail to be favourably experienced.

Appraising as I do the spirit with which the Assembly has promoted many useful works, but which were obviously beyond the present means of the province to provide for, except by raising the necessary capital on the security of an adequate fund for its gradual redemption, a further consideration presents itself in the necessity of guarding against the loss of capital from the unskilful execution of the works, and the inadequate means applied to them.

The practice of carrying roads over the summits of hills to avoid crossing streams, and the construction of bridges, has led to the abandonment of lines of road on which much labour had been bestowed; and the same remark is applicable to what are called "winter roads," where the forest trees are merely cut down. When covered with snow, such tracts may be traversed on sleds, but at other times they are impracticable, and the improvement of them is often attended with more labour than would be required for the completion of a new line of road. The losses, also, which are sometimes sustained from the defective construction of bridges should be guarded against by placing such works under the direction of a scientific department.

How far a change in the Crown lands, or, in other words, in the casual revenue, may hereafter be imposed in aid of these improvements, by which the value of the lands would be raised in common with the lands of the inhabitants, will be a subject for future consideration; meanwhile the rapid augmentation in the value of lands, where they are rendered accessible by means of roads, is strikingly evidenced in all parts of the province, and from the high price which they have attained in favourable situations, it is evident that no charge is more certainly compensated to the settler than that which is incurred in opening and improving communications throughout the country. In the older settlements it will in general be fully adequate for the purpose, and may be assisted by tolls; but the construction of roads and bridges through extensive tracts of wilderness, which may separate them as completely as if the ocean intervened, will, in most cases, require to be undertaken on the security of some general fund, to which the lands thus opened for settlement would afterwards contribute.

Settlers who possess resources to maintain themselves in the wilderness till the lands they purchase can be rendered productive, are generally disposed to contribute their labour, at moderate rates, in redemption of the charge by which they tax themselves for improvements essential to them, and the charges thus liquidated are public contributions to such works, by which the market value of the reserved lands is augmented.

Works of this description will sometimes admit of being progressively executed as funds become available; but in most cases it will be found preferable to delay them until adequate funds can be applied for their completion on approved estimates and plans.

From the adoption of the first mode, unfinished works have been subject to injury through neglect and dilapidation, the early completion of which could alone save the capital already expended on them, or render it reproductive as an investment.

brooke to Lord  
Stanley,  
14 November 1842.

My Lord,

I HAVE had the honour to receive your Lordship's despatch (No. 104), dated 7th October, transmitting for my information the copy of a General Report of the proceedings of the Land and Emigration Commissioners.

I have perused with interest the observations of the Commissioners, and I am desirous of affording them all the information that may enable them fully to comprehend the measures in progress for the settlement of the lands in this province.

Having in former despatches explained the principles by which I have been guided, I now enclose a Report by the Commissioner, Mr. Wilmot, who undertook to superintend the first settlement on the St. Andrew's road in the winter of 1841. From this report it appears that the forty settlers who occupy 2,000 acres or 50 acres each, have cleared 200 acres of land, and have opened and constructed a road of 16 feet wide and of four miles in length through the forest to connect their settlement with the main road to St. Andrew's; that the contracts made with the whole party under a joint guarantee were executed at the current rate for such work in 1841, and that the labour performed has been equivalent to the supplies advanced.

If the 2,000 acres of reserved land in the settlement should sell by auction at 5s. an acre—the former upset price of wilderness lands, and less than the average price of private lands—the proceeds would be equivalent to the value of the labour expended on the road; and from the great reduction in the value of labour and subsistence in the present year, the same contracts could now have been executed at half the cost.

When it is further considered that these settlers with their families were at the beginning of the last winter in a destitute condition and without employment in Fredericton, and that in twelve months their labour has acquired to them a property valued at 1,300*l.* sterling, and that they have performed public work valued at 471*l.* sterling, no question can be entertained of the advantage accruing to the public as well as to the settlers themselves from the undertaking.

The Commissioners have noticed that the further prosecution of this plan of settlement has been arrested by the financial difficulties of the province, and they observe that advances of public money may be expected unduly to encourage the influx of emigrants in search of labour. This observation necessarily applies to works of every description in which public funds may be expended in the colonies.

The opening of roads in a new country covered with forest is essential to its occupation and improvement. The money expended on them is of the nature of an investment of capital; and while there is an effective demand for wild lands and a progressive augmentation in its value, such works are not only a means of effecting the settlement of the country, but of increasing the revenue, from which the necessary funds may be derived for their further prosecution.

Without pursuing the subject at present, and admitting the necessity of a vigilant superintendence where public monies are advanced, and indeed of placing

placing them in the hands of those who are intrusted with their disbursement on the works to be performed, I wish to draw the attention of the Commissioners to the fact that the settlements now in progress have been undertaken by associated parties, who, possessing the means of maintaining themselves in the wilderness, have required no advances to be made to them, and who have entered into voluntary contracts in some cases to open roads required for access to their locations. Several settlements on this plan are now forming on lands selected in different parts of the province, the most considerable of which is situated near the Kennebeckasis river, where a party of 200 unemployed mechanics of St. John's are now settling.

From the enclosed Report of Dr. Gesner it will be observed, that a number of squatters were found by the surveyors on the land, and who will have an opportunity of purchasing at the sales the allotments which they occupy.

No person will be allowed to purchase more than 50 acres on credit, and those who desire to purchase the reserved lots must pay for those they have first acquired.

To ensure the effective occupation of the lands, the bonds will be enforced where it is neglected.

I will take an early opportunity of transmitting the regulations under which these settlements are now forming; and I hope that their effect in raising the value of the Crown lands will recommend the equitable claim of the settlers to the remission of a part of the price of their lands in consideration of the work performed by them in opening roads. I should not propose that this should be done except where the roads have been properly laid out and executed; and the sum remitted would be regulated by the extent of the road and the ordinary contract price of the work performed.

Hitherto the revenue derived from the sales of Crown lands has been inconsiderable, and the extent to which it is occupied by persons without title is generally complained of. In the prosecution of this plan of settlement, I anticipate that with the improvement of the country the revenue will be augmented, and a limitation of the occupancy of the settlers will facilitate the acquisition of titles, which it is as much the policy of the Government as it is advantageous to the people to encourage. In the expectation of a progressive rise in the value of lands, the settlers will be anxious to redeem the bonds on their first purchases, in order that they may be enabled to bid for the reserved allotments at the public sales.

I have, &c.

(signed) *W. M. G. Colebrooke.*

---

Enclosure 1, in No. 13.

Sir,

Fredericton, New Brunswick, 2 November 1842.

Encl. 1, in No. 13.

I HAVE the honour to enclose the account of work on the road through the Teetotal Settlement, showing a balance due to me of 389*l.* 12*s.* 6*d.*, the whole of which has already been advanced to the men, and which I have had to make provision for in the mean time at great inconvenience.

I have never obtained the actual measurement of the road until this morning.

I also enclose a return of crop produced on the clearances during the summer.

I shall have the account of disbursements made up to-day, showing the items of expenditure.

The prices for grubbing and making are those submitted to and approved of by the council at the formation of the settlement.

I have, &c.

Honourable W. F. Odell,  
Provincial Secretary.

(signed) *L. A. Wilmot,*  
Commissioner.

*P.S.*—There are now twenty-five houses erected in the settlement.

## CORRESPONDENCE RELATIVE TO EMIGRATION. 153

NEW  
BRUNSWICK.

The supplies purchased in the winter of 1841 consisted of pork, fish, flour, potatoes and other articles at the market prices, of the issues of which an account was kept with each settler.

The settlers having contracted collectively to perform the work at the rates specified in the account, the Commissioner has recredited them for the amount of work done, at the contract rate, against the supplies advanced to them for subsistence and aid, in planting their lands with potatoes, oats and turnips.

Due to Government from 40 settlers, purchasing 50 acres each, at 2 s. 8 d. sterling per acre, including survey, 266 l. 13 s. 4 d.

- |  |        |             |
|--|--------|-------------|
| 1. Value of 200 acres cleared land, at 4 l. sterling per acre - - -  | £. 800 | } £. 1,300. |
| 2. Value of 25 houses built, 20 l. sterling each, not including camp-houses, root-houses or cellars, &c. - - - | £. 500 |             |

Probable value of intermediate Crown allotments reserved in the settlement, 2,000 acres, at 8 s. sterling per acre, 800 l.

The average rates of labour in the present year are reduced nearly one-half from the above rates, at which the road-work was contracted to be performed in 1841; and the price of provisions has been subject to an equivalent reduction.

## Enclosure 2, in No. 13.

## REPORT.

(No. 103.)

To his Excellency Sir William M<sup>r</sup> Bean George Colebrooke, к.н., Lieutenant-governor and Commander-in-Chief of the Province of New Brunswick.

May it please your Excellency,

In compliance with your Excellency's instructions, I have visited the settlement now opening by the Mechanics' and other associations situated between the sources of the Kennebecasis and Pollet river, and the old road between St. John and Shepody, in the county of King's and Westmorland. The greatest number of the persons forming these associations are mechanics of St. John, among whom there is a part of the natives of the above counties, who I had encouraged to go into the woods on account of their knowledge of clearing wild lands, which knowledge will be communicated to settlers from the city. Encl. 2, in No. 13.

About 350 lots, each of 100 acres (to be subdivided), have already been surveyed on one tract, and the settlement will be about 12 miles long and six miles broad.

The land in general is of a good quality, and is covered with beech, birch and other kinds of hard wood, among which is the sugar maple, a tree of much value to the new settler. The tract contains but little pine, and not more spruce or fir than will be required for the use of the settlement. The streams passing through the land offer good sites for mills.

Roads have been reserved between every alternate range of lots, and also a sufficient number of cross roads to secure free communication when the tract became strictly inhabited.

A road has been laid out to the middle of the settlement, and I have been able to procure as much labour by subscription as will render it passable for the settlers to carry in their provisions and other supplies during the winter.

It is very desirable that a road should be made from the settlement to the Shepody road (five miles), and to the Bay of Fundy (20 miles). The distance to the Shepody road will be only six miles, and to the Bay of Fundy the distance is 15 miles.

These roads will allow the settlers to procure fish at a cheap rate in the summer season.

Already a number of persons have commenced making clearances, erecting log-houses, &c., and the settlers are advancing daily to the place of their future labour. The number of persons desirous of taking up land in this settlement is about 200.

The most serious difficulty had been likely to arise from the great number of squatters who had settled upon ungranted lands, a list of which, with brief notes, is appended to this report. A number of these had cleared lands, built houses, and made themselves comfortable; others have only felled and burnt from one acre to four acres, and a few had expected to hold occupation by cutting down a few trees, after an order had been issued to survey the whole tract.

Under a consideration of these circumstances, it was deemed advisable to allow such persons to join one of the associations. It is desirable that the survey of every tract should be completed before settlers enter upon the lands. Firmness is also required on the part of surveyors, in order that the general good of the whole may not be sacrificed for the benefit of a few. No possession should be given of the reserved lots.

Should the lots sold on credit never be paid for, the increase in the value of the reserved lots by the adjoining clearings, roads, &c. will be more than a four-fold compensation to the Government for all the lands thus disposed of.

When any body of emigrants, or persons from the towns, associate to open a new settlement, jealousies immediately arise between them and among the inhabitants near the districts selected

NEW  
BRUNSWICK.

selected for settlement. To remove this evil, encouragement should be given to the young men of the province to mix with the strangers, and this will prove a certain and an effectual remedy. The labours of an efficient and zealous emigrant agent or commissioner are, in my opinion, highly necessary in the opening of new settlements in the province.

A plan of the settlement, with another report, will be laid before his Excellency as soon as the surveys are completed.

Sussex, King's County, 27 October 1842.

I have, &c.  
(signed) *A. Gesner.*

MEMORANDUM of Persons settled on ungranted Lands near Salmon River, Pollet River, and West Branch of the Kennebecasis.

John Walter cleared half an acre in June last; has an order of survey; the lot is in Mr. Wilmot's survey, and is chosen by Mr. Storms.

William Taylor has cleared one acre.

John Martin has cleared two acres near Pollet Lake.

Edward Haley, a pensioner, has cleared 10 acres and built a house; he purchased his improvements from one Malone for 10*l*.

George Sprague and John Sprague cut three acres, on Nos. 4 and 5 of Mr. Wilmot's survey in June last; the lots are chosen by Messrs. Storms, of the Mechanics' Association.

Morton M'Loud, and others, had lots surveyed by Deputy Arnold, crossing Cunningham's survey, after the land had been selected by persons belonging to the association; they have taken possession.

Samuel Cleaveland has cleared two acres near Pollet Lake.

James Le Babcock has cleared 20 acres; has a house and barn; has been on the Crown land two years.

John Gordon has cleared two acres.

Robert Workman has cleared four acres, and built a house.

— Cook has cut two acres.

William Hawks has cut half an acre.

James Hawks has cut 10 acres.

John Corrigan has made a small clearing.

Eastman Neckinson has cleared five acres, and built a house.

Patrick Swift has cleared two acres.

Owen O'Brien has cleared four acres, and is building a house.

Humphrey Howard has a clearing.

Howard & Sons occupy 700 acres of ungranted lands.

Francis Gallagher has a clearing.

Edward Owens has a clearing.

John Huggins has a clearing.

Robert M'Lean has a clearing.

John Hall has a clearing.

The above squatters are settled within an area of 10 square miles.

27 October 1842.

COPY of a DESPATCH from Lieutenant-governor Sir *W. M. G. Colebrooke* to Lord *Stanley*.

No. 14.  
Sir *W. M. G. Colebrooke* to Lord  
*Stanley*,  
12 December 1842.

Fredericton, New Brunswick,  
12 December 1842.

My Lord,

REFERRING to my despatch (No. 103) of the 14th November, I have the honour to enclose to your Lordship copy of the Regulations passed by me in Council, on the 1st instant, to give effect to the measures which are in progress for the settlement of the Crown lands.

Previous to the adoption of the plan of laying out locations for the settlement of the people together, small allotments of land were applied for by individuals, and the applicant was put into possession on paying a first instalment, and defraying the expenses of a special survey.

In this manner numerous families have settled in the wilderness, who, failing to pay the subsequent instalments, have received no grants; while others, to avoid the first expenses, have taken possession of lands without authority, and formed settlements in situations where they might escape observation. The ill effects arising from the habits thus acquired, and the decline of the revenue from the sale of lands, necessitated a change; and by receiving applications from associated parties for the sale and survey of blocks of land laid out in locations,

locations, a general disposition has been evinced to form such associations, in which men of great respectability have taken a lead.

The expenses attending the surveys of land on this plan have been greatly reduced, and the funds of the settlers, formerly absorbed in defraying these charges, are now applicable to the improvement of the farms, or the purchase of additional land, by redeeming the bonds on the credit purchases, which credit purchases are limited to 50 acres.

I transmit, also, some extracts from a Report of Dr. Gesner, the provincial geologist, in which he has pointed out the situations of extensive tracts of valuable lands, which are open to settlement in all parts of the province.

The upset price at which it has been usual, of late, to offer the public lands for sale, will readily admit of being raised to the average rate at which private lands are disposed of in the same situations; and if the Assembly should concur in the application of a part of the land revenue to the opening of roads, which are essential to the occupation of the country, capital may be expected to be invested in the purchase of lands, by which that revenue will be considerably augmented. What proportion may admit of being so applied, I am unable at present to anticipate; but the application to such objects of the capital thus invested, and especially in connexion with the new settlements which are forming, will operate as a powerful incentive to the improvement of the country; and if the expenses of the Government could be otherwise provided for, and without drawing on this fund, I should consider such an application of it to be equally just and legitimate.

To whatever amount this revenue may be increased, the circumstances of the province altogether preclude the application of the principle of applying any part of it to the purpose of promoting the introduction even of such settlers as it is desirable to encourage, and the limited credit given to such settlers in the purchase of their first allotments can hold out no inducements to emigrants who are destitute of the funds necessary to maintain themselves in the wilderness, until their lands can be rendered productive for their support. Those who possess resources for their maintenance during the first year willingly apply their labour to the opening of such roads as are necessary to connect their locations with the sea-coast and the rivers and principal highways—a neglect of which has so much retarded the settlement of the country; and it is only after the work has been executed in a proper manner that a regulated remission would be made (in consideration of it) of a part of the purchase-money for their lands.

The circumstances which have led to so rapid a rise in the value of wild lands in Australia and New Zealand, as stated in the Land and Emigration Commissioners' Report of the 30th July last (pages 7 and 10), through the speculations of capitalists in England, do not apply in this province, where the only capital now available for the purchase of lands is derived from the savings of the industrial classes, who, in the present dearth of employment, are unable to find occupation in the practice of their trades.

The high prices, however, ordinarily paid for land in favourable situations, especially of the alluvial lands along the banks of rivers, called *intervale*, indicate that the introduction of capital would lead to a considerable and even rapid rise in the value of the Crown domains, there being still much land of superior quality at the disposal of the Government. The average price of lands, as quoted in the Commissioners' Report (page 11), of 2s. 5d. per acre, is merely nominal. This conventional rate was generally adopted under the Act commonly called the Restraining Act, which expired in the last year, and the distresses of the province since the lands have been sold at public auction have checked the competition which may be expected to arise, and which I am desirous of encouraging.

I have, &c.

(signed) W. M. G. Colebrooke.

P. S.—I enclose a Return of the parties now forming settlements under the Regulations I have alluded to.

W. M. G. C.

NEW  
BRUNSWICK.

Not received with  
this despatch.

NEW  
BRUNSWICK

Enclosure 1, in No. 14.

Encl. 1, in No. 14. REGULATIONS for the Disposal of Crown Lands. By Order of his Excellency the Lieutenant-governor in Council, 1 December 1842.

- 1st. No land to be sold, unless in locations previously surveyed under the directions of the Government.
- 2d. Purchases of lots of 50 acres and under (not being indebted to the Crown for any land previously purchased) may be allowed to claim credit for the purchase-money, upon giving bonds to the Crown, payable with interest annually in advance, at the rate of six per cent., and paying the first year's interest at the time of sale; upon executing which bond a grant to be passed to the purchaser.
- 3d. In default of regular payment of the interest annually, when due, or under other circumstances injurious to the effective settlement of the land, the bonds will be put in suit.
- 4th. Persons purchasing more than 50 acres must pay the whole amount of the purchase-money down at the time of sale, it being clearly understood that the 50 acres is the limit of the Government credit to any individual settler.
- 5th. Persons who have occupied and improved, without title or permission, portions of Crown land included within any surveyed location, are not to expect any compensation or consideration for such improvements; but if they become purchasers of such portion, they may have credit for the purchase-money to the extent of 50 acres, in common with other settlers, and receive titles on executing bonds, and paying interest as aforesaid.
- 6th. Reserves to be made in every location of lines of roads and allotments for schools and places of worship; which reserves will not be allowed to be broken or sold.
- Notice to be given at the time of advertising lands for sale, and also at the time of sale.
- It is to be clearly understood that no grant will be passed until the interest for one year upon the purchase-money is paid, and the bond for the purchase-money has been duly executed and delivered; and that the bonds will be peremptorily enforced against any purchaser who may neglect to clear and settle the land (which is a security for the debt), or who shall be found cutting off and disposing of the timber, without making efficient settlement.

Enclosure 2, in No. 14.

Encl. 2, in No. 14. Sir, Crown Land Office, 13 Dec. 1842.  
I HAVE the honour herewith to transmit, agreeably to your Excellency's commands, a schedule of applications for land under the association system, with such remarks as the nature of each case might appear to me to require.

I have, &c.  
(signed) Thomas Baillie,  
Surveyor-gen.  
His Excellency  
Lieut.-col. Sir W. M. G. Colebrooke, K. H.  
&c. &c. &c.

and 31 May 1842,  
*vide* Corres-  
pondence relating  
to Emigration,  
ordered by the  
House of Commons  
to be printed,  
7 June 1842,  
No. 34, pages 325  
and 333.

Sir, Downing-street, 3 February 1843.

I HAVE the honour to acknowledge the receipt of your despatches (No. 89) of the 27th September and (No. 103) of the 14th November last; in the former of which you state that a fresh body of unemployed mechanics, belonging to the city of St. John's, had obtained assignments of land under the arrangements adopted at the close of 1841, for the settlement of the Crown lands; and, in the second, you report the progress which has been made in one of the settlements previously formed, and advance arguments in favour of the continuance of the system.

In my despatches of the dates noted in the margin, I pointed out the objections entertained to the measures suggested by you for encouraging the location on the waste lands of persons of the labouring classes; and I was led to believe that the intention had been abandoned, from the remark contained in your despatch of the 30th April last, that it was unnecessary to discuss the subject any further, as, "in the present state of the public finances, no prospect could be held out of promoting the settlement of the province on this plan." It was therefore not without considerable surprise that I learned from your present despatches, not only that the scheme is still in operation, but that the local Government affords the utmost encouragement to its extension throughout the province, with this modification, however, that it no longer forms part of the plan to make loans to the settlers from the public funds.

Before proceeding further, I would wish to offer a few remarks on what is stated to be the result of the first experiment made on the original plan, as you refer to it in proof of the successful operation of the system. The settlement was composed of 40 men, numbering with their families 160 souls; and, at the end of 12 months from taking possession of their land, they appear to have raised a certain amount of potatoes, oats and turnips, and to have cleared 200 acres for cultivation next year. They have also erected 25 houses, and opened a road of rather more than four miles in length. So far the experiment would appear successful. But, on the other hand, not to mention the alienation of 2,000 acres of public land, for which, it is probable, no price will ever be paid, the charge made on the executive Government by Mr. Wilmot, the Commissioner for this settlement, amounts to 589*l.* 12*s.* 5*d.*, the greater part of which sum he had, at great inconvenience to himself, advanced from private sources. I conclude, of course, that funds exist for his repayment; but, I confess, I cannot look without great apprehension upon the continuance and general extension of any system which can, even remotely or indirectly, involve the Government in responsibility for the expenses and risk of forming settlements in the wilderness.

An essential difference doubtless exists between the plan now proposed and that previously acted upon, as, by the present scheme, the settlers are to be persons who

who possess the means of supporting themselves through the winter. I observe, however, that the regulations transmitted with your subsequent despatch (No. 114), of the 12th December, do not make any provision for ascertaining, and in fact do not require, that the persons obtaining land under the new system should have the means of supporting themselves in the wilderness. But, even supposing this condition to be insisted upon, I fear the difference between the two plans would prove to be less real than is expected. How the fact of the possession of the requisite means is to be ascertained is not stated; there is, however, reason to believe that any test which might be applied for the purpose would prove fallacious. For example, it is matter of experience that the same property may be passed from one to the other of the applicants, in order to establish their right to land; or individuals may borrow, for the moment, from friends; or the property which they exhibit may be their own at the time, but may be parted with to pay their debts before they leave their present habitations for the settlements.

Independently of this consideration, I fear that, if the local Government offer encouragement to mechanics and artisans to abandon their present trades and callings, and resort to the wilderness for the purpose of clearing and cultivating the land, it will hardly be able to escape from the responsibility of preserving them from destitution, when, from the failure of their own resources, or from sickness, or possibly from their own misconduct, they may become unable to support themselves. This danger, I believe, would be considerable, even in the settlements of moderate extent, which, up to the present time, are reported to have been formed under the more immediate superintendence of the Government, and which, according to the Surveyor-general's report enclosed in your despatch (No. 114), appear already to contain a population of 8,000 souls. The risk would obviously become much greater when the system had gone into operation all over the province, and when it had become generally known in this country and in the adjacent colonies, that land could be obtained in New Brunswick by what would soon be considered as only nominal purchase. As illustrative of the evil consequences of such rumours, I beg to call your attention to the following passage in the General Report furnished by the emigrant agent at St. John's in the course of last summer. It shows how rapidly any supposed advantage offered by a particular colony to settlers is communicated to the poor of this kingdom by interested persons. "To add to the emigrants' distress, they have been, and are, subjected to the most gross and reprehensible delusions by the shipping agents throughout Ireland. They not only induce the poor people to believe that they will get lands here for nothing, but that they will also receive provision for settling on them. The readiness with which the uninstructed receive this flattering, erroneous and cruel encouragement only augments their subsequent disappointment, and the more particularly so, as they are further assured that there is a Government fund provided here to carry them to any part of British North America or elsewhere; and under this delusion there are now really here parties whose destinations were parts of Lower Canada, and as far as Toronto and Dundas in the Upper Country."

The plan of settlement now proposed appears objectionable in another point of view. It proceeds on the principle, its chief recommendation, that assignments of land are to be made to associated bodies of the poor. But in the cases reported in your despatches, (Nos. 89 and 103), the applications for land appear to have been made by some chief person as head of the others; and even when gentlemen interested in the undertaking request the local Government to include other persons in the associations already formed, they think it necessary to state, that the consent of the head of the associates to the application had been previously obtained. Considerable power, therefore, of deciding on whom the favours of the local Government should be bestowed would thus appear to be thrown into the hands of individuals of the working class, and it is not improbable that, in the course of time, a desire to traffic in such power might arise and be acted upon. Again, if bodies of poor people associate together for the purpose of obtaining land, and acting with the advice and under the superintendence of colonists of a superior class, it is impossible not to feel some apprehension lest the plan, when fully developed, would lead to the abuses which attended the old system of leaders and associates in Canada. Indeed, it seems difficult to conceive that there can be any form in which free or conditional assignments of land could be made to encourage settlement, which has not been tried at various times in different British colonies. The great mistake pervading all attempts of the kind is to suppose either that capital is not necessary to successful colonization,

NEW  
BRUNSWICK.

---

tion, or that it can be supplied by the Government. To settle a country with the rapidity desired in New Brunswick, capital and labour must be poured into it simultaneously; and any attempt to force the result by the application of labour alone will end in failure, or else entail indefinite expense.

The truth of this principle, derived not so much from speculative reasoning as from a long course of experience, has come almost to be universally admitted. Practical effect has been long since given to it by the positive instructions which have issued from this department to the various colonial governors, never to alienate the public lands, except by *bonâ fide* sale; and still further, in some cases, by the enactment of laws prescribing the mode of sale to be adopted.

I have thus far stated the grounds on which I should consider the continuance and extension of the present system to be fraught with danger to the real and permanent interests of the province. But a much more serious objection remains, to which I advert with great reluctance. The course which you have pursued is not only in direct violation of the Royal Commission, which enjoins the Governor of New Brunswick to "conform to and observe the provisions in that behalf contained in any Act or Acts made or to be made by the Governor and Council and Assembly," for regulating the sale and settlement of the waste lands, but it is also in violation of the statute law of the province. That law (8 Will. 4, cap. 1, sect. 5.) provides, "That all and every grant, lease or other assurance which, during the continuance of this Act, shall be made or granted by his Majesty, his heirs or successors, of any lands, tenements, rents, woods, mines, royalties, revenues, or other hereditaments" in the colony, "shall be utterly void and of none effect, unless such grant, lease or assurance be made upon sale or rent to the highest bidder at public auction in the province, due notice having been first given thereof in the Royal Gazette." Unless, therefore, some explanation can be afforded, which I have sought in vain to discover, it follows that, in sanctioning a departure from the rules prescribed by the Legislature, you have involved yourself in a heavy responsibility, and have subjected the settlers who have accepted the grants in question to great risk of inconvenience and loss. Entertaining the strong opinions which I do, I cannot authorize you to propose to the Legislature such an alteration of the law as should legalize and extend the system for the future; but I think it due to those who have entered on the cultivation of these lands, on the faith of an undertaking from the Executive, that they should be protected from injury. You will, therefore, take an early opportunity of applying to the Legislature for an Act legalizing what has heretofore been done, and granting an indemnity to those who have acted in violation of the existing law. You will place before the Legislature the grounds on which I entertain very strong doubts as to the policy, and very grave apprehensions for the consequences, of a continuance of such a system; and although, if the Legislature should take a different view, it will be my duty carefully to weigh the reasons which they may assign, and to receive with due respect the expression of their opinions, you will consider yourself as absolutely and positively prohibited from giving any further extension to the system without my express sanction, and from assenting to any Bill which may be passed by the Legislature for its continuance, which shall not contain a clause suspending its operation till Her Majesty's pleasure shall have been signified.

I have, in conclusion, to instruct you to take care that the conditions attached to these grants be most strictly enforced in every instance, and in all particulars; and I should wish to receive from you quarterly Reports of the progress made in their fulfilment.

I have, &c.

(signed) Stanley.

—No. 16.—

NEW  
BRUNSWICK.

(No. 14.)

COPY of a DESPATCH from Lieutenant-governor Sir *W. M. G. Colebrooke*  
to Lord *Stanley*.Fredericton, New Brunswick,  
27 February 1843.

No. 16,

Sir *W. M. G. Cole-*  
*brooke* to Lord  
*Stanley*,  
27 February 1843.

My Lord,

I HAVE the honour to acknowledge the receipt of your Lordship's despatch (No. 130), dated 3d February, and to obviate any misconception as to the measures which have been taken for the settlement of wilderness lands in this province, I will briefly recapitulate to your Lordship the facts and circumstances which have attended them.

In my despatch (No. 77), dated the 9th of August, I alluded to the effects of the speculations in land, which had obtained previous to the passing of the Civil List Act in 1837; and in 1838 the Surveyor-general, in a report, pointed out the defects of the system under which lands were then granted, the principal objections to which consisted in the demand of payment for the lands with 14 days after the day of sale, which could not be complied with, and the delay and inconvenience of referring to the Governor in Council every application for the purchase of land. This regulation subsisted under the Act for restraining the operation of the Civil List Act, which authorized the special grant by the Governor in Council of allotments of 100 acres on application to them.

When I assumed the government in 1841, I found this regulation in operation, and the practice had been to assemble the Executive Council monthly for the consideration of all such applications, the expenses of the members residing at a distance being defrayed on such occasions from the gross proceeds of the casual revenue.

The inconvenience of such a system of management, and its effects in leading to detached and desultory settlement in the wilderness, were generally complained of, added to which the expenses attending the special surveys of small allotments constituted an exorbitant charge on the settlers, without any benefit to the revenue.

In the Session of 1839, the Assembly addressed the Lieutenant-governor to obtain an alteration in the regulation, requiring prompt payment for land, and the substitution of a system of payment by instalments; and in the Session of 1841 they again addressed him, praying that lands might be surveyed for settlement in blocks of 2,000 acres each, and subdivisions of 100 acres; premiums at the same time were granted to encourage the formation of emigrant societies in each county. The lands selected and laid out pursuant to this address were not generally taken up, and in September 1841, the Act to restrain the Civil List Act having expired, the provisions of that Act (8 Will. 4, c. 1, s. 5) for the sale of all lands by public auction, for the first time came into force, and it was strictly in conformity to these provisions, and after full consultation with the law officers of the Crown, that the settlements were formed in the winter of 1841-42, under regulations then adopted by the Government.

In the Session of 1842, a Bill was introduced to restrain the Civil List Act, but was finally lost, and no further interference has since been attempted in the Legislature to check the salutary provisions of that Act.

On reference to my despatch (No. 65) of the 28th June 1842, your Lordship will observe it stated, that the "disposal of lands, otherwise than by public sale, has at no time entered into my view for the settlement of the colonies."

The regulations enclosed with my despatch (No. 114) of the 12th December last, are in strict conformity with the law, and I may add my opinion, that no other mode of sale than by public auction ought at any time to be sanctioned.

In the despatch last mentioned, I pointed out that the plan of settlement previously pursued had led to the failure of engagements, and to the extensive occupation of lands without title. I now enclose an estimate of the probable extent and value of the lands thus occupied.

As the squatters naturally select the best lands, they have been found in occupation of allotments in every location which has been surveyed; and as their settlements have in many instances been far advanced, they have availed themselves of the opportunity of purchasing at the auction sales their respective allotments.

291.

By

No. 1.

NEW  
BRUNSWICK.

By this means I entertain a hope that the facility of acquiring land by purchase will check the practice of squatting hitherto so prevalent, and which has operated so injuriously to the revenue, and to the habits of the people.

In the progress of these measures the Government has merely followed the disposition of the people to acquire lands for settlement, directing the surveys to be made only when the applications were sufficiently numerous to ensure purchases when put up for public sale.

No. 2.

The necessity of opening roads led to advances being made in the winter of 1841 and 1842, in one instance, by petition of the settlers to the Legislature during the Session of 1842; and other petitions presented in the present Session are herewith enclosed. Whether these roads be made by the settlers on grants of money, or by remission of the purchase money on their lands, the necessity of opening them is generally acknowledged, as affording the only means of providing for the settlement of the country; and at the end of the Session I will be prepared to report to your Lordship the views of the Legislature on the subject.

There being no employment at present in the country, and no public works in progress, it would be impossible for any persons not possessed of resources to settle in the wilderness, where for the first year they must be dependent on the supplies of provisions they carry with them. Nor do I conceive that the British emigrants, even if possessed of such resources, would be able, until they have acquired some experience of the country and climate, to encounter the hardships of such a life.

The numbers who have formed associations with this object have possessed this experience, and having no employment, they have necessarily applied the resources they would under any circumstances have exhausted in supporting themselves and families while forming independent settlements in the forest. There they have obtained abundance of fuel during the long winters, which, had they remained in the towns, they must necessarily have purchased. The Government, in seconding the views of these settlers, by surveying the lands and selling them at auction, have doubtless prevented many from exhausting their resources and becoming chargeable, and others from adopting the alternative of emigrating to the United States, from whence, in too many instances, respectable mechanics have returned after spending the money they took with them.

Should employment again present itself, they can readily sell their improvements to emigrants or others, or let their locations upon shares, thus realizing an ample return upon the product of their labour in the value of their cleared lands.

At the same time the Government will have acquired an improved security for the bonds taken for the purchase money of the fifty-acre allotments sold on credit, should it be advisable at any time to enforce those bonds.

As the settlers desire in all cases to purchase a hundred acres, there can be little doubt that efforts will be made to redeem the bonds in the first purchases should they not be redeemed by labour on the roads, and that the settlement of the country will be more advantageously effected under the operation of this system than under the free grants in Canada, which are necessarily withheld as under the instalment system in this province until the conditions may be fulfilled, leaving a large quantity of land occupied for an indefinite time without title, and without any intermediate security to the settler, that he can realize the value of his improvements. The means of support which the settlers in these associated parties possess until they can clear land and raise crops for their subsistence, consisting of their implements, clothing and supplies of pork and biscuit, are their available capital in the undertaking, and if funds should be applied to the object of opening roads in the wilderness, they must be converted into such supplies, either by the employer or by the labourers themselves. That capital may be profitably invested in the construction of roads and other improvements, by which the value of the wilderness lands will progressively be raised, there can be no doubt, and the clearing of the land and the erection of habitations for settlers may, if judiciously executed, make a return to the capitalist; but the application of capital, which in all cases requires experience and vigilant superintendence, will in such operations be more frugally and economically applied by the actual settlers for themselves, than by the agents of capitalists.

In elucidation of this remark I may observe, that in the settlements formed by the New Brunswick Land Company, a large capital has been invested for which no adequate return has hitherto been made, although from the opinion of the  
present

## CORRESPONDENCE RELATIVE TO EMIGRATION.

163

present intelligent superintendent, in the report which I enclose, such operations may be profitably undertaken.

NEW  
BRUNSWICK.

Your Lordship has apprehended that the settlements which have been encouraged under the Addresses of the Assembly in 1841 and subsequently, will hold out encouragement to indigent emigrants from the United Kingdom; but as little employment is likely to be available to them in this province, they could not possibly maintain themselves in the wilderness without resources of their own.

No. 3.

The complaint rather is, that many who come out linger about the towns and become chargeable on the inhabitants, or on the rates, rather than seek the employment that offers in the country farms; and even if they possessed the means of supporting themselves in the wilderness, they would be still less disposed of themselves to engage in operations for which they are generally unprepared on their arrival by their previous habits and experience.

From the enclosed abstract of the collections under the Passengers' Act from 1833 to 1842 inclusive, and of payments for the relief of emigrants, your Lordship will perceive that the disbursements have exceeded the sums received; and as the petitions of the Commissioners of the Poor who have dispensed the relief have attracted the attention of the Assembly, I hope it will lead to the passenger duties being applied in future in such a manner as will render the fund available in effecting the settlement of the emigrants rather than in their indiscriminate relief as paupers.

No. 4.

Copies of the petitions from St. Andrew's are herewith enclosed, and as the inducement to indigent emigrants to embark for that port, from the facility of passing into the United States by the bridge over the St. Croix at St. Stephen's, may lead to future embarkations of persons in a destitute condition, I beg to draw your Lordship's attention to the enclosed petition of the Commissioners of the Alms and Workhouse, addressed to myself and to the Legislative Council and Assembly, with the correspondence to which it has given rise.

No. 5.

That a number of poor families should have been sent abroad from any part of the United Kingdom in the destitute condition here described, including aged and infirm persons who are likely to be permanently chargeable, is greatly to be lamented, and especially to a quarter where it was well known that employment could not be held out even to the most effective; and whether their removal may have been effected at the charge of the proprietor on whose estate they resided, or under the 5th section of the Irish Poor Law, it must be regarded as equally objectionable.

Being aware of instances in which infirm emigrants have been returned to Europe at the public charge, I trust it will be apparent to your Lordship that some amendment of this law is required.

In the United States, the emigrants are only permitted to land, on security being given by masters of vessels or others that they will not become chargeable, and as such a provision would be open to objection in a British Colony, the Act which encourages the emigration of paupers should also provide for their proper equipment for the voyage, and for their maintenance in the colony till they can obtain employment.

To counteract the delusions practised upon the poorer classes by interested speculators in the ports of the United Kingdom, means must be taken to diffuse accurate information; in Canada the employment on public works holds out inducements which do not offer in this province, and it would be in the power of the emigrant agents to ascertain when such delusions have been practised, and to advise the emigrants of the prospects that await them.

I enclose herewith copy of the Resolutions of the Assembly of 1839-41; a Return of land surveyed in pursuance of the latter; a letter from Dr. Gesner respecting the settlement of the Mechanics; and a copy of the Regulations of the 1st December, for the sale of the lands at public auction.

PETITIONS for LANDS.

Encl. 2, in No. 16. To his Excellency Sir *William M'Bean George Colebrooke*, K.H., Lieutenant-governor and Commander-in-chief of the Province of New Brunswick, &c. &c. &c.; the Honourable Legislative Council; and the Honourable House of Assembly of the same Province, in General Assembly convened.

The Petition of the undersigned Purchasers of Land in the Settlement called the Mechanics' Settlement,

Humbly sheweth,

THAT your Petitioners have at considerable expense explored a tract of land in the counties of King's and Westmoreland, and having purchased a number of lots agreeably to the last regulations of the Government, they have commenced making clearances, and the opening such paths as are requisite to convey to the settlement the necessary provisions which at present are carried into the forest on men's shoulders. The whole number of applicants for land in the settlement exceeds one hundred and fifty. The whole district in which your Petitioners' lands are situated is in a wilderness state, and consequently without any roads whatever. In order to open the country where they have begun to clear, ten miles of road are required through the settlement, and twelve miles to the Bay of Fundy, besides cross roads. The opening of these roads will greatly enhance the value of Crown Lands adjoining the settlement, and improve the district.

In consequence of the exertions of your Petitioners, surveys of adjoining lands have been applied for, and there is every prospect of a large parish being formed in the vicinity of their operations.

From the present depressed state of business, your Petitioners desire to direct their attention to agriculture in New Brunswick rather than remove to the United States, and being fully aware of the benefits which have arisen from the liberality of the province in opening and improving roads, and in the encouragement offered to new settlers, they feel that in submitting their own claims to the consideration of your Honourable Bodies, they are also seeking the good of the country generally.

The want of the ordinary means of transportation is the chief difficulty the settler upon wild lands has to contend with, and your Petitioners feel assured that the large settlement in which they are engaged must languish unless roads are opened through it.

Your Petitioners therefore pray that your Honourable Bodies will be pleased to grant them a sum of money to assist them in opening roads through the Mechanics' Settlement, or allow them

## CORRESPONDENCE RELATIVE TO EMIGRATION.

165

them to apply the purchase-money of the first fifty acres of land to that object under an authorized Commissioner, and in such a manner as may be deemed most meet and expedient.

NEW  
BRUNSWICK.

And your Petitioners, as in duty bound, will ever pray.

St. John's, January 30, 1843.

(39 Signatures.)

To his Excellency Lieutenant-colonel Sir *William M<sup>c</sup>Bean George Colebrooke*, K.H.,  
Lieutenant-governor and Commander-in-chief of the Province of New Brunswick,  
&c. &c. &c.

The Petition of *Bryan M<sup>c</sup>Quaid* and seventeen others,

Humbly sheweth,

THAT some time past they applied for a tract of land for immediate settlement, on the association system, situate in the rear of the Daly Settlement.

When Deputy Janett received orders to survey said land into lots, your Petitioners found that a number of other settlers would have been willing to settle on said lots had there been a road by which to reach them, but none existed from the Neropis road to the lots, a distance of about three miles, so that there was no access to the lots; consequently no other settlers were found who were willing to join in forming the settlement.

Your Petitioners, sooner than the undertaking should fail, formed a design themselves to make the road, and having consulted your Excellency, and receiving encouragement to proceed, they commenced operations, and have actually cut 901 rods of road of 20 feet wide, that being the distance required to each, nearly to the rear of the settlement, thus laying it open to settlers.

Your Petitioners beg further to state that they are poor men, and have been put to considerable expense in obtaining supplies to enable them to cut the said road.

Therefore your Petitioners pray that they may be allowed such compensation as your Excellency may see fit to allow them, and that the same may be placed in account of the land applied for by Petitioners; for since said road has been made, others have come forward and are desirous of settling on said land; the settlement of which will consequently be owing to the exertions of your Petitioners in making the road.

Your Petitioners therefore humbly pray that your Excellency will be pleased to take their case into favourable consideration,

And, as in duty bound, will ever pray.

(signed)

*Bryan M<sup>c</sup>Quaid.*  
*James Baxter.*  
And 15 others.

To his Excellency Sir *William M<sup>c</sup>Bean George Colebrooke*, Lieutenant-governor of the  
Province of New Brunswick, &c. &c. &c.

The Petition of the undersigned Inhabitants of the Parish of Wakefield, in the County  
of Carleton,

Respectfully sheweth,

THAT your Petitioners have located on a tract of land situate in the Williamston Settlement (so called), in the aforesaid parish, surveyed by Deputy Garden upon the application of your Petitioners, who, being without a road, have no suitable mode of ingress and egress to or from the land they are about to occupy and clear; and being desirous of commencing farming operations early in the spring, will labour under serious disadvantage for want thereof.

Your Petitioners, therefore, solicit your Excellency to adopt such measures as may be deemed advisable, to lay out a road from Maclauchlan's clearing to the ninth lot in the said emigrant settlement, and allow your Petitioners to work out the price of their land, or a part thereof, on said road.

And, as in duty bound, will ever pray.

(23 Signatures.)

NEW  
BRUNSWICK.

To his Excellency Sir *William M'Bean George Colebrooke*, К.Н., Lieutenant-governor and Commander-in-chief of the Province of New Brunswick, &c. &c. &c.

The Petition of the undersigned Inhabitants of the Parish of St. James, in the County of Charlotte,

Humbly sheweth,

THAT large tracts of excellent land, amounting to nearly 30,000 acres, are held by the respective proprietors in a wilderness and uncultivated state, in the northern part of the said parish, to the great injury and annoyance of your Petitioners, who are thereby kept at great and inconvenient distances from one another, compelled to make extensive lines of roads through large portions of the said lands, and otherwise subjected to all the privations and peculiar hardships ever attending a scattered population in a wilderness country.

May it therefore please your Excellency and Honors to enact a law, requiring the owners of wild lands, in various parts of the province, either to cultivate or settle the same, or to pay a reasonable annual tax for the benefit of such settlers as are compelled to make roads through such lands, or to grant such other relief as the hardship of the case may demand.

And, as in duty bound, will ever pray.

Signed by      John Arbuckel.  
Alexander Dunn.  
And 209 others.

To his Excellency Sir *William M'Bean George Colebrooke*, К.Н., Lieutenant-governor and Commander-in-chief of the Province of New Brunswick, &c. &c. &c., the Honourable the Legislative Council, and the Honourable the House of Assembly, of the said Province.

The humble Petition of the undersigned Farmers and other Residents of the Parish of Queensbury and its vicinity, in the County of York,

Most respectfully sheweth,

THAT your Petitioners have associated together for the purpose of obtaining vacant Crown lands from Government for immediate settlement. The lands have been recently surveyed, and are situated on the Nackawickac, between the north-east and north-west branches of the said stream, and distant by a road proposed to be made about 14 miles from the river St. John, and about eight miles from the Caverhill settlement. That the line of road to connect the proposed settlement with the main river, at present appearing most eligible to Petitioners, would run from the above proposed settlement, through the Hickey or Southern end of the Campbell settlement, thence join the main river at the upper end of the Nackawickac bridge, and traverse in its course some excellent land for settlement between the proposed new settlement and the Campbell settlement.

That your Petitioners, although possessing the means of support for themselves, while they would be engaged in clearing a sufficiency of land to support them, are, owing to the depression of the trade and the scarcity of money, unable to advance ready money enough to pay Government the purchase money for the land, and therefore respectfully pray your Excellency and Honourable Bodies to grant Petitioners, as a means of paying for said land, permission to cut and work a road from the said proposed new settlement towards the main river, under the supervision of a competent person; and that Petitioners would give bonds conditioned for the faithful performance of the said road work, to the satisfaction of the person appointed to superintend the same; which work, when so done as aforesaid, your Petitioners pray should be credited respectively to Petitioners, at a reasonable rate, towards the purchase money of their land; and that Petitioners would further engage in their bonds to perform the work on the said road in the space of two years from the compliance of your Excellency and Honourable Bodies with the prayer of this their Petition.

Your Petitioners therefore pray your Excellency and Honourable Bodies to take the prayer of Petitioners into your favourable consideration, and grant unto Petitioners such assistance towards the completion of the undertaking which Petitioners are so anxious about, as to you in your wisdom may seem meet.

And your Petitioners, as in duty bound, will ever pray.

(13 Signatures.)

Enclosure

Enclosure 3, in No. 16.

NEW  
BRUNSWICK.

REPORT of *R. Hayne, Esq.*, Commissioner of the New Brunswick and Nova Scotia Land Company.

Encl. 3, in No. 16.

Sir,

Stanley, February 25, 1843.

IN obedience to your Excellency's commands, I beg herewith to forward an Abstract of the Expenditure of the Nova Scotia and New Brunswick Land Company, from the commencement of their operations in 1834, up to the 31st December last.

Your Excellency will perceive, on reference to the accompanying document, that large sums have been expended in the construction of roads, and in clearing land and building habitations for emigrants; with regard to the first item, I beg to mention, as the fruits of experience gained, both to this province and in the Canadas, that in no way can money be more profitably or advantageously laid out than in the construction of good roads, provided they be made to pass through lands well adapted for agricultural purposes.

I am of opinion, too, that money, if prudently and judiciously expended in building log-houses, and clearing a few acres adjoining thereto, and in otherwise preparing for the reception of emigrants having means to carry on their farming operations, would essentially promote the objects and interests of settlers, as by this means emigrants not only avoid the most trying period of a backwoodsman's life, but may be said to be advanced upwards of a twelvemonth in their contemplated labours.

I beg leave most respectfully and deferentially to observe to your Excellency, that I consider the very low price at which Crown lands in this province are offered for sale to be detrimental to the best interests of the country at large, but particularly so to those of a Company whose territory was purchased at a comparatively high rate, and who have made such large sacrifices for its improvement; for land, when thus purchased, is never sufficiently valued for itself, nor is it, under these circumstances, but rarely properly cleared and well cultivated. Again, as intending emigrants are apt to estimate the quality of land by the price at which it is sold, your Excellency will at once perceive how inconsiderable must be the value of land in this province, when compared with New Zealand, the Canadas, South Australia and the United States. Now, reflecting on the geographical position of this province of New Brunswick, on the salubrity of its climate, and on the general good quality of its soil, I am impressed with a firm conviction that, if the price were raised to 7*s.* 6*d.* per acre, cash, or annual payments with interest, or 10*s.* per acre, if settled on and made payable on the terms now adopted by your Excellency, the province land would command attention at home, the tide of emigration would set this way, and capital and intelligence would rapidly flow in.

I have, &c.

To his Excellency  
Sir W. M. G. Colebrooke.  
&c. &c. &c.

Frederickton, 18 February 1843. (signed) B. Robinson, O. T.

Enclosure 5, in No. 16.

PETITION from COMMISSIONERS of ALMSHOUSE of ST. ANDREWS.

To his Excellency Lieutenant-Colonel Sir William M<sup>re</sup> Bean George Colebrooke, K. H., Encl. 5, in No. 16.  
Lieutenant-Governor of the Province of New Brunswick, &c. &c. &c.

The Petition of J. W. Chandler, Peter Smith, Thomas Berry, Thomas Sime and John Parkinson, Commissioners of the Alms and Workhouse, and Overseers of the Poor for the parish of St. Andrews, in the county of Charlotte.

Humbly sheweth,

THAT by the accompanying accounts it will be seen that for the support of emigrant poor, and other necessary outlays advanced on their behalf, from the 11th day of January 1842, to the 10th day of January instant, both days inclusive, your petitioners have expended the sum of 635*l.* 12*s.* 10*d.*

That a large portion of these emigrants were passengers in vessels which arrived during the season, and became chargeable to the parish in consequence of illness and indigent circumstances; and that of those who came by one vessel from Ireland, in the month of June last, were upwards of 40 individuals whose passages were defrayed by an extensive landholder (to get quit of them off his estate), and landed here in a state of absolute pauperism, the major part without clothing of any kind suitable for the climate, and the whole destitute of both money and food. The immediate consequence was that they became chargeable to the parish; and your Excellency will see, upon reference to our list from the 23d day of June onwards, the names and numbers of those admitted into the poor-house; and three distinct families, of the name of —, compose 20 members thereof. Your petitioners are convinced that, in the charge per week, they do not exceed the sum which it has cost to maintain each person; and therefore humbly pray that your Excellency would be pleased to take the premises into your favourable consideration, and grant them the sum of 635*l.* 12*s.* 10*d.* to reimburse them for their expenditure.

And as in duty bound will ever pray.

(signed) J. W. Chandler. Tho<sup>s</sup> Sime.  
Peter Smith. John Parkinson.  
Tho<sup>s</sup> Berry.

NEW  
BRUNSWICK.

To his Excellency Lieutenant-Colonel Sir *William M<sup>c</sup>Bean George Colebrooke*, K. H.,  
Lieutenant-Governor of the Province of New Brunswick.

The Petition of *J. W. Chandler, Peter Smith, Thomas Berry, Thomas Sime* and  
*John Parkinson*, Commissioners of the St. Andrews Alms-house, and Overseers of  
the Poor for the Parish of St. Andrews.

Humbly sheweth,

THAT in the petition already submitted to your Excellency, your subscribers have only  
claimed as remuneration for the support of emigrants therein named, who had been resident  
in the St. Andrews Alms-house but one year immediately preceding the date opposite  
their respective names, this course having been pursued in consequence of information that  
one branch of the Legislature has passed a resolution that no relief should be granted for  
the support of emigrants who had resided in the St. Andrews Alms-house more than one  
year prior to the time of petitioning your Excellency for a remuneration for their support.

That the subjoined list contains a just and true account of the names of emigrants who  
have resided in the St. Andrews Alms-house for more than one year preceding the period of  
this application, and the number of weeks board with the clothing furnished to each of them  
respectively.

That these persons have been and are now (with the exception of — and —, who are discharged) (and probably will continue during their lives to be supported in the  
said alms-house, as they are all either infirm or aged.

Your petitioners therefore respectfully request that your Excellency will be pleased to  
grant them the sum of 86*l.* 4*s.* 5*d.*, to reimburse them for the outlay made upon the grounds  
above stated.

And as in duty bound will ever pray,

(signed) *J. W. Chandler.* *Thomas Sime.*  
*Peter Smith.* *John Parkinson.*  
*Thomas Berry.*

Sir,

## CORRESPONDENCE RELATIVE TO EMIGRATION. 173

Sir,

St. Andrews, 15 February 1843.

NEW  
BRUNSWICK.

To yours of the 8th instant, requesting, for his Excellency's information, to be supplied with the names of the vessels which brought the emigrants to St. Andrews, as mentioned in our late petition, and also the name and residence of the extensive landholder who sent so many of them out from off his estate, we beg to give the necessary information:—

- 1st.—Ship "Pallas," from Cork.
- 2d.—Brig "Eliza Ann," ditto.
- 3d.—Brig "Volant," from Jamaica.

The full particulars respecting whose arrival, and the number of emigrants in those from Ireland, may be more fully obtained upon inspecting the returns made to Fredericton, by D. Jack, Esq., deputy-treasurer of this town, who is also the acting emigrant agent so styled.

The greatest number of emigrants who became chargeable upon the parish of St. Andrews, last summer, arrived in the "Eliza Ann," among whom were those sent out by the extensive landowner; a statement of which case is detailed in full by the deposition of one of the passengers, — taken under oath, and attested to before one of our local magistrates, hereunto annexed, to which please refer.

We have, &amp;c.

Overseers of the Poor at present only in St. Andrews.

THE DEPOSITION of —, an Irish Emigrant, at present residing in the Alms-house of St. Andrews.

I, —, am a native of the county of Cork, Ireland, and for many years, with my family, resided as tenant on the estate of —, in said county, the property of —. That, in the month of March 1842, I and my family, with a number of other tenants, were ejected from our farms by the aforesaid —, on account of non-payment of rents to him; said rents having been duly paid by myself and the other tenants to —, the middle-man (so called), who himself had failed in his payments to the proprietor. Accordingly, therefore, all and every of the tenants, to the number of 43 individuals, including myself, were expelled from our little farms. In consideration of our distress by such ejection, and the more fully to get us out of the country, the said — furnished myself and other tenants, to the number of 43 individuals, with a free passage from Cork to St. Andrews, in the brig "Eliza Ann," and provided us with all necessary food for such voyage. We sailed from Cork in the month of May, and landed here in June of last year; whereupon, having exhausted our provisions, and being otherwise destitute, I, with many more of the said tenants, were admitted into the alms-house. I myself had not one halfpenny upon landing in St. Andrews wherewith to buy one meal. Some of the others had a few shillings, but the residue not a penny. I am 57 years of age, and my wife is seven years younger.

The names of the families of the tenants, and the number of persons in each, who were ejected as aforesaid, as follows, viz., — (myself), and family, seven; — and family, three; — and family, five; — and family, eight; —'s family, eight; —'s family three; —'s family, three; —'s family, six; in all, as aforesaid, 43 individuals; the greater part of whom, including myself and family, are still residing in the St. Andrews alms-house. Now, I, —, having read and understood the foregoing statement, in my own name, and for and on behalf of all such of my fellows who are now residents in the said alms-house, subscribe to this as a just and true statement of the cause and means which brought me and the other individuals herein named upon these shores. In witness whereof I have hereunto placed my signature, this 15th day of February 1843.

(signed) —.

Before me, William Ker, Esq., one of Her Majesty's Justices of the Peace for the county of Charlotte, personally appeared the above-named —, and in my presence voluntarily and freely signed the above declaration, and moreover made oath and said that he verily asserted the same to be a true and correct statement of the aforesaid case, according to the best of his knowledge and belief.

St. Andrew's, N. B., 15 Feb. 1843.

BRUNSWICK.

Enclosure 6, in No. 16.

EXTRACTS from JOURNALS of the House of Assembly, New Brunswick, in reference to  
Surveys and Sale of Lands. 20 March 1839.

On Motion of Mr. Fisher—  
Encl. 6, in No. 16. WHEREAS the present practice of requiring the purchasers of land for actual settlement to pay for the same immediately retards the settlement of the province; and whereas the sale of lands for agricultural purposes, in lots not exceeding 100 acres, to persons requiring the said lands for actual settlement, and who could not afford to pay therefor, except by instalments, would be a great relief to the poorer class of settlers: therefore,  
Resolved, That an humble Address be presented to his Excellency the Lieutenant-governor, praying that his Excellency will be pleased to grant lands for agricultural purposes to such settlers as may require allotments for actual settlement, in lots not exceeding 100 acres, payable by instalments.

24 March 1841.

On Motion of Mr. Wilmot—  
Resolved, That an humble Address be presented to his Excellency the Lieutenant-governor, praying that his Excellency will be pleased to cause to be surveyed in each county one or more blocks of land fit for immediate settlement, not exceeding 2,000 acres in each block, and laid off in lots of 100 acres each, with a reserved road of not less than four rods wide through the centre; and that the lots on one side only of such road be sold in the first instance, on the most favourable terms that the law will admit of, reserving the lots on the opposite side for future sale.

25 March 1841.

Mr. L. A. Wilmot, from the Committee appointed to wait on his Excellency the Lieutenant-governor with the Address of the House of the 24th instant, praying that his Excellency will cause surveys of ungranted lands to be made for immediate settlement in the several counties of the province, reported that they had attended to that duty, and that his Excellency was pleased to say that he would be most happy to carry into effect the wishes of the House in this behalf.

Enclosure 8, in No. 16.

LETTER from Dr. Gesner, Surveyor of Land, to his Excellency Sir William M<sup>re</sup> Bean George Colebrooke, Lieutenant-governor and Commander-in-chief of the Province of New Brunswick, &c. &c. &c.

May it please your Excellency,  
Encl. 8, in No. 16. I BEG leave to state, for the information of your Excellency, that during the past year I have aided in settling upon wilderness lands 232 families; of these 81 are Catholics, and 151 Protestants; of the whole number 104 are freemen of the city of St. John, or freeholders in the province, and 103 were born in New Brunswick. All these consist of persons who were previously settled in the province, but who, from the general depression in the state of trade, the demand for their labour as mechanics, &c., have been compelled to turn their attention to agriculture; and I am fully of the opinion that any check put upon the settling of wild lands, upon the system of giving a credit on 50 acres, will be the means of increasing the unlawful occupation of Government lands, and emigration from the province to the United States.

I have, &c.  
(signed) A. Gesner.

Enclosure

## CORRESPONDENCE RELATIVE TO EMIGRATION.

175

Enclosure 9, in No. 16.

NEW  
BRUNSWICKREGULATIONS for the disposal of Crown Lands, by Order of his Excellency the  
Lieutenant-governor in Council, 1st December 1842.

1st.—No land to be sold unless in locations previously surveyed under the directions of the Government. Encl. 9, in No. 16.

2d.—Purchasers of lots of 50 acres and under, not being indebted to the Crown for any land previously purchased, may be allowed to claim credit for the purchase-money, upon giving bonds to the Crown, payable with interest annually in advance, at the rate of six per cent., and paying the first year's interest at the time of sale, upon executing which bond a grant to be passed to the purchaser.

3d.—In default of regular payment of the interest annually when due, or under other circumstances injurious to the effective settlement of the land, the bonds will be put in suit.

4th.—Persons purchasing more than 50 acres must pay the whole amount of the purchase-money down at the time of sale, it being clearly understood that the 50 acres is the limit of the Government credit to any individual settler.

5th.—Persons who have occupied and improved without title or permission portions of Crown land included within any surveyed location, are not to expect any compensation or consideration for such improvements, but if they become purchasers of such portion, they may have credit for the purchase-money to the extent of 50 acres, in common with other settlers, and receive titles on executing bonds and paying interest as aforesaid.

6th.—Reserves to be made in every location of lines of road, and allotments for schools and places of worship, which reserves will not be allowed to be broken or sold.

Persons desirous of forming a settlement may make application at the Crown Land Office, stating their names, and pointing out the situation where they may wish to settle, when, if approved of, a survey will be ordered, and the lots when surveyed will, after due notice in the Royal Gazette, be put up for sale at public auction, at an upset price to be fixed by the Government.

Purchasers at such sale are distinctly to understand that they must come prepared, either by themselves or their agent, to pay the first year's interest on the purchase-money at the time of sale, and that no grant will be passed or permission given to occupy the land without such payment being made, nor until the bond for payment of the purchase-money shall have been duly executed and delivered; and that the bonds will be peremptorily enforced against any purchaser who may neglect to clear and settle the land, or who shall be found cutting off and disposing of the timber without making efficient settlement.

The attention of persons desirous of purchasing more than 50 acres is also called to the 4th article of the Regulations, by which they will observe, that no part of such purchase is to be on credit, but the whole purchase-money is to be paid down at the time of sale.

By Order of the Lieutenant-governor,

Secretary's Office, 2 December 1842.

Wm. F. Odell.

(No. 118.)

COPY of a DESPATCH from Lieutenant-governor Sir W. M. G. Colebrooke  
to Lord Stanley.Fredericton, New Brunswick,  
30 December 1842.

My Lord,

As the season approaches when emigrants usually make arrangements to come out to the colonies, I consider it to be incumbent on me to apprise your Lordship that no alteration has taken place in the circumstances of this province which enable me to hold out that there will be any opening for the employment of those who are without funds, unless persons of capital should entertain views of settlement in the province, who would be prepared to employ them.

Those who may possess the means of maintaining themselves in the wilderness while engaged in clearing and cultivating land for their support would be able to settle with advantage on any of the lands which have been selected and laid out in locations, and they would have an opportunity either of settling apart, or of associating themselves with some of the numerous parties who, from the decline of employment in St. John's, and other ports, are now forming settlements in the country, under the regulations referred to in my despatch (No. 114) of December 12th.

I consider that these settlements afford a favourable opportunity for the investment of capital in the improvements that would raise the value of the lands adjacent, and that as the settlers would be glad to obtain employment on moderate terms near their locations, the settlement and improvement of the province would be greatly accelerated by such undertakings.

If the provincial Assembly should concur in my view of remitting a part of  
the

NEW  
BRUNSWICK

the purchase-money of the lands in consideration of the opening of roads and construction of bridges, for which grants of public money have been hitherto made, great inducement will be held out to capitalists to settle in the province, the varied resources of which would thus be developed.

I enclose a further Report to your Lordship from Dr. Gesner, the provincial geologist, and a letter, informing me that he has recently discovered coal near Gardner's Creek, opening into the Bay of Fundy, 15 miles to the eastward of St. John's, and in the vicinity of the new settlements.

I have, &c.

Enclosure in No. 17.

Encl. in No. 17.

Sir,

St. John, New Brunswick, 22 December 1842.

I HAVE the honour to submit for his Excellency the Lieutenant-governor a Report, and to state that myself and son have been engaged in exploring for coal with the best hopes of success in the neighbourhood of Gardner's Creek and Ten Mile Creek, eastward of St. John. The early arrival of a deep fall of snow has prevented us from completing the exploration, which must be deferred until spring; I have not, therefore, thought it necessary to make a report upon what has been done, as such a report would be imperfect.

I have, &c.

A. Reade, Esq.  
&c. &c., &c.

(signed) *A. Gesner.*

#### REPORT.

To his Excellency Sir William M<sup>c</sup>Bean George Colebrooke, Lieutenant-governor and Commander-in-chief of the Province of New Brunswick.

May it please your Excellency,

I HAVE the honour to submit for your Excellency's consideration the following Report, made in compliance with instructions received.

I have proceeded to examine the vacant tracts of country between the waters of the Petticodiac and the settlement of Quaco and Sussex Vale, or such parts of them as had not been previously explored.

At the heads of Salmon river and Pollet river there is a large tract of ungranted land of a good quality. Upon this tract extensive surveys have been recently made, and the Mechanics' Association, consisting of upwards of 200 persons, besides others resident in the counties of King's and Westmorland, are prepared to purchase lots and open a very extensive settlement.

Application has also been made for lands northward of the above surveys, called the Gosham settlement; upon these are a number of persons settled upon ungranted lands; I am of the opinion that it would be desirable to have the lands in the Gosham settlement surveyed and offered for sale, for as those lands are of a good quality and are favourably situated, they would be purchased, and the squatters would have an opportunity to obtain titles upon the recent terms proposed by the Government.

A survey has also been made of lands northward of Quaco and near the old Shepody road. The soil in this quarter is also good, but the surface of the country is much broken by hills, and some of the lands will be found very stony when they are cleared of timber. A number of persons are also desirous to obtain lots in this survey, and are prepared to commence clearing.

The old road extending from Shepody to St. John was almost abandoned for several years; it will now be found of great advantage to these settlements, and by opening new roads into it, and thence to the shores of the Bay of Fundy, a free communication will be afforded to the settlers in this district.

The proximity of the above surveys to roads already opened and to the Bay of Fundy are highly advantageous. At Salmon River, Martin's Head and Salisbury Cove abundant supplies of herrings and other kinds of fish may be obtained in the summer season. There is scarcely any pine timber on any land in this quarter, and the fine groves of spruce still remaining are too remote from the rivers or the bay shore to render them valuable for exportation at present. The hard or sugar maple is abundant, and will supply with little labour a luxury to persons employed in clearing farms.

There are some excellent tracts of vacant lands at the sources of Coverdale River and Turtle Creek; at the latter place I observed some of the richest soil in the province. The lands here are unimproved; but how far the ungranted lands extend I was unable to ascertain.

There is a ridge of elevated land situated between the tracts recently surveyed at the head of Pollet river and Shepody mountain. The greater part of this tract is fit for settlement, but there are patches which are too rocky for cultivation.

Northward

Northward of the extensive settlement of Shepody the hard wood trees of the forest were almost entirely destroyed, a few years ago, by a gale of wind, which took place when the trees were loaded with ice, and almost all their branches were broken down.

Coal has also been discovered at the sources of Coverdale River and Turtle Creek, and there is limestone in different sections of the district.

With reference to that part of my instructions wherein I was directed to inquire into the causes of complaint made by persons residing westward of the Petticodiac, on account of Dorchester, the shire town of the county, being inaccessible during the winter season, I beg leave to remark, that from the great rise of the tides in Shepody Bay and the Petticodiac and Memramcook rivers, the ice is broken up, and they are frequently neither navigable for boats, nor safe to be crossed in any way, and even in the summer season the passage between Dorchester and Shepody, across the mouths of the above rivers, is expensive, disagreeable, and sometimes dangerous.

The distance between Dorchester and Shepody, at its most remote settlements by land, is upwards of 90 miles, and as all the public offices and courts for the county are held at the former place, much inconvenience is complained of; and from the nature of the tides when the Petticodiac and Memramcook can be crossed, persons are frequently detained, especially when the wind is unfavourable.

The inhabitants of the western parishes of Westmorland have, from time to time, petitioned the Legislature to have the county west of the Petticodiac made into a separate county; but they have heretofore been unsuccessful in obtaining their wishes, and much dissatisfaction prevails from the expense, delay and inconvenience suffered by the inhabitants from the above causes.

Westmorland is a large and populous agricultural county, and its area on the west side of the Petticodiac is nearly equal in size to either the county of Sunbury or Kent, and that area contains a population greater than either Sunbury or Restigouche. This part of Westmorland will also become more populous by the opening of the settlements of the recent surveys.

The western parishes of Westmorland, in my opinion, possess a sufficient amount of wealth and intelligence for the purposes of local government; and the general good of the country would be promoted by their separation from the eastern parts of the county.

Independent of agriculture, the resources of both divisions of the county are coal, gypsum, freestone and grindstones: all these are abundant.

I am fully of the opinion that it would be advisable to form the western parishes into a new county, making the Petticodiac river the boundary on the east and north, King's on the west, and the Bay of Fundy on the south.

I have, &c.

Enclosure in No. 19.

Sir,

Crown Lands Office, 2 January 1843.

Encl. in No. 19.

YOUR Excellency having referred to me the despatch of the Right honourable Lord Stanley of the 30th November last, respecting the continuance of the system of granting privileges to military and naval officers in the acquisition of land in this province:

I have the honour to report that since the expiration of the Act to restrain the fifth section of the Civil List Act, no regulations have been in force for granting privileges to military or naval officers in the acquisition of land in New Brunswick, but all lands must be sold by auction to the highest bidder.

His Excellency

Sir *W. M. G. Colebrooke.*

I have, &c.

(signed) *Thos. Baillie.*

#### 8 GULIELMI IV. CAP. 1.

AN ACT for the support of the Civil Government in this Province.—

[Passed 17 July 1837.]

Preamble.

WHEREAS his most gracious Majesty has been pleased to signify to his faithful Commons of New Brunswick, that his Majesty will surrender up to their control and disposal the proceeds of all his Majesty's hereditary, territorial and casual revenues, and of all his Majesty's woods, mines and royalties now in hand, or which may hereafter during the continuance of this Act be collected in this province, on a sufficient sum being secured to his Majesty, his heirs and successors, for the support of the Civil Government in this province: And whereas we, his Majesty's most dutiful and loyal subjects, the Commons of New Brunswick, in General Assembly convened, with hearts full of the warmest duty and gratitude, are desirous that ample and liberal provision should be made for the expenses of the said Civil Government during the continuance of this Act, by charges on all and every of the revenues now and hereafter to be levied and collected in this province have therefore freely and unanimously resolved to give and grant unto his Majesty King William the Fourth, his heirs and successors, a certain sum for the aforesaid expenses of the Civil Government, payable out of the joint revenues of this province;

Proceeds of his Majesty's Hereditary, Territorial and Casual Revenues made payable to the Provincial Treasurer.

I. Be it therefore enacted by his Excellency the Lieutenant-governor, Legislative Council and Assembly, and by the authority of the same, That the proceeds of all and every the said hereditary, territorial and casual revenues, and the proceeds of all sales and leases of Crown lands, woods, mines and royalties which have been collected and are now in hand, or which shall be collected hereafter during the continuance of this Act (except the monies which shall be expended in the collection and protection thereof as specially authorized and provided for by the fourth section of this Act), shall immediately be payable and paid to the provincial treasurer, who is hereby authorized to receive the same for the use of this province; and from and after the expiration of this Act, the proceeds of all the said hereditary, territorial and casual revenue, and of the said lands, woods, mines and royalties, shall revert to and be payable and paid to his said Majesty, his heirs and successors.

To revert to the Crown on expiration of this Act.

14,500*l.* per annum granted for the support of the Civil Government.

II. And be it enacted, That there shall be granted to his Majesty, his heirs and successors, for and during the whole period of the continuance of this Act, the clear yearly sum

sum of Fourteen thousand five hundred pounds current and lawful money of this province, and that the said sum shall be charged on and made payable out of the afore-mentioned and all other revenues raised, collected and paid into the treasury of this province, and shall commence from and immediately after the Thirty-first day of December now last past, and to be paid by the said treasurer by warrant under the hand and seal of his Excellency the Lieutenant-governor or Commander-in-chief for the time being, with reference to all other charges or payments which have heretofore been or which shall hereafter be made upon or payable from the said revenues, such payments to be made quarterly (that is to say), on the Thirty-first day of March, the Thirtieth day of June, the Thirtieth day of September and the Thirty-first day of December, in each and every year, by equal and even proportions, out of the monies in the said treasury; the first charge for the same to be made on the quarter day next immediately after the passing of this Act, and to include the proportion of the said sum which may become due for the support of the said Civil Government by the said quarter day.

III. And be it enacted, That all the monies which shall be paid to the Provincial Treasurer under and by virtue of this Act, except the said sum of Fourteen thousand five hundred pounds hereby granted, shall remain in the Treasury until appropriated or disposed of by an Act or Acts of the General Assembly of this province, to be passed for that purpose.

All monies paid to the Treasurer except 14,500 £, to remain until appropriated by the General Assembly.

IV. And be it enacted, That it shall and may be lawful for his Excellency the Lieutenant-governor and Commander-in-chief for the time being, by and with the advice of the Executive Council, to expend out of the gross proceeds of the said hereditary, territorial and casual revenues, and of the said sales and leases of Crown lands, woods, mines and royalties, such sums of money as they may from time to time deem necessary and requisite for the prudent management, protection and collection of the said revenues; and that his Excellency the Lieutenant-governor and Commander-in-chief for the time being shall within Fourteen days next after the commencement of each and every session of the Legislature, cause to be laid before the Assembly a full and detailed account, stating all the particulars of the income and expenditure of and relating to the said hereditary, territorial and casual revenues, sales and leases of Crown lands, woods, mines and royalties, with all vouchers to the same appertaining, for the then previous year.

Governor, with the advice of Council, to defray expenses of management out of the gross revenues.

Detailed accounts of revenue and expenditure to be laid before the Legislature.

V. And be it enacted, That all and every grant, lease or other assurance which, during the continuance of this Act, shall be made or granted by his Majesty, his heirs or successors, of any lands, tenements, rents, woods, mines, royalties, revenues, or other hereditaments within this province, now belonging or hereafter to belong to his Majesty, his heirs or successors, whereby any estate or interest whatsoever in law or equity shall or may pass from his Majesty, his heirs or successors, save and except as hereinafter provided, shall be utterly void and of none effect; unless such grant, lease or assurance be made upon sale or rent, or to the highest bidder at public auction in this province, due notice having been first given thereof in the Royal Gazette, and unless all such sums of money and rent as may be payable in consideration of such grant, lease or assurance be made payable to his Majesty, his heirs or successors, during the whole term or time of the continuance thereof respectively.

Grants, leases, &c. to be void unless made upon sale or rent to the highest bidder at public auction.

VI. And be it enacted, That nothing in this Act contained shall extend or be construed to extend in anywise to impair or affect any rights or powers of control, management or direction, which have been or may be exercised by the authority of the Crown, or other lawful warrant, relative to any suits or proceedings for the recovery of the said hereditary, territorial, casual and other revenues, or to composition made or to be made on account of any of the same, or to any remission, mitigation or pardon of any penalties, fines or forfeitures incurred or to be incurred, or to any other lawful act, matter or thing which has been or may be done, touching the said hereditary, casual, territorial or other revenues, or to disable his Majesty, his heirs and successors, to make any grant or restitution of any estate or estates, or of the produce thereof, to which his Majesty hath or shall become entitled by escheat for want of heirs, or by reason of any forfeiture, or by reason of the same having been purchased by or for the use of any alien, or to make any grant or distribution of any personal property, and devolved to the Crown by reason of the want of next of kin or personal representatives of any deceased person, and that the said rights and powers shall continue to be used, exercised and enjoyed in as full, free, ample and effectual manner to all intents and purposes as if this Act had not been made, and as the same have or might have been heretofore enjoyed by the Crown, subject, nevertheless, to the restrictions and regulations hereinbefore made and provided, it being the true intent and meaning of this Act that the said rights and powers shall not be in any degree abridged or restrained, or affected in any manner whatsoever, but only that the monies arising from the full and free exercise and enjoyment of them, so subject as aforesaid, shall, during the continuance of this Act, be carried to and made part of the joint revenues at the disposal of the General Assembly of this province.

Act not to impair the rights or powers of control, management or direction by the Crown, or disable his Majesty to make restitution of forfeited estates.

VII. And be it further enacted and declared, That nothing in this Act contained shall operate to annul or prejudice any sale, purchase, grant, lease, enfranchisement, exchange, contract, rent-charge, agreement, bond, mortgage, security, exoneration or other act,

Act not to prejudice previous sales, grants, agreements, &c.

NEW  
BRUNSWICK.

matter or thing relating to the said lands, woods, mines or royalties which at the time of passing this Act shall have been made, done, given, effected or created, but the same shall remain as good, valid and effectual for the benefit or security either of his Majesty, his heirs or successors, or of any of the parties to or with whom or in whose favour any such sale, grant, lease, enfranchisement, exchange, contract, rent-charge, agreement, bond, mortgage, security, exoneration or other act, matter or thing shall have been made, done, given, effected or created, and be of as full force and virtue as if this Act had not been passed.

Limitation.

VIII. And be it further enacted, That this Act shall continue and be of full force and effect for and during the full and complete term of ten years, commencing from and immediately after the Thirty-first day of December in the year One thousand eight hundred and Thirty-six last past.

8 GULIELMI IV. CAP. 2.

AN ACT to restrain the Provisions of the Fifth Section of an Act, intituled, "An Act for the support of the Civil Government in this Province," and to establish sundry Regulations for the future disposal of Crown Lands and Timber in certain cases.—[Passed 22d July 1837.]

Preamble.

WHEREAS in and by the fifth section of an Act made and passed at this present Session, intituled, "An Act for the support of the Civil Government in this Province," it is enacted, that all disposals of any of his Majesty's lands, woods, mines and royalties within this province, made during the continuance of the said Act, shall be utterly null and void and of none effect unless made at public auction to the highest bidder; and whereas it is deemed advisable to restrain the operation of the said fifth section in certain cases;

Act 8 Will. 4, c. 1, not to prevent the Governor in Council from disposing of land by private sale to persons settled on such land without legal authority.

I. Be it therefore enacted, by the Lieutenant-governor, Legislative Council and Assembly, That nothing in the aforesaid in part recited Act contained shall extend or be construed to extend to prevent his Excellency the Lieutenant-governor or Commander-in-chief for the time being, by and with the advice and consent of the Executive Council, at any time during the continuance of this Act, from disposing, by private sale, of any tract or tracts of ungranted Crown lands to any person or persons who shall, prior to the passing of this Act, be actually settled upon and shall have improved such tract or tracts without any legal authority for so doing: Provided always, That in no case shall more than One hundred acres be granted to any one person, and that no grant be made as aforesaid for less than Two shillings and sixpence currency per acre for immediate payment, or Three shillings currency per acre by four annual instalments; and that the names of the grantees, with a statement of the quantity of land granted to each, where situate, and the terms and conditions of sale, be laid each year, with the other casual revenue accounts, before the General Assembly.

Return to be made to the General Assembly.

Governor in Council may grant annual licenses for cutting timber by private sale, at specified rates.

II. And be it enacted, That it shall and may be lawful for his Excellency the Lieutenant-governor and Commander-in-chief for the time being, by and with the advice and consent of the Executive Council, if they shall see fit, to grant licenses for cutting and hauling timber, logs, or other lumber, immediately on their being applied for, and to renew the same to the former occupant or occupants who may have worked the same during the previous year, on his or their making timely application therefor before the previous license expires, and to grant the same by private sale, on petition, without public auction, at the following rates, viz.:—

- For square red pine timber, Two shillings and sixpence per ton;
- For square white and sapling red pine, Two shillings per ton;
- For square birch, spruce and hemlock, One shilling and sixpence per ton;
- For pine and spruce logs, Three shillings and sixpence per thousand superficial feet;
- And for all other descriptions of wood, the sum of Ten pounds upon every One hundred pounds of its estimated value;

And in case two or more persons shall apply on the same day for a new berth, if the said Lieutenant-governor or Commander-in-chief, by and with the advice and consent aforesaid, shall see fit to dispose of the same, that then and in such case it shall be sold by the Commissioner of Crown Lands or his Deputy to the highest bidder, and be competed for between the applicants only; provided that no such license be granted for a longer term than one year, and not to extend beyond the first day of May next after the issuing thereof.

Relief may be granted to persons exceeding their license.

III. And whereas cases may arise where persons licensed to cut timber, logs or other descriptions of lumber may exceed the quantity so licensed; Be it therefore enacted, That it shall and may be lawful for his Excellency the Lieutenant-governor or Commander-in-chief for the time being, by and with the advice aforesaid, to grant relief to the person or persons so exceeding their license upon payment of the lawful tonnage money; provided that the person so exceeding the quantity licensed make such application for such excess and pay the tonnage before the first day of May in each year; and provided also, that such excess shall have been cut within the limits of his license.

IV. And

## CORRESPONDENCE RELATIVE TO EMIGRATION.

181

NEW  
BRUNSWICK.

IV. And be it enacted, That from and after the passing of this Act, it shall and may be lawful for the Lieutenant-governor and Commander-in-chief for the time being, by and with the advice and consent aforesaid, to make such rules and regulations relating to the disposal of land and the licensing of timber, logs and all other descriptions of lumber, and for the guidance of applicants, agreeably to the true intent and meaning of this Act, as may be deemed expedient and proper to carry the provisions of this Act into effect, which said rules and regulations shall be published in the Royal Gazette.

Governor in Council may make rules relating to the disposal of land, licensing of timber, and for guiding of applicants.

V. And whereas cases may arise where industrious emigrants or natives not having any land may be desirous of procuring small allotments for immediate settlement: And whereas there are in this province sundry tracts of ungranted Crown land not valuable for lumbering purposes, but fit for agricultural improvement, and which should be disposed of on reasonable terms to persons of the above description; Be it enacted, That from and after the passing of this Act, it shall and may be lawful for his Excellency the Lieutenant-governor or Commander-in-chief, by and with the advice and consent of the Executive Council, to sell and grant by private sale to any emigrant or native, being British subjects, not having any land, and who shall prove to the satisfaction of the said Governor and Council that he is deserving of such privilege, and has not applied for the same for any other purpose than that of immediate settlement and cultivation, a quantity of land of the description mentioned in the preamble of this section, not exceeding 100 acres to each individual; and that an account of such disposals be annually laid before the General Assembly, specifying the name of grantees, the quantity granted to each, where situate, and the terms and conditions of sale: Provided always, That no land shall be sold and granted as aforesaid for less than Two shillings and sixpence currency per acre, to be paid immediately on the application being complied with, and before the applicant take possession thereof.

Governor in Council empowered to sell land by private sale for immediate settlement.

VI. And be it enacted, That in case any officer of the army or navy of the United Kingdom shall be desirous of purchasing land from the Crown in this province, and shall make it appear to the satisfaction of the Lieutenant-governor or Commander-in-chief for the time being that the same is for the purpose of actual settlement by such officer, that then it shall and may be lawful for his Excellency the Lieutenant-governor or Commander-in-chief for the time being, by and with the advice and consent of the Executive Council, to grant a remission of the purchase money or part thereof to all such officers, according to the following graduated scale, on the production of testimonials of unexceptionable character from the General Commanding-in-chief or from the Lords of the Admiralty.

Governor in Council may remit the purchase money to Officers of the Army or Navy desirous of obtaining land for actual settlement.

Field officers of the army of Twenty-five years' service in the whole and upwards, Three hundred pounds; Scale of remission.

Field officers of the army of Twenty years' service in the whole and upwards, Two hundred and fifty pounds;

Field officers of the army of Fifteen years' service in the whole or less, Two hundred pounds;

Captains in the army of Twenty years' service in the whole and upwards, Two hundred pounds;

Captains in the army of Fifteen years' service in the whole or less, One hundred and fifty pounds;

Subalterns in the army of Twenty years' service in the whole or upwards, One hundred and fifty pounds;

Subalterns in the army of Seven years' service in the whole or less, One hundred pounds;

And officers of his Majesty's navy of the corresponding ranks and terms of service, in the like proportion:

Provided always, That no remission of purchase money be made to any officers of the civil departments of the army or navy.

VII. And be it enacted, That all grants, leases and other assurances under the great seal of this province, made and entered into under and by virtue of any of the provisions of the said in part recited Act or of this Act, shall in all cases and in all courts of law and equity within this province be deemed and taken to be evidence, that all the requisitions of the said in part recited Act or of this Act, as the case may be, in regard to the mode and terms of disposing of the lands, tenements or hereditaments in such grants, leases or assurances contained, have been duly observed and complied with.

Grants, &c. under the great seal to be evidence that the requisitions of this Act and of 8 W. 4, c. 1, have been complied with.

VIII. And be it enacted, That this Act shall continue and be in force until the first day of September which will be in the year of our Lord One thousand eight hundred and Thirty-nine.

Limitation.

## PRINCE EDWARD ISLAND

---

—No. 1.—

(No. 32.)

COPY of a DESPATCH from Lord *Stanley* to Lieutenant-governor Sir  
*H. V. Huntley*.

No. 1.

Lord Stanley to  
Sir H. V. Huntley,  
4 August 1842.

Sir,

Downing-street, 4 August 1842.

I HAVE had under my consideration an Act (No. 568) passed by the Legislature of Prince Edward Island in April last, and transmitted in your despatch, No. 35, of the 30th of last May, intituled, "An Act to create a Fund for defraying the Expense of providing Medical Assistance for Sick Emigrants, and of enabling indigent Persons of that description to proceed to the Place of their Destination."

*Vide Act annexed.*

The provisions of this Act, for the most part, coincide with those of the Emigrant Tax Act, which has lately come into operation in Canada; but there are certain distinctions between the two measures to which I have to direct your attention.

In the first place, the penalty upon infringing the law is not in every case the same, and what is of more importance, the Act excludes from the benefit of the relief fund single men and married couples without families, who are not sick; whereas the Canada Act, more correctly, as I conceive, makes no such distinction.

The tax is there paid by all emigrants indiscriminately, and all who can prove themselves to be in a state of destitution seem to have a fair claim for assistance out of the fund proceeding from the tax.

I have, therefore, to direct you to communicate to the Legislature my opinion, that should circumstances require a revision of the Act before its appointed termination (*viz.*, 1st of May 1845), which the passing of the new Imperial Passengers' Act may render necessary, it might perhaps be desirable that this portion of the enactment should be re-considered, advantage being taken of such experience as may then have been had of its operation.

The remaining point on which there is some difference between the Act now under consideration and that which has been passed in Canada, is in the persons by whom and under whose authority the fund is to be administered. By the Canada Act the money levied under its provisions is to be applied by officers appointed by the Governor (who I apprehend will be paid), and under regulations established by the Governor. By the present Act the money is to be paid by the Governor to the local boards of health, and to be expended under their direction. Upon referring to the several Acts under which these boards have been established, I find that they are nominated by the Governor, but that there is no limit to the number of members of which each may consist, and that apparently they are not paid. I think, therefore, that some caution will be necessary in securing the proper and discreet application of the funds, and that it would be proper to draw the attention of the Legislature to this subject.

I would moreover suggest, that inasmuch as the money is by the present Act to be first paid into the public treasury, and afterwards paid out by the Governor to the local boards, it would be desirable that it should not be so paid out, unless upon such conditions in regard to its application as you or the Lieutenant-governor for the time being may think proper to impose.

In conclusion, I have to acquaint you that, concurring generally in the purpose and provisions of this Act, the Order of Her Majesty in Council, leaving it to its operation, will be forwarded to you by the next opportunity.

I am, &c.

(signed) *Stanley*.

ACT

## CORRESPONDENCE RELATIVE TO EMIGRATION.

183

ACT, No. 568, passed by the Legislature of PRINCE EDWARD ISLAND.

## CAP. V.

AN ACT to create a Fund for defraying the Expense of providing Medical Assistance for Sick Emigrants, and of enabling indigent Persons of that description to proceed to the Place of their Destination.—[Passed 16 April 1842.]

WHEREAS it is deemed expedient to impose a rate or duty, payable by masters of vessels bringing emigrants into this island, for the purpose of creating a fund for defraying the expense of medical care and attention for sick emigrants, and of enabling indigent persons of that description to proceed to places of their destination ;

I. Be it therefore enacted, by the Lieutenant-governor, Council and Assembly, That there shall be raised, levied and collected a rate or duty, payable in the manner hereinafter prescribed, by the master or person in charge or command of every vessel arriving in any of the ports of this island, from any port of the United Kingdom, with passengers or emigrants therefrom, and such rate or duty shall be Five shillings currency for every such passenger or emigrant, and such rate or duty shall be paid by the master or person in command of such vessel, or by such person on his behalf, to the collector of impost of the port at which such vessel shall have first entered, and at the time of making such first entry, which shall contain on the face of it the number of passengers actually on board the vessel, and no such entry shall be deemed to have been validly made or to have any legal effect whatsoever, unless such rates or duties be so paid as aforesaid.

Imposes a tax of 5s. per head on emigrants from the United Kingdom, to be paid by master of vessel to collector of impost.

II. Provided always, and be it further enacted, That on any ship or vessel arriving with passengers from any port of the United Kingdom at any port or place in this colony, at any time before the First day of July next, and such passengers being declared in a healthy state by any medical person authorized by any board of health in this island to visit and examine such passengers, no tax shall be exacted from the master of any such ship or vessel on account of such passengers, in case the said master upon his arrival shall duly make affidavit before some one of Her Majesty's Justices of the Peace for this island, that there has not been received or exacted from any of such passengers any sum or sums of money for or on account of any tax for which he might be made liable upon the introduction of any such passengers into this or any other British colony.

Exempts immigrants arriving before 1st July 1842, if in a healthy state, from tax.

if master makes oath that he had not previously received such tax from them.

III. And be it enacted, That for the purposes of this Act, two children, each under the age of Fourteen years, or three children, each under the age of Seven years, shall be reckoned as one passenger, and that no child under the age of Twelve months shall be reckoned among the number of passengers.

Immigrant children how rated for tax.

IV. And be it enacted, That no master or person having the command of any ship or vessel arriving at any port or ports in this colony, shall permit any passenger to leave such vessel, until he shall have delivered to the collector of impost at such port a correct list of all the passengers on board of such ship or vessel, at the time of her arrival at such port, nor until such list shall have been certified to have been correct, and a certificate of such correctness, and a permission to allow his passengers to leave the vessel, and a receipt for the duties payable by him under the provisions of this Act, shall have been given to him by the said collector of impost, under a penalty of Twenty pounds currency, to be paid by such master or person having the command, for every passenger leaving his ship or vessel contrary to the provisions of this Act: Provided always, that the said list shall contain the name of each such head of family or single person, being a passenger on board of such vessel, his trade or profession, his country, and the place of his destination, and the number of grown passengers and children belonging to his family on board such vessel: Provided always, that nothing in this Act contained shall prevent the master or person having the command of any ship or vessel from permitting any passenger to leave the vessel, at the request of such passenger, before the arrival of the vessel in any port of this island; but in every such case the names of the passengers who shall so leave shall be entered in the manifest or the list of emigrants made out at the time of clearing of the vessel from the United Kingdom, and shall be certified under the signatures of the passengers so leaving the vessel; and if the number of passengers remaining on board on the arrival of the vessel in the harbours of this colony do not correspond with that mentioned in such manifest, after deducting those who shall have so left the vessel, the master or person having the command of such vessel shall incur a penalty of Five pounds currency, for each passenger not found on board or entered on the manifest as having left the vessel as aforesaid.

Master not to permit immigrants to land until he delivers a list to collector, &c.

Nor until list is certified to be correct, and permission given after payment of tax.

Penalty on master offending herein.

Requisites of list furnished to collector.

Master may permit passengers to land at any port not within this island. Duty of master in such case.

Penalty on Master offending herein.

V. And be it enacted, That every passenger on board any ship or vessel arriving in any harbour of this island to which the master or person commanding such vessel shall have engaged to convey him, shall be entitled to remain and keep his baggage on board such vessel during Forty-eight hours after her arrival in such harbour; and every such master who shall compel any passenger to leave his vessel before the expiration of the said term of Forty-eight hours shall incur a penalty not exceeding Five pounds currency, for every passenger he shall so compel to leave his vessel; nor shall any master or person commanding such vessel remove, or cause to be removed, before the expiration of the said Forty-eight hours, any berthing or accommodation used by his passengers, under a like penalty.

Immigrants may remain on board 48 hours after arrival.

Penalty on master compelling immigrants to land before the expiration of forty-eight hours after arrival.

VI. And be it enacted, That every pilot who shall have had charge of any vessel having passengers on board, and who shall know that any passenger has been permitted to leave the

Duty of pilot in charge of immigrant vessel.

PRINCE EDWARD ISLAND.

Penalty on pilot offending herein.

Money received under this Act to be paid into Treasury.

Mode of recovery of penalties imposed by this Act.

Appropriation of penalties.

Lieutenant-governor may advance from the monies received under this Act, to any board of health, &c.

Money received by board of health, how to be appropriated.

Boards of health to account to Legislature for expenditure of monies received by them.

Mode in which boards of health are to make up accounts of monies received by them.

Continuance of Act.

the vessel, contrary to the provisions of this Act, and shall not within Twenty-four hours after the arrival of such vessel in any harbour of this island, to which he shall have engaged to pilot her, inform the collector of impost at such place that a passenger or passengers has or have been so permitted to leave the vessel, shall incur a penalty not exceeding Five pounds currency, for every passenger with respect to whom he shall have wilfully neglected to give such information.

VII. And be it enacted, That the monies levied under the authority of this Act shall be paid by the collector of impost by whom they shall have been received, into the Treasury of this island, for the purposes hereinafter mentioned.

VIII. And be it enacted, That all penalties imposed by this Act may be sued for and recovered with costs, on the oath of one credible witness other than the prosecutor, in a summary manner before any Two Justices of the Peace in this island; and such Justices may commit the offender to the common gaol of the county until such penalty and costs shall be paid; and one moiety of every such penalty shall belong to Her Majesty, Her heirs and successors, and shall be paid into the Treasury, to be applied to the purposes to which the other monies levied under the authority of this Act are hereby appropriated, and the other moiety shall belong to the prosecutor.

IX. And be it enacted, That it shall be lawful for the Lieutenant-governor, or person administering the Government, by warrant under his hand, at any time after the passing of this Act, to advance to the boards of health in the several counties, such sums of money as may be required for the purposes of this Act, out of the money paid into the Treasury under the authority of this Act, to be applied and expended under the direction of the said boards of health.

X. Provided always, and be it enacted, That no part of the said money paid and received by the respective boards of health shall by them be employed in making advances in money to any emigrant, but shall be expended in forwarding poor and destitute emigrants to the place of their destination, in this or the adjacent provinces; and in no case shall any grown person, in good health, and unencumbered with a family, except unmarried females who may be unable otherwise to join their friends or relatives, receive assistance out of the said monies: Provided nevertheless, that house rent, fuel and other unavoidable expenses may be paid out of the said monies so received by the said board of health as aforesaid, together with a reasonable allowance to the secretaries of the said boards of health respectively, to be determined by the Lieutenant-governor in Council.

XI. And be it enacted, That the said boards of health into whose hands any money shall be paid under the authority of this Act shall within fifteen days after the meeting of each session of the Legislature, during the continuance of this Act, lay before each of the branches thereof a faithful and detailed account of the expenditure of such monies, and a correct list of the emigrants by them respectively relieved, distinguishing the nation and country of such emigrant, the place to which he or they shall have been forwarded, and his or her age, and the amount expended in affording such relief (and in what manner expended), to every grown person, and his or her trade or name.

XII. And be it enacted, That the persons composing the board of health to whom shall be intrusted the expenditure of any portion of the monies hereby appropriated, shall make up detailed accounts of such expenditure, showing the sum advanced to the board of health, the sum actually expended, the balance (if any) remaining in their hands; and that every such account shall be supported by vouchers therein distinctly referred to, by numbers corresponding to the numbering of the items in such account.

XIII. And be it enacted, That this Act shall continue and be in force until the First day of May in the year One thousand eight hundred and Forty-five.

PRINCE EDWARD ISLAND.

— No. 3. —

(No. 71.)

EXTRACT of a DESPATCH from Sir *H. V. Huntley* to Lord *Stanley*, dated Government House, Prince Edward Island, 13 February 1843.

No. 3.

Sir *H. V. Huntley*  
to Lord *Stanley*,  
13 February 1843.

I HAVE the honour to enclose for your Lordship's information, the Surveyor-general's "Statement of Account of Sales of Crown Lands."

Directions have been issued to the Surveyor-general to call for payment of the monies due by purchasers of Crown Lands, and this produced 258*l.* 8*s.* 3*d.* by the end of the last year; since this time I have been petitioned to delay calling in the remainder until next July, when I am assured that the whole amount will be paid into the hands of the Government.

Although I am not disposed to think that these assurances will be completed, yet I believe that they will be by those who really intend to keep the land they have purchased of the Crown; while those who do not, will have no cause to complain of the forfeiture of their deposit-money and land, after such a liberal allowance of time for payment.

I should not be inclined to ask the sanction of your Lordship for this extension of time, but from the heretofore very loose manner in which these sales have been conducted; as far as the payment has been involved, purchasers have been permitted from time to time to put off payment until, I believe, many supposed that it would never be called for; and some have certainly purchased the land merely as a speculation, paying the deposit-money, the loss of which they risk, hoping to realize it, and any further money by reselling.

All parties are, however, my Lord, now fully aware that peremptory measures will be adopted in July, and appear extremely well satisfied with the arrangement, which is provisionally made.

Enclosure in No. 3.

STATEMENT of Account of SALES of CROWN LANDS, from 11th April to 31st December 1842.

Dr.			Cr.		
1842.		Currency. £. s. d.	1842.		Currency. £. s. d.

Sir *H. V. Huntley*.

Sir,

Downing-street, 18 March 1843.

I HAVE received your despatch of the 13th February, No. 71, enclosing a statement of the account of sales of Crown lands in Prince Edward Island from the 11th April to the 31st of December last, and reporting that you had obtained payment of the arrears due by purchasers of Crown lands to the extent of 258*l.* 8*s.* 3*d.*, but that you had been requested to delay calling in the remainder of the arrears until the ensuing month of July.

I have to acquaint you in answer, that provided that this postponement is final, and the purchasers are peremptorily required to make their payments or abandon their land, I have no objection to sanction the proposed extension of time for receiving the money which is due to the Crown.

I have, &amp;c.

Sir,

Foreign Office, 25 February 1843.

I AM directed by the Earl of Aberdeen to transmit to you, for the information of Lord Stanley, a copy of a despatch from Her Majesty's Consul at Boston, enclosing the particulars relating to the formation of an Emigrant Society at that port for the relief of distressed British emigrants.

I am, &amp;c.

(signed) *H. U. Addington.*

(Extracts.)

Enclosure in No. 1.

Encl. in No. 1.

My Lord,

Boston, 28 January 1843.

My attention having been particularly given to the subject of emigration from the United Kingdom to this continent, I have the honour of laying before your Lordship some details of the efforts I have made to forward what I presume to be in accordance with the views of Her Majesty's Government in relation to the question.

A considerable increase in the number of arrivals at this port, chiefly from the provinces of New Brunswick and Nova Scotia, has taken place within the last two years, and, in consequence of the completion of the railroads, and almost all the other public works in this state, a large portion of the European labourers have been falling out of employment, and great distress among them has been the consequence, chiefly from their remaining in this city and its neighbourhood instead of proceeding into the interior of the country. At once to relieve such persons, and to promote the advantage of the island of Jamaica, I entered into correspondence with Sir Charles Metcalfe, the Governor, in the year 1841, and in the latter part of that year four vessels were despatched from this port with settlers, chiefly Europeans, with some Americans and a few coloured persons. From various circumstances these experiments failed, the settlers, but more particularly the Europeans, having given little satisfaction to the authorities of the island, and almost all the coloured people having died or returned to the United States.

I next turned my attention to New Brunswick, and interchanged several communications with Sir William Colebrooke on the subject; but I soon found that, from the scarcity of general employment and the non-existence of public works in that colony, it was fruitless to think of sending emigrants there from this place. The information I have at different times received from various emigration agents in Canada, with whom I have had personal and written communications, were not more satisfactory. I then directed all my exertions towards the establishment of an Emigrant Society in this city, for the object of giving information to emigrants, procuring them employment, and preventing the pauperism which throws them into the poor-houses and gaols, or causes their being sent back to Her Majesty's dominions to be a burthen to the country, and to prevent, by exaggerated accounts of the causes of their own failure in America, the emigration of many others, whose absence would be a considerable relief at home, while their coming here would, under good management, greatly benefit them, and enable them to contribute from their earnings to swell the very large amount of money remitted to relatives in Ireland by the labouring classes in the United States.

\* \* \* \* \*

I am happy to have it in my power to inform your Lordship of the complete success of my efforts, in consequence of personal explanations with the Governor and other functionaries of the state, the various gentlemen who have filled the office of mayor of the city for the last 20 years, and many of the leading citizens of all political parties. I have the honour to enclose some of the newspaper reports containing the accounts of the formation of the Emigrant Society, and a copy of Constitution.

Your Lordship will perhaps allow me to observe, that I strongly recommend the encouragement, to its greatest extent, of emigration from Ireland to the United States in preference to urging it in the direction of New Brunswick in the first instance. The Irish peasantry look to this country as their land of promise, and nothing is so likely to make them satisfied with a final settlement in the British North American colonies as having tried and been disappointed in the United States. They will then willingly seek their fortunes in Canada or the other provinces; and by the means of the society just established, every facility will be afforded to them for proceeding in those directions whenever they find that this portion of the country is overstocked with emigrants of the labouring class, and that they are looked upon by the natives with small regard, except while they are wanted to do the rough work which the former are unfit for.

Several hundred British subjects, in a state of total destitution, were sent from this city during the last year to various parts of England and Ireland, chiefly by vessels from New York.

NORTH AMERICA.

York. The funds from which the expense of such removals is defrayed are furnished by the payment of a capitation tax of two dollars, paid by every foreigner on landing at this port and the other ports of Massachusetts. The Act of Legislature authorizing this tax is called "An Act relating to Alien Passengers," and is dated April 20th, 1837. It expressly stipulates that the money thus raised is for the support of foreign paupers, and by virtue of the Act a superintendence of aliens was appointed, to whom the entire management of the funds were intrusted. Believing that this money can be legally employed only for the relief of foreigners, I hope to obtain, by an application to the Legislature, through the highly respectable persons composing the Emigrant Society, an appropriation of a portion of it for the support of the society.

\* \* \* \* \*

Hoping that my conduct in this matter will be approved of by your Lordship,  
I have, &c.  
The Earl of Aberdeen, K.T., (signed) T. C. Grattan.  
&c. &c. &c.

CONSTITUTION OF THE BOSTON EMIGRANT SOCIETY.

Article First.—The style of this association shall be "The Boston Society for the Diffusion of Information among Emigrants."

Article Second.—The object of the Society being to disseminate information and to give useful advice to strangers who have arrived in the United States, and to those who are desirous of emigrating from foreign countries to establish themselves in America, all the funds which may be at the command of the Society shall be devoted to this purpose, unless expressly otherwise ordered by donors who may choose to make this Society the medium of their benefactions.

Article Third.—Any person shall be and continue a member of this Society, who shall sign this Constitution, and shall pay into its treasury the sum of two dollars a year; the payment of 25 dollars shall entitle any person to be a member for life.

Article Fourth.—The annual meeting of this Society shall be held on the first Monday of January in each year after the first organization. At each annual meeting the Society shall choose by ballot 24 directors, 10 of whom at least shall be native Americans, and 10 of foreign birth, to hold their offices for the ensuing year and until they shall be re-elected or others shall be elected in their place. The Mayor and the President of the Common Council of the city of Boston, and all resident foreign Consuls, and Vice-Consuls acting as Consuls, shall also be, *ex officio*, members of the Board of Directors. The first Board of Directors shall be chosen at such time after the adoption of this Constitution, as the Society may by vote determine.

Article Fifth.—The Board of Directors, at their first meeting after their election, shall choose from their own number a President, Vice-President and Treasurer of the Society. They shall also at the same time choose a Secretary, who shall have a stated annual salary as general superintendent, to be fixed by the Board. All the said officers shall hold their offices until the close of the next succeeding annual meeting, provided that the Secretary and Treasurer shall be liable to be removed at any time and replaced by others, by vote of a majority of the whole Board. The Directors shall also have power to fill such vacancies in their own body as shall occur between two annual meetings, by death or resignation.

Article Sixth.—For the better transaction of the business of the Society, the Directors shall divide themselves into Committees, one of which shall give particular attention to it for each month in the year.

Article Seventh.—The Society shall hold regular quarterly meetings on the first Monday of April, July and October, at such place as the Board of Directors shall appoint. At each quarterly meeting the Board of Directors, through their Chairman, shall report their doings of the preceding quarter.

Article Eighth.—Special meetings of the Society may be called at any time by the President, or by any six of the Directors; notice of the same being given in not less than two newspapers printed in Boston, within not less than three days of the time of the proposed meeting.

Article Ninth.—The Board of Directors shall establish Regulations and Bye-laws for the administration of all the affairs of the Society, not provided for in this Constitution, and not inconsistent with the same.

EXTRACTS of a DESPATCH from Governor the Right Honourable Sir  
*Charles Bagot*, G.C.B. to Lord *Stanley*.

Government House, Kingston,  
26 January 1843.

I HAVE the honour herewith to transmit the Annual Report of the Chief Agent of Emigration for the past year, together with the Appendix thereto.

As these documents only reached me yesterday, I am unable to offer any observations upon the general subjects to which they relate.

As a valuable appendix to these Reports, I have the honour to transmit a copy of a communication from Mr. Hawke, which describes the mode of conducting the business of his agency, and furnishes valuable information with regard to the expense of forwarding emigrants.

I further add the Report of the Medical Superintendent at the Grosse Isle quarantine station, with Mr. Buchanan's Report thereupon, which will complete the view of the emigration transactions of last season.

Encl. (A.) in No. 1.

Office of Her Majesty's Chief Agent  
for the Superintendence of Emigration to Canada,  
Quebec, 31 December 1842.

Sir,

I HAVE the honour to lay before your Excellency, for the information of Her Majesty's Government, the following Report of the emigration to this province during the season of 1842.

It is gratifying to me to be enabled to state, that the expectations which, at the date of the last similar report made to your Excellency, I had found reason to form, have been very fully realised; and that the number of emigrants from the United Kingdom to Canada in the year 1842 has exceeded that of any previous year, with the exception, only, of the seasons of 1831 and 1832.

On reference to Paper No. 1 of the Appendix to this Report, it will be found that the total number of emigrants landed at this port during the past season is 44,374—614 of them coming within the description of cabin passengers. A comparison of this aggregate with that shown by the returns of the year 1841, will present an increase in favour of the past season, amounting to 16,288 persons. The paper here referred to presents a tabular view of the immigration of the season, divided into weekly periods. It distinguishes the adults, the children between 14 and 7 years of age, and those under seven, as well as the males and females; and it shows, further, the proportion of the whole who were ascertained to have received parochial, or other assistance, in aid of their removal from the United Kingdom to this country.

Paper No. 2 of the Appendix is an abstract of the records of this department, and shows the total number of emigrant vessels arrived, with an average of their passages from port to port—the number of steerage passengers embarked—the deaths in course of the passage, and in quarantine—and the number landed; distinguishing, in every case, the adult persons, the children between 14 and 7, and those under seven years old; and, also, the male from the female, adults, and children.

Paper No. 3 furnishes a list of the seaports in the United Kingdom, and the Lower Provinces, whence the immigrants were received, showing, at the same time, the number embarked at these ports, severally, and distinguishing the cabin from the steerage passengers. This abstract presents the aggregate number of emigrants: from England, 12,191; Ireland, 25,532; Scotland, 6,095; and from the Lower Ports 556.

PAPERS RELATING TO EMIGRATION.

CANADA.  
No. 1.  
Sir C. Bagot to  
Lord Stanley,  
26 January 1843.  
  
Encl. (A.) in No. 1.

Paper No. 4 is a comparative statement of the emigration into this province from the year 1829 to 1842, both inclusive. The total number arrived within this period of 14 years is 366,181; of whom, had sailed from ports of England and Wales										96,324
Ireland	-	-	-	-	-	-	-	-	-	222,415
Scotland	-	-	-	-	-	-	-	-	-	42,424
Nova Scotia and ports on the Continent of Europe	-	-	-	-	-	-	-	-	-	5,018
										366,181

I am under the necessity of referring to a disaster attending the emigration of the early part of the season; but it is subject of sincere gratification to me that the year has closed without loss of life by shipwreck, or other casualty, connected with the voyage from Europe.

By the violence of a gale and snow-storm, which occurred when they had reached the entrance of the St. Lawrence, on the night of 9th-10th May, two vessels, bound for Quebec, were stranded, and their passengers placed in extreme danger. The ship Kent, Gardiner, master, was driven ashore at Seven Island Bay, situate about 300 miles below this port, and the passengers, 54 in number, were rescued only, after some lapse of time, through the humanity of the master, Simpson, of the ship Llan Rumney, of Hull; by this vessel, however, they and their effects, the greater part of which were recovered, were brought in safety to this port. The other vessel lost was the ship Jane Black, Gorman, master, from Limerick, which was thrown on the rocks off Cap des Monts, at a distance of 250 miles from Quebec. The number of passengers on board of this ship at the time of her being wrecked was 417; but although the loss of a considerable portion of their luggage was entailed upon these unfortunate people by the casualty, their lives were preserved: they were landed and placed under temporary shelter, and eventually conveyed to their destination by a steamer despatched under my direction for this purpose. The peculiar circumstances attending the wreck of this vessel, and the measures which I felt it my duty to adopt for meeting the contingency, are detailed in my Report to the Chief Secretary, a copy of which will be seen in Paper No. 10, at page 23 of the Appendix.

Those were the only cases which occurred during the season to the hazard of human life on the voyage by sea between Europe and this port; but I regret to be compelled to report one of the most extensively fatal accidents which have ever taken place since the introduction of steam navigation on the inland waters of the province: I allude to the case of the bursting of the engine boiler of the steamer Shamrock, on her passage between Montreal and Kingston, and at the time of her traversing Lake St. Louis. The Shamrock had on board at the time upwards of 120 passengers, chiefly English emigrants, with their luggage, and the violence of the explosion was such as to involve the death of 47 of these unfortunate people and of two of the crew; of the remaining passengers many were seriously injured, and all lost nearly their entire property by the subsequent sinking of the vessel. The bodies of those killed were eventually recovered and decently interred; the property found on them, which, in some instances, amounted to a considerable sum, being duly taken charge of by the coroner. Every aid and attention also were afforded by the owners of the vessel to those who had been personally injured or subjected to loss of property, and charitable contributions were readily procured for the relief of those rendered destitute.

Until within a very short period of the present time, there had been in employment on the St. Lawrence and its chain of lakes but few steam-vessels constructed on the high-pressure principle; and to this circumstance it may be owing that the country has had room to congratulate itself on the occurrence of so comparatively small a number of casualties, similar to that of the Shamrock's explosion. The horror which was produced by this accident in all minds brought to reflect on its circumstances, has given rise to a general disposition to see steam-engines of all descriptions, but particularly those worked under high pressure, in the propelling of passenger vessels, placed under supervision, and subjected to the regulations that would seem requisite to remove the risk of future disaster, whether from insufficient construction, or from improper management; and I have every reason to hope, that with the approval of your Excellency's government, the necessary legislative measures to this end will be duly considered and enacted.

It is gratifying to me to be enabled to report, that the general health of the immigrants of the past year has been comparatively lightly affected by their sea voyage and change of climate. Several cases of severe sickness on the voyage have occurred, and, as I have had occasion fully to detail, in my weekly reports, one or two instances of extensive mortality. On the other hand, the favourable passages which a large proportion of the passenger-vessels experienced, and particularly those which arrived in the early part of July, secured to the passengers a great share of comfort and convenience, and an almost complete exemption from disease. The deaths at sea, in the course of the season, have amounted to 264; those in quarantine to 54; and the number of those which occurred amongst immigrant patients, admitted into the Marine Hospital of this city, within a short period of their arrival in the country, as will appear on reference to Paper No. 5 of the Appendix, amounted to 32, making a total of 350.

Compared with the aggregate emigration of the season, the proportion of deaths will appear to equal 0.78, or somewhat more than 3-fourths per 100 souls embarked. The mortality occurring amongst emigrants, and particularly that suffered in the course of their passage,

## PAPERS RELATING TO EMIGRATION.

3

passage, is found, from the returns to which I have already had occasion to refer, to affect, almost exclusively, young children and infants. That it must remain a difficult task to reduce materially the proportion of infant deaths in the period of the emigrants' outset, may be admitted; but I have every confidence that the operation of the New Passenger Act will, in some degree at least, have this result. Every regulation tending to secure the parent from privation, anxiety, or discomfort, must bear upon the young child, and most directly upon the infant; and it may not be unreasonable to hope, therefore, that the next year's returns will show an improvement under this point of view; permitting comparison with those manifest ameliorations in every other respect which have been effected through legislative interposition, and the systematic attention to which emigration from the United Kingdom is now subject.

The periodical report of the medical superintendent of the quarantine establishment at Grosse Isle has been rendered to your Excellency, in the most detailed form; and a copy has been furnished to me also by Dr. Douglas, under instructions from the Chief Secretary. This document shows that the medical treatment of the immigrants, and the general management of the institution, have been productive of the most satisfactory results. Of a total number of 488 persons admitted in the course of the season into the hospital wards, of whom 340 were cases of fever and 56 of small-pox, there were discharged, cured or convalescent, 434; the deaths, compared with the admissions, being, consequently, 11 per cent. only. Compared with the total number of immigrants arrived in the course of the season, this proportion of deaths amounts to 0.12, or considerably less than 1-ninth per cent., showing an improvement in the results of the hospital treatment, even over the year 1841, and admitting a most favourable comparison with every previous season. At the Marine Hospital the patients admitted have been 312, of whom the cured and convalescent amounted to 280; the deaths being as 10.25 to 100. By a reference to Dr. Douglas's abstract of admissions to hospital at Grosse Isle, appended to his report, it will be found that the proportion of cases comprehended within the various types of fever has been very large, including almost all the cases of disease affecting adult persons.

Amongst children, small-pox and measles appear to have been the most extensively active forms of disease; and these had, doubtless, been the chief causes of the numerous deaths which occurred, on the sea voyage, in this class of the immigration. More than one creditable statement has been made to me to the effect that the introduction of cases of evident small-pox has taken place on board passenger-ships at the time of embarkation, with the almost certain prospect of general contagion. Indeed, the frequent recurrence of cases of this kind is notorious; and I am led, therefore, to venture to suggest to your Excellency's government, whether or not some provision for a medical inspection of steerage passengers, at least as far as the chief ports of embarkation are concerned, might not be made, with a prospect of the prevention of contagious disease in that most fatal field for its action, the crowded emigrant vessel.

The number of cases of infringement of the law by masters of emigrant vessels which have occurred in the course of the season, show that the complete abatement of the evils against which the Imperial Acts for the protection of passengers were framed, was not to be effected unless by the most persevering enforcement of these enactments. For although in some of the cases in which it has become my duty to direct prosecution there may have appeared room to admit ignorance of the law as an excuse for the offence, in by far the larger proportion of instances, I have had no reason to doubt that a deliberate consideration of the chances of gain, and the risks of penalty, has resulted in the attempt to evade the law, and set its supporters at defiance. With this experience, I am forced to a conviction of the necessity of permitting no future infringement of the regulations for the protection of the emigrant to pass unaccompanied by the infliction of the severest penalty upon his oppressor.

The collector of customs at this port has been under the necessity of enforcing the penalty in no less than seven cases of vessels found to have carried a number of passengers exceeding the amount permitted by the law, in proportion to their tonnage. The cases also in which it has become my duty to institute prosecutions for infringement of the Passenger Act, have been, I regret to say, much more numerous than in former years. In consequence of instructions, received through the Chief Secretary, in the latter part of June last, to the effect that the enactments regulating the superficial space between decks of vessels conveying emigrants should be strictly enforced, I lodged in the hands of the Crown law officers, at different times, the information necessary for founding proceedings against the following vessels; viz.

Encl. (A) in No. 1.

The masters of eight of these vessels were severally convicted in the penalty of 20*l.* sterling. The cases in which the last four enumerated in the list are involved, owing to legal difficulties, encountered in their prosecution, and which have been already fully reported to your Excellency, remain yet undecided.

The masters of the brigs *Tottenham* and *Leo*, the former from *Ross*, the latter from *Wexford*, I procured to be fined under the provincial enactment, which renders it penal in the master of the vessel to remove the berthing of his passengers previously to arrival in port; and under the same enactment, —, master of the ship *Mountaineer*, from *Liverpool*, was, on prosecution, fined in the sum of 5*s.* currency in each of 26 cases of removal of the berthing of passengers in his vessel. The amount of these penalties has been duly accounted for to the collector of Her Majesty's customs at this port. The master of the *Mountaineer* was further prosecuted, upon the charges of having issued impure and unwholesome water to his passengers, and of having exacted exorbitant prices for the provisions sold by him to them in the course of the voyage; and the court, upon the evidence adduced, thought fit to award penalties for each infraction of the law. The *Mountaineer* was reported by me on the 27th August as having landed her large number of passengers in the worst condition, from the joint effects of disease and scarcity of food. Her passage had extended to 68 days; and 32 deaths had occurred among 511 souls embarked on board of her. The brig *Mary*, —, master, from *Liverpool*, also was reported by me on the 2d July, as having arrived with 213 passengers in the most distressed state of disease and suffering. Five deaths had occurred previously to her arrival at the quarantine station, and two more immediately after; while 56 cases of typhus required hospital treatment. The medical superintendent at *Grosse Isle* has, in his report, fully detailed the condition of these vessels on their arrival there, and exposed the gross negligence by which disaster, so extensive as these cases exhibit, was permitted. There have been, I regret to say, frequent instances of neglect on the part of ship-masters towards their passengers. It is a satisfaction to me, however, to be enabled to report these two vessels only as cases of an aggravated nature; very generally the passenger-ships exhibit improvement in their management; and numerous instances of considerate attention and humane conduct in their commanders have come under my immediate observation.

Among the cases of protection afforded by the department in my charge to immigrants subjected to wrong on the part of the owners of passenger ships, I have particularly to notice that of the brig *Lively*, from *Galway*, with 192 passengers. These people had engaged their passages to *St. John's*, *New Brunswick*, and were brought to this port in open violation of their agreement. Immediately on obtaining a knowledge of the circumstances, and ascertaining the correctness of the statements of those interested, I caused the institution of proceedings against the vessel; and I am required in justice to add, that the master, who, it appeared, had been appointed to the command within a few days only of her sailing, and who was consequently not involved in the imposition, showed immediate willingness to indemnify those of the passengers who were contented to remain at this port, and every alacrity in the procuring of means of conveyance for those persevering in their original intention. I am happy to be enabled to say, that although cases of this description of fraud are known to have occurred numerous in former years, the penalties to which the parties concerned have been with some difficulty made liable have had the effect of nearly altogether deterring such attempts; the instance of the *Lively* being the only one to which I have now to allude. The particulars of this case will be found in detail, with a copy of the affidavits upon which I became required to take proceedings, in Paper No. 11, page 24 of the Appendix.

The general circumstances of a very considerable portion of the immigrants of the season may be reported to have been such as to secure them from all distress on their passage to this port, as well as from all difficulty in their progress hence to their several places of destination. Indeed a reference to the details comprehended in the weekly reports, which I have had the honour, from time to time, to submit for your Excellency's information, will show that many persons of extensive property have reached the country, with the intention of becoming settlers, or of establishing themselves in trade. The passengers by the *Blonde* and *Faronia* from *Glasgow*, the *Marquis Wellesley* from *Dublin*, some of those by the *Catharine* and the *Minstrel* from *Liverpool*, the *Chieftan* from *Larne*, the *Jane Duffis* and *Gazelle* from *Donegal*, brought with them very considerable sums of money, as capital for investment, chiefly in land; and I became aware, in the course of the season, of numerous instances of the arrival of families in the possession of extensive wealth. A still larger class of this year's immigration has consisted in respectable yeomen and mechanics, having sums of money in their hands, varying from 20*l.* to 200*l.* sterling; and with these may be properly included the higher description of agricultural labourers, whose frugality had saved, or whose good conduct and character had procured as aid, sums amply sufficient to meet the necessities arising in the course of their progress, either to land or situations of permanent employment. But under the circumstances of a greatly extended immigration, induced, or compelled, by extreme distress affecting the lower grades of operatives, in almost every description of manufacture in the United Kingdom, it was to be anticipated that poverty would accompany a large proportion of those arriving in Canada. A comparatively small expense is involved in the removal of a family from a British port to the shores of the *St. Lawrence*; and the facilities in the provision of passages, and for embarkation, which the interest of the owners and charterers of shipping employed in the trade of this country leads them to offer, even to the least intelligent, have, for many years past, led to Canada, rather than any other colony of the empire, a great share of the most destitute of those

## PAPERS RELATING TO EMIGRATION.

5

those whose thoughts tend towards emigration. So long as similar causes shall operate, the same result must be experienced; and your Excellency is, therefore, doubtless, prepared to learn, that although the province has been the resort, in the course of the past season of such a number of immigrants of property, and superior intelligence, as considerably to exceed the accessions of the previous year, the increased number which the returns now transmitted show, as the aggregate arrivals, may be assumed to arise, chiefly, if not altogether, from an increase in the numbers of the poorest and most destitute classes. It is on this description of persons that deception may be most easily practised previously to their embarkation; and it is these, who from their deficient education, and careless habits, may be permitted, by negligent superintendence, to suffer the most fatally on their voyage. Their limited means rarely extend to the provision of all that their immigration demands, and it is to them, and to their wants, therefore, that attention is most frequently required to be paid, as well on their landing at this port, as in their attempts to reach sources of permanent subsistence. I regret to say, that of the poorer classes of the year's immigration, a small proportion only have been exempt from suffering and privation on their voyage; and I have reason to know that it has been only through the assistance afforded them by this department, under your Excellency's instructions, that continued distress and discouragement have been prevented from attending their course subsequently to arrival within the province.

The passengers by the ships *Bowling*, *Wexford*, *Harper*, and *Renfrewshire*, from Glasgow, 946 in number, were of the class of manufacturing operatives, and having embarked under circumstances of extreme poverty, had probably evaded the law prescribing the stock of provisions which shall be taken on board for the Quebec voyage; for before the expiration of their passage, in no case exceeding 58 days, they were already under privation, from the exhaustion of their stores; and on arrival here it became necessary to supply them with food for their immediate support. The brig *Percival*, from Cork, occupied only 55 days on the voyage to Quebec, yet the stores of the passengers, 149 in number, had been some time before wholly exhausted, and the vessel compelled to put into Sydney, Cape Breton, for a renewed supply.

The passengers by the *Compton*, from Liverpool, in a passage of 63 days, and the *Ayrshire*, from Newry and Dublin, in 51 days, were likewise short of provisions previously to arrival; and it is probable that in many cases which, from the natural desire of the parties to conceal their own evasion of the law or their want of economy, did not come so plainly before me, there had been short supplies laid in for the voyage, and consequent exposure to distress. The operation of the New Passenger Act of the Imperial Legislature, I have every confidence, will wholly remove the possibility of a recurrence of similar cases; for the clause which enacts that the ship shall provide and issue a supply of bread, or its substitutes (sufficient alone to obviate want), promises to be found capable of enforcement by the emigration agents at the ports of embarkation, without the practical difficulties that must have been attendant on every attempt to carry out the terms of the former law.

Paper No. 8 of the Appendix affords an abstract return of the voyages performed by the passenger-ships which have arrived from British and Irish ports, in the St. Lawrence, in the course of the season. It is divided into semi-monthly periods, which very plainly show shorter averages for the early portion of the season than for the months of July and August. The vessels sailing after this latter period appear to have had passages equal to those of the spring; but as the autumn is the least favourable time of the year for the arrival of the immigrant on these shores, whether his employment or his health be the subject considered, it is between the spring and the summer passages that the comparison remains to be drawn; and there is evidence in this table to show that the months of April and May are those in the course of which the departure of the emigrant ought by all means to take place.

The statement which will be found in Paper No. 6, at page 12 of the Appendix, is a compilation of the returns that I have received throughout the season, from Mr. Hawke, chief agent for Canada West, as well as the local agents of the department in both sections of the province, of the distribution of the emigrants of the year. It is unnecessary for me to remark, in reference to this statement, that the means of being strictly accurate have not existed within my reach; I may, however, add, that I have no reason to doubt the general correctness of all the returns on which it is founded, or the justness of the result which it presents.

The great body of the immigrants, it is gratifying to find, have remained inhabitants of the province, and settled in the Western Section; the number of those ascertained to have resorted to the United States, together with an addition to cover probable defect in the return, being not more than 2,500. On the other hand, although the immigration which this country has received, through the United States, is supposed by Mr. Hawke (see page 25 of the Appendix,) to be about 6,000 souls, I have grounds for believing that, taking the entire province into view, it has been considerably more extensive, and that the total accession to the population of Canada, in the course of the year, must have been at least 50,000.

This influx, consisting as I have already had occasion to show, in great proportion of a labouring class, forced by want of resources to seek early employment, may be supposed to have produced material effects in over-supplying the demand for labour. This occurred particularly at the various points on the great line of water communication at which the immigrants necessarily land and take up their temporary abode. The rates of wages had previously tended towards depression, from the severe check which all commercial operations

tions had recently received; and the public works of the province were, at an early period, fully supplied with experienced Old-country labourers coming from the United States.

When the prospect of extensive employment, therefore, which had been held forth in the prosecution of the works of the St. Lawrence Canal, and other provincial undertakings, was, from this circumstance, in great part removed, there was room to apprehend that some distress might be experienced by the immigrants newly arrived by the route of Quebec. This may have been the case to a small extent; but although the wages of ordinary labourers have suffered a reduction of one-fifth to two-fifths of their previous average amount; and although some of the immigrants of the season may have remained for a considerable period unemployed, the very great abundance of provisions, and necessities of all kinds, and the unprecedentedly low prices which they have borne in every part of the province, have maintained the employed in circumstances quite equal to those of former years, affording superior wages, and very generally relieved those not supplied with situations of profit, from every apprehension of want. It is to the reduction experienced in the labourer's demands, and the moderate rates of all agricultural produce also, that I attribute the circumstance of comparatively few existing cases of distress among emigrants, even at the present trying time of the year.

From reports which reach me from all parts of the province, I have reason to think that few of the industriously disposed of the population remain without employment; and that none who have proceeded to the country districts can want the means of support.

Paper No. 7 of the Appendix contains an abstract of my weekly reports, made up with a view to show the number of immigrants whose removal to this country has taken place through the intervention of parish authorities in England, or by the aid of landlords and charitable societies in Ireland and Scotland. Of these 831 persons, as shown by the abstract, received, under my inspection, the amount of aid promised to be furnished them on landing in this country, viz. 1 *l.* sterling for each adult, and for children in proportion. The remainder of the families brought within this classification appeared, to the extent of the greater number, to have received, on departure from Great Britain, some assistance in addition to the cost of their passage and provisions. But the best information I could obtain left it doubtful whether there were not many who had received nothing beyond the means of transport to this place. The Scottish immigrants included in the list, are those already alluded to as constituting two or three societies for the purpose of mutual relief. These societies had received some aid from charitably disposed persons in Scotland; yet with this and their joint means, the members were landed under circumstances of much distress; and having literally nothing that could be converted into means of support, were necessarily early claimants for relief from this department. I may refer, for a detailed account of the situation of these parties, severally, at the time of their arrival, to the weekly reports furnished throughout the season.

The provincial law imposing a duty of 5 *s.* currency on each adult immigrant arriving in this province, came into force on the 1st March last. The amount received under this enactment, at the ports of Montreal and Quebec, appears from the returns of the customs department, to have been 8,556 *l.* 15 *s.* 10 *d.* Halifax currency.

The grant of the Imperial Legislature, made in the course of its last Session, for the purpose of affording relief to destitute immigrants on arrival in this country, was 5,000 *l.* sterling; and a further appropriation, by the same authority, has made available, for meeting the expenses of the agencies of the emigrant department, a sum of 1,500 *l.* sterling. These together constitute a sum of 7,222 *l.* 4 *s.* 5 *d.* Halifax currency, and make the total fund available for the purpose of immigrant superintendence and assistance, in 1842, 15,789 *l.* 0 *s.* 3 *d.* Halifax currency.

The arrangement which your Excellency, on the 11th April last, was pleased to direct should be carried into effect respecting the management of the accounts of the emigration department, and their control by the chief agent, enables me to state, in a condensed form, the result of the operations of the year throughout the entire province, and to bring into one view the total expenses that have been incurred.

The expenditure involved in the assistance, through donations of provisions and necessities, and the transport inland of the more destitute classes of the year's immigration, has amounted, in the aggregate, to 11,310 *l.* 14 *s.* 2 *d.* currency. This sum, however, includes also all the expenses of the medical care of such immigrants as may have required it in every part of the province, exclusive of Quebec. The amount expended in the purchase of provisions supplied at all the points at which agencies exist, is 1,725 *l.* 7 *s.* 7 *d.*; the amount paid for transport, chiefly on the main line of interior communication, has been 8,434 *l.* 1 *s.* 3 *d.*; and the charges for medical assistance have been 1,151 *l.* 5 *s.* 4 *d.*

In the course of the past season, have been erected various buildings for the lodging of newly-arrived immigrants, and as hospitals for the sick, at Montreal, Kingston, and Toronto, involving a contingent expense amounting to 782 *l.* 5 *s.* 11 *d.*; and lastly, there has been paid, as salaries and contingent disbursements of the chief agent, and agents of the department at Kingston, Montreal, Toronto, Bytown, Hamilton, Port St. Francis, and Cobourg, a total of 1,671 *l.* 11 *s.* 10 *d.* The entire expenditure of the department, for the year 1842, having been 13,764 *l.* 11 *s.* 11 *d.* Halifax currency.

When the circumstances, detailed in my weekly reports, as affecting the condition of the immigrants of the year, and the representations contained in the former part of this report, shall be taken into due consideration, I feel assured there will be found ample justification of this increased expenditure.

Not

## PAPERS RELATING TO EMIGRATION.

7

Not only has the immigration of the present exceeded that of the past season by upwards of one-half, but the number of cases in which the agents of the department have been compelled to admit claims for relief, has extended very much beyond the proportion which all former experience could have anticipated.

There have been forwarded from this port to Montreal, and the intermediate places of debarkation, at the charge of the emigrant fund, 9,302 persons; 13,280 have been furnished with passages upwards, from Montreal to Bytown and Kingston; 8,766 from Kingston to Toronto, Hamilton, and other places on Lake Ontario; while 6,837 have been conveyed from one intermediate point to another; upwards of 1,200 persons have received the advantage of medical attendance at the different agencies; and lastly, the aggregate of the applications for relief from temporary distress, admitted by the agents of the department within their several districts, are found to amount to 46,910.

Following an abstract of the expenditure of the past year, I may properly offer such suggestions as I may have it in my power to furnish, with reference to the prospects of the ensuing season's immigration, and the contingencies connected with it, against which it appears necessary to provide.

The state of the lower classes of the population of the United Kingdom has continued to be exceedingly depressed; and although at the present moment somewhat more extensive employment may be offered them, a general redundancy of labour seems to afford to the most industriously disposed operatives, slight prospects only of future permanent improvement in their condition. The consequence will doubtless be a continued universal disposition to emigrate; and when it is reflected that this colony has been widely published as the field of certain success in settlement, and that its circumstances render it easily and inexpensively accessible, there is no reason to doubt that an extensive immigration of the poorer and worst provided classes will take place in the ensuing season. The enactments of the new Passenger Bill, inasmuch as they tend in some degree to increase the expense of the outward passage, and the depression in the timber trade of this country, which threatens still further to reduce the number of vessels resorting to the port of Quebec, may be found to interrupt the plans of those whose means are of the most limited extent; but, on the other hand, the discouragement which is offered to emigration to the United States, will turn additional numbers towards this country; and although the charge for passage may become slightly increased, the low price of every description of provision will probably make the total expense of removal no greater than it has been hitherto.

I am led, therefore, to anticipate, that the next season's immigration will equal or exceed that of the last; and that the lower and more destitute class will bear even a larger proportion to the whole.

As it is this description of persons that entail the largest amount of expenditure in their assistance, and as I am unable at present to discover room for the practice of stricter economy in the application of the relief fund to this purpose, the estimate of the amount likely to be required in the course of the ensuing year, under arrangements similar to those hitherto in force, must be based, I conceive, upon the past season's expenditure: this amounted to 13,764*l.* 11*s.* 11*d.*; and being lessened by the amount of disbursement incurred in the employment of a steamer, in the case of the wreck of a passenger ship (a contingency which, from the circumstance of a properly constructed sea-going boat being now maintained at this port, can scarcely recur), 500*l.*, and by the difference between the cost of the permanent buildings erected in 1842, 782*l.* 5*s.* 11*d.*, and the estimate for necessary repairs in the ensuing season, 182*l.* 5*s.* 11*d.*, 600*l.*, will show a sum of about 12,660*l.*, Halifax currency, which I would respectfully submit to your Excellency's consideration as the expense to which this department may be subjected up to the close of 1843.

The emigrant tax, which, under the continued operation of the Act, may be expected to be collected in the course of the season, must bear a similar proportion to the numbers of the immigration, as hitherto. If this resource, therefore, be set down at a probable amount of 8,500*l.*, there will remain a sum of about 4,000*l.* unprovided for; and as the balance remaining of the last year's appropriation is comparatively trifling, while there is reason to fear that the estimated limits of the next season's liabilities may prove to have been too much curtailed, I am led to hope that the grant of the Imperial Legislature, which will be made in lieu of the payments originally contemplated in the passage of the Emigrant Tax Bill, will not be less than the amount voted last year, viz. 5,000*l.* sterling.

I am indebted to Her Majesty's Consul at New York for the means of stating the number of emigrants from the United Kingdom landed at that port in the course of the past year, at 51,800. This return shows an increase over the arrivals of the previous season, amounting to 19,391 persons. I have, through the same channel, obtained information of the number of persons who have sailed from New York to Great Britain and Ireland in 1842, and it will be matter of surprise that so large a proportion as 9,521 persons within one year should have found themselves compelled to return from the United States to their native country.

The condition of virtual bankruptcy to which so many of the state governments of the Union are at the present moment reduced, has produced a total interruption in the progress of almost every public work. At the same time there exists the severest depression in both the trade and the agriculture of that country; and the greatest exertions of American enterprise are insufficient effectually to support the untoward circumstances of the times. The result is apparent in the destitution forced upon the labouring classes of immigrants, depending upon the employment offered, up till now, by the numerous canals and roads

undertaken, and in the disappointment suffered by those whose more ample means have been directed to settlement in the Western States. The statement which I have here brought under view does not show, by any means, the entire re-migration from the United States. The ports of Philadelphia and Boston, as well as various others on the Atlantic coast, have possibly been the points of departure of a further large number of persons; and, as I have had occasion to state elsewhere, the numbers who have proceeded to Canada, either immediately on arrival at the American port, or after a residence of a greater or less duration, have equalled those shown to have sailed from New York. Even from Michigan, Illinois, and other hitherto most favoured sections, the return of British settlers to the western districts of the province, has been of extensive occurrence; and it is not to be wondered at, that while the native American settler is the sufferer from redundant production, he should lay himself open to the charge of evincing an inimical feeling to those of foreign origin who crowd on his footsteps.

In approaching the close of this report, I feel called upon to allude to the prospects which the province seems to afford to the emigrant from the United Kingdom who shall resort to it in the course of the ensuing season. I have already offered to your Excellency the considerations under which I have been led to anticipate the arrival of many ill provided and even destitute persons, the assistance and direction of whom must involve considerable expense, and demand the utmost exertions of this department. The promise of employment for this class is, I regret to say, by no means extended since the close of the last year. The influx of labouring emigrants from the United States, owing to the utter impossibility of procuring employment there, has continued up to a late period, and the public works in progress remain supplied, to a great extent, from this source, and by labourers already residents of the country. The rates of wages continue depressed, even beyond the proportion generally admitted in the winter season. But I have reason to think, that although speculative undertakings are, and must continue to be, plainly discouraged by the altered circumstances of the country; and although the point to which the enterprise and activity of the commercial interests have forced their operations cannot be for the present advanced, there is no ground for apprehending that there will not be employment, to a considerable extent, open to labourers of all descriptions, nor any room to fear that the reduction in their wages will be such as in any degree to curtail their comforts. It is probable, indeed, that so soon as the establishment of the necessary new relations between its various interests shall be perceptible, the country will evince a renewed industrial energy, and discover yet unattempted objects of enterprise. In such case, the demand for labour may extend so far as materially to increase the rates of wages, or even to restore them to their former limits. In the meantime, as I have already explained, the labourer is now, notwithstanding his diminished remuneration, at least equally well situated as he has hitherto been, in respect to subsistence, and perhaps not less able to lay by a surplus for the eventual acquirement of land. It is to ordinary labourers arriving at this port, and landing under circumstances which render them dependant on immediate employment for the support of themselves and their families, that these remarks apply. Referring to the classes of immigrants who come provided with some small resources, and who are accordingly in a condition to support temporary difficulty in finding employment, I may speak more confidently; for these not crowding the chief towns and landing places, nor subjected to the risk of immediate want, may spread themselves throughout the country, and reach the situations that readily offer in favour of their better appearance and generally superior intelligence. Artisans and tradesmen come under this view, and have prospects of advantage quite equal, I conceive, to those which former seasons of higher wages, but proportionally increased expenses, may have offered.

It is gratifying to find that remittances to a very considerable amount continue to be made from this country to the United Kingdom, by mechanics, farm servants, and labourers, for the purpose of aiding the future emigration of their relations or their friends; showing that there is ample opportunity for industry to lay by a portion of its earnings. Even in the cases of some very recently arrived immigrants, who had obtained employment on the roads or canals of the province, funds have been saved for this purpose, or deposited in the savings banks. But I am required pointedly to remark, that it is manual labour chiefly which, in this country, obtains superior remuneration. There are some descriptions of persons who cannot benefit themselves by resorting to it, at least at the present time; and many must, in so doing, change their condition materially for the worse. Active and intelligent mechanics, industrious farmers, and farm servants, well-conducted domestic servants, and able-bodied labourers, are those who will find themselves improved in condition by emigration. But clerks and accountants, persons aspiring to be factors or overseers, and many others, indisposed or incompetent to devote themselves to bodily labour, experience much distress and disappointment; and may be emphatically warned of the error of emigrating to this country.

To those whose object is settlement, and the cultivation of land, this country continues to promise very certain success. The reduced prices borne by agricultural produce would seem to take away from the profits to be realized by the farmer who brings into application his own manual labour only; but there are few who do not require the assistance of others in subduing the forest, or cultivating the improved farm; and since both this assistance, as well as all the necessities of life required to be purchased, may now be obtained more cheaply than formerly, it may be assumed that the settler, even on the most limited scale, continues to have before him ample encouragement. In the case of those who contemplate the hiring of labourers for the performance of more extensive works of improvement, the circumstances

PAPERS RELATING TO EMIGRATION.

9

circumstances of the country will appear decidedly more advantageous than hitherto. The high value of labour, and the occasional difficulty experienced in procuring full assistance at the seasons in which agricultural undertakings might require it, have operated to prevent the investment of extensive capital in this way. Henceforth it may be found, that the expenses of farming being reduced correspondingly with its returns, the result continues equally favourable, while greater facilities in the procuring of agricultural labourers permit its being conducted on a scale not hitherto reached, and render it an employment more nearly correspondent in its character to that of the extensive farmer of Great Britain or Ireland.

Lands, both wild and under partial improvement, are offered for sale, to a large extent, in every section of the province. The several land companies, and many private individuals, offer lands for sale on liberal and advantageous terms, and their agencies are established at all the principal towns, for the ready reference of persons desirous of purchasing. The Crown also offers for sale extensive tracts in both sections of the province; those in Canada West at 8s. per acre, those in Canada East at 4s. and 6s. per acre, according to situation.

The districts which have been opened by roads of access, and placed under a system which offers to each efficient settler a free grant of 50 acres of land, continue to hold out to immigrants of enterprise a further resource on their arrival in this country. The class of the immigrants who possess the means of support for the period which must necessarily intervene between their establishment and the realization of their returns, but who have not, perhaps, sufficient funds to meet, at the same time, the payment of the price of land, must find material advantages under these arrangements, which leave their entire resources to be devoted to the purposes of their settlement.

Having thus brought before your Excellency every matter connected with this department which has appeared to be worthy of notice during the past season, I have the honour to conclude by requesting your Excellency will be pleased to transmit this Report to Her Majesty's Principal Secretary of State for the Colonies, for the information of Her Majesty's Government.

I have, &c.

The Right hon. Sir C. Bagot, }  
&c. &c. &c.

EXTRACTS from the several WEEKLY REPORTS made to the Governor-General by the Chief Agent for Emigrants at *Quebec*.

Week ending 21st May 1842.

THE emigrants who have arrived at this port since the opening of the navigation, are farmers, labourers, and mechanics, and all landed in good health.

Those by the *Favourite*, *Mohawk*, and *Monarch*, from *Glasgow*, 169 in number, are farmers and respectable mechanics, all in good circumstances, who, with the exception of a few of the tradesmen, are proceeding to join their relatives settled in different sections of the province; two families went to their friends in *Shipton*, eastern townships.

The *John Bell* and *Tottenham* arrived from *New Ross* with 429 passengers; these are chiefly labourers and farmers, many of the former very poor and depending on immediate employment for their support; the farmers generally appear to possess money, and with few exceptions are proceeding to their friends in *Canada West*.

On my boarding the *Tottenham* to inspect the vessel, I found that the master had removed all the berthing and accommodation for his passengers previous to his arrival in port, contrary to the fourth clause of the *Provincial Passenger Act*, for which I fined him in the penalty of 5*l.*, which he paid to avoid costs of prosecution. The penalty I handed over to *Mr. Jessopp*, the collector of customs.

The *barque Borneo*, with 291 passengers from *Limerick*, chiefly labourers, and a few farmers: many of the latter appear in good circumstances; the labourers are poor, and depending on immediate employment for their support.

The passengers per *Prince George* from *London* are 262 in number, and, with the exception of 40, are paupers, sent out under the sanction of the *Poor Law Commissioners*, chiefly from *Kent*; they landed in good health, and received a free passage to *Montreal*, with two days' provision, and 20*s.* sterling to each adult on leaving the ship. They are, with few exceptions, proceeding to their friends in the *Newcastle*, *Home*, and *Gore* districts. Two families, cabin passengers, who are in possession of considerable means, I have induced to settle on the *Lambton Road*; they have taken 50 acres each, and intend, so soon as they have made the requisite improvements, to purchase a further quantity of land from *Government*.

Week ending 28th May.

Emigrants arrived during the past week all landed in good health, and consist of farmers, mechanics, and labourers; many of them are in good circumstances; their destination is principally to *Canada West*, some to join their friends, and others to obtain land or employment.

The

## PAPERS RELATING TO EMIGRATION.

15

The passengers from the ports of Padstow, Gloster, St. Ives, Plymouth, Hull, and Aberdeen, are of the better class of emigrants, and all appear to possess means; many of them have friends settled in different sections of the province; and others, particularly from Padstow, are miners and mechanics in search of employment.

The Irish emigrants were not generally so well off; a considerable number of them are very poor; those with large families were assisted to proceed to their friends, and where they would meet with employment.

Many of them are, however, in good circumstances, and have brought out a good deal of property; their destination is, with few exceptions, to the western part of the province.

Among the arrivals this week are 417 passengers brought up by the steamer Lumber Merchant from the wreck of the ship Jane Black, from Limerick, lost on the night of the 9th instant at Point des Monts, 250 miles below this port; the poor people were encamped for 10 days, and on a short allowance of food, before the steamer reached them; they saved but little of their luggage; and many of them who left their homes in comfortable circumstances, lost every thing they had. Captain Gorman stated that a large number of his passengers brought out a considerable amount of money among them; they were Protestants, and intended to settle in the western section of the province. Owing to the distressed state in which these people arrived, I was under the necessity of assisting about 200 of them with a passage and provisions to Montreal, on their route to their friends.

Captain Simpson, of the ship Llan Rumney, from Hull, brought up 54 passengers from the wreck of the Kent, from Glasgow. This vessel was lost on the same night as the Jane Black, at Seven Island Bay, 300 miles below this port; the passengers saved the greater part of their effects, and were able to defray their own expenses from this port. Much credit is due to Captain Simpson for his kind and humane conduct to these people during their stay in his ship. They state that several vessels had passed previously, but refused to take them off the wreck. Captain Simpson supplied them with provisions at his own expense until their arrival at this port.

I fined Captain — of the Leo, from Wexford, 5*l.* for the infringement of the 4th clause of the Provincial Passenger Act, which he paid to avoid the costs of prosecution; the amount I handed over to Mr. Jessopp, collector of customs.

## Week ending 4th June.

The emigrants arrived during the past week consist of farmers, mechanics, and labourers, a large portion of whom are in search of employment. There are however a number of families in good circumstances, who are with few exceptions proceeding to Canada West, where many have friends; and others with the intention of settling.

I have been under the necessity of extending relief to a considerable number of families during the past week, owing to the difficulty of procuring labour for them in this section of the province. Among the passengers arrived are 14 families, in the Carleton, from Glasgow; these people are members of the North Quarter Glasgow Society; they landed here in good health, but without a shilling in their pockets, and consist of mechanics and labourers; all appear anxious and desirous of obtaining employment, and as many of them have relations in the upper province, I assisted those with large families to proceed thither. Masons are at present required at the Government works in this city, and mechanics of this class find ready employment at good wages, 5*s.* per day; all other description of employment is, I regret to say, scarce. This is to be attributed solely to the depressed state of trade, and the small number of vessels arrived to this date. The timber coves, which in former years furnished employment to a large number of labourers on their first arrival here, are this season not employing a single man, and the number of resident labourers thrown out of employment; completely absurd the work which formerly was open to the emigrant.

Among the passengers in the Lord Canterbury from Bristol, were eight families, 54 in number, who were assisted by their respective parishes; they are proceeding to the western section of the province; the remaining families are all in good circumstances, and have brought out a good deal of money with them; they intend settling in the Johnstown, Midland, and Home districts. In the Emmanuel were three families, 19 in number, also sent out by their parish; they were forwarded to Montreal at the ship's expense, and are going to their friends at Prescott.

## Week ending 11th June.

The emigrants arrived during the past week have landed generally in good health; of whom over two-thirds are Irish; they are chiefly of the agricultural class; and the average of those who are in possession of small capital is, I consider, greater than in former seasons; their route is, with few exceptions, to the western section of the province, some to join friends, and others to purchase lands. I have endeavoured to persuade a few of the heads of families, who have good means (but without any fixed destination in view), to visit some of our flourishing settlements in this section of the province, and judge for themselves; but I regret to say their dread of winter is so great, that it is difficult to induce them to attend to any offer for settlement, no matter how favourable it may be, should it be situated in Lower Canada. It is gratifying to state that to this period there have been but few cases of complaint against masters of vessels; the accommodations have been very good, and passengers generally well supplied with provisions. In the ships Bowlin, Harper, and Renfrewshire, from

Encl. (B.) in No. 1.

Glasgow, were 727 passengers, members of the different emigration societies; these people all landed very poor; and owing to their long passage, the average being 57 days, arrived here short of provisions; the passengers by the two former ships proceeded direct to Montreal, and I was under the necessity of furnishing them with a supply of oatmeal and biscuit to enable them to reach that port.

Those by the Renfrewshire landed here, without provisions or the means of paying their transport up the country; and as they principally consisted of persons with large families, for whom employment could not be obtained here, I was under the necessity of assisting the greater portion of them to proceed to the western section of the province; some to join their friends, or others in search of employment. I regret to remark that the members of the Glasgow emigration societies arrived here both this and last year in a more destitute condition than any other emigrants from the United Kingdom; they leave their homes with barely sufficient to pay their passage, and to procure a scanty supply of provisions; and unless they have a favourable passage, land here in a state of great distress. The passengers, although much within the period allowed by law for a voyage to this port, were out of provisions some days before their arrival at quarantine.

The emigrants from England are from Padstow, Bideford, and Aberystwith; they are all able to pay their way to their destinations, and many of them have brought out a good deal of money. They all emigrated on their own account, with the exception of one family, eight in number, sent out in the Voluna, from Padstow, by parish relief.

A number of families have landed during the week, with the intention of proceeding to the United States; they have in many instances been sent for by their friends, and all have a fixed destination in view.

#### Week ending 18th June.

The emigrants arrived during the past week consist of farmers, labourers, and mechanics; in several of the vessels there has been a number of cases of small-pox, measles, and fever, and there has consequently been a considerable addition to the number of patients in quarantine hospital.

In the Bryan Abbs were 18 families, 104 persons, sent out by Colonel Wyndham from his estates in the county of Clare; these people were well provided for, and received the sum of 20 s. sterling each adult on landing here, to enable them to proceed up the country. In the John Walker, from Poole, were 236 persons; 18 were left sick at Grosse Isle, and three deaths occurred during the voyage. They consist of English, Irish, and Scotch; there are a few respectable farmers with capital, who are proceeding to settle in the Home district; the remainder are labourers and mechanics in search of employment.

In the Albion, from Sligo, were 123 passengers, generally poor, and proceeding up the country for employment; a few families are going to their friends in the United States; left four sick at quarantine. The Marquis of Wellesley had 264 passengers from Dublin; they are chiefly farmers, and have brought out a large amount of capital, and are a respectable set of people. Three families went to their friends in the eastern townships, the rest to Canada West.

One hundred and five passengers arrived in the Queen of the Isles, from Glasgow; are mechanics and labourers, and all appear to have sufficient means to convey them to their destinations.

In the Cabotia and Minstrel, from Liverpool, are 408 passengers; a few English farmers have brought out good means with them; the chief part are labourers, and a few mechanics who are proceeding to different sections of the province to their friends. The latter vessel left nine in hospital, and a few of the families were short of provisions; one family, seven in number, and several young men and women were assisted by the parish; about 30 of them are gone to their friends in the United States.

The passengers from Hull and Bristol, 192 in number, are all in good circumstances, among whom are several farmers with capital.

In the Irvine, from Bristol, were four families, 32 in number, sent out by their parish; 171 passengers in the Pusey Hall, from London and Cowes, were sent out under the sanction of the Poor Law Commissioners. They were well supplied during the voyage, and the sum of 116l. 10s. sterling was paid to them on landing, with a free passage to Montreal.

Two hundred and forty-four passengers in the brigs Samuel and Hannah, from Killala, are very poor; they all landed in good health. A number of the young men I have directed to the Gosford Road for employment, and those with families I assisted to proceed up the country.

The passengers in the brig Percival, 149 in number, were 55 days on the voyage; they were short of provisions, and obliged to put into Sydney for a supply. Those from Scarborough are respectable farmers, and all appear to possess means.

In the Onyx, from Dublin, are a number of respectable farmers with money, the remainder are labourers and mechanics proceeding to different sections of the province; 13 of her passengers were left at Grosse Isle.

In the Chieftain, from Larne, with 261 passengers, there are several farmers with their families, who have brought out capital, varying from 200l. to 600l.; they are proceeding to settle in Canada West. The remainder are farm servants and labourers, who have emigrated in search of employment.

I regret to say that employment continues very scarce, both in this neighbourhood and in Montreal; and from reports received from Mr. Hawke, I regret to find the same complaint exists in that quarter, and will I fear continue so until the harvest commences.

## PAPERS RELATING TO EMIGRATION.

17

Week ending 25th June.

CANADA:

No. 1.

Sir C. Bagot to  
Lord Stanley,  
26 January 1843.

Encl. (B.) in No. 1.

The emigrants arrived during the past week have landed, with the exception of those in a few vessels, in good health, and among them are a considerable number of respectable families with capital.

In the *Gazelle* and *Jane Duffis*, from *Donegal*, are 470 passengers, among whom are a number of respectable farmers, who have brought out a large amount of property; the capital in these two vessels (from the information I have been able to collect) amounts to from 8,000 *l.* to 10,000 *l.* Their destination is *Canada West*, principally to the *Home* and *Gore* districts. The *Henry*, from *Killala*, with 148 passengers, arrived in good health; a few families are in good circumstances, but the greater part poor. Many of them have friends in the *Ottawa*, *Bathurst*, and *Johnston* districts; three families are going to their friends in the state of *New York*.

The passengers in the *Queen Victoria*, *Luna*, *Bowes*, and *Queen*, from *Sligo*, 711 in number, all landed in good health; and although they had long passages, average being 45 days, they, with the exception of one or two families, per the *Queen*, had a surplus stock of provisions on landing. A few families are in good circumstances, but the greater part are poor. About one-fourth are going to their friends in the *United States*, the remainder to different sections of the province. Those with large families were assisted from this office with means to enable them to reach their friends in the *Home* and *Newcastle* districts.

Sixty passengers in the brig *Robert Murrow*, from *Leith*, are respectable tradesmen; all appear to possess means, and, with the exception of three families who remain in *Montreal* with their friends, are proceeding to the neighbourhood of *Toronto* to settle; they went to *Montreal* direct in the vessel.

In the brig *Wingrove*, from *Glasgow*, were 160 passengers; this vessel proceeded to *Montreal* direct, after a few hours delay here, with her passengers. On boarding her, they complained of an overcharge for emigrant tax; children under fourteen, and seven years, being charged the full tax of 4s. 6d. sterling, which is contrary to law; but as the vessel only remained here a few hours, I forwarded instructions to the agent at *Montreal* to take the necessary steps to give them redress, in case the captain refused to refund the overcharge. A number of these families are very poor; they are members of the *Glasgow* emigration societies, and will require assistance to enable them to proceed up the country.

In the *Xenophon*, from *Belfast*, 250 passengers are farm labourers and tradesmen; a few of the former are in good circumstances, and are proceeding to *Port Hope*, *Hamilton*, and a few families to their friends in the *London* district, and from eight to ten young men to their friends in the state of *New York*. This vessel had a long voyage of 52 days, but all landed in good health.

Six hundred and thirty-seven passengers, in the *Standard* and *Compton* from *Liverpool*, are principally labourers, and generally very poor; above one-fourth are going to the *United States*, to their friends; among them are 10 or 12 *Welsh* families, consisting of about 50 individuals, who are going to the state of *Ohio*; they appear to have sufficient means to pay their way. The passengers per *Compton* suffered a great deal from sickness; there were 12 deaths from small-pox during the voyage, and a number of cases were sent to hospital on her arrival at quarantine.

This vessel had a long passage of nine weeks, and consequently a great many of the passengers were short of provisions; they all complained of the neglect and inattention of the master, *Mr. Jeffery*, to their wants during the voyage; and I regret that, owing to the defective regulations of the present *Passenger Act*, I could not give them any redress to their complaints.

One hundred and sixty-six passengers, per *Jubilee* from *Westport*, landed in good health; they are chiefly labourers; a number are going to their friends in the *United States*, and others are in search of employment.

In the brig *Ann Moore*, from *Limerick*, were 182 passengers. There was, I regret to say, a great deal of sickness in this vessel; she left 59 of her passengers at *Grosse Isle*, 37 of whom were sent to hospital. A passenger by this vessel, named *Patrick Quincey*, jumped overboard during the night while the ship was at anchor at *Grosse Isle*, and was drowned, leaving a wife and eight children, who were sent to hospital with fever: he has left 40 sovereigns in gold, which were taken charge of by the medical superintendent until his wife recovers.

The passengers in the *Prince of Wales*, 193 in number, from *Galway*, landed in good health; they are chiefly labourers and farmers, and are proceeding up the country in search of employment; a few families are in good circumstances. About 40 are going to the *United States*, to join their friends settled there.

Employment, I regret to say, still continues scarce in this district; I have, however, succeeded in procuring employment on the *Gosford Road* for about 100 men, and from 100 to 150 in the eastern townships. Employment, I hear, is abundant in that section of the province; but I find the greatest difficulty to induce those seeking work to try that section of the province.

## CANADA.

## No. 1.

Sir C. Bagot to  
Lord Stanley,  
26 January 1843.

Encl. (B.) in No. 1.

Week ending 2d July.

The emigrants arrived this week are principally farmers and labourers; those in the *William Tell*, and *Richard Watson*, from Dublin, 364 in number, landed in good health; they are chiefly labourers, and a few farmers, who appear possessed of small capital.

The passengers in the *Mary Russell*, *Boadicea*, *Mary*, and *Messenger*, from Limerick, arrived in good health, and consist of farmers and labourers; they are with few exceptions proceeding to Canada West, with the intention of settling. In the *Mary Russell*, the passengers were of a superior class; several families brought out capital, from 500*l.* to 600*l.*, and the master reported almost every family was in possession of from 40*l.* to 50*l.* in gold; these people all proceeded to settle in the Home and Gore districts.

In the *Dumfriesshire*, *Mary*, and *Margaret Johnston*, were 1,135 passengers from Belfast; they landed in good health, and are all proceeding to the western part of the province; only eight families, about 50 individuals, out of this number applied for assistance, which they received, as they were going to join their relatives settled in the western section of the province.

The passengers from *Hull* and *Plymouth*, 335 in number, are principally agriculturalists, and all appear in good circumstances; a few are going to the United States, but over three-fourths intend settling in Canada West, in the Newcastle, Home, and Gore districts, and one or two families in the Huron tract.

Ninety-eight passengers in the *Dependant*, from Bridgewater, arrived in good health, 52 of whom were sent out by the Chard Union, in Somersetshire; these people were found in provisions by the ship, and received 20*s.* sterling on landing; the remaining passengers were of the better class, and possess good means; they intend going to the western section of the province to settle; a good many of the paupers intend proceeding to the United States.

The passengers in the *Blonde* and *Feronio*, 483, from Glasgow, are a fine intelligent body of people; and have brought a large amount of capital with them; it is impossible to ascertain the exact amount, but from the information I have received, I should estimate it at from 10,000*l.* to 12,000*l.*; they are proceeding to the Bathurst, Home, and Gore districts, with the intention of settling; many of them are going to join their friends.

The passengers per the *Ayrshire*, 416 in number, from Newry and Dublin; she had a long voyage of 51 days, and had 25 deaths, previous to her arrival at Grosse Isle, all children, from the effects of measles; a number of families, embarked at Dublin, were aided in their emigration by the Earl of Fitzwilliam, from his estates in the county of Clare; these people, owing to their long passage, landed here, as well as many of the other passengers, short of provisions, and I was under the necessity of assisting 15 families, who had expended all their means, to enable them to proceed up the country.

Three hundred and twenty-six passengers in the *Thomas* and *Hannah*, and *Jane Avery*, from Londonderry, arrived in good health; they are chiefly labourers, and all very poor; I had to assist a large number of families who were without means, to proceed up the country; some to their friends, and others in search of employment.

In the brig *Mary*, from Liverpool, were 213 passengers; this vessel arrived in a most wretched state at Grosse Isle, from sickness; there had been five deaths previous to her arrival there; and 56 cases of typhus were sent to hospital, two of whom died in a few hours after. This vessel cleared from Liverpool, according to the certified list of her passengers forwarded to this office by the Government agent at that port, with 192 passengers; on arrival here, she was found to have 22 on board whose names were not on the list; she was also exceedingly crowded, the passengers being obliged to keep all their luggage and provisions between decks, there being no room in the lower hold; it (with the exception of a small space for water and fuel) was full of salt. On measuring the superficial space between decks, I found she had only space for 165 adults, whereas she had 180  $\frac{3}{4}$  on board, being an excess of 15  $\frac{3}{4}$  passengers; the necessary information was immediately placed in the hands of the Crown officer, to prosecute the master for the infringement of the second clause of the Imperial Passengers Act.

The dreadful condition in which this vessel arrived may, in a great measure, in my opinion, be attributed to the crowded state of the vessel, and to her having a cargo of salt in the lower hold, which was full up to the platform which the passengers occupied.

One hundred and ninety-four passengers in the *Orbit* from London and Gravesend, were sent out under the direction and superintendence of the Poor Law Commissioners; there were five deaths on the voyage, one an old man, the others children, and left a number of cases at Grosse Isle; these people were forwarded to Montreal at the ship's expense, and received 20*s.* sterling each adult on landing here.

The passengers in the *Ruth*, from Cork, and *Jane*, from Tralee, are chiefly labourers, and with very limited means; a large number in the *Ruth* were very destitute, and as employment in this district is very limited, I had to forward a considerable number of them up the country.

Two hundred and fifty-three passengers in the *Devereux*, from Liverpool, and 186 in the *Mary Alice*, from Newport, Ireland, are very poor, and principally depending on employment for their support. Notwithstanding the passage to Montreal is only 1*s.* 3*d.* each, I was under the necessity of forwarding a very large proportion of the passengers in the latter vessel; they are going to different sections of Canada West, to join their friends.

The passengers from *Sligo*, 439 in number, have landed in good health; they are principally labourers, and intend to proceed up the country in search of employment.

## PAPERS RELATING TO EMIGRATION.

19

Week ending 9th July.

CANADA.

No. 1.

Sir C. Bagot to  
Lord Stanley,  
26 January 1843.

Encl. (B.) in No. 1

Over 7,000 emigrants landed at this port during the past week, 5,000 of whom arrived during the 5th and 6th instant, and all extremely healthy. By a report received from Dr. Douglass, the medical superintendent at Grosse Isle, it appears he had occasion to send only four cases, out of the whole number, to hospital, a circumstance unprecedented. Their healthy state may in a great measure be attributed to the extremely fine passages, most of the vessels have made; the average of the week is less than 40 days, and the Sherbrooke, Jessie, and Victoria, from Liverpool, and Robert Bruce, from Bristol, came over in from 26 to 30 days, without a single day of rough weather.

They consist of farmers, labourers, mechanics, and servants, very many of whom have brought out a good deal of property, and are, with few exceptions, proceeding to settle in Canada West. I should estimate this number at two-thirds; the remainder are very poor, and many without means sufficient to take them to their friends, or to where they will meet with employment.

Those who arrived here in the most distress, were 35 families, 156 persons, in the ship Independence, from Belfast; and 22 families, 130 persons, in the Wexford, from Glasgow; these families had formed themselves into societies, and collected subscriptions, which barely enabled them to procure a passage and provisions for the voyage, and arrived here destitute of both money and provisions. I was under the necessity of giving these people a supply of provisions, and forwarded them up to the country, there being no employment available for them in this district.

The other emigrants who received assistance to emigrate were from Dublin and Limerick, 181 in number; they all received a sum of money on landing here to enable them to proceed to their friends, and were also well supplied during the voyage; those from Limerick are mostly Colonel Wyndham's tenantry; they are proceeding to their friends in the Newcastle district; 10 families, 48 in number, in the Areturus, are paupers sent out by their parishes, under the superintendence of the Poor Law Commissioners; they all received sufficient means to carry them to their destinations.

A case of gross infringement of the Imperial Passenger Act occurred this week in the brig Lively, Captain —, from Galway, with 192 passengers; about 130 of these people state that they had engaged their passage with Mr. —, in this vessel, to proceed to St. John's, New Brunswick; but, contrary to their agreement, they were brought to this port. I immediately took proceedings against Captain — to oblige him to fulfil the contract between these people and Mr. —, which he, to avoid prosecution, immediately complied with, and furnished those who were desirous of proceeding to St. John's with a conveyance, there being fortunately a schooner about to sail for that port; a report of the particulars of the case, with the affidavits of the passengers, I forward separate. It is but justice to the master to state that he appears in no way to blame, having joined the vessel only a few days previous to her sailing, and he used every exertion to remedy the evil on arrival here. I have also had occasion to place information in the hands of the Crown officer to prosecute the following vessels for the infringement of the Imperial Act, in not having sufficient superficial space for the accommodation of their passengers; viz. the Jane Melvain, from Londonderry; Independence, from Belfast; Lord Seaton and Dromahair, from Sligo; Bruce, from Newport, and the Lively, from Galway; the Harmony, from Waterford; the Britannia and Warrior, from Westport, were fined by the collector of customs for an excess of passengers over their tonnage; these vessels have each paid the penalty.

There are still, I regret to say, a good many hands unemployed at the different agencies throughout the province, but as the harvest is now approaching, I anticipate but little difficulty in being able to dispose of them all to advantage. Mr. Hawke reports, that the crops look most promising, and that throughout Canada West there is every appearance of a bountiful harvest; this in connexion with the large additional number of hands which will shortly be required on the St. Lawrence improvements in this section of the province, will more than absorb those at present seeking employment, and also furnish it for those who may arrive.

Week ending 23d July.

The emigrants arrived during the past week all landed in good health, and consist of mechanics, farmers, and a few labourers, generally in good circumstances.

The passengers per the Amazon, from Hull, consist of eight families and a few young men, chiefly mechanics, the greater part of them intend proceeding to join their friends settled in the state of Ohio, and all appear to possess good means. Two families, farmers, are proceeding to settle in the neighbourhood of Toronto. One hundred and seventy-seven passengers in the Exile from Belfast, are a respectable looking people, chiefly farmers; a considerable number of them have their friends in the western section of the province; this vessel had an excess of 18 passengers over her complement, according to the superficial measurement of her passengers' deck, and I have taken the necessary proceedings against the master to enforce the penalty. The barque Joseph Green arrived from Thurso with 239 passengers, who landed in good health; this vessel also had an excess of 26  $\frac{2}{3}$  passengers over her complement, according to measurement, particulars of which I have placed in the hands of the Crown officer for prosecution.

These people are, with the exception of a few families, all in good circumstances, and able to pay their way to their destinations, which are to the Bathurst, Home, and Gore districts.

## CANADA.

No. 1.

Sir C. Bagot to  
Lord Stanley,  
26 January 1843.

Encl. (B.) in No. 1.

districts. The 103 passengers in the brig *Truant*, from Sligo, are a healthy set of people, and consist of farmers and labourers, many of whom have friends in the western part of the province. This vessel was ascertained, on checking her list of passengers, to have an excess of  $10\frac{2}{3}$  adults over her complement, according to tonnage, for which excess the master was fined in the penalty of 20*l.* sterling, although, according to the extent of her superficial space, she might have carried from 12 to 14 passengers more. Passengers per the *Corisbrooke*, from Liverpool, and *Baltic*, from Yarmouth, are chiefly farmers and labourers; some respectable families in the former vessel are proceeding to settle in the eastern townships. I am happy to report that during the past month I have succeeded in directing a very considerable number of families to that section of the province; and, by the reports I have since received, they have all succeeded in getting employment, with the exception of some few young men, who were dissatisfied with the wages offered, viz. 2*s.* per day, with board. The following extract of a report received from A. B. Hawke, Esq., chief agent for Canada West, dated 20th instant, conveys most gratifying intelligence of the increased demand for labourers, and that the number of the unemployed, which I have had occasion to allude to in my former Reports, are rapidly decreasing:—

“The accounts which I have received from Cobourg, Toronto, and Hamilton, since I wrote you last, state that the near approach of harvest has increased the demand for labour, and that the number of unemployed persons was rapidly diminishing; but few emigrants so far have obtained employment on the public works. When we consider how few canal labourers settle and become good farmers, it is a subject of congratulation that so many have found employment in the rural districts; and unless we have a very extensive emigration late this fall, there is every prospect that all the immigrants will be comfortably settled before the winter sets in.”

In the schooner *Defiance*, from Miramichi, were 108 passengers, 10 of whom landed there this season; the others were old residents, chiefly farmers and labourers. Employment being very scarce, they have come on here seeking it. The greater part intend proceeding up the country.

## Week ending 6th August.

The emigrants arrived at this port since the 24th ultimo consist chiefly of farmers and labourers, and all landed in good health.

In the *Troubadour*, from Glasgow, were 224 passengers, consisting of farmers and mechanics, many of whom are in good circumstances. They are all proceeding to the western section of the province to settle, where many of them have friends. They proceeded to Montreal in the vessel. One hundred and thirty-three passengers in the *St. Andrew*, from Stornaway, are principally labourers and a few farmers, and all very poor. They all intend settling in the eastern townships, in Burry and Linwick. Their means being very limited, I was under the necessity of assisting them with a conveyance for the women and children as far as Sherbrook.

In the *Margaret Balfour*, from Belfast, were some very respectable emigrants, with good means; they all went to the western section of the province for settlement and employment. Two families, 12 in number, in the *Mary*, from London, are proceeding to their relatives at Guelph; they were assisted to emigrate by their parish. The other emigrants by this vessel appear in comfortable circumstances, and have all proceeded up the country, some for employment and others to join their friends. Seventy-four passengers in the schooner *Anna Maria*, from Limerick, consist of farmers and labourers. Five families are proceeding to their friends at Bytown, the remainder are going to their friends in the United States. They all appear able to pay their own way.

In the *Pactolus*, from Glasgow, were nine families, 51 souls, who have been aided to emigrate by public and private contribution; they landed here very poor. Two families who have relations in the province, one at Guelph, the other near Montreal, were forwarded to them; the others were sent into the country settlements for employment. This vessel proceeded direct to Montreal. The remainder of her passengers were all in good circumstances, and all intend settling in Canada West.

The demand for labourers throughout the country settlements has considerably increased; and I received a letter from one gentleman in the eastern townships a few days since, requesting me to forward him from 20 to 30 hands, to whom he would give steady employment until the winter, at 2*s.* 6*d.* per day. I find great difficulty in inducing any of those seeking employment to avail themselves of this offer; if they have the means of proceeding up the country, nothing will induce them to remain in this section of the province.

## Week ending 13th August.

The emigrants of the past week landed in good health; but a large proportion of them very poor, and requiring assistance to enable them to reach their friends; they are, with but few exceptions, proceeding to different sections of Canada West, to join their friends and relatives, who have been for some years resident in the province.

A number of the passengers per *Springhill*, from Donegal, are very poor; and I was under the necessity of assisting them with a free passage up the country, to enable them to proceed to their friends; the greater part of these people were on board this vessel over 12 weeks; as owing to a report of the vessel being unseaworthy, the Government agent at Sligo would not permit her to proceed to sea until a proper survey was held, and she was reported fit for the voyage. The passengers per the *Royal Bride*, from Dundee, are respectable

## PAPERS RELATING TO EMIGRATION.

21

able farmers, and all have friends and relatives settled in the province; they all appear to possess means. One hundred and ninety-eight passengers in the Nelson Village, from Belfast, are also, with few exceptions, proceeding to Canada West to join their relatives; they are mostly agricultural labourers, a number of whom possess money; a few young men whose means were limited proceeded to the Gosford Road for employment. The passengers per Huron, from Liverpool, and Henry Volant, from Ballyshannon, are labourers, a few mechanics, and servants; the greater part are proceeding up the country to their friends, and others I have directed to the Gosford Road for employment. Three families have gone to the eastern townships; there are but few emigrants about this city or Montreal out of employment at present; several hundred hands are now employed on the Beauharnois Canal, at 3s. per day.

CANADA.

No. 1.

Sir C. Bagot to  
Lord Stanley,  
26 January 1843.

Encl. (B.) in No. 1.

## Week ending 20th August.

The emigrants arrived during the past week consist of agricultural labourers, a few farmers, mechanics, and domestic servants; and nearly all appear to have their friends or relatives settled in different sections of the province; they have landed generally in good health; but owing to long and tedious passages, the average being over 57 days, very many families whose funds were limited, were unable to proceed to their destinations without assistance.

The passengers per the Macoa, 282 in number, sailed from Londonderry on the 10th May, and after being a few days at sea, the ship was obliged to put into Belfast in distress; and was detained there until the 14th June. As these people were delayed at that port upwards of four weeks, attended with a good deal of extra expense, the funds of many of the families were completely exhausted on their arrival here; and I found it necessary to grant some assistance to enable them to reach their friends. The master, Mr. Milligan, was most kind and attentive to their wants during the voyage; and they all speak most favourably of his attention; they are all proceeding to Canada West.

One hundred and fifty-two passengers in the John and Robert, from Liverpool, had also a long voyage of 50 days; many of the families were short of provisions, and being obliged to purchase from the master, they landed here very poor; they also state that they were waiting a considerable time in Liverpool for a vessel; with few exceptions they are proceeding to Canada West to their friends. One hundred and seven passengers in the brig Alice, from Glasgow, and 78 in the Sir William Wallace, from Aberdeen, are all respectable farmers and agriculturalists; and with the exception of one or two families in the former vessel, appear in good circumstances, and are going to join their friends and relatives in the Huron tract, and London district; a few families are proceeding to the neighbourhood of Perth and Bytown, and up the Ottawa river. Six families, 38 in number, in the St. Lawrence, from Cork, are going to their friends in the Bathurst district; they are all in good health, and appear well able to pay their way; there is a good demand for skilled labour among the farmers in that section of the province, and good hands have no difficulty in procuring employment; common labourers find it much more difficult, and, for steady employment, are dependant on the public works; about 400 hands are at present employed on the Gosford Road in this district, one-half of whom are emigrants of this season; wages 2l. per month and their board.

## Week ending 27th August.

A large portion of the emigrants arrived during the past week have suffered much from want of provisions and from sickness, the average length of these passages being over eight weeks.

The ship Mountaineer, with 505 passengers, was 68 days on her voyage, and her passengers suffered very much from the effects of small-pox and typhus fever, 30 deaths having occurred previous to her arrival at quarantine, and two more during her detention there. Many of the passengers were so much reduced from want of food, that the medical officer was under the necessity of retaining a number in hospital for a few days, to enable them to recover their strength; the stock of provisions of a great many became exhausted, after being out about five or six weeks, and they were under the necessity of purchasing food from the master at most exorbitant rates: this as well as many other complaints made by the passengers is now undergoing legal investigation, which when closed will be duly reported. A large number of these people are proceeding to join their friends, chiefly in Canada West. There were a good many Scotch emigrants among them, who are in good circumstances, and who are going to their friends in the London and Western districts.

The passengers per the Euphrosyne, from Bristol, are farmers and farm-labourers; two or three families have brought out a good deal of property with them, and intend settling in the London district. This vessel was 69 days on her voyage, but they all appeared well supplied.

The passengers per the Caledonia, 86 in number, from Glasgow, are respectable farmers and mechanics; they are all proceeding to join their friends in Canada West.

The 123 passengers in the Elephant, from Greenock, are, with the exception of a few families, in good circumstances; they had a long passage of 51 days, but were well supplied with provisions.

In the Edinburgh, from Liverpool, were 300 passengers. This vessel was 54 days on her voyage, and many of the passengers were short of provisions; they however landed in good health, and consist of farmers, labourers, and a large number of mechanics; the former are all proceeding to join their friends, and the latter in search of employment.

## CANADA.

## No. 1.

Sir C. Bagot to  
Lord Stanley,  
26 January 1843.

The passengers by the Borneo, 135 in number, from Limerick, and John Bell, from New Ross, are chiefly labourers coming out to join their friends; a number in the former vessel are going to the United States to their friends.

Week ending 3d September.

Encl. (B.) in No. 1.

The emigrants arrived during the past week have landed in good health, and consist of farmers, labourers, and mechanics. These vessels, unfortunately, all have had long passages, the average for the week being 60 days; consequently very many families were short of provisions, and obliged to buy from the master for some weeks previous to arrival, which has exhausted all their means.

Over one-half are proceeding to join their relatives and friends settled in different sections of the province, chiefly in Canada West; a few are proceeding to Ohio and the western part of the state of New York; and the remainder, principally mechanics, are in search of employment. Owing to the above causes the applications for assistance, I regret to say, have been very numerous; and I have been under the necessity of extending relief in free passages and provisions to a very large number. In the Catherine from Liverpool, and Ceres and Astrea from Sligo, the passengers were very poor, and I was obliged to assist upwards of 50 families from these vessels.

The passengers by the City of Waterford are generally in good circumstances, about 20 of them are proceeding to Ohio; one family, five in number, were sent out by their parish. Eighty passengers, per Susan, from London, have also been sent out by their parishes; they had a long voyage of 70 days, but being found by the vessel suffered no inconvenience; they received, on landing here, two days' provisions and 20s. sterl. in cash each adult, and proceeded immediately on their route to Canada West. The passengers per Lady Falkland, 361 in number, all landed in good health; among them are many respectable farmers, who have brought out capital with them; a large number have relatives settled in the province, and they are proceeding to them in the Bathurst, Johnstown, Home, and London districts.

Employment of all kinds is now very difficult to be obtained in the neighbourhood of this city and Montreal, as also in the towns of Canada West; and it is at these points, unfortunately, all the idle, destitute, and those in search of employment, will collect; and it is only by distributing them throughout the agricultural districts, where employment may be obtained (for all who will take the trouble to inquire or look for it), that we can expect they will be able to provide for themselves and families during the coming winter: this, however, is attended with expense, but it is unavoidable. This outlay thus incurred may be considered as final; and had they not been thus scattered in the early part of the season, the expense would have been much greater, and the result by no means so satisfactory.

The almost certainty of an abundant harvest will, by reducing the price of all the necessities of life, enable the poor immigrants of this season to get through the winter months with comparative comfort.

Week ending the 17th September.

The emigrants arrived the two past weeks consist of farmers, labourers, and mechanics, and have landed generally in good health. The average passages of these vessels is 48 days.

The 378 passengers in the Anne Hall, from Belfast, consist of farmers and labourers; they are all proceeding to Canada West, to join their friends. This vessel sailed originally on the 2d July, with 450 passengers, but after being a few days at sea, was obliged to return to Belfast, her crew having mutinied, when about 70 of her passengers returned to their homes; she afterwards sailed on the 14th July, and arrived here after a voyage of 55 days. Owing to their long passage and detention at Belfast, their supply of provisions ran short, and they were under the necessity of purchasing from the master, and consequently many landed here very poor, and unable to pay their passage up the country to their friends; I was therefore obliged to extend relief to upwards of 30 families. The passengers per Margaret Wilkie, from Greenock, 111 in number, are respectable farmers, and all appear to possess means; they, with the exception of three young men who are going to Cape Breton, all proceeded direct to Montreal in the vessel, on their route to the western section of the province. The English emigrants from Padstow, Hull, and Plymouth, are all in good circumstances, and, with the exception of two families going to Ohio, are all proceeding to settle in Canada West, principally in the Newcastle, Home, and Gore Districts. In the Eliza were 60 passengers sent out by their respective parishes; they were well supplied during the voyage, and each adult received 20s. sterling on landing here.

The passengers in the Mohawk, from Glasgow, are all respectable farmers; they intend settling in the neighbourhood of Toronto and Hamilton.

Fifty-nine passengers in the Hercules, from Stornoway, are all very poor, and are proceeding to join their friends in Canada West. This vessel landed 350 passengers at Sydney.

## PAPERS RELATING TO EMIGRATION.

23—

Week ending 15th October.

Nothing worthy of remark has occurred during this past fortnight; the arrival of emigrants has been limited, and chiefly consist of families coming out to join their friends and relations already settled in the province; all landed in good health, and, with the exception of a few families in the Rose Bank, from Belfast, were able to pay their way to their respective destinations.

Navigation closed 29th November 1842.

Encl. (B.) in No. 1.

— (B.) No. 10. —

Sir,

Emigrant Office, Quebec, 19 May 1842.

It is my painful duty to report, for the information of his Excellency, the Governor-general, the loss of the ship *Jane Black*, Captain Gorman, from Limerick, with 417 passengers, at a place about 10 miles east of Point des Monts lighthouse, 250 miles below Quebec. Captain Gorman arrived here on Monday last, about 12 o'clock, and furnished me with the following particulars:—It would appear that about one o'clock on the morning of the 10th instant, during a heavy squall, accompanied with a snow storm, the vessel struck, and immediately bilged and filled with water, which destroyed the greater part of the passengers' provisions and luggage. The ship continued to strike heavily on the rocks until daylight, when, fearing that if the gale should increase she might go to pieces, Captain Gorman landed all his passengers in safety; and as the coast was desolate and without inhabitants, he had the snow cleared, and tents made from the sails and other articles saved from the wreck. The passengers saved only what provisions they had between decks, which probably, with care, might last them three days; the stores which were saved belonging to the ship would be sufficient for three days more.

Captain Gorman, after having seen all made as comfortable as circumstances would permit, engaged some Indians (whom he was fortunate enough to meet there, and who were of great service in making fires and assisting the passengers to build their camps) to take him over to the south shore, in order to proceed with as little delay as possible for assistance. On his route up he endeavoured to procure schooners, but without success; and, by travelling day and night, he arrived here, as stated above, on the sixth day after the wreck.

Immediately on his arrival I took, in connexion with Captain Boxer, the necessary steps to send relief to the unfortunate sufferers; and with the sanction of the Trinity Board, despatched their yacht, which had arrived only that morning from below, with a supply of provisions; but looking to the uncertainty of the schooner's arrival, and the fatal effects of the delay which might occur, in the event of her having to beat down to the wreck against one of those easterly gales so prevalent at this season; and considering also the very destitute and helpless condition of the unfortunate sufferers, encamped in the midst of ice and snow, on a desolate coast, and by that time without provisions; I deemed it my duty to procure if possible the service of a steamer for their relief.

I applied accordingly, without delay, to the different owners of steamers, for that purpose, and finding that no other could be procured for less than 600 *l.*, accepted Mr. James M'Kenzie's offer to send his steamer, the *Lumber Merchant*, with a supply of provisions, to bring up all the passengers, for 500 *l.* A few hours necessarily elapsed after this arrangement was concluded, and while the steamer was being provided with the requisite supply of fuel for her unexpected voyage; but at 11 o'clock on the same night (Monday), I had the satisfaction to know that she had started for the wreck, with Captain German on board; and I confidently look for her return to-morrow, if the weather should continue favourable.

I have prepared a building to afford shelter to those who may require it, for a few days after their arrival here.

Having thus done all that it was incumbent on me to do, for the relief of the unfortunate sufferers, it only remains for me to hope that my conduct will meet with his Excellency's approval.

Nothing, I conceive, but the extreme urgency of the case, could have justified me in incurring the responsibility of so great an expenditure; and I should certainly not have ventured to incur it if the wreck had taken place on an inhabited coast, or under any circumstances enabling the passengers to await without danger, the more tardy relief to be afforded by sailing vessels.

Four schooners would have sufficed to bring them up, and could have been procured for 40 *l.* each; but for the reasons above stated, I did not think it prudent to trust to them in the present emergency.

The employment of the Trinity yacht, I may observe, is altogether unattended with expense; and in case of any accident occurring to the steamer, she may prove of essential service to the poor sufferers.

When the steamer returns I shall not fail to acquaint you, for the information of his Excellency, with the result of these measures.

I have, &amp;c.

(signed) A. C. Buchanan,  
Chief Agent.

T. W. C. Murdoch, Esq.,  
Chief Secretary.

## CANADA.

## No. 1.

Sir C. Bagot to  
Lord Stanley.  
26 January 1843.

Encl. (B.) in No. 1.

— (B.) No. 11. —

Sir,

Emigrant Office, Quebec, 30 July 1842.

I HAVE the honour to enclose you the affidavit sworn to by three passengers who arrived here in the brig *Lively*, —, Master, from Galway, on the 8th instant.

It will appear from the affidavits of these people, whose statement was fully confirmed by the rest of the passengers, that they had engaged their passage with a Mr. —, agent for Mr. —, owner of the *Lively*, for St. John's, New Brunswick, and were notified to be in Galway by a certain day, viz. 20th of April, or else forfeit their deposit; and that the vessel was advertised to sail for St. John's, New Brunswick, by handbills and placards, one of which is attached to the affidavit.

Out of 192 passengers, about 130 appear to have engaged their passage for St. John's; and it also appears that they understood the vessel would call and land them there, and afterwards proceed to Quebec.

These people, on arrival, made a complaint to this office of the breach of contract, and to solicit redress; they also complained of being detained in Galway from the 20th May until the 3d of June, at their own cost.

I immediately wrote to the captain, stating these circumstances; and informed him that unless immediate redress was given to those people, and the agreement entered into between them and Mr. — fulfilled, I should prosecute him to the utmost extent of the law; which to avoid, he immediately complied with.

A large number of the passengers consented to remain here, as their object was to obtain employment; these he compromised with for 10s. each, which enabled them to proceed up the country; and to six families, whose relations resided in St. John's, he furnished the means of procuring a passage in a schooner about to leave for that port; with which they were satisfied.

In justice to the master, I here beg to state that he did everything in his power to remedy the evil, and appeared to be in no way to blame, as he only joined the vessel a day or so before sailing, and states that he was quite ignorant of any agreement, on the part of Mr. —, to land these people at St. John's, N. B.

I trust, if possible, some means may be adopted in the United Kingdom to prevent the recurrence of so gross a violation of the Passenger Act. This vessel had also an excess of 14 passengers over her complement, according to the superficial space of her passenger-deck; for which the master has incurred a penalty of 20*l.* sterling; and I have furnished information to the Crown officer, with instructions to prosecute for the same.

T. W. C. Murdoch, Esq.  
Chief Secretary.

I have, &c.  
(signed) A. C. Buchanan, Chief Agent.

Province of Canada, } PERSONALLY came and appeared before the Hon. Philippe  
Quebec to wit. } Panet, one of the Justices of Her Majesty's Court of King's  
Bench, in and for the district of Quebec, in that part of the province of Canada called  
Lower Canada, Richard Morley, of the parish of Killimore, in the county of Galway, in  
that part of the United Kingdom of Great Britain and Ireland called Ireland, shoemaker;  
Thomas Larkin, of the same place, shoemaker; and Denis Nevin, of the same place, labourer;  
who, being severally duly sworn upon the Holy Evangelists, depose and say that they  
came passengers in the ship or vessel called the *Lively*, of which one — was and is  
master, and which ship or vessel sailed from the port of Galway, in that part of the United  
Kingdom of Great Britain and Ireland called Ireland, on or about the 3d day of June last,  
and arrived at the port of Quebec, in the said province of Canada, on or about the 7th day  
of July inst. And the said deponents further say, that the said ship or vessel called the  
*Lively*, long previous to her sailing from the port of Galway as aforesaid, was advertised as  
about to sail from the said port of Galway for the City of St. John's, in the province of  
New Brunswick, on the continent of North America, on the 10th day of May in the pre-  
sent year of our Lord 1842; and that numerous printed notices, similar to the printed  
notice hereunto annexed, and marked A, were posted up at the church-door and other  
public places in the said parish of Killimore, during the month of April, in this present year  
of our Lord 1842. And these deponents further say, that intending to take passage by  
the said ship or vessel called the *Lively*, from Galway aforesaid, to the City of St.  
John's in New Brunswick aforesaid, they, the said deponents, some time in the month of  
April or the beginning of May last, paid to —, of Lessemiske, in the said parish of  
Killimore, who acted as agent for —, of Galway, aforesaid, the owner of the  
said ship or vessel called the *Lively*, as a deposit for their passage-money from Galway  
to St. John's, as aforesaid, the sum of 5*s.* sterling money of Great Britain per head; to wit,  
he, the said Richard Morley, the sum of 5*s.* for himself; he, the said Thomas Larkin, 5*s.* for  
himself, and a further sum of 5*s.* for Mary Larkin, his wife; and he, the said Denis Nevin,  
5*s.* for himself; and that each of them, the said deponents, got from the said —  
acknowledgments in writing for the said deposit money as and for a passage from  
Galway to St. John's, as aforesaid. And the said deponents further say, and each  
for himself saith, that being poor, and unwilling to be detained longer in the port of  
Galway than was absolutely necessary, they applied to the said —, as agent for the  
said —, to obtain information at what time it was for them to be at Galway aforesaid,  
for

for the purpose of embarking on board the said ship or vessel; and that they were informed by the said —, on or about the 18th day of May last, that unless they were ready to embark on board the said ship or vessel on Monday the 23d day of May then instant and now last past, that they would lose their passage, and forfeit the deposit money respectively paid as aforesaid. And the said deponents further say, that they left Killimore aforesaid, which is distant about 30 miles from Galway aforesaid on Friday, the 20th of May last, and arrived there the same evening, being desirous of laying in stock for the voyage on the next day, being market-day, which they the said deponents accordingly did. And these deponents further say, that they were detained, at their own cost and expense, in the town of Galway, from the time of their arrival as aforesaid until the said ship or vessel sailed, namely, until the 3d day of June last. And the said deponents each for himself saith, that he paid, at the office of —, the owner of the said ship or vessel the *Lively*, in Galway aforesaid, the balance of his passage-money, to wit, the sum of 2*l.* sterling money per head; and thereupon were required to deliver up, and did deliver up, at the office of the said —, the receipts for the deposit money so given as aforesaid; and thereupon they received respectively orders to be received on board the said ship or vessel. And the said deponents further say, and each for himself saith, that he embarked on board the said ship or vessel called the *Lively*, as aforesaid, believing that she was destined on a voyage from Galway aforesaid to the port of St. John's in New Brunswick aforesaid, and did not know to the contrary until the said ship or vessel, with the said deponents on board, had been about ten days at sea, when, happening to speak another vessel which was going on the same course, they, the said deponents, heard the said —, the master of the said vessel called the *Lively*, request the master of the said other vessel, to report the *Lively* for Quebec. And these deponents further say, that they never saw James Price, the person named as commander of the said ship or vessel called the *Lively* in the notice hereunto annexed; and that the said —, to the best of their belief, took command of the said vessel about a day or two before she sailed from Galway, as aforesaid. And these deponents further say that they did not complain to the said —, the master of the said ship or vessel, whilst on the voyage aforesaid, of having been carried to Quebec, instead of St. John's, as aforesaid, for fear of ill usage; but, that immediately upon their arrival at Quebec, they complained at the police-office there, and subsequently to Alexander Carlisle Buchanan, esq., the chief agent for emigrants there, for redress. And the said deponents further say, that, to their knowledge, there were on board the said ship or vessel called the *Lively*, on the voyage aforesaid, not less than 30 persons from the said parish of Killimore and neighbourhood, who had engaged for a passage from Galway to St. John's, as aforesaid; and further, from the conversations which these deponents have heard between the passengers on board the said ship or vessel and the master and crew thereof, the said deponents believe, that out of about 186 passengers embarked on board the said ship or vessel on the voyage aforesaid, not less than 130 had engaged passages from Galway to St. John's, New Brunswick, as aforesaid. And the said Thomas Larkin hath signed, and the said Richard Morley and Denis Nevin have made their marks, declaring respectively that they cannot write or sign their names.

Sworn at the city of Quebec, this 12th day of July 1842, before me,

—(B.) No. 12. —

EXTRACT of a REPORT received from *A. B. Hawke, Esq.*, dated Kingston,  
7 December 1842.

THE effect of so large a number of settlers as have been added to the population of Canada during the current year, either with reference to themselves or the colony, cannot be very correctly ascertained at present. I estimate the total number at 50,000; say 44,000 by way of Quebec, and 6,000 by way of the neighbouring states. Nearly 40,000 have settled in Canada West, and the remainder it is to be presumed have, with very few exceptions, settled in the eastern division of the province.

With reference to those who have settled in the upper section of the province, I have much pleasure in being able to state that nine-tenths have succeeded in obtaining employment, although at a lower rate of wages than was given to the same class last year.

The settlement of the immigrants has been greatly accelerated in consequence of the  
great

Sir C. Bagot to  
Lord Stanley,  
26 January 1843.

Encl. (B.) in No. 1.

great majority of them having come out for the express purpose of joining their friends and relations settled in the province. When we take into consideration that three-fourths of the immigrants belong to the labouring class, and that the public works now in progress are chiefly supplied with labourers from the United States, as well as the depressed state of trade, it is a gratifying fact to find that our rural districts have been able to absorb so many new-comers without any apparent difficulty.

Of late years so large a portion of the immigrants have been labourers as to materially reduce wages, and the labour market appears to be so well supplied at present, that we can hardly hope that an equal number of indigent settlers will be provided for with the same facility next season as those of the current year. The immigrants who stand the best chance of benefitting their condition are persons possessing sufficient capital to purchase farms, or to establish themselves as mechanics, viz. such as wheelwrights, blacksmiths, carpenters, masons, shoemakers, and tailors; persons of this description can hardly fail of success if industrious and prudent.

There is another class of persons to whom Canada at present holds out great inducements, I mean persons possessing small incomes, who find it difficult to educate and bring up their families at home; the low price of provisions in our markets, the trifling amount of our taxes, and the cheap rate at which a good education can be obtained, renders this country a very desirable residence for persons so circumstanced.

Our social condition cannot of course boast of the refinement and luxury of an older country; but to a man who is satisfied with a plentiful supply of the comforts and necessities of life, and the means of bringing up a family, and afterwards educating them for professions or trades, in which with common industry they can scarcely fail of success, is almost sure to become a useful and happy member of society. I do not say that those who immigrate to this country, even under circumstances so favourable, will be likely to acquire fortunes, or that they will meet with nothing to regret in their new position; but with a well-contented mind and industrious habits, they will find their condition substantially ameliorated, and much of that uneasiness as to a provision for their families so often experienced at home, dispelled.

I am, &amp;c.

(signed) *A. B. Hawke*,  
Chief Emigrant Agent, W. D.

(C.)

(Extracts.)

Sir,

Emigrant Office, Kingston, 21 December 1842.

Encl. (C.) in No. 1.

DURING the current year nearly 34,000 immigrants have been landed at this agency; they generally arrived in parties numbering from 50 to 300 or 400 persons.

The course adopted at this office with reference to their distribution, and the relief which is occasionally afforded has been as follows:

We will assume that a party of 200 immigrants are to be disposed of; the names of the heads of families and their occupation are first ascertained, as well as their destination, if they have left home with the intention of settling in any particular part of the province. We will suppose that 75 wish to proceed to Toronto, 25 to Cobourg and Port Hope, 25 to the ports on the Bay of Quinte, and that the remaining 75 are in search of work.

As the steam-boats leave Kingston for Cobourg, Port Hope, and Toronto every evening at eight o'clock, except on Sunday and Monday, during the season, the immigrants anxious to proceed to these ports are first examined, and the questions generally put to them are as follows:—When did you leave Montreal? Did you apply to or receive any relief from the agent at that port? If these questions are answered in the affirmative, the Montreal list is referred to, and if it confirms his statement, his reasons for wishing to proceed to any particular place are demanded. The reason generally assigned is, "I have relatives settled there, and I came to Canada to join them." If the immigrants have any letters or written directions from their friends, they are required to produce them. We then endeavour to discover whether their poverty is real or pretended. If the immigrant gives a straightforward account of the means which he started with, and the manner in which he has expended it on his journey, his claim is admitted. If he hesitates or declines, his claim is rejected; at all events, until further inquiry can be made.

As soon as the whole of the party have been examined, the free lists for the different ports are made out, as well as another list showing the amount of food which each family is to receive. The party is then taken to the bakery, and from thence to the steam-boat.

The 25 immigrants for the Bay of Quinte undergo a similar examination. As the steam-boats for the ports on the bay leave at nine o'clock in the morning, the immigrants are sent to the sheds and supplied with food for the night, if necessary.

The 75 who have no particular destination, and who want employment, remain to be disposed of.

They

PAPERS RELATING TO EMIGRATION.

27

They are generally sent to the sheds for the night, and ordered to be at the office early on the following morning. They undergo the same examination as their comrades. The applications to the office for farm servants, labourers, &c. are examined, and such of the immigrants as will probably suit the applicants, are sent forward. If the supply of labourers exceed the demand, which is frequently the case, the overplus is distributed through those districts which are most likely to require their services. The immigrants thus sent are furnished with the names of some respectable persons residing in the part of the district to which they are directed, with a request that they will have the goodness to send the immigrants to any persons in the vicinity who are in want of labourers. But if they are sent to Toronto, or Hamilton, this duty devolves upon the agents stationed at these ports.

As to the extent of the relief which is afforded to indigent immigrants at this and the other agencies in Canada West, it is confined to medical attendance and comforts to the sick, and free passages and food to the healthy. The rates of conveyance for 1842 are as follows:—

			s.	d.	
From Bytown to Kingston	- - - -	each adult	-	-	2 6 currency.
— Kingston to Dickinson's Landing	- - - -	—	-	-	6 3 —
— — to Ports on the Bay of Quinte	- - - -	—	-	-	4 — —
— — to Cobourg and Port Hope	- - - -	—	-	-	3 9 —
— — to Toronto	- - - -	—	-	-	7 6 —
— Toronto to Hamilton	- - - -	—	-	-	3 9 —
— — to Niagara	- - - -	—	-	-	3 9 —

Being 25 per cent. under the established charges.

Transport by land is of course more expensive than by water. The average expense may be stated at 1 d. per mile for each adult. The supply of food is in all cases proportioned to the time occupied on the journey. We give a four-pound loaf of bread, the cost of which averages about 7½ d. currency, to each person over 14 years old, sent to Toronto, and in proportion to other places. Emigrants who remain in the sheds rarely get more than one or two days' supply of food, unless the head of the family is confined by sickness to the hospital. In such cases the assistance is continued until the patient recovers, or employment can be found for such members of his family as are able to work.

The immigrants by the St. Lawrence do not reach Kingston before the latter part of April, and I generally manage to dispense with the services of the agents at Bytown, Toronto, and Hamilton, until the middle of May. These agencies are generally closed about the 20th of November. The immigrants who arrive before and after the dates above-mentioned, are disposed of without any assistance from the out agents. Upwards of 3,600 emigrants landed at Kingston this year who came from the United States. A large proportion of them came in as early as March and April. I rendered them very little assistance, and that little was, I fear, in some instances granted to improper objects. Being aware that assistance was only granted to immigrants of the current season, many of them pretended that they had recently landed at New York, although their language, as well as the quality of their clothing, proved a much longer residence in the United States.

The correspondence of the office is necessarily extensive, and embraces a great variety of subjects. Besides corresponding with the agents and influential persons in different parts of the province, we are called upon to write letters for the emigrants to their relatives at home, and occasionally to remit funds to enable them to emigrate.

The accounts of the steam-boat proprietors, forwarding merchants, and for the disbursements at the different agencies, are generally rendered in December, and after examination, they are brought into one account current, and transmitted for inspection and audit.

The hospital establishments at Bytown, Kingston, and Hamilton, for the reception of sick indigent emigrants belong to the emigration department, and the physicians who superintended them are paid out of the emigration fund. At Toronto, the indigent sick are sent to the general hospital, and 1 s. per day is paid for each patient during the time he is an inmate of the institution, and the amount charged to this office.

Between the months of May and November, I occasionally visit all the parts to which immigrants are forwarded, in order to distribute any of them who cannot get into the interior without assistance, and to procure work for the unemployed.

All the agents and physicians are required to make monthly returns; these returns are sent to Mr. Buchanan, chief agent, Quebec, to enable him to report to the Government.

I have endeavoured to state, generally, the duties of my office; but it is impossible to enumerate the particular services which I am called upon to render, or the difficulties I have often to contend with.

I have, &c.

Rawson W. Rawson, Esq.  
Chief Secretary, &c. &c. &c.

(D.)

Quebec, 1 December 1842.

Sir,

I HAVE the honour to submit, for the information of his Excellency the Governor-general, the accompanying tabular Return (A.) of sick emigrants admitted, discharged, and died at the quarantine hospital, Grosse Isle, for the season ending October 31st. On comparing the same with the admissions, &c. of previous years (B.), it will be seen that the proportion of sick to the number of emigrants arrived has been somewhat greater this year than last. The mortality of passengers on the voyage has not, however, been so great; while the number of deaths on ship-board last year was 222 out of 28,060 emigrants, or 0.79 per cent.; the number this year has been 302 out of 44,584, or 0.67 per cent.; as in former years, the great majority of these deaths were infants at the breast, young children, and aged persons. The loss of infant life on the passage is very great every year, and is readily accounted for from the circumstance of the mothers, upon whom the children depend for support, being placed under circumstances in every way most unfavourable to affording it. She is in most instances from the country, accustomed to respire pure air, and to take active exercise; from this state she is transferred to the hold of a vessel, where she suffers from sea-sickness, is anxious and alarmed, and her food and water in many cases bad and unwholesome; from these causes the infant, deprived of its usual supply of nourishment, pines and dies from inanition. Aged persons, or those in second childhood, are obnoxious to the same causes, and suffer in proportion. A greater number of the deaths took place this year on board of emigrant vessels that were in their passage out in the early part of May; at which time a succession of severe gales of wind from the S. W. were encountered by all those at that time in long. 30° to 40° W. One gale, which lasted from the 4th to the 6th May, was so violent, as to oblige the emigrant vessels exposed to it to keep their hatches battened down for upwards of 48 hours; during which time much suffering was experienced by the poor people, deprived of fresh air, of the means of cooking, and their *morale* affected by the dread of shipwreck. Many of these vessels arrived with loss of bulwarks, boats, and galleys, and in all cases with a greater proportion of sickness and deaths than those not exposed to the fury of the gale.

This season, as in former years, wherever measles and small-pox broke out on board of crowded vessels, the mortality has been very great. Among the worst cases, I would instance the ship *Mountaineer*, from Liverpool, among whose passengers both these diseases raged, and the number of deaths was 32 out of 505. These passengers suffered also from a deficiency of food, and were reduced to the utmost extremity when they arrived at Grosse Isle; I was under the necessity of admitting 41 to hospital. On board of the bark *Ayrshire*, from Dublin and Newry, there were 25 deaths out of 428. In the *Renfrewshire*, from Glasgow, 16 out of 554. In the *Compton*, from Liverpool, 12 out of 329. In the *Minstrel*, from Liverpool, 10 out of 180. On board of all these vessels both measles and small-pox prevailed extensively, and had the usual effect of vitiating the atmosphere of the hold, and causing fever amongst those of the adult passengers who were not obnoxious to the contagion of these specific diseases.

The number of vessels on board of which typhus fever appeared has not been so great as in former years; aggravated cases of this dreadful pestilence occurred, however, on board of three or four vessels, one of which was the brig *Mary*, from Liverpool, where the disease was evidently the result of want of cleanliness, ventilation, and from insufficiency of food. This vessel was owned by the master, who took in as much cargo at Liverpool as completely to fill the lower hold; the remaining space (technically called the 'tween-decks) he then chartered for a specific sum to a passenger broker, who put into it 214 souls, with their baggage and stores (these last, in emigrant vessels, being usually stowed in the lower hold). The master, unaccustomed to the passenger trade, and having made no contracts with the emigrants individually, did not consider himself bound to enforce cleanliness or good order in the part of the vessel occupied by them; he looked upon them in fact simply as part of his cargo; the consequence of this neglect was the speedy generation of typhus in its worst form, which once begun, went on increasing in a direct proportion to the number of cases, until their arrival at the quarantine station. When I visited the vessel, and put the usual questions to the master, I learnt that five adults had died on the voyage, and that several were ill below. I requested him in the usual manner to accompany me and point out the worst cases, and the treatment he had pursued towards them; this he at once refused, saying, he knew, nothing about them, and that no inducement would make him expose himself by going down into the hold where they were. Upon descending to the hold I witnessed such a scene as can only be witnessed in emigrant vessels where fever prevails; 56 poor wretches lay about in different stages of disease, some violently delirious, others stupid and comatose; those who had no relatives (of which the number was great) were left entirely to an occasional chance supply of moisture for their parched lips. The state of atmosphere in such a confined place could hardly be worse; ventilation (at all times difficult from the construction of the vessel and the superior gravity of foul air) was utterly neglected, and no care was taken to preserve cleanliness by removing even the foetid discharges of the sick. After removing 56 to hospital, I caused the others to be landed on the island and placed in the sheds until their foul clothes and bedding had been thoroughly washed and scrubbed, during which time the chief agent for emigrants authorised the distribution of oatmeal to those destitute of food, or the means of purchasing it. The other most aggravated cases of typhus were on board the brigs *Anne Moore* and the *John White*, from Limerick; the former of these left port with 179 passengers, out of which it was found necessary

## PAPERS RELATING TO EMIGRATION.

29

necessary to send 61 cases to hospital, including the master and three of the crew; and from the latter, 26 cases of fever out of 133 passengers. In both these cases the disease was brought on by the exposure and fatigue of the passengers in severe tempestuous weather, which after contending against for two weeks, they had to return to the port in Ireland from whence they sailed, where they were landed and placed in sheds during the time the vessels were undergoing repairs. On commencing their voyage again, fever broke out among them. From the barque Sarah Stewart, 18 cases of fever were admitted to hospital out of 261 passengers. Among the admissions to hospital were 15 cases of fever from the barque Lord Canterbury, from Bristol; eight of these passengers died on the voyage; disease among these people was brought on by their extreme sufferings from cold, wet, and fatigue at the pumps, the vessel having had the misfortune to strike the ice three weeks previous to her arrival at Grosse Isle, and was only kept afloat by the continued exertions of the crew and passengers, who worked the pumps and bailed with buckets night and day.

As offering a favourable contrast to the above recited instances of suffering and deaths, I beg to allude to the case of 23 passenger vessels that arrived at the quarantine station on 3d July. There were on board of these ships upwards of 5,000 emigrants, out of which number I had occasion to send only six to hospital, and but 15 deaths had taken place on the voyage. This comparative absence of sickness and deaths in so large a body of people of all ages, was owing entirely to the extremely favourable weather experienced on their transit to this country. The passage of these vessels did not on an average exceed 30 days, during the whole of which time the weather was never such as to prevent the passengers being on deck. Some of the shipmasters declared they might have made the passage in an open boat, the sea was so smooth and the wind so light; during the 10 years of my official connexion with the quarantine department of the province, I have never witnessed so large a body of emigrants arrive in such good health. The number of births of emigrants on the voyage out, and at the quarantine station, amounted this year to 117; two of these cases were twins; in the great majority of these cases both mother and child did well; two deaths in child-birth took place.

Great advantage has been experienced this year from the substitution of a small steamer for a sailing craft. Convalescents from hospital have been by this means enabled to arrive in Quebec in from three to four hours, without suffering the fatigue consequent upon a voyage of uncertain duration in a small schooner, without beds or bedding.

Another great addition to the comfort of the sick has been made this year by substituting iron bedsteads, such as are used in military hospitals, for the old worn-out wooden stretchers, which it was found impossible to keep in repair, or free from vermin; though these two improvements, together with some other extraordinary disbursements, caused the expenditure of the quarantine station this year to exceed that of last by 595*l.* 2*s.* 3½*d.*, yet the actual expenditure of the hospital department has been only a trifle more in proportion to the number of sick this year than last, as may be seen by reference to the following statement, taken from a document furnished by Mr. Cary, deputy inspector-general of accounts, 10th November:

	1841:	1842:
	£. s. d.	£. s. d.
To Martin Ray, Sundries for Emigrants - - -	187 3 11½	282 15 11½
Milk and Firewood for ditto - - - - -	29 11 4	91 19 2½
£.	216 15 3½	374 15 2½

The number of sick emigrants in 1841 having been 290, gives a fraction less than 15*s.* as the average cost for each patient. The number this season having been 488, gives 15*s.* 4½*d.* as the average for each patient, being a difference of only 4½*d.* each; and this trifling increase was owing to the greater average length of time that patients remained in hospital this season, owing to the many cases of relapse from fever. The same frequency of relapse has been noticed in the fever cases of emigrants treated in the hospital of this city.

The quarantine department sustained a great loss this season by the melancholy death of the Rev. l'Abbé Fortier, the Roman-catholic missionary attached to the hospital for these last two seasons, the unremitting kindness, zeal, and devotion of this gentleman to the sick was beyond all praise; he fell a victim to typhus fever, contracted at a time when the hospital was crowded with bad cases of that dreadful disease.

I cannot conclude this report without again bringing under the notice of his Excellency the Governor-general the urgent necessity that exists for causing a wharf or landing-place to be constructed on that part of the island where the sick are landed; much suffering is every year caused from the want of such accommodation.

I have, &c.

(E.)

Sir,

Emigrant Office, Quebec, 23 Dec. 1842.

Encl.(E.) in No. 1. I HAVE the honour to acknowledge the receipt of your letter of 13th instant; and have this day been furnished by Dr. Douglass with a copy of his report on the transactions of the Quarantine Establishment at *Grosse Isle* during the past season.

From this report it is gratifying to find, that notwithstanding the large number of sick which, in the early part of the season, crowded the hospital, the per centage of death has been less than last year.

The cause of the great suffering in the case of the passengers by the brig *Marys*, Redpath master, from Liverpool, to which you drew my particular attention, is, I am happy to state, one of comparatively rare occurrence. In my weekly report to his Excellency of the 26 July, I alluded to the very distressed condition in which the passengers by this vessel arrived, in the following words :—

“ In

"In the brig Marys, Redpath master, from Liverpool, were 213 passengers. This vessel arrived in a most wretched state, at Grosse Isle, from sickness; five deaths occurred previous to her arrival there; and 56 cases of typhus fever were sent to hospital, two of whom died in a few hours after. This vessel cleared from Liverpool, according to the certified list of her passengers, forwarded to this office by the Government agent at that port, with 192 passengers; on arrival here, she was found to have 32 on board whose names were not on the list; she was also exceedingly crowded, the passengers being obliged to keep all their luggage and provisions between decks, there being no room in the lower hold; it (with the exception of a small space for water and fuel) was full of salt. On measuring the superficial space between decks, I found she had only space for 165 adults, whereas she had 180 $\frac{3}{4}$ , being an excess of 15 $\frac{3}{4}$  passengers. The necessary information was immediately placed in the hands of the Crown officer, to prosecute the master for the infringement of the second clause of the Imperial Passenger Act.

"The dreadful condition in which this vessel arrived may, in my opinion, be in a great measure attributed to the crowded state of the vessel, and to her having a cargo of salt in the lower hold, which was full up to the platform or deck occupied by the passengers."

A penalty of 20*l.* sterling, the only one I could enforce, against Captain Redpath, was duly awarded by the Court of Vice-Admiralty, and paid. He afterwards petitioned His Excellency for a remission of the fine, which Mr. Chief Secretary Murdoch referred to me, a report of which I had the honour to forward under date of the 21st July, recommending that his prayer should not be granted.

In the case of the Mountaineer, from the same port, also alluded to by Dr. Douglass, I beg to state that, owing to the complaints made by many of the passengers in this vessel as to the deficiency and impurity of the water furnished them during a part of the voyage, and also the exorbitant prices charged by the master for provisions, he having bought up the surplus stock of some of the passengers, and resold to those in need at a large profit.

On inquiring into these statements, I found sufficient evidence to justify my placing the matter in the hands of the Crown officer, who accordingly entered proceedings in the Court of Vice-Admiralty, and obtained judgment for a mitigated penalty of 5*l.* each in both charges. I also prosecuted him before the magistrates, under the Provincial Act, for removing the berthing of 25 of the passengers previous to her arrival at quarantine, for which he was fined 5*s.* currency for each berth removed.

On arrival at Grosse Isle, many of the passengers were so much reduced from want of food, that Dr. Douglass was obliged to have them landed and detained a few days on the island, in order to recruit. As these people had neither food, nor the means of procuring it, I authorized Dr. Douglass to distribute some oatmeal amongst them.

The very sickly state in which the passengers by both these vessels arrived, as well as many others alluded to by Dr. Douglass, I attribute to the inattention paid to their proper ventilation and cleanliness, and to the want of wholesome food.

I trust, however, that the salutary provisions of the new Imperial Act will provide a remedy in some degree for these evils.

Sickness in the Marys may have been further increased from her lower hold being full of salt, which may, by keeping the place occupied by the passengers damp and cold, have caused the disease to generate more rapidly.

I beg to remark with reference to the comparative advantages of a steamer and a sailing-vessel, as a means of communication with Grosse Isle, that though the distance is only 27 miles from Quebec, yet when a schooner was employed to perform this service, two, and in some cases, three days were occupied in making the voyage to town; during which time, as the accommodations were necessarily limited, the convalescents from hospital were exposed to much hardships and suffering: By means of a steamer the trip in no case occupies more than from three to four hours; and I learn from the medical superintendent that this year, since the employment of a steamer, he has been enabled to discharge the sick much sooner, from their not having to encounter the fatigue of lying out one or two nights in the hold of a schooner.

Another great inconvenience, when a schooner was employed, arose from the impossibility of communicating with the island when the wind prevailed strong from the east, a time when, from the arrival of numerous passenger-vessels, it was often necessary to send down supplies of provisions, stores, medical comforts, &c. I learn from Dr. Douglass, that in the year 1839, from May 25th to June 3d, a period of 11 days, it was found impossible to send the schooner down, though some thousand passengers had arrived, and provisions, stores, &c. were required.

Independent of the great advantage to the convalescent emigrant in being able to reach Quebec on his discharge from hospital with comfort and despatch (an advantage not to be estimated by a pecuniary consideration), the employment of a steamer, by affording a sure and certain communication with the island on fixed days, will hereafter enable individuals in town to furnish various supplies, such as fresh meat, bread, &c. at a much less rate than they have hitherto been supplied by contractors, who had to bring them at their own expense in boats from the main land.

Should the increased expense of a steamer be deemed an objection to its employment, another season I would beg to suggest, that rather than return to the employment of a sailing vessel, a steamer should be engaged to make one trip a week in place of two, and that an allowance of 50*l.* for the season should be made to keep a small craft constantly at the station to make a trip to town for supplies once a week, or whenever an emergency should

Encl.(E.) in No. 1.

occur; by this means the chief advantage of a steamer would be obtained, without incurring greater expense than that paid for a schooner.

I am convinced a steam-boat can be had to perform this service once a week throughout the season for 250*l.* to 300*l.*, and 50*l.* more would cover the expense of keeping constantly at Grosse Isle a small craft, as before stated. By this means the total expense would not exceed that incurred for a schooner in former years.

The great necessity of a wharf at the island, where the sick and other passengers could, with their baggage, &c. land in safety at all times, has been felt and admitted every year since the establishment was formed; and though the melancholy loss of life which took place in 1832, has not again occurred, it is owing solely to the great care and vigilance employed in preventing boats leaving the shore with passengers in stormy weather; but even with the utmost care, the bedding and luggage of emigrants is frequently completely wet from the surf.

In 1838 a survey of the island, with a view to the erection of a wharf, was made; a site was selected, and a contract made for the work, which was completed the following autumn; it unfortunately happened, however, that the spot was injudiciously chosen, and the work so slightly performed, that the ice carried it away the ensuing spring, leaving the establishment still labouring under all the evils arising from the want of such a convenience. From personal knowledge of the island, and from the opinion of practical men, among whom I would mention Captain Boxer, R.N., who visited and sounded that part of the island where a wharf can be made at a comparative small cost, at which vessels of any size could lay, and land, or take off their passengers and baggage at all times; and, owing to the low price at which the necessary timber and labour can now be procured, I have no doubt it could be built in the course of the ensuing summer, on very advantageous terms.

From the many improvements that have been made each year in the hospital buildings, and passengers' sheds, the only expense now necessary to render this useful establishment complete, is the erection of this wharf or landing place.

I have, &amp;c.

(No. 5.)

COPY of a DESPATCH from Lieutenant-Governor Sir *W. M. G. Colebrooke*  
to Lord *Stanley*.No. 2.  
Sir W. M. G. Cole-  
brooke to Lord  
Stanley.  
30 Jan. 1843.

My Lord,

Fredericton, New Brunswick,  
30 January 1843.I HAVE the honour to enclose to your Lordship two reports which have been  
made to me by the emigrant agents at St. John's and Fredericton.

I have, &amp;c.

(signed) *W. M. G. Colebrooke*.

Enclosure 1, in No. 2.

Sir,

Government Emigrant Office, St. John,  
New Brunswick, 2 January 1843.

I HAVE the honour to acquaint you, for the information of his Excellency the Lieutenant-governor, that the number of immigrant arrivals in the province during 1842, is 8,329, exclusive of desultory unofficial migrations through Prince Edward Island, Nova Scotia, and the United States, as per accompanying Return. A gratifying feature manifested itself in this immigration, in the general state of health in which they arrived, there being fewer cases of sickness or casualties amongst them than I ever witnessed in proportion to numbers, the details of which were duly transmitted in the prescribed returns. Many proceeded immediately into the interior to join their friends, with a view of permanently settling there.

Encl. 1, in No. 2.

Since the Report which I had the honour of submitting to the Lieutenant-governor on the 16th July last, nothing has yet occurred in the general affairs of the country to induce more flattering prospects of demand (for a time at least) for immigrant labourers. When, however, the reaction in business at home shall have realized steps of permanent improvement (now so auspiciously begun), then, and not till then, will its beneficial effects be sensibly felt amongst all industrial classes here; for we cannot conceal from ourselves that such has been the extent of exhaustion in the monetary and other resources of the many, that it must be a work of some time to redeem their condition. In the present state of depression and distress here, the debt of thankfulness of immigration and humanity is due to his Excellency Sir William Colebrooke, for it is to his timely intervention with the Right honourable the Colonial Secretary of State, that an accumulating torrent of emigration was stayed at home. Had they reached this province, it could only have been to augment the body of misfortune now heavily pressing on the community. These expressions are, you will perceive, Sir, inapplicable to another class of immigrants whom it is most desirable to have in the country; I mean, a rural population composed of solvent yeomanry and small farmers with sufficient means to make permanent settlements.

The rates of wages and prices of provisions for the past quarter, are indicated in the quarterly abstract for the provincial secretary's office. It is a source of deep regret, that there is no Board of Works to employ immigrants.

Emigrant Office, St. John, New Brunswick, } (signed) A. Wedderburn,  
2 January 1843. } G. E. A.

Enclosure 2, in No. 2.

Government Emigrant Office, St. John,  
New Brunswick, January 1843.

Sir,

Encl. 2, in No. 2.

IN obedience to the commands formerly received, I transmitted to the provincial secretary's office the abstract account of immigration here for 1842, for the information of the Right honourable the Colonial Secretary of State; and I have now the further honour to submit to his Excellency the Lieutenant-Governor a communication recently made to the Commissioners for Colonial Land and Emigration, being extended, but collateral observations to the remarks in the forwarded printed official category. A gratifying feature in the immigration of last year was the comparatively healthy state in proportion to numbers in which the parties arrived here, which is in a great degree attributable to the salutary measures of the colonial and emigration departments. The intervention of Sir William Colebrooke with Lord Stanley, to check the fall emigration; was most timeous and beneficial; had they arrived in the bodies apprehended here, they could only have formed accumulations of misfortune, now lying so heavily on this community.

Total arrivals,  
8,320 souls.  
Divisory Scale:  
Adults:  
Males - - 3,623  
Females - 3,017  
Minors - - 1,680  
Total - - 8,320

Since the report which I had the honour to submit on the 16th July last, nothing has occurred in the general aspect of affairs in the province to warrant me in holding out any more flattering prospects (for a time at least) of demand for immigrant labour. Whenever the reaction in business shall have attained such valid advances in improvement as will indicate stability, then, and not till then, can the beneficial effects be felt among the immigrants and others here; for it cannot be concealed from ourselves, and the fact ought not to be withheld from the knowledge of those interested abroad, that such has been the extent of exhaustion in the monetary and other resources of the many here, that it must be a work of time to establish anything like a permanent redemption in their condition and circumstances, or to enable their industry and enterprise to benefit from the abundant natural capabilities of the province, or the advantages it affords. Much solicitude as his Excellency has evinced to meliorate the condition of immigrants, it is deeply to be regretted that the necessary and effectual sinew, a solvent exchequer, is wanting to enable the executive to initiate and extend works of public utility, wherein a systematic course of employment for emigrants might be established. Although rates of wages are inserted in the abstract, I regret to say that they in most cases must be considered but nominal, and only a very small number of mechanics, artizans, or labourers can be employed, and that, too, intermittently.

State of the country at present affecting immigrant labour.

Public works, and emigrant employments.

The prices of provisions have, however, been also very low, owing alike to the abundant harvest, clemency of fall weather, and scarcity of money. Those low prices tended essentially to alleviate the distresses of the immigrants here.

Highland Society.

Agricultural Society.

Associate system.

I look forward with no small degree of confidence to receiving in future beneficial action and co-operation on behalf of immigrants from our recently established Highland Society; and I am enabled to acquaint the Lieutenant-governor that the best feeling manifests itself amongst the members of the Agricultural Society here towards the humble settlers, and that on the limited funds admitting, it is intended to reward the deserving and industrious by donations of suitable seeds, to enable them to prosecute their labours with advantage.

The associate system of settlement organized by Sir William Colebrooke must eventually prove

## PAPERS RELATING TO EMIGRATION.

35

prove of much advantage to immigrant settlers in the country. The original avocations of the parties constituting the associations, and their practical experience and knowledge of the work in the woods, guided by their general intelligence, render them good examples and able schoolmasters in the bush to subsequent settlements in the neighbourhood.

## Enclosure 3, in No. 2.

To his Excellency Sir *William M<sup>c</sup>Bean George Colebrooke, K.H.*, Lieutenant-Governor  
and Commander-in-Chief, &c. &c. &c.

May it please your Excellency,

IN making a report for the past year, as emigrant agent at Fredericton, I beg leave to call your Excellency's attention to the provincial statute, page 587-8, under which the funds that may be obtained from emigrants arriving in the province, are directed to be applied, and under which I am satisfied a sum is collected sufficient, if properly expended, to meet its object, which is the relieving destitute and diseased passengers and emigrants, and in assisting them to reach their places of destination within the province.

But, unfortunately, the Act further provides that sums so received shall be applied from time to time by grants of the legislature; and as that body does not meet till the season has passed away when passenger-ships arrive, and as the Lieutenant-governor for the time being has no authority to apportion any part of the sums so obtained to assist emigrants in distress, or aid them on their arrival in this country, the result is they are thrown upon the community as paupers, to be provided for by the commissioners of the poor, who subsequently apply to the legislature for remuneration, where their claims are frequently reduced. Hence a stigma is attached to persons thus unfortunately situated, which attaches to them and their families in after-life.

I know an instance myself where the descendants of a person who came to Halifax, Nova Scotia, several years since, in a very humble situation in life, have by their prudence and integrity raised themselves to seats in the Council of that and another colony; and yet under the system pursued in this province, had he obtained some trifling assistance, which probably he would afterwards have repaid, it must have been doled out to him by the commissioners of the poor, and would not have been forgotten by those malignant persons with whom every community abounds.

There is also some little allowance to be made for the feelings and habits of those poor people who leave the country of their nativity to seek in a strange land another home. For instance, the Irish, and I believe the remark applies to the Scotch and English emigrants, never having been accustomed to eating Indian meal, they dislike it; in fact in some instances they cannot eat it, although it is a wholesome and excellent description of food, without experiencing ill effects. But oatmeal they will gladly take. Yet in every instance that has come under my observation, the commissioners of the poor give Indian meal; and those who endeavour to obtain oatmeal are considered as improperly fastidious.

To remedy the difficulty that arises from the interference of the commissioners, and to relieve them from a disagreeable duty, as also to secure an economical and proper expenditure of the Emigrant Fund, I would suggest that it should be placed at the disposal of the Lieutenant-governor to be applied for the relief and assistance of emigrants, under his Excellency's immediate directions, by persons who act as emigrant agents, or others who may perform that duty where numbers of emigrants annually arrive; a detailed account to be rendered to the legislature at the close of each year.

There is another proceeding attending the passage of emigrants that materially affects their comfort during such passage, and their circumstances on their subsequent arrival in the colony, to which I beg leave to call your Excellency's attention, for the purpose of bringing it under the notice of Her Majesty's Government.

The emigrants on leaving Great Britain generally provide for themselves and families, as they conceive, a sufficient supply of food to last during the entire passage; but owing to the prevalence of adverse winds, and I fear, in some instances, the cupidity of the masters of the vessels, the passages are protracted to an unusual length; and the poor people having consumed their provisions, are at the mercy of these men, who sell supplies to them, as I have understood repeatedly from emigrants who have come to my office in a destitute condition, at an exorbitant rate, so that when the voyage is ended, individuals with families, who when they embarked had funds that would have materially assisted them, on their arrival in the province are reduced to abject poverty, and have been compelled to dispose of their clothing to support nature on their being landed after the termination of their voyage.

This would be obviated if the masters of vessels taking passengers were compelled to have at least two months' supply of provisions for both passengers and crew, and that a fixed

30 Jan. 1843.

Encl. 3, in No. 2.

price should be prescribed for adults and children, and the articles constituting a ration, and their quality and quantity, also defined by some competent authority at the place of departure.

This may seem at first sight to inflict a hardship upon the owners and masters of vessels; but the price of a ration might so be fixed as to repay them for their outlay; and when it is recollected that the conveyance of passengers is a mere business transaction, and that credulous and ignorant people are continually imposed upon by the cupidity of persons in command of emigrant ships, it will be found to be a course consistent with justice as well as humanity.

With reference to the description of emigrants that should resort to this province, I would beg leave to remark that in the absence of any great public undertaking, a sufficient influx of the labouring class will find their way hither, through the representations of interested persons, or owing to the recommendations of their friends and acquaintances, and as many as can well become annually merged in the population of the province.

There is, however, a class of settlers wanting in this province, and to whom it offers probably as great inducements as can be found elsewhere; and that is persons of limited means, say possessing from 300 *l.* to 500 *l.* Owing to the great loss that attends lumbering pursuits, there are numbers of farms throughout the province which have become mortgaged to the merchants, who have advanced supplies and money to pay for their licences, and which would be disposed of at a cheap rate if purchasers with means could be found; and there are large quantities of cleared land throughout the province which are entirely neglected, that might at a comparatively trifling expense become cultivated and fertile tracts of country.

Were persons so situated, therefore, to emigrate to this province in bodies, including among their number a due proportion of artisans, such as smiths, carpenters, shoemakers, tailors, masons, &c., with a schoolmaster, and perhaps a clergyman, not only would their condition be permanently improved, but the country would be better settled by a description of persons being infused among the population who would possess superior information and attainments, and they would form for themselves very happy communities.

The settlement of the boundary question will open up a fine country for the reception of emigrants; and I look upon it as an object of importance, that an English or Scotch population should inhabit the upper part of the county of Carleton, between the River St. John and the Grand Falls, as they would be diverted from those animosities and prejudices which might have a tendency to disturb that tranquillity which is so desirable should be established and cultivated between the people of these provinces and the neighbouring state of Maine.

There are considerable quantities of cleared land between Woodstock and the Arestook, particularly within the first 15 or 20 miles above the former place, that are only partially cultivated, where settlements could be made; and there are also large tracts of wilderness lands beyond that owned by absentees, and belonging to the Crown, which should no longer be locked up. These are at present held by absentees or other persons, to whom grants have been made between the Medurmkek, which empties into the St. John's at Woodstock; and the Grand Falls, 23,000 acres, and the vacant or ungranted land in that quarter, comprises about 25,000 acres more. The soil, as far as I am acquainted with it, and from the best information I can obtain, is of a superior quality, and the climate is remarkably fine.

There is also abundance of good land in the vicinity of the projected road to the bend of Petticodiac, between North River and New Canaan, amounting to 10,000 acres, including the Albert settlement, which has been surveyed, where new settlements could be advantageously formed. But whether sitting down in villages, or dispersed in separate farms, where the country has been partially cleared, or penetrating into the wilderness of the province, it is essential that parties arriving here depend mainly on the labour of their own hands, and understand something of agriculture. When such is the case, after having procured land or purchased farnus, paid for their stock, and each head of a family having retained, say from 100 *l.* to 150 *l.*, they would have sufficient to support themselves and families till the crops of the first and second years would meet their requirements; and if the subsequent life of each individual should be marked by industry and prudence, it would be one of constantly increasing comfort and independence.

There is a fine tract of land, commencing about 10 miles from Fredericton, called the Rusagonis settlement, which, owing to the lumbering pursuits of the inhabitants of that part of the province, has been much neglected; it extends from the Maryland settlement towards the Oromucto River. The land, generally speaking, is good, and the situation is delightful; I should say that 40 or 50 families might sit down in that direction in great comfort, and at a moderate distance from the seat of government.

On the south west Miramichi River there is abundance of fine land, and I believe a number of farms that might be bought at a very cheap rate, owing to the losses sustained by lumbering. The distance from Fredericton to where the road strikes the Miramichi River at Boiestown, is between 30 and 40 miles.

With reference to the immigrants who came to Fredericton from St. John and other parts of the province, in considerable numbers, during the early part of the summer, they were chiefly of the labouring class, many with helpless families, most of whom had parted with what trifling means they possessed before leaving the vessels in which they came passengers,

or

## PAPERS RELATING TO EMIGRATION.

37

or by the sale of articles of clothing in St. John's, and were consequently in destitute circumstances. I gave these people such advice as my knowledge of the country enabled me to afford, and passed them on to different parts of the province.

In some few instances, when nothing else could be done, I sent them back to St. John's in the steamers, incurring thereby an expense of some 3*l.* or 4*l.*, which I hope will meet with your Excellency's approbation. Those of them who were apt, and calculated to make themselves useful, however, have, with few exceptions, succeeded in obtaining employment.

With a slight exception (there being probably ten or a dozen English people, among whom were two shipwrights, whom I forwarded up the river in December), the emigrants who came to me were all Irish; and there is this difficulty about this description of persons, that they will often apply for and receive aid when they are in possession of sufficient funds of their own; and it is almost impossible to determine between cases of real poverty and affected want. The Scotch seldom or never beg; and I do not recollect an instance of a person of that nation applying for charitable relief under ordinary circumstances. On their arrival they generally penetrate into the country, and procure employment; but the Irish will hang about towns while a farthing remains in their pockets, and then, when necessity compels them to resort to the country, will demand wages far beyond what they can earn, or farmers can afford to give. I feel much gratified, however, in stating that the Irish immigrants who have arrived out during the last two years in particular, were remarkable for sobriety; and I never saw an instance of inebriety, either among those who applied at my office or in the street.

Whatever may be the determination of Her Majesty's Government with reference to emigration, I cannot conclude this report without remarking, that this province seems hitherto to have been singularly unfortunate in this particular. Possessing abundance of land of the finest quality, intersected by numerous rivers of considerable extent, many of which abound with salmon and other fish, with a salubrious climate, at no great distance from the mother country, which may be reached in a fortnight, it offers every inducement to a person desirous of emigrating and possessing property, who, with moderate means, can live here in independence. Those who can command funds to support them during the first year of their residence are sure to succeed; and there are numerous instances where persons, without any means whatever beyond their own labour and industry, have cleared away the wilderness around their dwellings, and have converted it into profitable and fertile farms, who are now living in the enjoyment of every comfort which the bulk of a community can anywhere obtain.

I have, &amp;c.

No. 95.

COPY of a DESPATCH from Governor Sir *George Gipps* to Lord *Stanley*.

No. 3.  
Sir George Gipps  
to Lord Stanley,  
23 May 1842.

Government House, Sydney,  
23 May 1842.

My Lord,

I HAVE the honour herewith to enclose three copies of a Report recently made to me by the immigration agent of this colony, which, though nominally only for the year 1841, contains a general notice of the progress of immigration up to the arrival of the last of the emigrants who left England previous to the 1st November 1841.

On comparing this Report with my own despatch, No. 88, of the 14th May 1842, and the memorandum which accompanied it, your Lordship will perceive that but little difference of opinion exists between myself and the immigration agent—the principal, perhaps, being, that whilst I have recommended that in any future emigration the selection of the emigrants should be left to the agents of the parties contracting to bring them to this country, Mr. Merewether recommends that they should be selected by the agents of government.

Your Lordship will perceive that Mr. Merewether has given all the information in his power respecting the way in which the immigrants, during the last 18 months, have been distributed in the colony; and I desire particularly to request attention to those paragraphs in pages 39 of his Report, which relate to this matter, as in your Lordship's despatch, No. 16, of the 14th October 1841, I was desired to afford information on this subject.

Of the large encampment of emigrants which was to be seen in Sydney a few weeks ago, all the tents, with the exception of five, have now, I am happy to say, disappeared.

At Port Phillip the number of unemployed immigrants is still considerable; but this is in great part to be accounted for by the long detention in quarantine of the ship *Manlius*.

Male immigrants at Melbourne, not able to make better engagements, are still employed by government, though their wages have been reduced from 20s. to 18s. per week. There were 362 men so employed on the 1st of the present month; and about 250 women and children were at that time still receiving assistance from the government.

I have, &c.  
(signed) *Geo. Gipps*.

Enclosure in No. 3.

REPORT on IMMIGRATION, for the Year 1841, by *Francis L. S. Merewether*, Esq.,  
Agent for Emigration; with an Appendix.

Encl. in No. 3.

Sir,  
I do myself the honour to transmit to your Excellency my Report on Immigration to this colony for the year 1841, together with a series of returns illustrative of the subject. In these documents I have endeavoured, in accordance with the instructions under which this Report is made, to embody all such statistical information as the records of my office enable me to furnish, of a nature likely to be "either useful or interesting to Her Majesty's Government or to the colonial or British public."

Appendix (A.)

The Return marked (A.) presents a detailed account of the bounty immigration of the year, showing the number of ships in which bounty immigrants arrived, the number of bounty immigrants landed from each ship, the place where they were landed, and the cost of their introduction.

From

## PAPERS RELATING TO EMIGRATION.

39

From this document it will be seen, that during that single year, 99\* ships, whose aggregate measurement amounted to about 35,000\* tons, were engaged in the conveyance of bounty immigrants to this colony, and that of this number, no less than 89 were specially fitted out for the purpose.

It will also be seen that from these ships were landed, at Sydney 11,757, and at Port Phillip 7,766, bounty immigrants, making a total of 19,523 souls added to the working classes of the population, at a cost to the colony of 327,106 *l.* 2*s.* 10 *d.*

The Return marked (B.) shows the proportion in which the several counties, and principal subdivisions of the United Kingdom, have contributed to the amount of labour imported during the year 1841.

Having heard complaints that many immigrants, hired as farm labourers, have proved utterly ignorant of almost every branch of their business, as well as slovenly in their mode of doing the work set before them, I cannot pass on from my notice of this document without an expression of regret, that of the very large number who have obtained free passages under the description of "Agricultural labourers," so very few should have been selected from those districts where agriculture is most generally and most successfully pursued, and where, consequently, the best husbandmen are to be found.

From Return (C.) it will be seen :—

1st. That of the number of persons who arrived on bounty, including children, 9,750 were males, and 9,773 were females; and that of the males, 7,335, and of the females, 7,599, were above the age of 15 years, and immediately available therefore for work.

2dly. That of the total number of bounty immigrants, including children, 4,563 were natives of England; 1,616 were natives of Scotland; and 13,344 were natives of Ireland.

3dly. That of the total number of bounty immigrants, including children, 10,009 were Protestants; 9,476 were Roman Catholics; 37 were Jews, and one (happily a solitary case) was a member of no religious communion.

4thly. That of the total number of adults imported on bounty, 8,643 could read and write; 2,961 could read only; and 3,178 could neither read nor write.

5thly. That of the adults, 3,425 males, and 3,396 females, were married; and 3,758 males, and 4,203 females were unmarried.

Return (D.) shows the number of deaths and births which occurred, either on the voyage or in quarantine, amongst the passengers of all classes who arrived in ships conveying bounty immigrants, and is, perhaps, the most gratifying of all the documents appended to my Report.

From this return it appears that out of 22,335 souls (including children, amongst whom the greater number of deaths occurred), who embarked in ships which arrived in the colony with bounty immigrants during the year 1841, 21,705 were landed in safety, the diminution by death of the number which left Great Britain having amounted only to 630, being in the proportion of rather less than three in each hundred persons.

Return (E.) shows the trades or callings of the bounty immigrants who arrived during the year 1841, according to their own statements when examined before the Board; and also the average wages given to persons of those callings at the close of that year.

This return is the only one of those forming the Appendix to my Report which I cannot submit as an accurate statistical document. The immigrants having been rapidly hired on board the vessels in which they arrived, I have been unable to obtain any satisfactory record of their engagements, by means of which to classify them, according to their actual employment in the colony, instead of according to their own representations of themselves. This return will, therefore, be found to give a very imperfect account of the distribution of the labour which arrived. For example, the number of agricultural labourers appearing in the Table being 5,149, and the number of shepherds being only 331, it is obvious that many of those who professed the former occupation must be actually employed in the latter; and that, in this instance at least, therefore, the return is defective, as it does not afford a correct view of the proportion in which the demand for these two descriptions of labour existed and was supplied. It is, however, in the number of these two classes only that inaccuracy exists to any considerable extent. The numbers assigned to the other callings may be considered as very nearly correct.

Though I have not been able to show with such accuracy as I could wish the manner in which the labour imported during the year 1841 has been distributed, yet that it has been distributed with a rapidity which might have been deemed almost impossible, considering the difficulty of communication with the interior, I have the means of affording most satisfactory proof. At the close of the third quarter of the year, the immense number of immigrants who were arriving at Sydney in continuous succession, rendered it impossible that those of a less eligible description should find employment within the 10 days during which a maintenance was provided for them on board ship; the admission into the immigrant barracks, and the temporary maintenance there of such labourers with families, and such single women as, through no fault of their own, were discharged from their respective ships, without engagements, was in consequence sanctioned by your Excellency. The total number of

NEW  
SOUTH WALES.  
  
No. 3.  
Sir George Gipps  
to Lord Stanley.  
23 May 1842.  
  
Encl. in No. 3.

of persons from time to time received into the barracks, under the above circumstances, up to the end of the year 1841, was									
Married men with families	-	-	-	-	-	-	-	-	200
Single females	-	-	-	-	-	-	-	-	172
The number lodged in the barracks on the 1st of January 1842 was,									
Married men with families	-	-	-	-	-	-	-	-	31
Single females	-	-	-	-	-	-	-	-	15

So that out of 2,997 adult men, and 1,700 adult single women, or 4,697 working hands, who arrived at Sydney during the last half of the year 1841, 372 only failed to obtain employment within 10 days after their arrival in Sydney, and 46 only remained without employment on the first day of the present year.

At Port Phillip it was found necessary to make similar provision for the immigrants who did not find immediate employment ; and from returns furnished by his Honor the superintendent of that district, it appears that out of 2,115 adult males, and 1,299 adult single females, or 3,414 working hands, landed in the district on bounty during the last half of the year 1841, 42 men with families, and 65 single women, or 107 working hands, only were without employment on the 1st day of January 1842. These statements render unnecessary any comment on the great demand for labour which must have existed in the colony, and the almost overwhelming distress which, but for its arrival, would have been experienced.

The rates of wages inserted in this Return (E.) are principally taken from averages struck on the wages given in 10 different districts of the interior, according to returns furnished to the principal superintendent of police, by the police magistrates of those districts. The present rates of wages are somewhat lower than those given in this Table, but the reduction is so inconsiderable as to afford in itself a satisfactory proof that the labour market is still much understocked.

Appendix (F.)

Return (F.) shows that the total immigration to the colony during the year 1841, including persons who arrived without any assistance from the Government, amounted to 23,200 souls ; of whom 14,652 were landed at Sydney, and 8,548 at Melbourne.

By a remark annexed to this return, it will be seen, that in the number of immigrants represented as having arrived without cost to the Government, are included 127 adult males, 381 adult females, and 72 children, who embarked as bounty immigrants, but were not paid for by the Government in consequence of their ineligibility under the colonial regulations.

The male portion of these rejected immigrants contains some few above the prescribed age, and some single men in excess of the number of single women, and on that account ineligible ; but it is principally composed of persons represented to be agricultural labourers, but proving to be of other callings, such as tutors, clerks, overseers, butlers, valets, auctioneers, tradesmen, and others not coming within the description given in the bounty regulations.

The females who were rejected on their own account, and not on account of the ineligibility of their husbands, consisted of some few young women of a superior class to that of domestic and farm servants (which is now the only class admissible on bounty), or of an age above that prescribed by the regulations, or of notoriously bad characters, but principally of young females, not under the protection of married couples, in the manner contemplated by the regulations. The disallowance of bounties, made on this ground, has been large, and in some instances, perhaps, the rigid adherence to the principle of the regulations, which has been found necessary, has involved the rejection of women of an unexceptionable description in other respects. It is, however, satisfactory to myself, and to the other members of the Board, in looking back upon their discharge of a painful duty, to know, that whenever, subsequently to the report of the Board, and the payment of the bounties on immigrants by any ship, facts have come within my knowledge of a nature prejudicial to the character of any single females, these females have almost invariably been found amongst the number of those on whose account no payment was made, in consequence of their not having been under proper protection.

Appendix (G.)

Return (G.) is a comparative statement of the annual amount of immigration during the past four years, from which it will be seen that the number of bounty immigrants who arrived during the year 1841 was less than the aggregate number which arrived during the entire period of the three preceding years by 691 souls only.

The number of immigrants who arrived without cost to the colony during the year 1841, was 3,677, which is less than the aggregate number of the three preceding years by 2,593.

That unassisted immigration has not progressed in the same ratio with assisted immigration may be in some degree attributed to the discouraging accounts which have reached England of the state of the colony, and which must have had the effect of preventing both large and small capitalists from embarking their fortunes in this country, during the continuance of its commercial distress. As this distress is now fast passing away, it is not an unreasonable hope that our next supply of labour will be accompanied by an influx of capital seeking investment in the surplus produce and stock of the colonists, which is now waiting for a market, and thus giving renewed impetus to the further development of the resources of the country, and opening an unbounded field for the employment of the productive classes.

The very small number of capitalists who arrived in the colony, or who have entered into agricultural or pastoral speculations, affords further proof of the great demand for labour which

## PAPERS RELATING TO EMIGRATION.

41

NEW  
SOUTH WALES.

No. 3.

Sir George Gipps  
to Lord Stanley.  
23 May 1842.

Encl. in No. 3.

which existed during the year 1841 amongst the old colonists, by whom that which arrived has been almost entirely employed.

From the same Return (G.) it will be seen that the immigration of the four years ended 31st December last, has amounted to 49,684 souls, of whom 39,737 have been introduced at the public expense.

Though it is gratifying to be able to state, that the "want of every description of labour," of which my predecessor, with so great cause, complained in his Report on Immigration for the year 1840, has been, in a very great measure, removed, yet I am far from thinking that the want has as yet been nearly met.

The temporary cessation of immigration will operate very advantageously, as it will afford time and opportunity for the recently arrived labour to settle itself throughout the colony.

On the re-commencement of immigration, the higher rates of wages before the immigrants, as they recede from their place of disembarkation,\* will have had the effect probably of withdrawing all but what may be called the perennial labour, or the labour required all the year round from the agricultural districts in the neighbourhood of the capital. In these districts I am of opinion that the next harvest season will bring back a very large demand for additional hands. Under the circumstances of this colony it will not be possible at any time to form anything like a correct estimate of the labour likely to be required; but I feel persuaded that 2,000 males and 1,000 unencumbered females will not meet the demand which will exist during the last quarter of the present year.

The descriptions of productive labour which are now, or are likely to be, in such demand, as to make a provision for their supply out of the public funds desirable, are those, and only those, which are enumerated in the Bounty Regulations of the 3d March 1840; viz. agricultural labourers, shepherds, carpenters, smiths, wheelwrights, bricklayers, masons, and female domestic and farm servants. Sawyers, uniformly paid for by the Government, and brick-makers, might perhaps be specially mentioned.

For males of a superior description, such as clerks and farm overseers, there is at present no demand; and such persons have latterly been subjected to great privations, as well as great disappointment, on their arrival.

For nursery governesses, ladies' maids, and females of a similar description, there is also no demand; and the emigration of such persons (unless with friends to protect and provide for them until they can find employment) is but too frequently productive of misery to themselves and injury to the community.

The number of bounty immigrants who have already arrived in this colony since the commencement of the present year is as follows:

SYDNEY.									
Adults	-	-	-	-	-	-	-	-	3,156
Children	-	-	-	-	-	-	-	-	1,159
									<hr/> 4,315
PORT PHILLIP.									
Adults	-	-	-	-	-	-	-	-	1,007
Children	-	-	-	-	-	-	-	-	316
									<hr/> 1,323
TOTAL									<hr/> 5,638

In addition to the above, about 1,000 persons have arrived without cost to the colony, making the total number of all classes landed in New South Wales, between the 1st of January last and the present date, amount to about 6,565 souls.

Of the number of bounty immigrants landed at Sydney, the following only now remain in the barracks without employment:

Men with families	-	-	-	-	-	-	-	-	27
Widows with families	-	-	-	-	-	-	-	-	3

In the uncertainty which at present hangs over the conduct of immigration to this colony, I am without the means of forming any estimate of the numbers who may be expected to arrive during the remainder of the present year.

I am happy to be able to report to your Excellency, that so far as my experience reaches, the ships employed in the conveyance of immigrants, during the past and present year, have been almost uniformly of a class well adapted to the service.

I can also speak in terms of commendation of the manner in which the ships generally have been fitted out and provisioned.

On these heads it occurs to me only to remark, 1st, that it would be desirable, in future, that a description of food, more suited to their constitution than that issued to adults, and now to children also, should be provided for the latter; and, 2dly, that of two modes in which

\* It will be borne in mind, that as the immigrants recede further from the capital, whence all supplies are transmitted at a heavy cost of conveyance, the price of clothing will increase as well as the rates of wages, though probably not nearly in the same ratio. See Return (E.)

Encl. in No. 3.

which ships have been fitted up, under the sanction of the authorities at home, recent experience has, I think, shown that to be the better in which the three compartments of the passengers' deck, allotted respectively to the single males, the families, and the single females, are divided from each other by wooden partitions. These partitions, when formed entirely of bars or grating, cannot offer much obstruction to the current of air, and contribute essentially to the preservation of order and morality.

Having bestowed commendation so far, as by abler judges than myself commendation has been allowed to be due, I must respectfully beg to be permitted to stay my remarks at this point, beyond which general praise cannot go. Short as has been my experience in the Immigration Department, I shrink from using individually the strong terms in which the Immigration Board have censured the numerous abuses latterly brought under their notice, and to use weaker terms, would be an injustice to their feelings as well as my own. I beg, therefore, simply to recal your Excellency's attention to the several special reports made by the Board during the past nine months, if, indeed, the facts brought within your knowledge, by the evidence appended to those reports, are not so deeply impressed upon your memory as to need no revival from without.

As regards the conduct of immigration for the future, I must beg, with submission, to express my doubt, whether the selection of the immigrants can wisely be intrusted to mercantile speculation.

The merchant has been truly and justly designated "the friend of mankind;" but in all dealings with him it must be borne in mind, that however beneficial to the public may be the effects of his enterprise, yet, that his occupation is not the exercise of philanthropy, but the pursuit of gain. And in sending out emigrants for the benefit of New South Wales, the question with the merchant will be, not how he can best promote the interest of the colony, but how he can perform his contract in the most profitable manner to himself. And if, as he sits in his counting-house in London, he finds that men from Shoreditch and Wapping will flock to him for passages to the colony, and that such men will come sufficiently within the description of persons mentioned in his contract to make his payment secure, he will assuredly not go to the trouble and expense of seeking a better description of labourers from the counties of Norfolk and Suffolk. This conclusion, I think I may venture to say, can be shown, by the experience of the past six months, to be fully as much supported by fact as it appears to me to be theoretically just.

Recent experience has also shown that an undue, and, as it has proved, a suicidal thirst for gain, on the part of many of the persons entrusted with the conduct of emigration hither, has operated as unfavourably in the selection of surgeons superintendent, as in the selection of emigrants.

Several instances have been brought within my knowledge, and that of the members of the Immigration Board, in which surgeons have not only received no remuneration from the shippers of the immigrants, but have even been required to enter into an engagement to pay for their passages, out of the gratuities expected by them from the Colonial Government. The consequence has been, as might be expected, that in many instances, these cheap surgeons have proved utterly unqualified for their charge, and have brought discredit upon themselves, loss upon their employers, and worse consequences still upon those who were committed to their care. In order to obviate so grievous an evil in future, your Excellency will remember that the Immigration Board, in a late report, took occasion to suggest, that no surgeons should be allowed to proceed in charge of immigrant ships, until they had been approved by the medical officers attached to the Board of Admiralty, or by some other equally competent and disinterested examiners.

I trust that the adoption of some such course may be (if it has not already been) recommended by your Excellency.

Having been driven, by my recently gained experience, from the prepossession in favour of the bounty system, which, in common with most of my fellow colonists, I entertained when I was placed in charge of the Immigration Department, I have naturally been led to consider how the good which was in that system could be retained in any other system which might take its place. I will not venture to intrude the scheme of such a novice as myself into the pages of this already long Report, but I so far trespass upon your Excellency's indulgence as to annex the outline of a plan, which might, perhaps, be found to combine the advantages of the two systems of immigration, known as the Bounty and Government systems, which, unfortunately for the interests of the colony, have ceased to be in concurrent operation.

I cannot conclude this Report, without making known to your Excellency the grateful sense which I entertain, and which, I think, the public at large must entertain with me, of the disinterested exertion made by Mrs. Chisholm in favour of the unprotected and friendless females who have latterly been landed in such numbers upon our shores. When, in consequence of inattention to a most important regulation of the Government, requiring every single female claimant for bounty "to be under the protection of a married couple, as forming part of the family, and destined to remain with it until otherwise provided for," a number of young women were landed from every ship, without employment, and without friends to afford them shelter or protection, this lady generously came forward to rescue these poor creatures from ruin and misery, and has, for the last seven months, single-handed, and at an entire sacrifice of time and comfort, been labouring to obtain suitable situations for any and all who made application to her. She has deserved my thanks in my official capacity, and I am anxious thus to record them.

I feel

## PAPERS RELATING TO EMIGRATION.

NEW  
SOUTH WALES.

No. 3.

Sir George Gipps  
to Lord Stanley.  
23 May 1842.

Encl. in No. 3.

I feel also under obligations to this lady for having roused the colonists to a sense of the advantage which they would derive from the establishment of depôts throughout the country for the reception of newly-arrived immigrants, and from associations to provide for the conveyance of large bodies into their respective districts, at their common cost. At her instance, the foundations of several such institutions have been laid; and I have reason to hope that, on the renewal of immigration, they will be general throughout the country.

Should emigration become, as there is now good ground for hoping that it will become, a great national measure for the relief of a distressed population at home, and for the establishment abroad of dependent "communities on every shore, whose aspect favours hope or bold adventure," I cannot but anticipate from such associations as those of which I am speaking the greatest possible advantage to this colony, as a recipient of the redundant labour of the mother country. Their existence being known in Great Britain will create a confidence amongst the rural population (naturally fearful of what may befall them in countries beyond the seas) that in New South Wales they will not be left destitute in the place where they may be landed, until the demand for their services reaches them there, but that they will, at once, be conveyed into those districts where employment is ready for them.

There are also other institutions, for which it will be the interest of the colonists, as they look not for labourers merely, but for virtuous and respectable labourers, to make large provision out of the wealth which each accession of labour creates amongst them; I mean institutions for the education of the young, and the religious instruction of all, who may be tempted to seek a home amongst them. The honest and respectable of the working classes of Great Britain who may be disposed to emigrate, will be most generally directed in the choice of the land whither they should go by the advice of the parochial clergy; and that advice will assuredly point to those countries where, in co-existence with worldly advantages, the best provision is made for the education of their children and their own religious instruction.

That, as a field for emigration, New South Wales should hold out these advantages, I consider to be of the utmost importance to her interests.

Your Excellency, during whose administration of the Government, nearly 60,000 souls have been transplanted hither, from a country where the ministrations of religion and the means of education are at every man's door, would doubtless press this subject on the attention of the colonists on higher grounds. It is my province here to urge it merely as a means of attracting a better class of immigrants to our shores.

I have, &amp;c.

*Francis L. S. Merewether,*  
Agent for Immigration.To his Excellency  
Governor Sir George Gipps,  
&c. &c. &c.

## PROPOSAL FOR THE FUTURE CONDUCT OF IMMIGRATION.

1.—That ships shall be provided, fitted out, and victualled by contract.

Charter and outfit  
of ships.

That one-half of the contract money shall be advanced in England, leaving the other half to be paid in the colony, on the receipt, by the Government, of a favourable report from the surgeon superintendent as to the manner in which the contract has been performed.

That the contractors shall be required to lodge in the hands of the Colonial Land and Emigration Commissioners such policies of insurance as will secure the Government against the loss of the moiety of the expenditure advanced in England.

2.—That the surgeon superintendent shall be nominated by the Colonial Land and Emigration Commissioners, who would doubtless require from their nominee satisfactory certificates, not merely that he is competent as a medical practitioner, but that he is a person possessing the still more requisite qualifications of humanity, decision, uprightness, and self-respect. That after nomination he shall be required to present himself before the medical officers attached to the Board of Admiralty, and that his appointment shall be dependent upon the report of those officers.

Surgeons Super-  
intendent.

That to the surgeon shall be committed the sole charge of the emigrants, and that the officers of the ship shall be subordinate to him, in all matters concerning the emigrants.

That it shall be the duty of the surgeon to make himself acquainted, as far as possible, with the previous history, character, and callings of the immigrants under his charge; and that he shall be required to present a complete list of them to the immigration agent, on his arrival, with a note attached to the name of each individual indicative of his eligibility, or otherwise, as an emigrant.

3.—That selecting officers shall be appointed in such districts of the United Kingdom as may be deemed expedient, and that they shall be under the general superintendence of the Colonial Land and Emigration Commissioners, but that their pay, or the greater part of it, shall be derived from the Colonial Government, by way of head-money on every immigrant who may be approved by the Immigration Board in the colony (deciding of course, as now, according to established rules), after personal inspection, and after consideration of the report given of him by the surgeon superintendent.

Selection of emi-  
grants.

RETURN of the Number of DEATHS and BIRTHS on Board EMIGRANT SHIPS which arrived in the Colony during the Year 1841; and also of the Number which occurred in Quarantine.

RETURN of the TRADES or CALLINGS to which the BOUNTY IMMIGRANTS, who arrived during the Year 1841, professed to belong; showing the Number of each Calling, and the Average Rate of Wages given during the last Quarter of the Year.

TRADES.	SYDNEY.			PORT PHILLIP.			GRAND TOTAL.	Average Wages per Annum, with Food and Lodging.	REMARKS.
	Time of Arrival.		TOTAL SOULS.	Time of Arrival.		TOTAL SOULS.			
	Between Jan. and June 1841.	Between July and Dec. 1841.		Between Jan. and June 1841.	Between July and Dec. 1841.				
MALES:								£. s.	
Agricultural labourers	865	2,134	2,999	533	1,617	2,150	5,149	22 -	According to the custom of the colony, food and lodging are almost invariably allowed to out-door labourers, mechanics, &c. in the country districts, where alone any considerable demand for labour now exists.
Blacksmiths	43	152	195	26	79	105	300	45 10	The quantity of food usually allowed is as follows
Boot and shoe makers	17	-	17	12	1	13	30	44 -	Meat, 7 to 10 lbs. - - -
Brickmakers	8	8	16	1	-	1	17	43 -	Flour, 7 to 10 lbs. - - -
Bricklayers	3	56	59	6	36	42	101	51 -	Sugar, 2 lbs. - - -
Butchers	4	2	6	2	-	2	8	36 -	Tea, 3 oz. } or milk in lieu - - -
Bakers	7	2	9	1	-	1	10	42 -	
Carters	-	1	1	-	1	1	2	28 -	The clothing required by a labourer and his wife, and its average cost in the remote, and consequently most expensive districts in the country, is as follows:
Carpenters	72	322	394	65	176	241	635	45 -	Labourer: £. s. d.
Cabinet-makers	5	2	7	2	-	2	9	52 -	One moleskin jacket - - -
Coachmen	5	-	5	-	-	-	5	25 -	Two vests - - -
Coopers	5	1	6	2	-	2	8	47 10	One pair moleskin trousers - - -
Domestic servants	28	11	39	6	-	6	45	25 -	One pair flush trousers - - -
Grooms	13	16	29	7	4	11	40	26 -	Four shirts—2 regatta, 8s.; 2 striped, 5s. - - -
Gardeners	49	57	106	16	27	43	149	32 -	Three pair boots - - -
Millwrights	2	1	3	-	-	-	3	45 -	One shepherd's coat - - -
Plasterers	5	-	5	2	-	2	7	47 10	Three pair socks - - -
Quarrymen	4	2	6	1	1	2	8	51 -	Two handkerchiefs - - -
Shepherds	60	113	173	41	117	158	331	24 -	One pair blankets - - -
Stonemasons	11	59	70	23	36	59	129	54 -	One rug - - -
Sawyers	14	20	34	4	6	10	44	57 10	One mattress - - -
Tailors	14	-	14	5	-	5	19	34 -	One straw hat - - -
Wheelwrights	12	17	29	-	12	12	41	45 -	
Whitesmiths	2	9	11	-	1	1	12	47 10	
Miscellaneous	55	12	67	13	1	14	81		
TOTAL	1,303	2,997	4,300	768	2,115	2,883	7,183		TOTAL - - - £. 7 17 6
FEMALES:								£.	
Cooks	16	29	45	5	19	24	69	14 a' 30	The wives of labourers (if their services are required in ordinary farm occupations) receive somewhat less than one half of the wages, and about two-thirds of the quantity of food allowed to the husband.
Dressmakers	54	7	61	23	-	23	84	9 a' 16	Boys of an age for work may obtain from 8 l. to 10 l. per annum, with food.
Dairy maids	-	156	156	-	51	51	207	12 a' 30	Young children requiring the constant attendance of their mother are a great hindrance to the engagement and well-doing of new-coming immigrants, and immigrants so encumbered must be satisfied with a small pecuniary compensation for their labour.
Farm servants	125	265	390	24	37	61	451	10 a' 15	
General house servants	23	561	584	45	478	523	1,107	10 a' 18	
Housemaids	279	345	624	314	620	931	1,558	12 a' 15	
Housekeepers	13	6	19	2	30	32	51	8 a' 20

Francis L. S. Merewether,  
Agent for Immigration.

— No. 4. —

No. 173.  
COPY of a DESPATCH from Governor Sir George Gipps to Lord Stanley.

My Lord,  
I HAVE the honour to forward herewith the Annual Report of the Committee of the Legislative Council of this colony on the subject of immigration, as also a copy of the resolutions which were passed by the Council on the last day of its session, (the 9th instant) adopting and approving the Report.  
Having in my despatch, No. 88, of the 14th of May last, addressed your Lordship fully on the subject of immigration, I feel it unnecessary to accompany the Report with many observations.  
The view taken by the Committee of the probable want of immigrants is, I have reason to believe, correct. There is not, it appears to me, any actual dearth

dearth of labour in the colony ; but there is ground to apprehend that, ere long, a scarcity of it will again be felt.

With respect to the project of a loan, I beg leave to state, that I still adhere to the opinion I have often expressed, that we should endeavour, if possible, to do without one ; but that if the want of immigrants alone stand in the way of the prosperity of the colony, and we cannot obtain money to pay for the passage of them in any other way, we ought not to shrink from resorting to a loan ; remembering, however, always, that we cannot raise one without the assistance of Her Majesty's Government.

We still continue to sell but little land ; but our ordinary revenue suffices, I am happy to say, to cover all our expenses.

I have, &c.  
(signed) *Geo. Gipps.*

2. IMMIGRATION : Committee appointed to consider the question of Immigration generally, with the view of ascertaining the present and prospective demands of the colonists for labour, and how the same can be most effectually and economically met ; with instructions to take evidence, if necessary, and report :—

The Right Rev. the Lord Bishop of Australia.	
The Hon. the Colonial Secretary.	M. H. H. Macarthur.
The Auditor-General.	Sir John Jamison.
Mr. Jones.	Mr. James Macarthur.

His Excellency the Governor then laid upon the table the undermentioned Papers on the subject of Immigration ; viz.

(1.) Report from Francis L. S. Merewether, Esq., on the subject of Immigration generally, for the year 1841, with an Appendix ; to be printed.

(2.) Return of the Number of Immigrants landed in New South Wales, between the 1st of January 1841 and the 30th of April 1842, on whom Bounty has been refused.

(3.) Return of the Amount of Quarantine Expenses charged against parties importing Immigrants on Bounty into New South Wales, between the 1st of January 1841 and the 30th of April 1842.

(4.) Return, showing the Number of Permissions to import Immigrants on Bounty, granted in the several quarters of the years between that which ended the 31st December 1837 and the quarter ended 31st December 1840, which permissions respectively expired in the several quarters between that which ended on the 31st December 1839 and the 31st December 1841 ; showing, also, the proportion of these permissions acted on and the proportion not acted on.

(5.) Return, distinguishing the Number of English, Scotch, and Irish Immigrants introduced into New South Wales during the year 1841.

(6.) Return of the Number of Immigrants landed in the Colony of New South Wales, on whom Bounty has been paid, or is now payable, in conformity with the Regulations of 3d March 1840.

To be referred to the Committee on Immigration.

REPORT from the COMMITTEE ON IMMIGRATION, 1842.

THE COMMITTEE of the LEGISLATIVE COUNCIL, appointed on the 17th May 1842, to consider the question of Immigration generally, with the view of ascertaining the present and prospective Demands of the Colonists for Labour, and how the same may be most effectually and economically met, with Instructions to take Evidence, if necessary, and to report, having carefully examined the subject, have agreed to the following Report.

THE attention of your committee has been directed to an examination of the working of the bounty system ; the only one which, during the past year, has been in activity for the introduction of immigrants. Until the suspension of its operations, in consequence of the decline of the land fund, that system provided a supply of labour sufficient not only to remove the dearth which before prevailed, but to accumulate a disposable amount of

of that commodity to which recourse may be had, until the period, not very distant it may be hoped, when the course of events shall admit of a further supply being furnished. Between the 1st of July 1841, and the 30th June 1842, there have been introduced into the Port of Sydney, 4,502 men, 4,663 women, and 3,186 children; 12,351 persons, on account of whom bounties and gratuities, amounting to 205,774*l.* 3*s.* 5*d.* have been paid. Within the same interval there have been landed in Port Phillip, 2,720 men, 2,910 women, and 1,750 children; 7,380 persons: and the attendant expense has been 122,789*l.* 3*s.* 3*d.* Between the same dates, 1,395 individuals have arrived on whom the bounties have been withheld, on various grounds of objection, to the amount of 22,567*l.* There have arrived also 2,300 persons not claiming the assistance of Government; thus 23,426 persons have been added to the population within 12 months. The sum total expended in the introduction of the 19,731 persons on whom the bounty was paid, has been (excluding the expenses of the quarantine and immigration departments) 328,563*l.* 6*s.* 8*d.* The average cost per head has therefore been 16*l.* 13*s.*, or about 2*s.* 4*d.* less than the average of the previous year.

In reporting, in conformity with their instructions, as to the mode in which the demand for labour may be most effectually and economically met, your committee do not hesitate to state their persuasion that in both these respects the advantages of the bounty system have been satisfactorily established. But upon the subject of the qualifications of the immigrants as to character and usefulness, they cannot express themselves but with a very considerable abatement of satisfaction and approval.

Respecting too large a proportion of them, it is impossible not to observe that the very attempt to pass them off as qualified in accordance with the regulations of Government, must be a standing disgrace to the parties engaged in it. Proofs of deception attempted, and of fraud and forgery actually committed, by persons in the United Kingdom connected with the occupation of sending out emigrants under bounty orders, and instances of personation, and of fictitious characters, exposed by the vigilance of the Immigration Board, have been painfully frequent. Where so many instances have upon inquiry been brought to light, there is reason to allow much weight to the opinion of witnesses, that there may have been, in all probability many other cases in which detection has not taken place. It has been accordingly a question with your committee, whether they ought not to recommend the absolute discontinuance of a system under which it has been proved that such abuses could be practised; and that recommendation they would certainly not withhold, if they could be satisfied that those abuses formed an inseparable part of the system. But they have hesitated to take that extreme step, as past experience has shown that the bounty system admits of being carried on without such attendant deceptions and with a superiority of advantage to the colony in point of economy over any other system which has hitherto been attempted or proposed. After the largest allowance has been made for the number of useless and unsuitable persons who have so satisfied the letter of the regulations, as only not to be rejected, and whose services must therefore be considered as dearly purchased, it yet remains certain that cases of an unexceptionable nature have preponderated, and in a high proportion. It is impossible to look around in any direction without discovering instances of skilful workmen, and of industrious well-conducted families and individuals, added to the community by the operation of the bounty system during the period now under observation. It would therefore be as questionable in point of justice as of policy to abandon a system productive of such undeniable advantages, on account of some attendant abuses and defects. At any rate, it should not be given up so long as a reasonable hope remains that such abuses can be suppressed, and the public be enabled to obtain the benefits of the system without its attendant drawbacks. It is right to bring into notice, that whenever a breach of the regulations is detected, the bounties are withheld; and therefore, although there may have been brought to the colony a number of individuals from whose residence in it there is but little prospect of any benefit arising, yet the public is at least exempt from all charge for their conveyance. The prominent feature in the bounty system is, that it provokes and enforces strict inquiry into the character and qualifications of every individual introduced by it. And if it must be presumed that objectionable cases do frequently pass undetected, in spite of the utmost vigilance which can be exercised, it must be admitted, on the other hand, that similar cases might occur under any other system which should introduce immigrants, without exacting on their arrival in the colony, and preliminary to the payment of their passage-money, that inquiry into their characters and qualifications which the bounty emigrants invariably undergo. Neither does the amount of bounties withheld furnish any accurate test of the extent of unworthiness prevailing among the parties so rejected; because, although the forfeiture is justly imposed for every breach of the regulations, yet it is obvious that persons may be highly respectable in themselves, without exactly answering the conditions by which they would be qualified to receive a free passage at the expense of the colony; great numbers, for instance have been refused on the ground of their following the trades of tailors, coopers, cabinet-makers, brewers, and other occupations not admissible under the regulations; and yet such persons may be altogether unexceptionable in themselves, and will undoubtedly form a useful acquisition to the colony which obtains their services without expense. In the instance also of young women who have been refused the bounty, in consequence of their not being *bonâ fide* under the charge of relatives or protectors, as required by the regulations, although your committee regard the strict observation of that condition as most important to the moral welfare and security of the parties, and therefore view with the highest disappro-

bation the attempts which have been made to evade it, still it would be by no means just or charitable to conclude that the unprotected are uniformly unworthy.

Nevertheless, while these considerations in some degree abate the unfavourable impression created by the detection of so many abuses under the bounty system, your committee still feel, after every allowance has been made, that there remains evidence of improprieties which can scarcely be spoken of in terms of too great severity. The disposition to resort to such practices cannot but be checked by the numerous examples of severe pecuniary loss sustained by the characters of emigration ships, through the refusal of the bounties in all cases where abuses have been discovered; and this community is under the deepest obligations to the Executive Government for its firmness in imposing those penalties. Should that check, however, prove insufficient, and if no other can be devised to prevent the recurrence of systematic deceptions, and to suppress such frequent breaches of morals as have occurred during the past year, your committee must, in fulfilment of their duty, recommend the abolition of the system. The points which they consider to require especially a corrective or total remodelling, are the following:

1. The mode of certifying the age, occupation, character, and identity of the parties who are permitted to embark as bounty emigrants.

2. The maintenance of order and morality among the emigrants during the voyage.

Upon examination it will appear that the present form of certificate, even with the checks devised by the Colonial Land and Emigration Commissioners, is extremely defective as a security against imposture. From the appearance of many of those certificates which have been brought under the notice of your committee, a suspicion is excited that the alterations and erasures which they exhibit have been effected subsequently to their attestation, and with a purpose clearly fraudulent. These certificates, it appears, are generally placed in the hands of the bounty agents after the commissioners' agent has finally mustered the parties, and has certified that he sees no reason to doubt that they are really the persons described. It is therefore plain that there exists no security against the subsequent introduction of false statements; and the evidence taken before this committee affords full proof that some of the parties entrusted with the certificates are not incapable of such dishonesty. As a check upon this, it is recommended that all such certificates should be delivered up to the government emigration agent when he musters the parties; and that he, after having signed, transmit them to the colonial secretary at Sidney, or to the superintendent at Port Phillip, according as the vessel may be chartered for one or the other destination.

Some question may still be raised as to the safety and expediency of the agents of Government in England granting any certificates, in however general terms they may be expressed, because it is scarcely possible that they should not be construed, by parties interested, to imply some degree of at least negative approval. Thus regarded, they tend to restrict the expression of a perfectly unfettered opinion by the Board here upon the qualifications of the immigrants, or it is felt as a hardship that the bounty should be withheld upon parties who are supposed (however erroneously) to have been officially approved before they left England. But supposing that the system of requiring certificates, as at present, is to be upheld, your committee would propose the following alterations in the details of the established practice:

1. It is recommended that the declaration by every applicant for a free passage should include a statement "that he or she has not paid, nor promised to pay, nor to his or her knowledge has there been paid, or promised on his or her account by any other person, any sum of money or valuable consideration in addition to the bounty for his or her passage, or for the passage of his or her child or children."

2. The certificate, to be signed by two respectable householders, should state "that they have known the applicant, if an adult, regularly working for a period of — years (not less than two) at the trade or occupation of —."

3. The certificate of the clergyman and magistrate should not be annexed to the foregoing declarations, as at present, but should be contained on a separate paper; and when signed by the clergyman and magistrate, should be by one of them forwarded by post direct to the Colonial Land and Emigration Commissioners. In addition to the present form, every such certificate should testify "that the applicant, and the respectable householders, are known by such clergyman and magistrate; and that all which is attested, as to the age, character, and occupation of the party proposing to emigrate, is true."

Your committee repeat the expression of their doubt whether certificates of this tendency can be required of parties proposing to emigrate, without impeaching, in some degree, the privilege of withholding the bounty for such parties if their examination here before the Immigration Board should prove unsatisfactory. But assuming that such certificates are to be required, they cannot doubt the propriety of their being so framed as to render the evasion of them a matter of extreme difficulty; and they are of opinion that this end would be promoted by the adoption of the alterations now suggested. With the same object in view, they consider it would be very serviceable if the government emigration agents were to institute such inquiries as their local circumstances would afford them excellent opportunities to prosecute, relative to the age, character, and occupation of every emigrant proposing to claim a free passage on bounty; and that it should be studiously made public, so that the parties interested should be fully apprised of the fact, that such inquiries would be made, and the result stated to the colonial secretary at Sidney, or to the superintendent at Port Phillip. This course of proceeding, while it would

would be exempt from even that degree of implied approval which the present certificate, however qualified in its terms, may be supposed to carry, would suggest valuable hints for inquiry to the Immigration Board; and by the augmented dread of detection which it must inspire, would have the effect of deterring the bounty agents in England from attempting, or conniving at any evasion of the regulations. The government emigration agents resident at the several seaports, are the persons who have the best opportunities to detect and baffle such unprincipled attempts as are proved to have been resorted to during the past year; and on the part of those gentlemen it may be required and expected, that both as relates to investigating the correctness of certificates in favour of emigrants, and to the arrangements for their health and comfort during the voyage, a more active degree of interference should be exercised than they appear hitherto to have considered to form part of their duty.

But the most indispensable improvement called for, is in the description of persons filling the office of surgeon to the bounty ships. A moment's consideration of the circumstances under which the passengers by an emigrant ship are brought together, and must be associated during the voyage, will sufficiently show the importance of the station filled by the medical superintendent. Even if that most becoming provision of the bounty system were punctually carried into operation, according to which parental superintendence or family connexion should be pledged for the security of the most defenceless, there would still remain such offices to be discharged towards the passengers as none but a man of firmness, discretion, forbearance, and benevolence, could appropriately fulfil. It was with the desire and expectation of inducing medical men of suitable qualifications to engage in the emigration service, that your committee in 1840 advised the adoption of that part (among others) of the government regulations which established the payment of a gratuity to the surgeon for every approved bounty immigrant landed in the colony. Their surprise and disappointment have been equally excited on discovering that this provision has been perverted from its proper design, and has gone to swell the profits of the emigration agents instead of being employed, as was intended, for the better protection and management of the emigrants during the voyage. This is a point of such vital importance to the preservation of health, order, and morals, in the bounty ships, that your committee have directed their most assiduous attention to the best means of remedying the evils, which, in the course of the present inquiry, have been brought under their notice as arising from the want of proper medical superintendence. They believe it to be unquestionable, that surgeons of the navy would be the most proper and effective officers who could be appointed to the superintendence of emigrant vessels. If their employment in that service should be sanctioned by the Lords Commissioners of the Admiralty, your committee entertain a hope, that their time, while so employed, might be allowed to be reckoned as a period of active service. They also recommend, that the pay, allowances, and gratuities of surgeons so engaged, should be on the same scale as was fixed in the government immigration vessels; and that the pay and allowances, no less than the gratuities, should form a charge upon the sum to be issued in payment of bounties for each vessel; and that the payment should be direct from the Colonial Treasury to the surgeon, without coming at all into the hands of the agent.

Should it be found impracticable to obtain the services of naval surgeons, the next most desirable expedient which presents itself, is the engagement of surgeons who have been previously accustomed to the sea, and are of suitable character and age. This would require the establishment of some satisfactory test for ascertaining the medical skill and the scarcely less important personal qualifications of parties seeking the appointment now under consideration. It is the opinion of your committee, not only that the power of nominating the surgeon should be altogether removed from the owners or agents of the vessel, and transferred to the Commissioners for Colonial Lands and Emigration, subject to the production of proper professional and other recommendatory certificates, but that the amount of remuneration to be received by the surgeon should be fixed at the discretion of Government, and the Commissioners be empowered to conclude an agreement with him accordingly, authorising him to receive payment by order of the governor, on satisfactory proof being afforded of his having duly discharged his duty. By this means the combination now subsisting between the medical officer and the bounty agent, to whom he looks for his remuneration, would be broken off. The surgeon would become, as he ought to be, a virtual officer of Government, under an obligation, arising from both duty and self-interest, to use his best exertions for the welfare of the emigrants entrusted to his charge, and to render to the colonial government a fair and impartial report of them, according to the best estimate which his opportunities of intercourse and observation during the voyage have enabled him to form.

During the 12 months ending with the 30th of June last, immigration has been carried on to an unprecedented extent; the numbers added to the population from that source alone having been, as was before shown, 23,426. Nevertheless, those new arrivals, with exceptions too few to affect the main position, have rapidly found engagements at wages which, though somewhat reduced, are still sufficiently liberal to satisfy any reasonable expectations which could have been entertained by the immigrants themselves. The occurrences of the period now under consideration have satisfied your committee, that in their previous reports they have not at all overstated the want of labour prevailing in the colony at those periods. They can also trace the soundness of that policy by which large masses of population were introduced at once into the colony. No fewer than 1,000 have sometimes arrived within a period of two days, and although the entire number did not fail to obtain

employment within a period surprisingly short, yet the addition of so many serviceable hands all seeking engagements at the same instant, could not fail to produce an effect in keeping down the general rate of wages. That effect would not so certainly have followed if the same number of emigrants had been brought in small detachments, and at more distant intervals. At the same time, although wages have been so far reduced as in some degree to meet the circumstances of the employer, they have not fallen below that level which enables the labourer to provide an honest and comfortable subsistence for himself and family. Neither are there symptoms of a superabundance of labour in any part of the territory. There are few, if any, instances of industrious and skilful persons wanting employment. Among particular classes, consisting of those who have not learned a trade, or are unqualified for manual labour, depending rather upon pursuits of a higher order, there may be some excess of candidates for situations. But it should be remarked, that if the parties in question, that is, such as are qualified to act as clerks, overseers, tutors, and the like, have arrived here under the bounty system, it can have been only through a breach or evasion of the regulations, which were framed with a design to exclude them. In every state of society there will always be a certain proportion, which, from incompetency, or through mere casualty, experiences difficulty in obtaining employment; but there is nothing in the evidence before your committee to lead them to suspect that such proportion is excessive here, or that it has very materially augmented with the recent increase of the population. Under these circumstances it appears most obvious that there exists a continued necessity for the introduction of immigrants; whether by the bounty system, or by any other, is of comparatively minor importance, provided that such introduction of additional hands be certain, sufficient, and economical. The copious fund of labour which was introduced during the past year, among other beneficial effects upon the welfare of the colony, has had that of enabling the settlers to carry on the operations of their industry for a certain period, without the necessity of having recourse to any fresh supplies. But that period must necessarily be drawing to a close, and your committee are most strongly persuaded that unless measures be taken for the resumption of emigration, not later than the spring and summer of next year, the want of labour will be felt as injuriously here as ever; wages will rise to their former exorbitant rate, and the consequent exhaustion of property and embarrassment (arising from that cause), among the settlers, will be again experienced with even aggravated severity.

With reference to the precise extent to which it is desirable that immigration should be carried, your committee see no reason to depart from the opinion which they have on former occasions expressed, that from 10,000 to 12,000 individuals may be introduced at the public expense every year, without occasioning any redundancy in the population. Your committee have had before them during a succession of years, continued proofs of the tendency which employment has, in this colony, more than to keep pace with the supply of labour. Their persuasion therefore, founded upon such experience, is, rather that immigration, even to the extent here contemplated, augmented also as it undoubtedly would be by numerous individuals arriving without assistance from Government, would not sufficiently keep down wages to such a rate as employers could afford to pay, unless there should be at intervals not too distant, a great increase (as in the past year), upon the ordinary average of numbers introduced. It might not be prudent to lay down as a positive certainty that such will be the case, but all reasonable probability appears to countenance such an expectation.

Under these circumstances, and deeming the continuance of immigration to be altogether indispensable to the improvement and even the maintenance of the colony, your committee have naturally looked with very great anxiety to the condition and prospects of the land fund. The vital importance of this question cannot be doubted, when it is recollected that upon the productiveness of the land fund depends the continuance of immigration, and that the continuance of immigration is indispensable to the welfare of the colony. In having their attention directed to the virtual cessation of the sale of Crown lands, it has been impossible for your committee to omit all consideration of the causes to which that stoppage is attributable. In expression of the opinion entertained by the majority of the members, a resolution has been adopted, "that the raising of the minimum price of land of every description in the colony above 5s. per acre is impolitic." Under the prevailing uncertainty as to what measures may be adopted by the Imperial Parliament, and what may be the minimum price ultimately determined on, your committee deem that it would be unserviceable in them to pursue this part of the subject.

But to whatever cause the decline of the land revenue may be attributable, it is impossible not to acknowledge the sound discretion exercised by the Home Government in circumscribing the liabilities of the colony, by bringing emigration to a pause so soon as that decline began to be seriously apprehended. The decision of the Secretary of State to that effect was communicated in a despatch from Lord Stanley to Sir George Gipps, dated 8th February, in the present year; and was founded upon a report of the Colonial Land and Emigration Commissioners, to whom an official return had been referred of the amount actually received into the treasury of New South Wales, on account of land sales in the half year ending 30th June 1841. The commissioners, judging from the data before them, estimated the balance in hand applicable to immigration on the 1st January 1842, at 68,424*l.*, and the probable net receipts of the land fund during the present year at 91,901*l.*, making a total of 160,325*l.*; subject, however, to liabilities for immigration charges during the first three or four months of 1842, to the amount of 118,200*l.* The surplus expected to be actually applicable to the continuance of immigration during the remaining portion

of

of 1842, was stated at 42,125*l*. It will appear from documents annexed to this report, how exceedingly the produce of the land revenue, during the present year, has fallen short of the anticipations entertained by the commissioners at its commencement. The notification of the colonial government, of its inability to meet the bounty orders conditionally issued\*, and the decision of the Secretary of State to suspend further emigration on bounty orders†, appear to have been more than justified by the event. From the statements before them your committee collect, that the earliest occasion on which the interference of the home authorities was solicited by the colonial government, for the purpose of preventing too extensive an emigration from the United Kingdom, during the year 1842, was on the 2d November 1841; at which time the desired interference (though of course not yet known here), had actually taken place in England. The same measure had therefore, at nearly the same moment, suggested itself to the Home and the Colonial Governments; and this proceeded solely, in each case, upon an apprehended want of funds. No traces are to be met with of an impression anywhere prevailing, that further and continual immigration was not indispensable to the welfare of the colony; at least it does not appear that any expression of that opinion, or recommendation to that effect, is contained in any part of the official correspondence between the Colonial-office and the government of this colony; of which, so far as it relates to the suspension of emigration, your committee find copies among the papers placed before them. The want of funds is the only ground assigned for that suspension‡; and the duty of your committee is therefore limited to considering in what manner that obstacle to the advancement of the colony may be removed. Independently of the relief which, in the opinion of many of the witnesses examined before them, might be expected from a reduction of the minimum price of lands to its former rate of 5*s*. per acre (which subject, as being now in the hands of Parliament, your committee have declined at present to pursue), they have directed their attention to the proposal, which has already been more than once before them, of negotiating a loan on the security of the unsold Crown lands of the colony, the practicability and expediency of which was specially referred to their consideration by a vote of council on the 7th of June last.

Reviewing the opinions upon this point, which they deliberately recorded in their reports for 1839 and 1840, they are far from discovering grounds for departing from those opinions, but are on the contrary more fully confirmed in them by all which has since occurred.

Your committee have also the strongest reasons for believing, that the parties who in the former of those years expressed their sense of the policy of raising a loan, have since had their first impressions in its favour strengthened; and that many others, who were formerly undecided or opposed in their sentiments to the proposed measure, may at this time be numbered among its advocates. In recommending that recourse should be had to a loan, your committee would be understood rather to affirm their sense of the policy and justice of that measure, than to offer any opinion as to the precise extent to which it ought to be carried. But they think it will be evident, that to whatever extent it may upon trial be found that the colony is capable of receiving, and advantageously employing, an additional population, to the same extent a loan may be securely applied to the purpose of introducing that population; because, wherever people are occupied to their own benefit, they must be every year adding to the resources of the government under which they live; and so, by their consumption of taxable articles, or by the purchase of land, swelling both the ordinary and the land revenue, will infallibly provide ample resources in repayment of the outlay occasioned by their introduction into the colony. Its resources must be multiplied and expanded by the efforts of an industrious population, and will equally languish in its absence. In support of the expediency of resorting to a loan to provide on the instant for the cost of immigration, your committee cannot but express their persuasion, grounded on observation of the occurrences of the preceding years, that the policy is extremely questionable of absorbing a large proportion of the surplus or disposable funds of the community in the purchase of land from Government, and remitting the whole amount in payment for labour imported. In this way such a scarcity arises of that circulation which is required to carry on the internal business of an active community, that the interchange of all commodities for money is nearly suspended, prices are beaten down to a ruinous state of depression, and it becomes more and more difficult to employ labour, even while the necessity for it is urgently and increasingly felt. All these inconveniences, your committee are of opinion, would be much abated if the introduction of labour could be for a time provided for by borrowed funds; thus leaving the employers of labour in possession of their own resources, which they would apply to the improvement of the country; and their attendant profits, a great proportion of which would naturally be invested in the purchase of land, would provide, without risk or difficulty, for the extinction of any debt of reasonable amount which might be contracted for the promotion of immigration in this season of emergency. It should also be remembered, that if this recommendation wear the appearance of a claim upon the resources of England, the welfare of England is involved, in a degree not inferior perhaps to that of the colony itself, in the first expenditure,

NEW  
SOUTH WALES.

penditure, as well as in the final result of the application of the funds which it is proposed to raise in this manner. No part of any loan which may be raised on the credit of the colony will be withdrawn from the United Kingdom, but the whole will be expended in the advancement of the three chief and leading interests of the mother country. The shipping interest must be promoted by the extent of tonnage employed in the emigration service, and by the nursery of seamen afforded by the length of the voyage. The agriculturist would derive benefit through the demand created for victualling so many persons during a passage of such duration; while few events could be so favourable to the manufacturing interest of Great Britain, as the rapid growth here of a population dependent for the supply of their wants upon the products of its industry, and engaged in raising a staple article of export, the profits of which would enable them to be extensive consumers of British goods. In this way your committee deem it a most obvious and certain consequence, that whatever extent of aid may be, in the first instance, afforded by the mother country to the colony, in the introduction of population upon easy terms to the latter, the same will be amply and liberally repaid to the parent state as the yet untried resources of this distant dependency shall be more extensively brought into activity. On the other branch of the question, namely, the justice of providing by a deferred payment for the introduction of labour into the colony, whether it be immediately or only prospectively productive, it may be serviceable to refer to a passage in the Report of the Committee on the Debenture Bill, which sat during last year, and of which the colonial secretary was chairman:—"It cannot be objected that in raising a loan to defray the expenses of immigration, to be repaid at a future period, this is unjustly entailing a debt on posterity for the benefit only of the present generation. The effects of such an expenditure cannot be regarded as merely ephemeral. The best interests of the colony are permanently served by the introduction of what may be termed the productive classes of society. Property of every kind acquires an additional value from their presence, and the elements of future increase in the population thus introduced must be considered as highly conducive to the advancement of colonial prosperity generally. Besides, the outlay in introducing the families of labourers is immediate, but the benefit only prospective; until the children attain a sufficient age to work they are merely consumers, and not producers; and from the practice in this colony of supplying the families of labourers with rations, they become not unfrequently a serious burden on the employers of their parents. On these grounds your committee are of opinion that such a debt may justly be left for liquidation to the period when the greatest benefit from the outlay will be experienced."

Appendix (M.) (N.)

In consequence of the length of time occupied in communicating with Melbourne, the report of your committee had been prepared before the statements concerning immigration could be fully received from that district; and it might therefore appear to the council that all their observations have reference principally, if not exclusively, to those parts of the colony which are nearer to the seat of government. But from a report by his Honour the superintendent of Port Phillip, it will appear, that the opinions entertained there by the most intelligent and best qualified persons, coincide with those expressed in this report; and this general concurrence is the more gratifying and valuable, as it is the result of independent views taken by observers placed at very considerable distances, and having had no opportunities of previous communication, by which their conclusions could be unconsciously biassed, and brought to a state of artificial agreement.

Appendix (O.) (P.)  
(Q.) (R.) (S.)

Your committee have, in conclusion, to draw the attention of the council once more to the extreme disparity existing in the proportionate numbers of immigrants from the different quarters of the United Kingdom. The returns annexed will show, that between the 1st of January 1841, and 30th of June 1842, the number of immigrants from Ireland alone has amounted to 16,892; while those from all other parts of the United Kingdom have been no more than 8,438. \*It is the decided opinion of your committee, that such a distribution is practically inequitable towards the most considerable division of the empire at large. Upon whatever system immigration is henceforth to be conducted, it evidently ought to be placed on a footing more approaching to equality, in furnishing openings for the inhabitants of the different counties of the three kingdoms to avail themselves of its advantages. Under the present arrangement, vessels with emigrants sail from a very limited number of ports; in consequence of which, while such as have ready access to those ports enjoy an undue preference, the greater portion both of England and Scotland is almost precluded the opportunity of profiting by the offer of a free passage, and therefore contributes, in a very inconsiderable degree, comparatively, to increase the population of the colony. The only remedy which your committee can propose, is the same as was suggested by them last year; that the stations of vessels for the conveyance of emigrants to this country should be so distributed among the ports of the United Kingdom, as to afford just facilities to the inhabitants of every quarter; and if it be found impracticable under the bounty system to secure such distribution, they would consider this so serious a defect in that system as to be almost of itself a sufficient reason to be urged for its discontinuance.

\* Payment of the bounties on the immigrants, per "Brilliant," has not yet been authorised.

† This amount remains unpaid ; its settlement is awaiting a report on the causes of the disease which led to the vessel being placed in quarantine.

‡ These immigrants were not imported on bounty, but received a grant of free passages from the Colonial Land and Emigration Commissioners, under a special survey order held by Mr. Dendy.

(E.)

EXTRACTS FROM REPORTS FROM THE IMMIGRATION BOARD.

The " Queen Victoria."

\* \* \* \* \*  
Of the prevalence of immorality in the " Queen Victoria" we entertain no doubt.  
\* \* \* \* \* Nor can we avoid forming the opinion expressed by the witness  
A—, " that the immorality was so open that the doctor must have known it." That it  
was sanctioned or even connived at by that gentlemen we are far from asserting ; but we do  
think that from easiness of disposition, and perhaps from too great freedom with the immi-  
grants,

grants, he lost his authority, and was obliged to pretend ignorance of practices which he had no longer the power to check.

\* \* \* \* \*

The sale of spirits is an irregularity which appears to have existed on board the "Queen Victoria," and from the admission of the surgeon, to have received his sanction. He states, that on a petition from the immigrants, he permitted spirits to be sold in consequence of the badness of the water. This indulgence, if so it can be called, we cannot too forcibly condemn; and if the excuse for its allowance were as strong as it appears to us to be weak, we still could not but think the surgeon guilty of great neglect of duty in not carefully superintending the distribution of the spirits, and restricting their issue to such small quantities as would answer the purpose for which they were given.

\* \* \* \* \*

The next case, that of J— C—, and C— W—, is one in which, we regret to say, fraud is combined with neglect. These parties appear to have been received on board as man and wife, and according to the surgeon's statement, they slept together for some weeks, when they quarrelled, and declared that they were not married. They were then separated, and C— W— took her place among the single women. Certificates suitable to their single state were then fabricated on board under the direction of Mr.—, acting as attorney for the agents in London, and such signatures as are usually attached to these documents were inserted. These certificates were deposited in the office without comment, and J— C— and C— W— were passed by the Board as single people of good character, without a remark from any of those persons present who were aware of the circumstances of the case, except that when C— W— was found to be without the requisite protection, the surgeon came forward and said that she had been under his special care.

---

*The "Eleanor."*

\* \* \* \* \*

\* \* \* It will be sufficient for us to observe, that even though the plea advanced by Mr. —, in his letter to us, should be admitted, and the affreighters should be deemed released, by the approval of the Government agent in London, from all blame as to the faulty construction of the water-closets, the lumbered state of the decks during the early part of the voyage, the manner in which the immigrants were crowded in consequence of the large space set apart for intermediate passengers, and the most inadequate supply of medical comforts, are fully sufficient to warrant our conclusion that the progress of the disease was mainly attributable to a want of proper precaution and regard to the comfort of the immigrants, and that the affreighters should therefore be required to pay all the expenses of the quarantine.

We cannot conclude this report without expressing a hope that his Excellency will take steps for the absolute prohibition of the sale of wine and spirits on board emigrant ships. Whether or not it is the intention of Messrs. — & —, when they "put wine and spirits on board for sale," to draw an additional profit from the pockets of the poor emigrants, such, it appears from the evidence given in the present instance, will be the effect of the practice if suffered to exist. In all cases where these articles are required for the health of any individuals, they should be issued without charge, as medical comforts, and in no other cases, we are of opinion, should they be issued at all. As the best mode which occurs to us of putting a stop to this pernicious practice, we would suggest the issue of a public notice, that the gratuities of the surgeon-superintendent and officers will be disallowed in all cases where the sale of wine or spirits may be proved to have taken place.

NEW  
SOUTH WALES.

*The "Marchioness of Bute."*

\* \* \* \* \* We enclose for his Excellency's perusal some certificates produced in favour of immigrants by this ship, in which alterations and additions have been made in the descriptions of the parties, and made, we have good reason to believe, in the office of the gentleman in Liverpool, employed by the importers to superintend the selection of their emigrants; we are not disposed to recommend the disallowance of bounties in any other cases than those above mentioned; but we think it our duty to submit these documents to his Excellency's inspection, as the alterations made appear to us to be of such a nature as to show that the main object of the persons by whom they were made, is not that the emigrants sent should be of the best description according to the colonial order, but that they should present such an appearance as would secure to the importers the colonial bounties.

(signed) *Francis L. S. Merewether.*  
*W. S. Christie, J. P.*

*The "Duke of Roxburgh."*

\* \* \* \* \* WE regret to state, that of the single women above reported not to have been under proper protection, six were inmates of Newington workhouse before their embarkation, and some of this number, if not all, prostitutes.

The bad character of two of them is placed beyond a doubt by their conduct since their arrival, as reported to the immigration agent by the water police magistrate, in the communication annexed. (a) Their behaviour on board has also been reported by the surgeon to have been very disorderly. A third, H— M'G—, known on board by the nickname of the "Duchess," we have also reason to think had been a common prostitute.

(signed) *Francis L. S. Merewether.*  
*Arthur Savage, R. N.*  
*W. H. Christie, J. P.*

(a) Extract from Communication referred to:—

"M—A—F— came out an immigrant by the ship 'Duke of Roxburgh;' was sent on board from the Newington workhouse, where she had been two months; saw R—, a waterman, on board on Saturday last, who asked her to come and live with him; she left the vessel and took her clothes with her; R— took her to a public-house on the Rocks, and has been cohabiting with her ever since. States also that a girl of the name of J— H— is living in the same house with a man named G—, who took her from the same ship on Friday last.

"H— was also in the Newington workhouse. I think there can be no doubt these girls have been prostitutes all their lives.

"(signed) *H. H. B.*"

*The "Mathesis."*

\* \* \* \* \* It is our painful duty, therefore, to report that we are not "satisfied that the immigrants have been duly supplied with a sufficiency of wholesome provisions and water, and with reasonably comfortable accommodation;" and we must add, that a want of order, regularity, and decency, appears to us to have existed in this ship, which is in the highest degree discreditable to all parties concerned. We cannot, therefore, recommend the payment of any portion of the bounties claimed.

We must further report our opinion, that the conduct of the surgeon and officers of this ship has been so disgraceful as to render it a matter of regret to us that we cannot be the means of visiting them with a heavier penalty than the loss of their gratuities.

\* \* \* \* \* We feel it unnecessary to bring prominently forward any other reprehensible points in the surgeon's conduct, but we must express our surprise that a person so ill-educated, and of so ill regulated a mind, as his letters to us show him to be, could have been appointed to so responsible a situation, or that he could even have been in possession of such testimonials as would admit of his application for such employment being entertained.

(signed) *Francis L. S. Merewether.*  
*Arthur Savage, R. N.*  
*J. Long Innes, J. P.*  
*W. H. Christie, J. P.*  
*H. H. Browne, J. P.*

The " Agnes."

NEW SOUTH WALES.

\* \* \* \* \* We cannot approve of any charge being made on emigrants for the passage either of themselves or their children, as we are inclined to think that many valuable people are thus deterred from emigrating, and their places are supplied by others of a less desirable description, but possessed of the requisite funds. \* \* \* \* \*

We have on former instances had occasion to express our disapprobation of the sale of provisions, wine, spirits, &c. in immigrant ships. No case has, however, been brought under our notice so much requiring censure as this. Not only has the sale been carried on to a greater extent than we have before heard of, but the prices charged appear to us to have been most exorbitant. Of the correctness of our opinion on this point, his Excellency will be able to judge from two bills which we enclose. The one shows a bounty immigrant, named M——, to have been a purchaser of provisions to the amount of 7*l.* 12*s.* 2*d.*; of spirits to the amount of 4*l.* 8*s.* 6*d.*; of wine to the amount of 13*s.* 7½*d.*; and of cigars to the amount of 10*s.* 6*d.*; making a total sum expended of 13*l.* 4*s.* 9½*d.* (a) In this instance we think that the nature of the articles bought shows M—— to be a valueless " farm servant," and we have therefore recommended the disallowance of the bounty claimed on his account.

See Evidence, Innes, Q. 24.

The other account, that of T—— P——, does not exhibit the same extravagance on the part of the immigrant, or any just ground for suspecting his ineligibility. We have not therefore recommended the disallowance of bounty on his account. But though more favourable as regards the purchaser, this case presents a feature very discreditable, we think, to the chief officer, at whose hands he purchased. It appears, that when this man's money was exhausted, and exhausted in procuring articles distinctly stated by the surgeon and master to be unnecessary, he was allowed further to purchase unnecessaries on his giving his watch as security for payment on his arrival in Sydney. The watch is still in the hands of the chief mate unredeemed, in consequence of a dispute about an item in the bill. \* \* \* \* \*

\* \* \* \* \* Though fully satisfied with their conduct in other respects, we feel it our duty to recommend that the surgeon should receive five per cent., and the master and chief officer one-third less than the sums to which they would otherwise have been respectively entitled, in consequence of the above stated circumstances connected with the sale of provisions. \* \* \* \* \*

*The "New York Packet."*

\* \* \* \* \*  
On the entry of the vessel into the port, the surgeon superintendent and master were questioned in the usual manner by the health officer, as to the nature and extent of sickness which had occurred on the passage, or which at the time existed. The answer given to the health officer's enquiries was, that the small-pox had been prevalent during the early part of the voyage, but had for some time disappeared, and that, with the exception of a few cases of influenza, the passengers were totally free from disease.

We must now state our decided opinion, that the disease which existed amongst the emigrants on their disembarkation, which the surgeon superintendent admits terminated in typhus, was stamped with the character of typhus when the vessel entered the harbour.

That this contagious fever was typhus is positively asserted by some of the most respectable immigrants; and the opinion entertained by these individuals appears to have been prevalent amongst the passengers generally.

Their opinion, in opposition to that of the surgeon superintendent, is supported by the statement of Dr —, R.N., who asserts, that "about twenty cases sent by him to the hospital, on the fourth day after the arrival of the vessel, which the surgeon superintendent was unwilling to admit as typhus, were decidedly cases of typhus, and that they had existed prior to the two days which had elapsed since the disembarkation of the immigrants." Dr. —, who, two days afterwards, took charge of the "Lazaretto," states that even then the surgeon superintendent would not admit that any of the fever cases in the hospital were other than cases of influenza. He says, "the cases were all most decided cases of typhus fever, with the exception of one child that had whooping cough; when I went down first, Mr. —, on going round the cases with me, did not seem to think that any of them were typhus; I told him I had not the least doubt on my mind, and that it was ridiculous to call them anything else. There were some cases which I should think were at least of a fortnight's standing."

His Excellency will observe, on perusal of the statement made before our Board by the surgeon superintendent, that during the continuance of the small-pox, three patients only were removed from the berths which they at the time occupied; the remaining eleven were allowed to continue, and one of them, as it would seem, even to die in the midst of their fellow passengers.

The second hospital he allowed to be filled with ship's stores, and so to continue useless and unused through the passage, notwithstanding that he had hospital patients of both sexes under his treatment at the same time.

We have dwelt at some length on the points in which the incapacity of Mr. — appears to have been exhibited; but we have felt ourselves called upon to endeavour to fix his Excellency's attention upon the danger to which the lives of so many poor people, conveyed to this country under his Excellency's permission, have been exposed, by the want of efficient superintendence; our duty is a painful one, and the more so from the fact of Mr. —'s incompetence being unaccompanied with misconduct; we believe him to be weak and irresolute as a man, and most deficient in practical acquaintance with his profession as a surgeon, but his moral conduct during the passage is unimpeached; we should have been therefore rather disposed to limit ourselves to a brief expression of our unfavourable opinion, had this been an isolated case, and had our attention not been called in other instances, to a most culpable want of care in the selection of surgeons superintendent. In more than one instance have we been dissatisfied with the selections made by the importers of these immigrants, as well as by other parties engaged in the trade; and a similar dissatisfaction with surgeons appointed to the charge of immigrants landed at Melbourne, has been expressed by the superintendent of Port Phillip. In a letter dated the 19th February 1842, his Honour says, "his Excellency will perceive that I have considered that more blame is to be attributed to the importers in not securing the services of a more competent and experienced person, than to the surgeon himself;" and requests "that his Excellency would mark his sense of the impropriety of the course now frequently adopted, in sending out a large number of souls under charge of incompetent and inexperienced men, by subtracting the whole or part of the surgeon's gratuity, from the sum claimed by the importers;" and in a letter dated 2d March 1842 he says, with reference to another case, "considering as I do, that in many instances far too little care is taken by the importers in securing the services of men of real character and experience, to bring out and take charge of such large bodies of emigrants, it appears to me, that in this and in every other instance where such (quarantine) expenses are the consequence of bad management or bad arrangements, that they should be deducted from the amount of bounty.

The opinion expressed by his Honour in the foregoing extracts, coincides exactly with that formed by us on review of this and similar cases, viz., that the penalties arising out of a surgeon's incompetency for his situation, should fall not so much upon himself as on his employer, whose duty it is to ascertain, beyond the possibility of doubt, the qualifications of the person to whom he entrusts so important a charge.

We

We will now conclude this division of our Report by stating our opinion, that in the most important provision for the health, comfort, and convenience of the passengers, and that on which the efficacy of every other provision depends, namely, the selection of a surgeon superintendent, the affreighter has shown a carelessness which we cannot too strongly reprobate. And as to the uncleanly state of the vessel and emigrants, to the want classification and proper treatment of the sick, to the non-separation of the sick from the healthy, or in other words, to the inexperience and incapacity of the surgeon, we attribute mainly the origin and progress of the disease which caused the establishment of the quarantine, we are of opinion that on this ground alone, the importer should not be relieved from any portion of the expense with which the quarantine was attended. \* \*

It appears that the immigrants were allowed to bring on board blankets, &c. which had been in use for an indefinite period, and that the articles so introduced into the ship were not inspected by the affreighter or his agents. It also appears that the emigrants were not required to provide themselves, before embarkation, with a suitable supply of clothing for so long a voyage. In one instance, the surgeon states that he was obliged to give a man his own sheets. We cannot but attach great blame to the affreighter for his negligence in these particulars; and we consider that the fever, which seems to have existed more or less throughout the passage, may have been generated by filth in the bedding and clothing of many of the passengers, whose habits seem to have been most uncleanly. \* \*

*The "Wilson."*

\* \* \* \* \* THE bounties claimed on R— M'L— and wife we have disallowed for the same reason. M'L— stated, when examined by us, that he was, and had been all his life a miller; and that he had told M'L—, of Derry, the sub-agent employed by the importer to select emigrants for him in that neighbourhood, that such was his calling. The claim for bounty advanced in this case we cannot therefore consider in any other light than as an attempt at imposition on the Government; more especially as on the certificate produced in this man's favour, the word originally inserted in the column showing his trade is partially erased, and wheelwright written in its place. The original word appears to have been "miller." M'L— seems too, to us, to be at least ten years older than is stated in his certificate. \* \*

\* \* \* \* \* And we have deducted the amount of bounties on three single men, namely, R— C—, W— G—, and B— N—, in accordance with a minute of his Excellency, on a communication from the Water Police Magistrate to the Immigration Agent, from which it would seem that they embarked as bounty emigrants to Sydney, merely with a view of obtaining a cheap passage to New Zealand, their place of destination. \* \*

*The "Duke of Roxburgh."*

Sir,

Immigration Office, Sydney, 11 February 1842.

WITH reference to the Report of the Immigration Board, of the 8th instant, on the immigrants per "Duke of Roxburgh," I do myself the honour to enclose a memorandum\* from the Water Police Magistrate, from which it would appear that bounties have been improperly paid on a family named —, per "Comet;" and I beg to call your attention to the minute of his Excellency the Governor, enclosed, directing that the amount paid should be deducted from the bounties of the "Duke of Roxburgh."

The amount paid on account of — and family, was sixty-eight pounds. I enclose the certificate produced in favour of this family.

The Hon. the Colonial Secretary,  
&c. &c. &c.

(signed)

Francis L. S. Merewether.

\* Memorandum referred to:—

— came out as an immigrant, per "Comet;" has been a painter, plumber, and paper-hanger all his life; the agent at — knew him as such, and told him to put himself down as a carpenter, as painters would not pass; after arrival here was told by the doctor that he was to say he was a carpenter, which he did; heard the doctor tell several other persons what they were to say when mustered by the Commissioners; has been working as a painter since arrival here; states that his wife was never in service.

(signed) H. H. Browne.

Minute of his Excellency the Governor on the foregoing:—

LET the bounties which have been paid on this man and his family be deducted from any that may be coming to the same parties.

The "Duke of Roxburgh," I believe, belongs to them.

NEW  
SOUTH WALES.*The "Thetis."*

\* \* \* \* \*

IN perusing the form of agreement transmitted by Messrs. — and —, we cannot fail to be forcibly struck by the following article: "that he (the surgeon) will aid and assist the said agents (the agents of Messrs. — and —), in passing the emigrants carried out under the colonial bounty, before the Board of Inspection at Port Philip, so as to procure payment of the said bounty;" and its intention is more prominently brought forward by the article which precedes it—"that he will furnish to the agents of the said — and —, at Port Philip, all the information which he may be able to obtain with reference to each family or person on board." In these articles we discover the cause of the want of candour which we have frequently observed in the surgeons of emigrant ships, when questioned as to the character or eligibility of the people under their charge.

From these articles it would appear, that the surgeon is bound by the bounty agent faithfully to report to his agents, on the arrival of the immigrants, all that he knows respecting them individually, and that he is as faithfully to conceal their defects from the Government; or in other words, he is bound to sacrifice the interest of the public here, by whom he is paid, to the interest of his nominators, by whom he is not paid; for we observe that the only remuneration guaranteed to Mr. — in this case, was a free passage with cabin fare, in which we believe, wine, spirits, and ale, were not included, but were to be paid for as used; whilst the duties imposed upon him comprised those of purser (a) and surgeon to the ship's company and cabin passengers, as well as those of surgeon superintendent of the emigrants; for his services in this latter capacity he was to receive but a promise from Messrs. — and —, that if he served them satisfactorily, they would assist him in obtaining from the Colonial Government the usual gratuities; which gratuities would be paid as a matter of course, if the conduct of the surgeon were satisfactory to the Government, as well as to Messrs. — and —; but which, if otherwise, no representations or exertions on the part of these gentlemen could extort.

A careful consideration of this transaction confirms us in the opinion which we had previously formed, that the establishment of the gratuities in favour of the surgeons superintendent of immigrant ships has no other effect than to relieve the importers from the necessity of paying the small salary which they used before to allow to their surgeons, and that, too, when the rate of bounties was lower, and the receipts consequently less than at present. The gratuities have thus been turned into a source of profit and patronage to the parties engaged in the emigrant trade; and the object of their institution, as might be expected, has been entirely defeated.

We need not pass in review here, the instances in which, during the past season, the incapacity of surgeons of immigrant ships has been brought under our censure, and under the censure of his honour the Superintendent of Port Philip; but we gladly avail ourselves of the opportunity of suggesting, that no surgeon should in future be allowed to proceed in charge of an immigrant ship, until he has been approved of by the medical officers attached to the Board of Admiralty, or some other equally disinterested and competent examiners. \* \* \* \* \*

*Arthur Savage, R. N.* *H. H. Browne, J. P.*

*The "Carthaginian."*

\* \* \* \* \* There is one instance, however, of outrageous conduct on the part of the master, which we think it our duty specially to notice. It appears that during the early part of the voyage many of the immigrants had been in the habit of keeping log-books, or records of the little occurrences which took place in the ship. This we should have considered a very harmless amusement, and one which we should have thought it politic to encourage. To the master, however, the practice seems to have given offence, or to have been a source of apprehension, and he issued an order that no log-books should, for the future, be kept, and that those in existence should be destroyed. This order appears not to have been very readily obeyed, and by way of obtaining more prompt compliance with his desire than the immigrants were disposed to give, the master ordered the man at the helm from his post, and let the ship go adrift \* \* \* \* \* As it happened, fortunately we may say, for we should have expected consequences far more serious, one woman only, who appears to have lost the use of her senses for some time from fright, suffered materially from this extraordinary conduct on the part of the master. \* \* \* \* \*

In the present case we regret to find, that the parties in England, acting for the importers, exacted from the surgeon a promise to pay a certain sum as passage-money on the receipt of his gratuities here; and we have reason to believe that subserviency to the master was made another condition of his appointment. We cannot therefore be surprised that the cheap surgeon—the surgeon who would bind himself to submit to one, who by profession and by education ought to have been his inferior, should have

have ill discharged the duties of the situation in which, through a false economy, he was placed.

\* \* \* We are happy, however, to state, that Messrs. — and — have in this, as in every other instance of improper behaviour, repudiated the acts of their agents in England, and have released the surgeon from his engagement. (a) \* \* \*

W. H. Christie, J. P.

Sir,

Immigration Office, Sydney, 25 April 1842.

WITH reference to the statement made in the Immigration Board's Report B. of the 23d instant, on the "Carthaginian" case, that Elizabeth Smith had declared herself before the Supreme Court to be a married woman, and not single, as represented in her certificate, I do myself the honour to annex a copy of a note addressed to me by Mr. Justice Stephen, from which it appears that she distinctly told the bounty agent that she was married, and that the false representation made originated with the bounty agent, and not with her.

The certificate produced in favour of Elizabeth Smith, I beg to enclose for his Excellency's inspection.

I have, &c.

The Hon. the Colonial Secretary,  
&c. &c. &c.

(signed) Francis L. S. Merewether.

(COPY.)

My Dear Sir,

25 April 1842.

I PERFECTLY recollect that the girl Betsy Smith, at the late "Carthaginian" trial, swore that she told the emigration agents, at Liverpool (or ship's agents), that she was a married woman, but that "they" told her, (or "the clerk" told her, as I understood) that it did not signify; it "made no difference," and she was then entered as single.

I have the substance of this on my notes; and you will see the fact of her swearing to having "told them in the office, in Liverpool, that she was married" reported also in the newspapers.

Yours, &c.

Francis L. S. Merewether, Esq.

(signed) Alfred Stephen.

*The "Sir Charles Napier."*

\* \* \* Of the certificates produced in favour of the individual immigrants, many appear to us to have no reference whatever to parties included in them, whose names would seem to have been inserted subsequently to the approval of the documents by the authorities in England. \* \* \*

The unsatisfactory nature of the certificates, a general complaint of the disorderly character of the immigrants preferred by the surgeon, and other information of a discreditable nature to the conduct of the ship, rendered a formal inquiry into these general points necessary before we could report on the claim to bounties. We accordingly obtained the attendance upon our Board of the surgeon superintendent, and in the presence of the importer's agents questioned him as to what he knew of the correctness of these certificates, and of the character and calling of the parties to whom they applied. The surgeon readily afforded every information required, but at the same time, whilst he made known to us the existence of gross irregularities, he gave us to understand that he should prefer the evidence of other parties being taken with regard to their nature, when he, being present, would answer any questions arising out of the statements made by these witnesses, or would substantiate them by his own testimony, if requisite. We accordingly examined, out of the immigrants whose attendance was procured, a sufficient number of the most respectable and the best informed, to prove to us beyond all doubt, that in the shipment of the immigrants the grossest frauds had been practised; that most improper people had been wilfully put on board; and that immorality had prevailed to a disgraceful extent during the passage. \* \* \*

\* \* \* At the same time we think it right to state, that if we considered ourselves authorised so to do, we should, under the aggravated circumstances of this case, recommend a total disallowance of the amount claimed. \* \* \*

\* \* \* We should be glad, could the sum shown to have been paid by the surgeon superintendent for his passage, be reserved for his benefit from the amount allowed as bounties. \* \* \*

REMARKS:

The charges for immigration include the sum of 10,840 *l.* paid as out-fits, and for passages to 60 clergymen and 26 teachers, who are not included in the number of other immigrants.  
The total number of 51,736 is exclusive of the immigrants for whom bounties were refused.  
Of the total charges, the sum of 48,760 *l.* was paid for in land and immigration debentures, the redemption of which is still to be provided for.  
The charges for immigration and survey alone exceed the total proceeds of the land fund during the period specified, by 39,747 *l.* 13*s.* 1  $\frac{1}{4}$  *d.*  
The payments by the Colonial Agent-general, from 1st January to 30th June 1842, have not been notified.

(I.)

At a Meeting of the Immigration Committee, held on Thursday, 11th August 1842, it was moved that the following Resolution be adopted:—

“THAT in the opinion of this Committee, the raising the minimum price of every description of land in this colony above 5s. an acre is impolitic, inasmuch as it has a direct tendency to divert the emigration of British capitalists from this colony to the United States of America, where fertile lands may be purchased at one dollar and a quarter per acre, which price has apparently been found by the American government to be sufficient on the one hand to check the too rapid conversion of the labourer into a landowner, and on the other hand not so high as to oppose a bar to that investment of capital in the purchase of land which is essential to the progress of colonization.”

Passed in the affirmative.

COPY of a Circular Letter addressed by the Colonial Secretary to the Holders of Conditional Bounty Orders.

Colonial Secretary's Office, Sydney,  
11 September 1841.

Sir,

I AM directed by his Excellency the Governor to inform you, that it appears desirable to draw the attention of parties who have received conditional permissions to import persons on bounty to the very rapid immigration now taking place into the colony; and to point out to them that it is very probable the Government may not be in a situation to pay bounties in cases where they have been promised conditionally only; and that, at any rate, none such can be paid until after all demands to which the Government is liable on account of promises made unconditionally are satisfied.

I have, &c.  
(signed) E. Deas Thomson.

## PAPERS RELATING TO EMIGRATION.

75

NEW  
SOUTH WALES.

(L.)

(No. 64.)

COPY of a DESPATCH from Lord *Stanley* to Governor Sir *George Gipps*, respecting  
Emigration on Bounty Orders.

Sir,

Downing-street, 8 February 1842.

I HAVE received your despatch, No. 137, of the 17th July last, containing a report of the amount of revenue actually received into the treasury of the colony in the half year ending the 30th of the preceding month.

On the receipt of that despatch, I called on the Colonial Land and Emigration Commissioners for an estimate, as far as might be practicable, of the state of the land revenue of the colony for the year 1841, and of the probable balance which would remain applicable to emigration in the succeeding year, without having recourse to unusual measures.

I enclose for your information a copy of the report which I have received from the Commissioners upon that point. 12 January 1842.

On a full consideration of all the circumstances, I consider it necessary to suspend for the present further emigration on bounty orders. However desirable it may be to keep up a continued supply of emigrants to New South Wales, I cannot consent to anticipate its land revenues for that purpose; and looking to the very large addition which will have been made to its population in the course of the past and the commencement of the present year, I am strongly inclined to believe that the supply of labour furnished will have been at least equal to the demand, or at all events, to such a demand as would realize the fair expectations of the emigrants.

I am, &amp;c.

(signed) *Stanley*.

Governor Sir *George Gipps*,  
&c. &c. &c.

(M.)

(No. 42-955.)

COPY of a LETTER from C. J. *La Trobe*, Esq. to the Clerk of the Councils at *Sydney*, relative to the demand of the Colonists of *Melbourne* and the surrounding Districts for Labour.

Sir,

Melbourne, 26 July 1842.

I HAVE had the honour to receive your letter of the 18th June, requesting, by the desire of the Committee of the Legislative Council (appointed to consider the question of immigration generally, with the view of ascertaining the present and prospective demands of the colonists for labour, and how the same may be most effectually and economically met), that I would afford them such information, on certain points, as it might be in my power to obtain.

Understanding that it was desirable that this report should be forwarded to you with as little delay as possible, I immediately took such steps as lay in my power to meet your wishes. I have now the honour to lay before the committee a brief exposition of the opinions of a number of the better informed and influential gentlemen of this district, to whom circumstances allowed me a ready access, in the form of a report, drawn up by two gentlemen whom I commissioned to receive their several communications.

However briefly expressed, I trust that the information thus produced may be of use to the Committee. My own opinions on the several points brought forward, coincide in the main with those that are set forth in this document. I however request permission to add a few brief remarks.

I am decidedly of opinion that, taken as a body, the emigrants who have been sent to this colony within the last 18 months, have been of an inferior description to those previously supplied. From the knowledge I have gained of the character of a considerable proportion,—a knowledge which can only be gained after they have become colonists, I should say that the object of the exporters at home had been to collect, and not to select; to secure at a given time, the requisite number to fill the vessel, with as little trouble to themselves as was consistent with a bare compliance with the letter of the Regulations. The large importations we have received of so called labourers, married men with very large families from the south and south-west of Ireland, and single women from Bristol, Cork, Dublin, or Glasgow, have given us ample occasions of finding to our cost that the letter of the Regulations may be tolerably well followed, and yet the main object, to effect which they are framed, completely defeated. With reference to the latter, it may be remarked, that the mere object of supplying the colony with a proportion of females, may indeed be attained by such importations; but the above are certainly not the localities likely to furnish a really valuable class of either farm or domestic servants. Once furnished with the requisite certificates, and passed by the officers appointed to the duty in England, it is impossible for the local Board to reject an individual presenting himself or herself here, unless occurrences during the voyage, that could not be concealed, have given premature publicity to the impropriety of the selection.

From the experience we have had of the working of the new Regulations, I should say, that all the precautionary measures taken by the Home Government, however strong, and however strictly carried out, are still insufficient to secure the colonies against the introduc-

gration Agent.  
The Sub-Treasurer.

Queries, 1, 2 and 3.

NEW  
SOUTH WALES.

tion of a large proportion of exceedingly indifferent, if not of worthless hands. In the collection of most of these, and their presentation for passage as bounty immigrants, perhaps the exporters may have contemplated no deception; the details set forth in the certificate, and the signatures placed at its foot, may be real; the party may be one whom friends sincerely wish to advantage by emigration, and not merely to get rid of; no direct fraud may be contemplated, still he may not belong to the class of labourers which it is the object of the Regulations to secure. But instances of gross fraud are not wanting, and when the perfect impunity with which certain of these have been practised, is remarked, the suspicion arises whether they are not much more numerous than is supposed.

To the majority of the frauds that have been detected, the surgeons superintendent of the ships must have been parties, directly or indirectly; and I need not remind the Committee how great, when this is the case, and while the interests of that officer are bound up with those of the importer, must be the difficulty of detecting the imposition.

Should the present system of bounty emigration be continued, I not only think that further measures must be taken at home to enforce the selection of proper individuals, but that it is imperative that the surgeon superintendent in every case should be a Government officer, in the interest of the Government, and preferably a naval man of mature age and experience. This officer should have the entire control over the medical stores and comforts of every description, and a general power of providing that the provisions given out be supplied of the quality and in the quantity prescribed by the Regulations. Perhaps, generally speaking, no exception can be taken to the medical talent of the gentlemen recently chosen to fill the office of surgeon superintendent on board the emigrant ships; but a great want of experience in the management of large masses of emigrants on shipboard has been evident, and this deficiency has, in several cases, been productive of exceedingly serious results.

It may be well for the Committee to take into consideration whether the increase in the rate of bounty has been attended by advantage or disadvantage, as far as the quality of the labour supplied is concerned. I am scarcely in a position to prove it, but I am inclined to think that the indifferent character of much of that imported since 1841, has been the result of such augmentation, and the inducement held out, by the more considerable profit to be reaped, for men of less established character to engage in the business.

The smaller degree of profit to be gained formerly, left the business in the hands of those whose profits were derived from their ability to carry it on upon a large scale. With these a careful selection was almost indispensable, as the rejection of even a small proportion of the emigrants would exercise a very serious effect on their gains. In the case of many of the smaller speculators who have entered into the trade latterly, I am convinced that there has not only been a want of experience, but that the larger amount of the profits would allow them to incur the risk of the rejection of a certain proportion without serious inconvenience.

The attention of the Committee will have been doubtless drawn to the certain fact that, from Mr. Marshall downwards, a practice has prevailed with many of the exporters, to exact sums of various amounts, under divers pretexts, from the emigrants, in part payment of their passages; this I consider a most culpable practice.

Queries, 4, 5 and 6. These queries may be considered sufficiently answered by the accompanying report.

I coincide in the opinion expressed in the report, as to the proportion in which single women and single men should be introduced into this district.

Query, No. 7.

It is impossible for me to hazard an opinion in reply to this query. The sales of land must depend upon the demand, and the demand upon the introduction of capital. I should hope that some land may be disposed of, but I cannot flatter myself that the revenue to be thus raised will be at all commensurate with the claims that must be made upon it, even leaving immigration out of the question.

I have no hesitation in stating, that I consider the projected loan to be both necessary and expedient.

I consider that it would be well to provide for the introduction annually of about 4,000 able-bodied immigrants into this quarter, for two or three years to come; I have no doubt but, if properly selected, that number would find ready employment; they might perhaps be introduced in the proportion of 2,000 single men to about 1,500 of each of the other classes.

In addition to the report to which I have already alluded, I have the honour to enclose a communication which has been handed into my office by the immigration agent, accompanying a general return, illustrative of immigration into this district, in bounty ships, from 1st January 1841, to the close of February in the present year, which I considered might be useful to the committee; and further, a return of the number of immigrants of every description in the employ of, or in any way dependent on Government in this district at the present date; merely remarking, with reference to the latter, that no doubt can exist, but that all of the individuals thus upon our hands would have found employment long ago had they been of the proper description. This was clearly demonstrated on the arrival of the ship "Earl of Durham," on the 18th of June, with 119 immigrants, the whole of whom, with the exception of four or five families, were at once eagerly engaged by the settlers or residents of the town and neighbourhood.

To the Clerk of the Councils, Sydney.

I have, &c.  
(signed) C. J. La Trobe.

(N.)

(No. 42/1345.)

COPY of a LETTER from Messrs. *Patterson and Lonsdale to C. J. La Trobe*, Esq. relative to the demand for Labour in *Melbourne* and the surrounding Districts.

Sir,

Melbourne, 22 July 1842.

IN compliance with your Honor's directions, we have submitted the series of queries forwarded to you by direction of the Committee of the Legislative Council, upon the subject of immigration, to a considerable number of gentlemen, residents in the town and surrounding district, who were most likely to be well informed; and we beg to submit a summary of their opinions on the subject.

It appears to be the general impression, that the character of immigration has not been kept up during the last 12 or 18 months, as compared with that of former years; which opinion is strongly expressed by some of the gentlemen who have well considered the subject.

Opinion on Query the 1st.

The prevailing opinion is that the selection of emigrants has not been conducted with becoming care or attention; and that in most cases they have not been procured from those parts of the United Kingdom most likely to afford really good and useful servants.

Opinion on Query the 3d.

The universal opinion is, that the description of labour chiefly required in the district comprises shepherds, good farm servants who can plough with reins or bullocks, reap, sow grains, and use the spade; a few good gardeners, a few mechanics, and some male and female good domestic servants who really understand their business, and who are of good character.

Opinion on Query the 4th.

The actual demand for labour at present seems not to be very urgent, but the universal opinion decidedly is, that should labour not continue to be regularly, and at short intervals supplied, to a certain amount, the price will most certainly, and that very soon, attain its former ruinous advance, with its usual attendants, insolence, disobedience, and reckless carelessness on the part of the employed towards the employers.

Opinion on Query the 5th.

The late large importations of labour into the district has had the most beneficial effects; it has brought labour, or rather wages, down from their former oppressive price to a more equitable rate; it has made servants of every class more obedient to their employers, and more careful and diligent in their respective callings; and it has placed the proprietors of the soil in a position to cultivate and improve the land purchased from the Crown, and has thereby directed their attention more to agricultural pursuits.

The present rates of wages appear to be as follow:—

First class farm servants, 25*l.* to 30*l.* per annum, with rations; second class farm servants, from 20*l.* to 25*l.* per annum, with rations; shepherds, from 25*l.* to 30*l.* per annum, with rations; rough carpenters to be employed on a farm, from 30*l.* to 50*l.* per annum; female farm and dairy servants, from 15*l.* to 20*l.* per annum, with rations; and housemaids, from 10*l.* to 15*l.* with rations; good mechanics, such as carpenters, joiners, smiths, wheelwrights, &c., from 10*s.* to 15*s.* per diem, and find themselves.

Opinion on Query the 6th.

If these mechanics are hired by the year, and rationed, they receive from 30*l.* to 70*l.* a year.

The general opinion of the best informed is much in favour of a loan, to be raised upon the security of the land revenue, for the purpose of immigration.

Opinion on Query the 8th.

Emigration to these colonies has been heretofore conducted in two different modes, viz: by ships chartered by the Home Government, and by ships sent out by private individuals, each on the bounty system. We are not in possession of sufficient data whereby to form an opinion as to the relative merits of the two methods.

Query the 9th, with general remarks.

As respects the question to what extent immigration may be required in future, we have no hesitation in giving it as our opinion, which is also the decided opinion of all the gentlemen consulted on the subject, that during the next 12 months the wants of the district will require at the rate of 30 families, each not to have more than one child, or if more than one child to each family, the youngest of such family of children not to be less than 10 years of age; unmarried males, chiefly consisting of agricultural labourers and shepherds, and a few good house servants, at the least 60; unmarried females, good housemaids, not less than 30. The above proportions, if regularly introduced each month in the year, might meet the wants of the district. But many circumstances may occur meantime to require a much larger supply of labour. We beg further to observe, that during the last two years, too great a proportion of married people, with large families of children, have been brought out to the colony. The settlers would not engage this description of labour, on account of the children, who could not be of any use to them.

The consequence was, that hundreds of married men could not find employment in either town or country, and were thrown on the bounty of Government, who, to save them and their families from starvation, gave them employment in the public works.

NEW  
SOUTH WALES.  
—

A large proportion of single females, chiefly from the south and south-west of Ireland, have been imported into the colony during the last 18 months. These young women have been found so totally unqualified for the common wants of the colony, most of them having never been in service at home, and being utterly unacquainted with the duties of housemaids, could not find employment but with the greatest difficulty. They consequently became a heavy burden on Government, who has supplied them all along with rations and lodgings. The number of this description of females, we are happy to say, has been gradually reduced to 18 at the present time. It ought to be known that these helpless peasants have at all times been very desirous to obtain employment, and have generally shown virtuous dispositions.

Several single girls, most of them not exceeding 16 years of age, selected in large towns, such as London, Liverpool, Leith, and Bristol, generally turned out badly, and soon resumed their former abandoned habits. Therefore to obtain good, useful, and virtuous farm and domestic female servants, the country towns and rural districts in England, Scotland, and the north of Ireland, are to be preferred.

First rate useful mechanics and handicraftsmen are mostly to be procured in large towns.

We beg further to observe, that the regulation which requires that an equal number of single males and of single females be introduced into the colony might be modified with advantage. The single men on their arrival here obtain employment at once, and can engage to go any distance into the country, where they are chiefly required. The single females, on the contrary, are obliged to look for situations in the town or neighbourhood, where they can be under the protection of a mistress; consequently, the demand for their services is vastly less than that for single men. We give it as an opinion that the relative proportion of single females to single men ought to be as six of the former to 10 of the latter.

Opinion on Query  
the 2d.

Queries No. 2 and No. 7 were not submitted with the others for the opinions of the gentlemen, as it was considered that the public generally could not be informed on these subjects. But from what has fallen under our own notice, we beg to give the following opinions :

The arrangements made for the health and comfort of the immigrants have been in most cases satisfactory; in others, indifferent; and in others again, decidedly bad. In the indifferent class, one or more articles of provisions were found either bad in quality, or deficient in quantity to last the whole of the voyage. In the decidedly bad, several of the articles of provisions were not only bad in quality, but deficient in quantity for the consumption of the entire voyage. In two or three cases, the quantity of medical comforts sent on board for the voyage seemed deficient; and in one or two other instances, the surgeon-superintendent appeared to have acted with more regard to the interest of his employer, in the distribution of these comforts, than to the dictates of liberality and humanity.

Opinions on Query  
the 7th.

With regard to this question, we find it next to impossible to give any definite or satisfactory answer; but we may not be far wrong in concluding, that but a small and inadequate sum for the purposes of immigration can be calculated on within the next 12 months. The severe pressure of the times has so generally prevailed in these colonies for a considerable time back, that we think it can scarcely be removed within the above period; and unless a good many capitalists arrive on our shores, we are of opinion it would not be prudent to attempt making large sales of Crown lands.

His Honor C. J. La Trobe, Esq.  
Superintendent of Port Phillip.

We are, &c.

The Right Reverend THE LORD BISHOP OF AUSTRALIA, in the Chair.

Wednesday, 25 May 1842.

*Francis Lewis Shaw Merewether, esq.* Agent for Immigration; called in, and Examined.

NEW  
SOUTH WALES.

*F. L. S. Merewether,*  
Esq.

25 May 1842.

1. YOU are Agent for Immigration, and Chairman of the Immigration Board?—I am.
2. How long have you held these offices?—About ten months.
3. During that time, it has been your duty to examine the immigrants on arrival?—It has.
4. Have the immigrants introduced within that period been exclusively on the bounty system?—Yes.
5. Can you furnish the Committee with a Return of the immigrants introduced into this colony on whom bounty has been paid, or is now payable, from the date of the Returns in last year's Report up to the present period?—I can, and will prepare such a Return.
6. Does the principal business of examining into the qualifications of immigrants in their arrival, devolve upon you?—It does.
7. Are you sufficiently acquainted with the proceedings in previous years to institute a comparison between the immigration of those years and the present; and do you consider that the character of immigration has been kept up?—I am not so well acquainted with the conduct and character of Immigration previously of my taking charge of the department as to be able to institute a comparison between that of the past ten months, and that of any former period.
8. Can you speak, in a general way, as to the suitability, to the general wants of the colony, of the immigrants introduced within the period over which your experience extends?—My general impression is, that they have been ill selected.
9. Do you mean to say you are of opinion, that the ill-selected immigrants outnumber the really useful?—The demand for labour has been such, that any man with a pair of hands would be found useful in this colony; I cannot therefore say, that those immigrants, who appear to me to have been ill selected, have not been really useful. What I mean to state is, that neither physically nor morally have they been of so good a description as might have been chosen, and as the colony had a right to expect. As regards the English, I feel myself competent to speak more positively; and of their eligibility generally, with the exception of the artificers, my opinion is anything but favourable. With regard to the Irish, I think that I shall be borne out by the testimony of better judges than myself, when I express my opinion, that a large proportion of those recently landed here have been far from favourable specimens of their country's peasantry. I speak with greater confidence on this subject than I should otherwise feel myself justified in doing, with so limited an experience as I possess, because I am aware that my opinion coincides with that of all the other members of the Immigration Board, who have had the opportunity of comparing the recent with the former Immigration. I am also the more convinced of the correctness of my judgment, by the opinion of an officer of the Government in England, resident at a port from which a large number of the most ineligible immigrants have been shipped. His opinion, formed on or before the embarkation of the emigrants, I will take the liberty of submitting to the Committee in support of that formed by myself on their arrival here. The remarks to which I refer are as follows:—"If I had anything to do with the selection of the candidates, it strikes me, that a goodly number of those gone from hence would have lost their passage. You pay liberally, and have therefore a right to expect a good article; but I fear some will be found burdens instead of benefits."
10. In what respect do you consider them ill selected?—Many of the single women have been proved to be of notoriously bad characters; and many also to have been of a class much above that prescribed by the regulations, and in every way unsuited to the present demand in the colony. Amongst the men, the immigrants whom I characterize as ill-selected, have been a number of those imported under the description of "agricultural labourers"

NEW  
SOUTH WALES.

F.L.S. Merewether,  
Esq.

25 May 1842.

labourers," which appears to have borne in England a most comprehensive signification, and to have included every grade of persons not mentioned in the Bounty Regulations, from classical tutors down to "lumpers" and "hodmen." I do not think that one-third of the number calling themselves agricultural labourers, were really such. In many cases, where men have really been out-door manual labourers, though ignorant of agriculture, and have been so represented originally in their certificates, the bounty agents, aware that such persons were not properly eligible, appear to have supplied the deficiency, by prefixing "Agl." to their more correct description of themselves, given in the general term "labourer."

11. Do you consider those calling themselves shepherds to be of a better description than the agricultural labourers?—Their number was very small, and they were, I think, decidedly of a better, and the greatest part of them of a good description.

12. If the immigrants designated "agricultural labourers" were not such, why were they recommended by the board for bounty?—Many were not recommended by the Board for bounties; others were recommended from want of proof, or from absence of well-grounded suspicion at the time, that the individuals were of other callings than that represented. In some cases of this latter description, the amount paid to the importers has been charged against them out of sums payable to them on account of immigrants subsequently introduced. In very many instances, individuals professing to be agricultural labourers, have proved to be utterly unacquainted with the ordinary work of a farm servant, though evidently country people; as in the case of many of the Irish, whose experience has been found not to extend beyond potatoe culture. It was, however, considered by the Board, that such men, though ignorant of agriculture, would be serviceable as shepherds.

13. But in point of fact, bounty was refused on a considerable number from want of qualification?—Yes, I hand in a Return of the number. (*Return put in.*)

14. How much per cent. has been deducted for disqualification from the total amount of bounties claimed?—About four and a half.

15. Have you had reason to suppose that the regulations, established by the Commissioners, for the examination of the certificates of intending emigrants, have been found insufficient to prevent imposition?—I have been informed that a very large number of certificates have been rejected by the Commissioners as unsatisfactory documents, but in very many instances the vigilance of those officers has been eluded.

16. Can you state what precautions are established by the regulations of the Commissioners to prevent unsuitable persons from emigrating to this colony?—Every emigrant is required to furnish himself with a certificate of health, age, character, and other requisite particulars, signed by a medical practitioner, and by two householders of repute, which signatures are certified by either a clergyman or a magistrate, or both. These certificates, when duly prepared, are transmitted to the office of the Colonial Land and Emigration Commissioners, and there examined; or in case any deficiency in the number of persons embarking occurs on the eve of the sailing of a vessel, the Government agent, at the port of embarkation, has the power of examining and passing these certificates. It is the duty of this last-mentioned officer to inspect the emigrants before their departure, and to compare their appearance and their own representations of themselves, with the statements on the face of their certificates. If satisfied that the individuals are such as they are represented to be, he allows them to embark, but not otherwise.

17. Notwithstanding these precautions, deceptions still take place?—Yes.

18. Can you offer an opinion as to the particulars in which these deceptions are practised?—As the most satisfactory mode of answering this question, I beg to quote from my official records, a few cases of attempted or intended frauds which have been brought within the knowledge of the Immigration Board.

(1.) Bounty refused on —, a single man, in consequence of the following statement made by the party presented for examination under that name:—He said that he was a married man; that he had heard before his embarkation that his wife was dead, but he was not sure of the fact, and that he had left a child of four years old living with his wife's mother; his real name was —, but he had been induced by Mr. —, a sub-agent employed by the importers, to embark under the name above mentioned; he had left his native place, —, from inability to obtain employment, and was working at —, at the time when the — was on the point of sailing from that port; he saw Mr. —, who was also then in —, and applied to him for a passage; Mr. — told him that a certificate would be necessary, which it was then too late to obtain, but that he had one in his possession in favour of one — who did not intend to embark, and if he, —, would assume that name, all difficulty would be removed. So the matter was arranged. — appeared before — the Commissioners' agent at —, with —'s certificate, and the bounty sub-agent was by "to put words into his mouth."

(2.) — was represented in her certificate as a single woman, 29 years of age; she was presented as such to the Board, though her appearance would bespeak at least 50 years; from an application for a free passage ineffectually made to the Commissioners in the year 1840, and from other documents which have been lodged in my hands, she has been shown to be more than 40; to have been married, and to have a daughter in the colony 16 years old. In this case, an alteration in the figures marking her age appears to have been made subsequently to the original preparation of the document.

(3.) It appears from her own evidence, and the evidence of a party present at the time, that —, at the suggestion of a clerk, in the office of Mr. —, a sub-agent, employed by the importer to collect immigrants for him, and with the sanction of the sub-agent

NEW  
SOUTH WALES.

*F. L. S. Merewether,*  
Esq.

25 May 1842.

agent himself, passed herself off as the wife of her own son, in order to obtain a free passage; and that to herself and her son one berth was appropriated, as man and wife.

(4.) ———, in his examination before the Board, stated, "I arrived in the colony under the name of ———, but my real name is ———; I came out as a married man, but I am a single man; the woman who came out as my wife had five children on board, who passed as my children; one of them, ———, is a married man. The agent of ——— in ———, was well aware of the circumstances of the case, and also was aware that ——— was to have come out as the husband of his own mother, but that he had married subsequently in ———, when I was asked by her to represent her husband."

(5.) ———, a single female, reported by the surgeon superintendent to have been delivered of a son on board, produced no separate certificate in her own favour, being included in that of ———, who stated that the child was his, and that he was not the brother of this woman, though represented to be so in the certificate. The surgeon superintendent informed the Board that this woman's real name was ———; that she was married, and that her husband had been transported to this colony for murder.

(6.) ———, represented in her certificate to be single, stated that she was the wife of a man named ———, a prisoner of the Crown; and that a boy, called ———, represented in the certificate of a man named ——— to be his son, was her son. The surgeon superintendent informed the Board that this woman's name was ———, and that she was no relation of ———, although he was stated to be her brother.

(7.) ———, speaking of the single females who came out in the same vessel with him, stated, "I know ———; I do not think her a correct girl; I have seen ———, a sailor on board, \* \* \* \* \*; the constable on board took no steps to prevent this conduct, as she had an apartment of her own partitioned off from the other emigrants, for which accommodation she paid the agent in ———; her uncle told me she was a married woman; that her husband had 500*l.* per annum in Ireland; that he was obliged to separate from her, owing to her conduct, and grant her an allowance of 30*l.* per year; she was at that time living on the bounty of this sailor."

(8.) ——— stated, "the ———, the ———, and the ——— had a girl each, while the vessel was at ———, out of the emigrants; their names were ———, ———, and ———. They had these girls \* \* \* \* \* Two of these girls, ——— and ———, were brought on board at ———, by an officer of a poor-house."

(9.) Mr. ——— stated, "I came out to this colony in the ———; I am son of ———; I first intended to have come out as a bounty emigrant, and I applied to Mr. ———, the agent in ———, for that purpose. He told me a ship was to sail in about a week, and that he would have a certificate filled up for me, if I would let him have 6*d.* for the doctor. I do not know who the medical man was, but I heard he used to attend at the ——— inn, for the purpose of signing certificates for persons desirous of emigrating. The agent at the same time said he would prefer that I should sail from ———. I refused to go to the ——— church to get a clergyman's signature, as I thought the clergyman would know me. The agent replied, he was an old man, and probably would not recollect me; I then left Mr. ———, and went down to ———; I went to Mr. ———'s office, and saw Mr. ———, his clerk; who got a certificate signed for me, in the name of ———; and in the same certificate were entered four other names, who were represented to be brothers and sisters. We were then taken before Mr. ———, the commissioners' agent in ———, for the purpose of being passed by him. I had been previously prepared for this interview by the selecting agent's clerk, who directed me to give the following account of myself: 'That my father was dead, and that my mother had sailed for Australia in the ———.' The commissioners' agent asked Mr. ——— if my mother had sailed, as was stated by me, and Mr. said, 'she had, he believed.' In the evening the selecting agent's clerk, Mr. ———, came after office-hours to the place where the intended emigrants were lodging, and a conversation passed between him and me, with some others, relative to the characters required by Mr. ———. I declined procuring any character. The clerk then addressed himself to a young woman, and asked her if she had lived no where. She replied she had lived with ———, but that she could not get a character from him, as he would not permit her to start for Australia, if he knew such was her intention. He then requested me to write a character for this girl in her late master's name; which I refused to do, saying it would be forgery. He then asked a young gentleman standing near me to write it for her. The young gentleman refused to write a character in another's name, but consented to write a copy of one according to the clerk's dictation, which he (the clerk) said he would transmit to ———, to the address of Mr. ———, the selecting agent there, in order that it might be put into the post-office of that town. The clerk said, the one character would answer all (meaning me and the four others included in the same certificate), and therefore required 13*s.* from me for the selecting agent in ———, as a reward for posting the character; adding, he could not be expected to endanger himself without obtaining some remuneration. I also gave him 2*l.* to purchase things he said I would require on the passage. I paid him 6*l.* for the perfecting of the certificates, including my own name and that of the other four.

These few instances will show the nature of the deceptions practised, and also how difficult it must be for officers of the Government to cope with the artifices of such unscrupulous traders. I feel it however right to remark, that none of the instances of fraud cited, nor any similar instances, occurred in the case of emigrants sent out by London agents.

19. On arrival here, the immigrants have to undergo a strict examination?—Yes, and in consequence of the numerous attempts at imposition upon the Government and the colonial public, which have latterly been discovered, the Board have felt it their duty to make

NEW  
SOUTH WALES.

*F.L.S. Merewether,*  
Esq.

25 May 1842.

much stricter inquiry than, under ordinary circumstances, they might have considered necessary.

20. The strictness of that inquiry, it is to be presumed, secures the colony against bounty being paid on unsuitable immigrants?—It does, to a certain extent; but many instances have been brought, even officially, within my knowledge, in which the Board have been deceived, and have recommended the payment of bounties on ineligible persons. I could add from my private knowledge, and so, I am persuaded, could every member of the Board, many other instances.

21. What cause exists to prevent the Board from exercising such vigilance as would prevent the practice alluded to?—The surgeon superintendent being in the interest of the bounty agents, and not in that of the Government, the Board has, in almost all cases, to contend with every artifice which the merchant's self interest, assisted by the surgeon superintendent's knowledge of the parties, can suggest, to cloak any ineligibility in the immigrants brought under inspection.

22. Have you discovered, generally, whether their ineligibility has been in point of age, character, or ability as useful labourers?—Some few have been rejected as above the prescribed age; and of the females, a considerable number have been rejected on the score of character. Of the males, the greater number have been refused in consequence of their real occupation not being one of those mentioned in the regulations, or in accordance with the description given of them in their certificates.

23. Are you aware whether the form to be filled up by persons desirous of obtaining a passage on bounty, and submitted to the agent for Her Majesty's Colonial Land and Emigration Commissioners, contains any statement of the trade or calling of the applicant?—It does.

24. Then how do you conceive it to be possible that, with the certificate appended, parties can pass themselves as of a trade or calling which they really are not?—In some cases alterations have evidently been made on the face of the certificates, subsequently to their original preparation, and probably to their examination by the Commissioners; as ineligibility in this respect, under the colonial regulations, would not form a ground of objection with those officers. Many instances have also been brought within the knowledge of the Board, in which the signatures of "respectable householders" have been attached to the certificates, without any knowledge on the part of the householders of the persons in whose favour they signed. Of such instances I will cite two; the first of which carries with it unusual weight, from the circumstance of the statement having been made on oath before a magistrate.

(1.) ———, whose certificate states him to be a blacksmith, is a ladies' shoemaker, and is employed as a shoemaker in Sydney; he has stated upon oath that the certificate produced in his favour was filled up by a clerk in the selecting agent's office; that he knew nothing of the signatures attached to the document; and that the signature, purporting to be his own, was not written by him.

(2.) ——— states, "I went, accompanied by my brother, to Mr. ———, the agent in ———; he told us we could go out as agricultural labourers on payment of 1 *l.* each; we got certificates from him, to which we signed our names; we then asked him if we were to get the other signatures to the certificates: he said not; there was no use in putting us to that trouble, as he would do all if we paid 6 *d.* for each signature; Mr. ——— put his own name down as one of the respectable householders. The Thursday before we left ———, I went, accompanied by my mother, brother, and sister, to Mr. ———, the commissioners' agent; on our way Mr. ———, the clerk of the selecting agent in ———, asked us if we knew the names which were signed to our certificates; we replied we did not; he then handed the certificates to us, and desired us to see, as Mr. ———, the commissioners' agent might ask us. I never was an agricultural labourer. I was a clerk in a shipping office in ———. My brother is a draper. My sister was never in service; she left school to come out here as a bounty immigrant."

25. Are those certificates placed in possession of the parties to whom they relate?—They are generally placed in the hands, not of the emigrants themselves, but of the bounty agents through whom they have been provided with a passage.

26. Are you of opinion, if strict correctness in these certificates could be ensured, together with the examination of the Board here, that that would correct the abuses which it appears have crept into the bounty system?—If that were possible; but I am of opinion that correctness in these documents can only be ensured by the vigilant superintendence of disinterested officers, having opportunity of personal communication on the spot with the intending emigrants, and with the parties signing in their favour.

27. Do you mean to state it as your opinion, that no regulation established by the Commissioners in England, could prevent the practice of such positive and wilful deceptions as appear to have been practised in a great number of instances?—I think not without double expense; as I am of opinion that a local agency under the direction of the Government, for the examination of the intending emigrants, would be requisite, besides the agency established by the contracting merchant for their selection.

28. Do you not think that much must always depend on the character of the contracting merchants?—Certainly; but the merchants must necessarily be greatly dependent upon the local agents employed by them to select the emigrants; and on the respectability of these sub-agents, more than on that of the merchant, would depend the faithful execution of the bounty order. For instance, some of the grossest frauds lately brought under our notice have

have been practised in the office of the selecting agent of one of the most respectable mercantile houses in Sydney. His employers have, in the most honourable manner repudiated his acts, but the evil has not been the less for their abhorrence of it.

29. Does it appear to you, that any advantage would arise from requiring all persons acting in the capacity of bounty agents, to obtain a license from the Commissioners of Colonial Land and Emigration, which should be granted to persons only of good character, and be revocable on proof of misconduct or deception having occurred with their knowledge?—If the future conduct of emigration is left to mercantile speculation, I am of opinion that such a check would be highly desirable.

30. You have stated that the bounties have been refused on a considerable proportion of the whole number claimed for; setting aside those cases, and confining yourself to those on whom the bounty has been paid, do you think that the immigrants, taken as a class, afford a fair sample of the persons whom it would be desirable to introduce into this colony?—I think not.

31. Do you think, then, that so long as emigration is conducted as a mere mercantile speculation, the profit or loss of the transaction will be considered, rather than the benefit to the colony by the introduction of a moral and industrious class of immigrants?—I do. A considerable proportion of the English, called “agricultural labourers,” and many of the Irish, who have lately arrived, appear to have been discontented idlers, or men employed in casual labour in or about the seaport towns where the emigrants embarked. These men were doubtless shipped because they came ready to hand, and were obtained without expense; and thus I think it would ever be. So long as men of a description sufficiently within the terms of his contract to make his payment safe, would seek him in his office, the agent would assuredly not give himself the trouble to inquire whether he might not obtain a better class of persons from the rural population; much less would he think of incurring additional expense for the sake of obtaining a better description of emigrants than he was bound to furnish.

32. Do you not think that the experience they have had of the penalty they are liable to, by withholding the bounty on parties not suitable, will render the agents for the future much more cautious in the selection of those whom they send out?—It will probably make the contractor more cautious, but I do not think it will have the effect of securing to the colony the best description of persons within its reach.

33. May not the perseverance of Government, in the strict application of the regulations, at length convince the agents that it will be their best policy to send out none but such as are truly what they are represented to be?—The agents will find it their policy to send out such persons only as would make their payment sure, but no better; at least if any additional expense would be entailed on them by the selection of a superior description.

34. Do you imagine, that under such a rigid interpretation, persons would be found willing to engage in such an occupation?—I think that in order to secure, through a mercantile agency, the best description of labourers within the reach of the colony, it would be necessary to give so closely defined a description of the persons wanted, and to enforce so rigid an adherence to the rules laid down, as would render the contract a most embarrassing, if not an unprofitable one; and would also be injurious to the colony, by excluding many persons who might be allowed free passages under the greater latitude of choice, which might safely be allowed to agents less influenced by considerations of self interest.

35. Do you consider that such disallowances would have the effect of raising the character of immigration generally, or merely prevent the introduction of such parties as are not of the character required by the regulations?—I think that the contractor would, as a matter of course, still execute his order in the manner most profitable to himself, and send the cheapest description which he could furnish without risking the loss of payment.

36. The point which the committee wish to ascertain is, your opinion whether by a strict, yet not unjustly rigorous application of the regulations, it might not be possible so to discriminate the different classes, as to confirm the allowance of bounty to such individuals only among the immigrants as should be truly worth to the colony the expense incurred by their introduction?—I think that the rejection of decidedly ineligible immigrants might generally be ensured; but I am of opinion that the selection made would still not be as good as might be made if the question of cheapness did not enter into the consideration of the parties entrusted with it.

37. Do you think then, that by another system, a more valuable class of immigrants could be obtained at the same cost?—I do.

38. Will you be so good as to explain your views as to the manner in which such a system is to be provided?—The cheapness of the bounty system must consist almost entirely in the lower rate at which merchants are able to fit-out and victual their ships; and this cheapness may be secured by still leaving this part of the management of the immigration business (and it is his legitimate business, which the selection of the emigrants is not) in the hands of the merchant. I would propose that the Commissioners should contract with the merchants for shipping and provisions, at so much per head for each emigrant embarked; that the surgeon superintendent should be an officer appointed by the Government, and devoted to the interests of the Government; that upon his report, together with that of the Immigration Board in the colony, should depend the full payment of the merchant or shipowner, as well as of the officers appointed to select the emigrants; these officers, I would propose, should be appointed by the Commissioners, and act under their

general control, but should be paid by the colony in the way of head-money on each immigrant pronounced to be of an eligible description, according, as now, to some fixed standard.

39. You think, judging from past experience, that that would be as cheap a plan?—A nearly similar plan has, I believe, been pursued by some of the holders of bounty orders during the past season, and has left them a considerable profit. They have contracted for the selection, conveyance, and victualling of the emigrants, by giving up to the shipowner and emigrant broker their claim to the government bounties, with the exception of a percentage reserved as their own share in the profits of the speculation. The selecting agency which I propose, would probably be somewhat more costly than that employed by these merchants, but the increased expense would be met by the sum which now forms the merchant's profit, or, in other words, the value of the order which he holds.

40. Has proof been afforded that parties have come out under the bounty system who would otherwise have paid their own passages?—One instance has been brought within my knowledge in the last examination before the Immigration Board; and it naturally raises a suspicion that such may have been the case in other instances, where individuals have appeared to be of a description above the class to which they represented themselves to belong.

41. Will you furnish the committee with the particulars of the case you have alluded to? The case, as stated by the immigrant himself, is as follows:—"I went to Mr. ———'s office, and saw his clerk, Mr. ———; he asked me if I intended to pay my passage; I said I did; he said I was a great fool, and if I gave him 5*l.* he would send me and my wife out free of expense. I said I would give him 5*l.* if he ensured me a passage out; he wanted the money then, but I said I would not give it until I saw my passage secured. I gave him 10*s.*, and he handed me a blank certificate to get filled up. He asked me what I was; I replied, I was overseer of a manufacturing mill; he said I should put myself down as an agricultural labourer. After keeping the certificate for about a week, I returned it (not filled up) by post to this same clerk; my reason for not getting it filled up was, I did not wish to ask any one in my own neighbourhood to sign what I knew to be false. A few days after I sent him the certificate, I received a note from him, saying that he had submitted my certificate, and directing me to come to ———, to pass the Commissioners' agent. I accordingly did go, and called at the office of Mr. ———, the selecting agent, where I again saw this clerk. Next day I was taken by him before the Commissioners' agent. This same clerk asked me for a doctor's certificate; I got a note certifying to my health, which I gave him, and he copied the doctor's name into the certificate; when I had my passage secured to me I paid him the 5*l.* I promised."

42. Can you furnish the committee with a return of the number of ships which have arrived from the 1st of January 1841, up to the latest period; shewing the ports from whence they sailed?—I can. (*Return handed in.*)

43. Can you furnish the committee with a return of the number of immigrants arrived during the same period from the various parts of the United Kingdom?—I can. (*Return put in.*)

44. Looking at these returns, do you think that the effect of the present system has been to bring a due proportion of emigrants from the various parts of the United Kingdom, according to the population?—I am of opinion, that regard only has been had to the degree of cheapness with which emigrants could be procured, and their means of paying the sums required from them by the bounty agents. These two considerations have, I think, much restricted the selection of emigrants, and the latter more particularly. On this point I will beg leave to quote from the report of the Board, remarks which were suggested by the evidence of a very intelligent immigrant, who stated, "that many useful people were deterred from emigrating, by the charges exacted by the selecting agents at home:" "Our observations during the past six months, has led us to form the same conclusion as that stated by ———, that many respectable and efficient labourers are thus deterred from emigrating, and that less suitable people who are in the possession of the means of making the payment required, usurp the place of good, and useful, and honest labourers, who though in such distress as would induce them to seize with thankfulness the opportunity held out by emigration of bettering their condition, yet are not sufficiently troublesome or burdensome to their neighbours to make their riddance worth paying for. To this cause we attribute the selection of a number of persons who have latterly emigrated under the description of agricultural labourers and female domestic servants, though evidently of a superior class; and also the number of persons encumbered with large families. The former class are able to pay the bounty agent from their own resources, or those of their relatives; the latter are provided probably with the requisite funds by the parishes in England, and in Ireland by the landlords anxious to clear their estates, and glad, therefore, to remit a quarter's or half-year's rent to any of the small holders under whom they may be disposed to emigrate. It is also to be observed, that the usual payment of the 3*l.* per head on children, in addition to the bounty, makes a large family rather an object of preference with the selecting agent." And I would here observe, with reference to a former answer, that in comparing the expense of the system proposed by me with that of the system now in operation, I have considered that portion only of the cost of the selecting agency which is charged upon the bounties, and have not included that charged upon the emigrants themselves. Should the bounty system be continued, I am decidedly of opinion that the practice prevalent amongst the holders of bounty orders, of taking money from the emigrants shipped by them, should be absolutely prohibited, its tendency being, as is represented in the extract from the report just quoted, to cause the introduction of a superior class,

## PAPERS RELATING TO EMIGRATION.

91

class, and also of an inferior class to that which it is the intention of the Government and the interest of the colonists to import at the public expense.

45. Do you consider such a system of agency as is now in operation, calculated to overcome the repugnance which the agricultural population of England has to emigrate?—I do not think that in such an agency, the rural population would feel so great a degree of confidence as would induce them to emigrate; still less, that such an agency would be influential enough to remove the indisposition which they feel to leave their homes in quest of employment in so distant a country as this; and one, too, which they are inclined to view with some degree of dread, as a place set apart for the punishment of evildoers. The agency to be desired is a local one under the immediate superintendence of the Government; and one in which the parochial clergy, who would probably be themselves the actual and the best selectors of emigrants, would feel confidence, and with which they could cordially co-operate. I will here remark, that if the parochial clergy can be enlisted in our service, the class of persons which they might be most instrumental in sending out, is precisely the class wanted by the colonists. I mean, young married couples. Instead of discouraging, as they now frequently do, early marriages, they might consider it rather their duty to promote them, wherever, by emigrating, parties would place themselves in a position to maintain any offspring which might be the issue of their union.

46. Have the surgeons superintendent under the bounty system been generally properly qualified persons, both as regards their medical skill, and their general fitness for the charge of so many persons?—As regards medical skill, they have been, generally speaking, competent. In the qualifications requisite for the management of the emigrants, they have been in too many instances, deficient. They have also been generally much too young for such a charge.

47. According to the regulations, a gratuity of 10s. 6d. per head is allowed to the surgeon superintendent?—Yes.

48. Has that answered the purpose intended; of obtaining a superior class of persons, with an interest in the proper performance of their duty?—Certainly not.

49. In what respect has it failed?—The gratuities, which were intended as an increased payment to the surgeon, and thus a means of obtaining a more efficient superintendence of the emigrants, have been turned into a source of profit to the bounty agents, who, in very many instances, are known to have required from the surgeons a guarantee that they would pay a sum out of their expected receipts from the Colonial Government, for their own passage. The gratuities have thus relieved the merchant from the payment of surgeons, which, under a lower rate of bounties, they were compelled to make out of their own funds.

50. Do you know of instances of the kind, and how many?—Three instances have been officially brought under the notice of the Government, and I have been made aware of others.

51. Do you think the arrangements on board emigrant ships have been such as to ensure order, morality, and discipline, as well as the health and comfort of the emigrants during the passage, as far as they have come under your observation?—Several cases have been brought under the knowledge of the Immigration Board, in which gross immorality and want of order have been shown to have existed in emigrant ships.

52. Have these cases formed the subject of official investigation?—Most of them.

53. What was the result of these investigations?—In these cases, bounty has been refused on such of the emigrants as were shown to have misconducted themselves; and the gratuities have been withheld from the surgeon and officers, when any neglect of duty or misbehaviour on their part has been shown.

54. Have the ships been generally of a suitable class?—Decidedly.

55. Is any examination made of the provisions after arrival here?—Yes.

56. Have they been found of suitable quantity and quality, with reference to the number of emigrants embarked?—With scarcely any exception.

57. Have proper arrangements been made for the separation of the unmarried females from the bulk of the emigrants, and also for their being placed under proper protection, as required by the regulations?—A large number of single females have been found by the Board not to have been under the required protection, and the bounties have been withheld in consequence. The ships have been differently partitioned, according to the opinions of different officers entrusted with their inspection. In some, the passengers' deck was not divided at all; in others, the single males were kept apart from the families and single females; and in others, there have been three partitions. To the latter plan I am inclined to give decided preference, as the one most conducive to morality and decency; and when the partition is formed, from top to bottom, of grating, the current of air cannot be much obstructed.

58. By the regulations, the same number of single young women must be introduced as of single young men; and if the bounty were withheld from the one, it would be withheld from the other also?—It has been so decided by the Government.

*Arthur Savage,*  
Esq.

26 May 1842.

Thursday, 26 May 1842.

*Arthur Savage, Esq. Surgeon, R. N. called in ; and Examined.*

1. YOU are health officer, and have held that situation for about two years?—Yes.
2. You are also a member of the Immigration Board?—Yes.
3. In your capacity as a member of that board, you examine the bounty immigrants on arrival?—Yes.
4. Of what description of persons have you usually found them during the last year?—They have been infinitely worse as a whole, during that period, than previously.
5. In what respect?—In general character, and efficiency as labourers, both physically and morally ; and in many instances being of a description superior to the class of labourers, and consequently unsuited to the wants of the colony. There has been a gradual deterioration during the last eight months.
6. Is there any circumstance to which you would attribute this deterioration?—I ascribe it to the great number of persons who have now entered into the business of bounty agents, and to the emigrants being hastily collected in seaport or other large towns, instead of being selected from the country districts. Formerly, the agency was confined to one person—Mr. Marshall, of London, whose Irish agent, Mr. Besnard, of Cork, had a good opportunity of selecting the class of emigrants suited to the wants of the colony. Some ships, however, have brought an unexceptionable selection of people during the period I allude to.
7. Then a number of inexperienced persons, you think, have engaged in the business of sending out bounty emigrants?—Yes, and some of them not much interested in the welfare of the colony.
8. Have you reason to believe that there have been any cases of fraudulent attempts to pass improper persons for bounty?—Many persons have proved to be not what they were represented to be, and must, therefore, I am of opinion, have been sent out with a fraudulent intent on the part of the agents at home.
9. Then you consider that they have engaged themselves in the business with a view to the profit to be derived from it, rather than to benefit the colony?—Decidedly so.
10. Can you state what number of available labourers you have found in each hundred immigrants, on an average?—About 15 in every 100, men, women, and children.
11. That is in reference to the families, and not to the single men and single women?—Yes.
12. What has been the available amount of labour, taking an aggregate upon both classes?—About 20 to 25 per cent.
13. Have you had reason to be satisfied with the arrangements made for the health and comfort of the emigrants on board ship?—For health and comfort the arrangements were generally good.
14. Have you been equally satisfied with the arrangements made for the order and morality of the emigrants?—Sufficient precautions have not been taken to ensure order and morality on board ; which may be attributed in many cases to the youth, inexperience, and general ineligibility of the captains and surgeons.
15. Was this the general character of the captains and surgeons, or were there exceptions?—Several ships arrived here well conducted in every sense ; and, with scarcely an exception, the provisions and the ships were good, and suited for the service.
16. In respect to health, has there been less mortality than formerly?—Yes.
17. Were any complaints made by the emigrants in respect to the treatment they received during the voyage?—Yes, many.
18. Were those complaints more in reference to immorality than to comfort?—The most important were in reference to immorality.
19. When you say that the surgeons superintendent were unqualified, do you mean that they were deficient in medical skill, or incapable of undertaking so great a charge?—I mean that they were ineligible from want of the necessary acquirements for so important an undertaking ; not that they were deficient in medical knowledge.
20. Were there many instances of misconduct on the part of officers of ships brought under the notice of the Board ; and were the gratuities withheld in consequence?—The gratuities were withheld in three or four instances in consequence of misconduct.
21. Those cases formed matter of inquiry before the Board?—They did.
22. Then the gratuities have failed to produce the effect intended?—Yes, entirely failed, in my opinion ; indeed the gratuity to the surgeon, in most cases, has been his only remuneration ; and it has come to the knowledge of the Board, that the surgeon has even been required to pay 20 *l.* or more, out of that gratuity, as passage money, besides having had to submit to degrading compliances.
23. Do you consider that the gratuities to surgeons and officers have served the purpose of obtaining a better class of emigrants?—They have not.
24. What induces you to suppose that the gratuities have failed in that respect?—The surgeons and officers generally knew nothing of the emigrants before embarkation.
25. Then the gratuities granted have been virtually merely so much added to the amount of bounties?—The gratuities, I think, may be looked upon merely as a bonus to the importers.
26. Have they failed as well in the case of the masters and officers, as in that of the surgeons superintendent?—No ; I think they have succeeded as regards the mates, in making them more attentive to the 'tween-deck duty.

27. Upon

NEW  
SOUTH WALES.

Arthur Savage,  
Esq.

26 May 1842.

27. Upon the whole, do you conceive that the arrangements for the general management of the ships, and the health of the passengers, have been inferior to what they were formerly?—The management of the ships, in point of the physical treatment of the emigrants, has been as good as in former years.

28. Will you define to what in particular you attribute the falling off you have mentioned in point of moral observance?—I attribute it to want of tact in the persons appointed to superintend the emigrants, as well as to the want of persons competent to frame the necessary regulations, and to see them carried into effect. The evils to which I refer, may be attributed generally to the want of proper order during the early part of the voyage.

29. You appear to state that there has been an inferior description of persons sent out; might not this have rendered proper arrangements more difficult?—Yes, in consequence of the emigrants being not only of an inferior description, but of a troublesome character also.

30. Have you seen the paper required to be filled up by every person desirous of a passage on bounty?—I have seen and perused a great many.

31. Can you account for the introduction of so large a number of unsuitable persons, in spite of the precautions taken by these certificates?—Some blame may be attributable to the Government agents at the ports of embarkation, whose duty it is to see that the qualifications of the emigrant embarking, judging from personal appearance, correspond with those given to him by his certificate; but where bold and well-concerted deception is practised, the agents cannot detect forgeries unless they have previously entertained suspicion.

32. Are you aware whether any means are adopted to ascertain that the householders who sign the certificates in question, are really the respectable persons they represent themselves to be?—I am not aware that there is any check in this respect, except that of requiring a clergyman or magistrate to certify to the respectability of the parties.

33. Your opinion then is, that these certificates are liable to great abuse, and are insufficient for the purposes intended?—That they are so has been proved, I think, by the many cases of deception discovered by the Board.

34. Are these certificates returned to the parties named in them, or to the affreighter?—To the affreighter, I believe.

35. Would it not tend to prevent alteration in these certificates, if they were transmitted to the colonial government, after being signed by the proper officer?—It would check alteration subsequently to their approval by the Commissioners.

36. Have you reason to believe that alterations have been made?—I have.

37. Do you consider that the instances in which you suspect deception to have been practised, are so numerous as to bear a large proportion to the whole number of immigrants introduced?—A very considerable proportion; I have no hesitation in saying that we have failed to detect a large number.

38. Then in fact, it is not a casual, but a standing defect?—Undoubtedly so, as was proved in evidence taken before the Board in the case of the "Sir Charles Napier."

39. Can you suggest any practical additional means of precaution, by which these abuses might be reduced in number, if not wholly eradicated?—Yes, I think they might be greatly reduced by having local travelling inspectors, whose duty it should be to examine personally the candidates for free passages, and make inquiry respecting their general character.

40. Do you propose that these local inspectors should be appointed by the Government, and held responsible for the efficient discharge of their duty?—Yes, they should be so appointed, and held strictly responsible to the Commissioners of Colonial Lands and Emigration.

41. Can you form an opinion as to the number of active agents which would be required to carry on that inspection, throughout England, Ireland, and Scotland?—Ten active men might be sufficient for England: four would, I think, answer for Ireland; but this the Commissioners would be able to determine more accurately.

42. Are you aware whether that mode of proceeding would answer for Ireland?—Yes; I filled the ship "Magistrate," in which I came out as surgeon superintendent, through the instrumentality of the clergymen, with whom I put myself in communication, and by visiting sundry places, at stated times, notice being previously given of my intent to do so; in this way, and by establishing depôts, I consider emigrants of the most eligible kind, and in sufficient number, could be procured.

43. Are you aware whether the practice of requiring from the emigrant himself a sum of money, independent of the bounty, has been productive of much injury?—Yes, I think it has; and that many objectionable persons have been embarked in consequence of their being able to pay the sums demanded, while unobjectionable persons may have been refused because they could not pay the sums required of them.

44. Does it appear to you that the agent would be more likely to require the sum from a person whose passing the Board here might be doubtful, than from a really useful person?—Certainly; but I am under the impression that many of the agents acted on the opinion that almost any person, of whatsoever age or character, would pass the Board here.

45. The effect of that must be to encourage the introduction of persons not likely to prove useful to the colony?—Yes.

109.

46. Do

NEW  
SOUTH WALES.

Arthur Savage,  
Esq.

26 May 1842.

46. Do you not think, if it were printed in the certificates, as a warning to emigrants, that they were not to pay the additional sum, it would greatly check, if not wholly prevent this practice?—Decidedly.

47. Then you would recommend that such a condition should be printed in the certificates?—I would most strongly.

48. Would you recommend that the sums so taken by the agents at home, should be deducted from the amount of bounties, or that the bounty should be entirely forfeited?—I would recommend that the bounty, in each case satisfactorily proved, should be wholly forfeited.

49. Do you consider the bounty itself, without any addition, taking the average, if fairly fixed at 19*l.*, remunerative?—My opinion is, that the bounty, at the present rate of freight and cost of provisions, is fairly remunerative.

50. Supposing that all the persons introduced had been useful, would you consider the number introduced in 1840 excessive?—No; if those who arrived had been all useful people, they would have been immediately engaged, but numbers of them were burdened with large and helpless families, and ought not to have been allowed to embark.

51. Supposing that the system were acted upon, which would only admit of the introduction of grown-up children, does your observation extend to them, or to young children?—My observation extends to young children; I would not allow any family to emigrate with more than two young children; I mean those requiring the assistance of a mother.

52. What age would you fix for such children?—Their age should not be under four years.

53. You have stated objections to the bounty system; is there any other which you think could be adopted which would ensure a sufficient number of a better description of persons being introduced, and at a less expense?—Yes, and at a less cost, if the ships were fitted out in Government yards, and every person engaged in fitting them out were made answerable as a Government officer. Captains of private ships, more particularly the regular traders, might also be allowed to bring out small numbers.

54. Do you think it would be better for the Government to provision the private ships, or allow the captains to do so?—I would not propose this as a system, but merely as an auxiliary to an established system under the direction of the Government.

55. You have stated the arrangements on board the ships generally to have been satisfactory; there have been different arrangements: what one would you consider the best calculated to ensure morality and order among the emigrants?—That which would keep the young men apart from the women, by means of a latticed partition.

56. Have not the comforts of the emigrants been circumscribed by taking intermediate passengers?—Yes; I object to the admission of intermediate passengers; they detract materially from the comfort of the emigrants, by occupying the best part of the ship, and interrupting the current of air.

57. Can you state how many immigrants have arrived in any one week?—From the 24th to the 30th of January inclusive, 1,239 arrived.

58. The only ground of even so large a number not going off was, that the colonists did not like them?—Their not going off was owing to so large a number arriving at the same time, and some of them being of the character I have mentioned, and encumbered with large families.

59. Has the port of embarkation, or place of selection, operated to introduce an inferior description of persons?—In my opinion it has.

60. Has it been the practice on board the bounty ships to dispose of articles to the emigrants, including fermented and spirituous liquors?—Yes, both provisions and spirituous liquors; it is a practice which has been the source of evil, and ought to be discountenanced on every account.

61. Have any instances been brought under your notice, in which the emigrants have been charged exorbitant prices for those articles, and have so spent the money which would have been serviceable to them on arrival here?—Yes.

62. Is this countenanced by the officers?—It is done, I believe, with the knowledge of the captains.

63. For whose benefit are these articles sold?—For the benefit either of the captain or affreighter.

64. Was the disposal of such liquors with the knowledge or consent of the surgeons superintendent?—I believe not with their sanction.

65. How many cases of quarantine have there been?—Four; three of importance, the "Eleanor," "Ayrshire," and "New York Packet;" the last in particular.

66. Considering the amount of immigration, do you think that a large average?—No; it is less than the average of former years.

67. In the case of the "New York Packet," which you say was one of particular importance, to what cause would you attribute the illness on board that ship?—It was evidently attributable to the want of proper care on the part of the surgeon superintendent.

68. On what account was she placed in quarantine?—On account of small-pox in the first instance; but she was continued in quarantine on account of typhus fever.

69. Was the fever prevalent on board when she arrived?—Yes; but that circumstance was concealed, as was discovered in the course of an examination before the Immigration Board.

70. Was the fever of a severe type?—Yes; fever of a marked typhoid character was discovered

## PAPERS RELATING TO EMIGRATION.

95

discovered by the naval surgeon, who was appointed to take charge of the healthy in quarantine.

71. How many deaths were there?—Nine deaths occurred subsequently to her arrival.

72. Was it necessary to place the sick as well as the healthy under care of a surgeon from the shore?—Yes.

73. What was the cause of appointing a surgeon from the shore when there was one on board?—He was appointed in consequence of a petition, signed by the best informed of the immigrants, stating their want of confidence in the surgeon of the ship.

74. Are there any precautions which you would recommend to be taken, on the arrival of immigrant ships, with reference to the health of the immigrants, and their better appearance, which might render them more fitted to enter at once into service?—I think it highly desirable that on arrival the immigrants should be landed on Garden Island, or some other suitable place, to afford them an opportunity of washing their clothes, &c.

75. Is there any similar practice in any other country?—I understand it is done in America, although the voyage there is much shorter than to this colony, and the climate is colder.

76. Would this be attended with any expense?—But very trifling, if any.

NEW  
SOUTH WALES.

Arthur Savage,  
Esq.

26 May 1842.

Friday, 27 May 1842.

Joseph Long Innes, Esq. J. P., Superintendent of Gangs and Assistant Police Magistrate, called in; and Examined.

J. L. Innes,  
Esq. J. P.

27 May 1842.

1. You are a member of the Immigration Board?—Yes.

2. How long have you been a member of that Board?—About two years.

3. Is it your duty, in conjunction with the other members, to examine the immigrants on arrival?—I have taken very little part in this portion of the duties of the Board, on account of personal infirmity.

4. You have been engaged, however, in investigating complaints made by immigrants on arrival?—Yes; I have attended particularly to this branch of my duties.

5. Have there been many cases of complaint during the last 12 months?—About seven.

6. What was the nature of those complaints generally?—Complaints of the conduct of surgeons and of masters, of ill-treatment of immigrants by both, and of immorality on the part of the officers.

7. Did any of the cases you allude to appear to be well founded?—With two exceptions, the "Ayrshire," and, I think, the "Agnes;" and in almost every case, in addition to the immediate cause of complaint, various other irregularities were disclosed in the course of the investigation.

8. Would the latter cases have been undiscovered but for the former ones?—I am of opinion that they would; I am quite certain of it. In the case of the "Marchioness of Bute," irregularities were made known to me subsequently to the departure of the ship, which escaped detection at the time the immigrants were passed.

9. Will you state generally the nature of the irregularities or cases of immorality which were brought under your notice?—Complaints against the captains for ill treating the immigrants, as in the case of the "Carthaginian," which was brought before the supreme court.

10. In what way did the case of the "Carthaginian" transpire?—In the course of an investigation, in consequence of a complaint made by M. A. Bolton, before the Board, three of the members of the Board being magistrates, felt it to be their duty to issue a warrant against the captain and doctor, which was prepared and signed by me; they were thereupon committed to take their trial, admitted to bail, tried before the supreme court, found guilty, and sentenced each to a fine of 50*l.*, and to be imprisoned for six months. The immediate case of ill-treatment for which the captain and surgeon were tried, as proved on the trial, was their having, one night in the month of December, brought M. A. Bolton on deck, about ten o'clock, with six other females; she was then handcuffed with her hands behind her back, and buckets of water were thrown over her by the surgeon and captain, varying in number from two to seven, as stated by the different witnesses. This case, in which a verdict was found against the parties, was not the only case proved against them before the Immigration Board. It was proved to the Board that, some weeks previously to this, in consequence of a trifling dispute about the cleaning of a mess kid, the captain and surgeon had handcuffed the same person, and thrown several buckets of water over her; and had kept her on the poop in her wet clothes so late as 11 o'clock at night, but how much later was not proved.

11. Was there any misconduct on the part of M. A. Bolton, which could lead to such unfeeling treatment?—Not at all; she appears to have been a correct but peevish girl; she was a very moral girl in her conduct.

12. Independently of the sentence passed on the surgeon and captain, did the government take any steps to mark their sense of the impropriety of such conduct?—Yes, their gratuities were withheld.

13. Were there not considerable deductions on the bounties on the immigrants by that ship?—Very considerable; many young women not having been under the protection

NEW  
SOUTH WALES.

J. L. Innes,  
Esq. J. P.

27 May 1842.

required by the regulations, and many having been proved to have been women on the town, the bounties were disallowed on such, and on a corresponding number of young men.

14. In the course of your inquiries, were there any other improprieties brought under your notice?—Many of the immigrants presented fictitious certificates, and are said in some instances to have paid 6*d.* a signature. This system of fraud has appeared only in the case of a house in Liverpool.

15. How do you think they were able to deceive the agent of the Commissioners, who is obliged to countersign the certificate?—I am sorry to state it, but I can only attribute it to great neglect on his part.

16. Will you state the other subjects of inquiry brought under the notice of the Board?—There were several complaints, both against surgeons and captains.

17. Of what nature?—Immorality.

18. Were there any complaints as to the medical qualifications of the surgeons, or their unsuitableness to exercise the necessary control on board?—In the cases of the "New York Packet" and the "Mathesis," there were very serious complaints against the surgeon for incapacity.

19. In the case of the "New York Packet," the quarantine expenses were not paid?—They were not.

20. What were the reasons for withholding the bounties in the case of the "Mathesis"?—The misconduct of both surgeon and captain, and the insufficiency and bad quality of the provisions; but the reasons will be more clearly seen, as contained in an extract from the Report of the Board, approved by the governor, which, with permission, I will read to the Committee:

"It is our painful duty, therefore, to report that we are not satisfied that the immigrants have been supplied with a sufficiency of wholesome provisions and water, and with reasonably comfortable accommodation; and, we must add, that a want of order, regularity, and decency, appears to us to have existed in this ship, which is, in the highest degree, discreditable to all parties concerned. We cannot, therefore, recommend the payment of any portion of the bounties claimed."

21. Are there any other cases of irregularity than those to which you have already alluded?—The almost universal sale of wine and spirits to the immigrants.

22. For whose benefit?—I am not aware, but certainly with the concurrence of both captain and surgeon.

23. Did it appear that the immigrants had been charged high for such articles?—They were charged 16*s.* per gallon for rum.

24. Could they obtain any quantity they required?—It appears that, in some instances, they could. I have a case before me, which was reported on by the Board, in which a man bought 4*s.* worth on the 23d, 8*s.* worth on the 26th, and 4*s.* worth on the 27th of one month. In this case it appeared that the captain had a sum of money belonging to the immigrant in his hands, from which he took payment. In another case, it was distinctly proved, that an immigrant in the same vessel was allowed to purchase articles, confessed by the master and surgeon to have been unnecessary, even after his money was expended, on depositing his watch in the hands of the chief officer as security.

25. Although these complaints were numerous, yet they formed the exception rather than the rule?—Yes; but I am very much inclined to think that many irregularities occurred which never came to the ears of the Immigration Board.

26. Were these irregularities discovered to have existed in the ships recently arrived, or in those which arrived 12 months previously?—In the ships recently arrived.

27. Then you think there has been a falling off latterly?—Decidedly.

28. To what cause do you attribute these irregularities?—To the gross inattention of the shipping agents at home, whose only aim appears to have been to make as much money as they possibly could out of their bounty orders; to the incapacity of the persons put on board as surgeons; and, I must add, to the culpable neglect of the port agents of the government.

29. If the latter had done their duty in examining the certificates, these irregularities would not have occurred?—There would have been fewer irregularities.

30. Then, according to this system, it would appear that the business is carried on more as a mere mercantile speculation than with any regard to the wants or interests of the colony?—So it appears to me.

31. From your observation, have the immigrants who have arrived during the last 12 months been suited to the wants of the colony?—A large portion of the females have been of a good description, but a large number have been of a description which should never be allowed to embark, as will clearly appear from an extract which I will take the liberty to read from a Report of the Board:

"The manner in which unmarried females are represented to have been shipped, without reference to character or qualifications, by the person to whom Messrs. ——— entrusted the selection of the immigrants imported by them during this season, is so disgraceful, that we should have been inclined to receive the statements made in the course of our inquiries as exaggerations, if not perversions of the truth, but for the affidavit of the witness

J. I. Innes,  
Esq. J. P.

27 May 1842.

witness — — —; not that we are surprised to find that but little attention has been paid to character in the selection of females, for, of want of regard to the interests of the public here, in that particular, we have had but too frequent proof; but we could not have supposed that the evil found by us to exist was of so shameless and so base a character. The statements to which we refer will be found in the evidence of — — —, — — —, — — —, and — — —; and from their evidence we consider the following facts to be fully established:

"That the clerk of — — —, agent, has been more than once heard to say, that, so long as he got his number of single women, he did not care if he took them from the streets.

"That the same clerk has encouraged women of the worst character to emigrate under Messrs. — — —'s bounty permissions.

"That the same clerk was in the habit of getting certificates prepared in a manner nearly approaching to forgery. — — — states, upon oath, that the certificate which was produced to us in his favour was filled up by this clerk; that he knew nothing of the signatures attached to the document, and that the signature purporting to be his own was not written by him. — — — states, that 'all individuals had to do was to say that they would go, and this clerk would make it right for them.'

"And we are further of opinion, from the evidence given by — — —, and from similar statements that have been made to us, in other instances, that the same clerk has been in the habit of directing single men, who applied for a passage, to obtain from the streets, or the brothels of — — —, or whence mattered not, the requisite appendage of an unmarried female. It may be well to remark here, that we find a large number of the certificates of character, produced by emigrants embarked at — — —, to be signed by this clerk."

32. Are these observations intended to apply generally to the system, or to the cases which have come under consideration of the Board?—Generally, as regards the parties in Liverpool. The London ships were better managed, and particularly those fitted out by Mr. Marshall.

33. Have you any suggestions to offer, tending to improve the system?—In reply to this question, I feel much diffidence in venturing upon any suggestions; the great length of time I have been absent from Europe, nearly 17 years, and the changes which have taken place during that period have been so important, that I fear I am but ill qualified to offer an opinion as to the best method of conducting emigration; but I may state generally, that the surgeon should, in all cases, be approved of by the Colonial Land and Emigration Commissioners, who would no doubt satisfy themselves, not only as regarded his professional capacity, but also as to his moral character and general capability for so grave a trust. A man may be a good surgeon, and at the same time altogether deficient in the other qualifications for the important duties of the superintendent of an immigrant ship. The surgeon should clearly understand that, as regards authority over the immigrants, he is the first person on board, and that he is the servant of the public, and not of the parties importing the immigrants. He should make himself acquainted, as far as possible, with every particular connected with the immigrants under his charge, so as to be able, on arrival in the colony, to afford the Board every information. I am also of opinion, if the salaries of the local agents of Government at the different ports, as also those of the selecting agents (should such be appointed), were made in some degree dependent on the final passing of the immigrants in the colony, it would have a beneficial effect. The sale of wines and spirits on board immigrant ships cannot be too strongly condemned; and (after due notice being given) I would not hesitate to recommend the bounty being withheld in any ship where it was proved to have been practised.

34. Have the gratuities to the surgeons and officers been attended with a proper selection of officers desirous of securing the comfort and morality of the immigrants?—Certainly not.

35. To what do you attribute this failure?—To the incapacity of the surgeons appointed. Had proper surgeons been appointed, nearly all the irregularities brought under the notice of the Board would have been prevented.

36. Can you state anything to the committee respecting the present demand for labour?—I cannot.

37. Do you think there has been an excess of supply within the last 12 months?—Certainly not.

38. Has the supply tended to reduce the rate of wages?—It has caused a considerable reduction on the rate of wages; it has brought them, so to speak, to a wholesome state.

39. Then a very copious supply of labour was necessary, in order to reduce wages to such a moderate rate as the settlers could afford to pay?—Certainly.

40. The effect of this reduction is, that the immigrants are not so prone to change their employers?—Yes, they are more settled, not having any inducement to hunt for higher wages.

41. Do you know whether there are many immigrants out of employment now?—I do not think there are many.

NEW  
SOUTH WALES.

*J. L. Innes,*  
Esq. J. P.

27 May 1842.

42. Are there any so who are of a useful description?—I do not think that any useful man need now be without employment for a single day.

43. Conncted with your observations on the surgeon-superintendent, is it necessary, do you think, that they should be in the interests of the public rather than of the affreighters?—Certainly; they should consider themselves the servants of the public. There have been two instances only in which the surgeons have come forward to expose irregularities.

44. Have there not been written engagements, on the part of the surgeons, to assist the affreighters against the public?—There have.

45. What is the effect of the affreighters requiring from the emigrants a certain sum of money, in addition to the bounty?—A very bad one; the people are left penniless on their arrival here, and become discontented.

46. Has it not also the effect of inducing persons to come out on bounty, who are of a superior class, and likely on arrival here rather to employ labourers than become labourers themselves?—Certainly.

47. Do you consider that the parochial clergy might be beneficially employed in the selection of emigrants?—I am convinced that the agency of the parochial clergy would be the best that could be employed.

48. Do you think that the fines, and the withholding the bounties, in the cases you have spoken of, will have the effect of preventing or checking attempts at imposition in future?—I think there will be greater caution, and more honest dealing, on the part of the ship-pers, in future.

Friday, 27 May 1842.

*Hutchinson Hothersall Browne, Esq., J. P., called in, and Examined.*

*H. H. Browne,*  
Esq. J. P.

1. You are Water Police Magistrate?—I am.

2. You are also a member of the Immigration Board?—Yes.

3. Do you attend, in that capacity, the examinations of the immigrants on arrival?—I do, with few exceptions.

4. How long have you acted in that capacity?—About 20 months.

5. Have the immigrants been generally of a useful class, or has there been any deterioration during that period?—I think that they have not at all improved latterly; a large proportion of those who have arrived within the last eight months have been from the sea-port towns; I think that but a small proportion of those who have arrived during that period have been of a useful class, and few have been such as I should have sent up to my own station.

6. Can you state what the generality of them have been employed in at home?—I have found that several, as many as 60 of those who have arrived during the last few months, had been employed at home about the wharfs and shipping, and have gone to sea again.

7. Would you attribute this falling off to the fact of a greater number of persons embarking in the trade, without the experience necessary to conduct it properly?—I think that the principal cause is the reckless manner in which selections have been made at home. The best ships have come from London; the worst have come principally from Liverpool and Greenock, where no care seems to have been taken in the selection, the object being merely to fill up the ships.

8. Do you conceive then that the business has been conducted as a mere mercantile speculation, having regard to profit only, and without reference to the wants or interests of the colony?—I think it has been altogether a mercantile speculation, carried on with a view to profit only.

9. Have there been many instances of complaint that have formed the subject of investigation before the Immigration Board, and what has been their nature?—Very few cases of complaint were formerly made; most of the investigations which have taken place lately have arisen out of abuses accidentally discovered to the Board; in fact, the people are not willing to complain, even where just causes exist, provided they have been tolerably well treated by the captain and surgeon.

10. Have the arrangements in the ships, with respect to the separation of the married and unmarried females, been such as to insure morality on board?—The ships have been generally good, and well provisioned. The best arrangement for the observance of morality, has been the entire separation of the females from the males; the plan pursued by Mr. Marshall. Intercourse between the crew and the young women has been thus prevented. Neither morality nor decency can be insured on board vessels without partitions.

11. Have there been any complaints with regard to immorality on board the ships?—In most cases, where investigations have taken place, immorality has been found to have existed, though not previously complained of.

12. Have not the ships, on board which immorality has been proved to have existed, formed

27 May 1842.

formed a very small proportion to the whole number that have come out?—A very small proportion; but if we had been aware that abuses prevailed, such as have been discovered during the last eight months, we should probably have discovered more.

13. Then you have been put upon your guard by the discovery of abuses within the last eight months?—Yes; several abuses have come to light during that period.

14. Do you think Marshall's ships have been better conducted than any other?—They have been decidedly superior to any other ships. The only objectionable arrangement in his ships was the blocking up the after part of the between-decks, by berths for intermediate passengers, which prevented the free circulation of air.

15. Have the surgeons-superintendent in general been competent, both as regarded their medical skill, and their fitness to take charge of so large a number of people?—I think they have not generally been proper men; they have not been possessed of the moral qualities requisite for so responsible a situation.

16. Then, in your opinion, it is a matter of vital importance that the surgeons-superintendent should be not only skilful in their profession, but also possessed of the moral power requisite for the proper control of the people committed to their charge?—Certainly.

17. Have the gratuities to the surgeons answered the purposes for which they were granted?—I think not; they have been of benefit only to the importers, as relieving them from the payment of surgeons.

18. Then the only effect of granting the gratuities to surgeons has been to create a virtual addition to the bounties?—Yes; such has been their only effect.

19. In any future system, how would you have the surgeons appointed and remunerated?—I would recommend that their appointment should be subject to the approval of a competent Medical Board at home, and that they should be paid by gratuities.

20. Is it not absolutely necessary that they should be in the interest rather of the Government than of the affreighters?—Most certainly; they should be officers in the interest of the Government, and in no way connected with the affreighters.

21. Then they should hold their appointments from the Government?—Yes, and their gratuities should be subject to the approval of the Board here, to whom they should be bound to communicate all they know of the immigrants.

22. Being as at present appointed, it is the duty of the surgeons rather to withhold information from the Board than to come forward and expose any irregularity which may have taken place?—It has been proved to the Board that such is the case.

23. Have you known instances where young single females have come out without protection, and have been told off to protectors in harbour only, to insure payment of the bounties?—It is my impression that such a practice has been very general.

24. Have not the cases been numerous, in which the bounties have been withheld on young single females who have not come out under proper protection?—A great many bounties have been withheld on that account.

25. Will not this have the effect of checking the practice you have mentioned?—It will have a beneficial effect in checking it in future.

26. Do you think the withholding the bounties will have the effect of inducing the merchants to send out a better description of people; and are you of opinion that the amount paid by the Government for the importation of each immigrant is sufficient to enable the importers to send out such persons only as would be useful to the colony?—I certainly think such should be the effect; and from a calculation I have made, I am of opinion that the business might be conducted with advantage to the importers, with no other payment than that received from the Government, and yet with strict adherence to the regulations. In support of this opinion I will read an original charter-party, between —, a holder of a bounty order, and —, the owners of a suitable vessel for the conveyance of emigrants: "It is this day mutually agreed between Messrs. —, owners of the ship —, to be classed A. 1, at Lloyd's, and Messrs. —, merchants. The said owners agree hereby to lay the vessel on the berth for Sydney, New South Wales, for cargo in the lower hold, and passengers in the 'tween-decks, they undertaking to victual the passengers, and equip the vessel in every respect to the satisfaction of the said —, and the Government emigration agent. The said — engage to procure as many passengers as the 'tween-decks will accommodate according to law, and to provide all who go out under the bounty regulations with certificates, approved of by the Colonial Emigration Commissioners, or their agents, in England; and for others not going under the bounty regulations, to pay the said owners 16*l.* nett for each adult. The said owners agree to address the vessel to Messrs. —, of Sydney, for collection of the bounties, under authority from the colonial government, and to pay them for recovering the same a commission of four per cent. on the amount, together with the usual commission on sales of surplus stores, or freight collected, and on disbursements. The said owners agree to pay Messrs. —, on clearing out at the Custom-house, 20*s.* for every adult bounty passenger put on board as aforesaid, and 10*s.* for each young person under fifteen years of age, and 10 per cent. on cabin passage-money. The owners paying all expenses of advertisements, and the ship being in every respect sent out on owners' account. The vessel to be ready to sail by the 25th of —; the owners to detain the ship two or three days in the River, for the purpose of mustering the passengers, as may be required."

NEW  
SOUTH WALES.

H. H. Browne,  
Esq. J. P.

27 May 1842.

27. Is there any other system you would propose by which a better class of immigrants could be obtained at a less expense to the public? If agents at home were appointed by Government to select the Emigrants, and payment of the bounties were made to depend on the approval of the Board here, of each person selected, I think a better class of people might be obtained on cheaper terms.

28. You mean that the selecting agents should be appointed by the Government?—I do.

29. How would you provide for the passage of the emigrants in such case?—If the Government would enter into contracts with shipowners, such as I have read to the Committee, they might charter vessels, and send them out fully as cheap as merchants.

30. Then the selecting agents should obtain the emigrants from the country districts, and not, as at present, from the sea-ports?—Certainly, from the inland counties and agricultural districts.

31. Might not a better selection be obtained through the medium of the parochial clergy?—I think, perhaps, that if the parochial clergy were actively employed in the selection of emigrants, they might be disposed to send persons whom they might wish to get rid of, rather than persons useful to the colony.

32. Has the practice which has obtained of the parish authorities paying a portion of the bounty to the agents been beneficial or otherwise?—I think that any payments to the agents other than the legitimate bounties, tend to the introduction of persons whom the parish authorities, or others, are glad to get rid of, and to prevent the introduction of those of a more suitable description.

33. These are not the parties who would be most beneficial to the colony?—No.

34. Has not the practice of requiring certain sums of money from the emigrants themselves been instrumental in introducing a superior class of persons, who, on arrival here, would be more likely to employ labour, than to engage as labourers themselves?—It has.

35. Have the masters in command of immigrant ships been generally of suitable character?—The Scotch and Liverpool ships have been the worst commanded. The masters have not been at all fitted for the charge of immigrant ships during a long voyage. I think it of great importance that the master of an immigrant ship should be of a superior class, and one who would co-operate with the surgeon. I think also, that the mate should be competent to take charge of the ship, in case of any accident to or illness of the master, which has generally not been the case.

36. Would you say that the ships have been well conducted?—Yes, the generality have been so.

37. Do you think that the gratuities to the master and officers have had the desired effect?—I do.

38. They have rather tended to induce them to be more attentive?—Certainly.

39. If immigration were in the hands of the Government, do you not think it would insure a certain supply of labour arriving in the colony at the seasons when it would be most required, and also insure a better description of people?—Under a government system the supply would be more regular, and the conduct of the ships better.

40. Have you had any reason to believe that the certificates furnished by the parties have been falsified?—A great number have been proved to the Board to be false.

41. Have the Board had direct evidence of that?—I think they have.

42. Do you know what is the course with respect to these certificates, after they are signed by the Government agents?—They are sent, I believe to the bounty agents.

43. Would it not be better if they were sent direct to the local government here?—Certainly.

44. Has the system of selling spirits on board ship to the emigrants been carried to any extent?—I think the sale of spirits and wines has been encouraged, as an addition to the profits of the importers.

45. For whose benefit have the sales been made?—Generally for the benefit either of the master or the owners.

46. Can you give an instance?—Several instances have come under the notice of the Board.

47. Have you any means of knowing what the present demand for labour is?—I have not.

48. Do you think, from your own observation, that there has been an excess of supply during the last 18 months?—I think that there may have been an excess, in so far as that the whole did not find immediate employment, although a demand existed for them in the colony.

49. If they had been of suitable callings they would all have been employed?—Yes.

50. Are there many now out of employment, and are they useful people?—I do not think that there are any useful men now out of employment.

51. Have the rates of wages much diminished?—I have not known shepherds engaged for less than 18*l.*, whilst they are generally engaged at from 20*l.* to 25*l.* with rations.

52. This

## PAPERS RELATING TO EMIGRATION.

101

52. This is as much as the colonists can afford to give?—Quite as much.

53. Then but for the very copious supply which arrived within the last 12 months, wages would have been so very exorbitant as to have caused great distress amongst the employers?—Before the supply arrived wages were at an exorbitant rate; I myself had been paying 50*l.* to a shepherd, in order to save my sheep.

54. That must have entailed an absolute loss on you?—I considered it much too high, but had no alternative.

55. The importation of labour has been attended with very great advantage to the colony?—It has been attended with inestimable advantage.

NEW  
SOUTH WALES.

H. H. Browne,  
Esq. J. P.

27 May 1842.

Friday, 27 May 1842.

William Harvie Christie, Esq., J. P., a Member of the Immigration Board; called in, and Examined.

1. How long have you been a member of the Immigration Board?—Since January 1841.

2. In that capacity you visit the immigrant ships, for the purpose of examining the bounty immigrants?—Yes.

3. Have you attended pretty regularly?—Yes.

4. According to your observation, have the immigrants been generally of a useful class?—I think they have deteriorated lately.

5. From what cause?—I think that the importers have been less careful in their selection, in Liverpool particularly; and that a very bad description of people, and many prostitutes, have been shipped in consequence of the employment of a lower description of agents.

6. Have not the cases you allude to been detected by the Immigration Board, and the bounty withheld in consequence?—Very generally, but not in all cases; many escape detection from an indisposition on the part of the immigrants to make complaints.

7. Then, notwithstanding the vigilance of the Board, you think ineligible parties have been passed for bounty without detection?—I think so.

8. Has not the bounty been withheld on a considerable number of young women, who were not brought out under proper protection?—Yes, on a great many.

9. Do you consider these cases as likely to cause stricter adherence to the regulations in future, so as to ensure a better description of people?—Decidedly; but I think the most efficient check would be to appoint naval surgeons to take charge of the immigrants.

10. Have not the gratuities to the surgeons superintendent, established by the regulations, been attended with the good effects anticipated from them?—I think the gratuities have not had the effect of securing a better class of surgeons, and that they have frequently been turned to the profit of the shippers only.

11. Then the gratuities have been virtually merely an addition to the bounties?—All affreighters may not have made this the case, but I am aware that some have done so.

12. Have the gratuities to the officers been attended with better results?—I think that the gratuities to the masters and other officers have had a good effect.

13. Do you think, that under what is called the bounty system, the most useful and moral class of immigrants is likely to be obtained?—I think not, as at present constituted.

14. Is it conducted as a mereantile speculation, so as to afford a profit to the parties engaged in it, without reference to the interests of the colony?—I am of that opinion.

15. Is the result of this, that the emigrants are selected from seaport towns, rather than from the country parts likely to afford the description of people required by the colony?—I think so.

16. Is there any other system that you could propose, by which a better class of immigrants might be obtained at the same cost to the colony?—I think that the appointment of naval surgeons to the emigrant ships, with the power of rejecting ineligible persons, would be attended with a beneficial result to the colony; and I consider that the selecting agents should be persons of established character.

17. How would you, in case the selecting agents were appointed by Government, provide for the passage of the emigrants?—I am not prepared to say that the affreighters should not appoint their own selecting agents; but in every instance the appointment should be confirmed by Government, and the agents should be subject to dismissal on frauds being detected.

18. Do you not think that ships could be obtained for the conveyance of emigrants, upon equally advantageous terms, if chartered by the Government?—I think that ships might be chartered by Government upon as advantageous terms, but individual enterprise has effected much towards inducing emigration.

109.

19. Have

W. H. Christie,  
Esq. J. P.

NEW  
SOUTH WALES.

W. H. Christie,  
Esq. J. P.

27 May 1842.

19. Have there been many cases of complaint investigated by the Immigration Board?  
—Yes, several.
20. Of what nature?—Chiefly immorality and want of order.
21. Have those investigations led to the stoppage of the bounties or gratuities?—The gratuities have been refused to the surgeons and officers, and bounties have been stopped, according to the specific case.
22. Do the cases you allude to, form rather the exception than the rule?—In almost every investigation, the complaints brought forward have been substantiated, and I have very little doubt that there have been many cases of complaint that have never come under the notice of the Board.
23. Does the proportion of bad ships increase?—Decidedly so.
24. Do you think it essential that the surgeons superintendent should be in the interest of the public, and not in that of the affreighter?—The surgeon should be in the interest of the public; at present it is his interest to pass and admit every person, whether eligible or not.
25. Are you enabled to state the present demand for labour?—I am not; but, having been lately up the country, I am enabled to say, that though wages are reduced, there is still a demand for labour.
26. Have wages been reduced below an adequate remuneration to the immigrant?—No; wages are still remunerative, being from 16*l.* to 18*l.* per annum.
27. Unless a copious supply of immigrants had been obtained during the last 12 months, would much inconvenience have been experienced by the colonists in obtaining labour at a price which they could afford to pay for it?—Yes, the very greatest inconvenience. The flockholders would have been obliged to destroy their lambs, and the harvest could not have been got in.
28. Are you aware whether there are many immigrants at present unemployed?—I believe not many.
29. Are there any useful people remaining unemployed?—I think that every useful man in the country can now find employment at remunerating wages.

Wednesday, 8 June 1842.

*William Augustus Miles*, Esq., J. P., Superintendent of Police, called in; and Examined.

W. A. Miles,  
Esq. J. P.

1. You are a member of the Immigration Board?—I am.
2. How long have you been so?—Since September last.
3. In your capacity of superintendent of police, have you become acquainted with the general condition of the working classes, in the town of Sydney?—During the short time I have been in the colony, I have endeavoured as much as my duties would allow me, to obtain a knowledge of the working classes.
4. Will you have the goodness to afford the Committee such information as you possess as to the existing demand for labour in the town?—At present the demand for labour is not so brisk as it has been, owing, not so much to the imported masses of people, as to recent monetary depression. By a return of wages from 1830 to the present period, which, together with a return of the prices of rent, provisions, and clothing, during the same period I will read to the committee, I find that since 1839 the aggregate of wages paid to 21 different classes of working tradespeople has not decreased. In some few trades there has been a steady increase; in others, a slight depression; but in all, a great increase since 1830. The depression is among those classes requiring little skill in the trade or calling, and to which those of lazy dispositions, or who are fit for nothing else, may occasionally turn to seek employment, in order to meet the wants of the day; such as lumpers, day labourers, sawyers, plasterers, and common bricklayers. The wages of these classes will be subject to fluctuations, but there are some which will not be so easily disturbed in the rates of wages.

## REMARKS CONCERNING VARIOUS TRADES.

REMARKS.	INFORMANT.
<i>Bakers.</i> —Plenty of inferior men; good hands can always get employment.	Mr. Smith, Hunter-street.
<i>Boot and Shoemakers.</i> —Every man is employed; wages more likely to rise than fall.	Mr. Hamilton, Hunter-street.
<i>Bricklayers, Carpenters, and Plasterers.</i> —Many out of work since commencement of last year, but not likely to continue so long.	Mr. Cowlshaw.
<i>Butchers.</i> —Plenty of employment - - - -	Mr. Charles Smith.
<i>Cabinetmakers.</i> —Employment has been difficult to obtain since December 1841.	Mr. Hunt, Jamison-street.
<i>Carpenters.</i> —See Bricklayers.	—
<i>Coopers.</i> —Trade dull, and some hands out of employment.	Mr. John Hall, Cooper.
<i>Gardeners.</i> —Since 1840 informant has numerous applications for employment; sometimes six or seven of a week.	Mr. Bird, Market-street.
<i>Millers.</i> —Only a few out of employment; some labourers get employed as millers, and undersell the more experienced workmen.	Mr. Blair, Sussex-street.
<i>Millwrights.</i> —It is said that increase of hands and decrease of trade render employment scarce.	Mr. Struth, engineer.
<i>Plasterers.</i> —See Bricklayers.	—
<i>Quarrymen.</i> —Immigrants get work for a short time in a quarry, then engage themselves as quarrymen; trade dull, said to be overstocked with labour.	Mr. John Harris.
	<i>Saddlers.</i> —

NEW SOUTH WALES.

REMARKS.	INFORMANT.
<i>Saddlers.</i> —Overstocked with labour, in consequence of English goods; several good working men have gone into service.	- - Mr. Giblett, Mr. Cooper, and Mr. Griffiths.
<i>Shoemakers.</i> —See Bootmakers.	—
<i>Tailors.</i> —In consequence of the depression of the times many journeymen are out of work.	Mr. John Coyle, George-street.
<i>Tinsmiths.</i> —Trade improving fast; dull however since 1840; if it continue favourable for two months all hands will be employed.	Mr. F. Robinson, George-street.

Sydney, 8 June 1842.

William Augustus Miles, J. P.,  
Superintendent of Police.

Sydney, 8 June 1842.

William Augustus Miles, J. P.,  
Superintendent of Police.

NEW  
SOUTH WALES.W. A. Miles,  
Esq., J. P.

8 June 1842.

5. What description of labourers do you allude to as being less likely to be disturbed?—I allude to those men whose trade requires a greater degree of skill, and who, by reason of a higher rate of wages, can be esteemed among the employers of labour as good and respectable men, such as coopers, millwrights, tailors, shoemakers or stonemasons, who all earn respectable wages. I might include saddlers, but many of these working tradespeople are out of employment, not on account of an excess of labour, but on account of an excess of imported saddlery from England. The returns, which I have read to the Committee, will show the relative conditions of wages, and the demand for labour in many of the trades.

6. Do you not think that the decrease you have mentioned in the rates of wages is to be attributed, in a great degree, to the indisposition of parties to leave the town?—In many cases it is so. I have now, under my surveillance, upwards of 400 immigrants who employ themselves in the town; many as labourers, &c. These people live in small houses, renting small rooms, adopting, in this hot country, the Irish plan of herding together; so common, and which I have frequently witnessed in the low crowded cities of Liverpool, Manchester, Bristol and London. There a man hires a room, which he sub-lets to different families, till he contrives to live rent free.

7. Do you mean to say that this custom is confined to the Irish people here?—Perhaps not confined exclusively to the Irish people here. My inspectors have given me some returns relative to immigrants, which I beg to hand in. [*Put in.*]

8. The returns which you have handed in, and which purport to be from the different inspectors of police in the town of Sydney, show that there is an increase of more than 400 immigrants lingering in this district within the last nine months; do you mean that any greater number are out of employment here than might be expected, or than is usual in places having an equal population?—Certainly not.

9. Have you means of knowing whether those who are disengaged are such as would be likely to prove useful if taken into service?—Yes, if they are not too lazy. Some immigrants prefer to remain in Sydney, either on account of being near their relatives, whom they came out to join, or else on account of their lazy disposition, preferring chance employment to the harder labours of the bush; they are the dregs, the sediment of importation. Two men, one married to the sister of the other, arrived in the ship *Palestine*; they went into service for a month, but left, saying to a fellow servant, that they never intended to do any work, as they could do very well by conjuring; and these people are now performing feats of “hocus pocus.” I have observed with regret, that many able-bodied men prefer the lazy occupations of selling fruit, or hawking about the streets; and as I consider their labour could be better employed both to themselves and the colony, I have desired the constabulary not to allow them to put their baskets on the pavement, and I intend to enforce the penalty for hawking without a license.

10. Do you think that the number of useless and unemployed persons of the labouring class in Sydney exceeds that of any other places?—Certainly not; it would be difficult to find a spot where greater acuteness and energy prevail than in Sydney.

11. Then you do not think that there is any marked excess beyond what might be expected?—I do not.

12. Do you infer from the returns furnished by the inspectors of your force that there is an excess of labour in the market?—Decidedly not; there is no excess, but merely a balance in the supply and demand in Sydney; I am led to conclude that labour must be less in demand than heretofore, because I find robberies are increasing; as it becomes difficult to obtain the same amount of money which has been hitherto easily obtained, so in proportion will crime increase. As long as wages were high it was a man's interest to be honest, though he may have heretofore been a thief; deprive him of this inducement, by a reduction of wages, so that he cannot honestly indulge in any of his propensities, and it is more than probable that he will thieve again to make up the deficiency of wages. This is now partly the case in Sydney.

13. By what class of persons do you think these robberies are committed?—They are frequently committed or planned by men, who, though now free, have been convicts, or by assigned servants, but more especially by men who have returned from Norfolk Island or other penal settlements; these men are lost and debased by the severest punishment, as well as corrupted by the foulest contamination; there is a sad fellowship of crime and a recklessness in their character. There are a few exceptions, but, in general, those men who have been to Norfolk Island are the blots of the population. With regard to the convict admixture with the immigrants, I cannot too strongly advert to the injury caused by contamination. It may be said that the convict population is decaying, but the germs of crime are deeply implanted. The result of the intercourse of convicts with immigrants is to render them cautious, insolent and suspicious, if not worse.

14. With reference to the last question, the Committee observe that the inspectors, in their Reports, state they are not aware that there is any increase of thieving; can you explain this?—The Report only relates to recent immigrants.

15.—Are the persons you allude to as the planners of robberies, the prisoners who have been sent up from Norfolk Island under the provisions of the Commutation Act?—I am endeavouring to ascertain this point, but at present I cannot give a definitive answer. I do not believe we have any men from Norfolk Island who have been under the new discipline of Captain Maconochie.

16. Does it appear from this circumstance that the effect of immigration has been to throw out of employment persons of bad habits and character?—It has; and the “old hands,” as they are termed, cordially hate the immigrants on that account.

17. As, then, the number of immigrants unemployed has not exceeded what you consider the ordinary average among the labouring classes, and as they are generally well conducted persons, does your experience lead you to conclude, either that immigration has been excessive,

NEW  
SOUTH WALES.  
  
W. A. Miles,  
Esq., J. P.  
  
8 June 1842.

sive, or that there has been a preponderating number of immigrants of bad character?—I do not consider immigration to have been excessive, nor do I consider the character of the people to have been preponderatingly bad, although they appeared to lack the energy and aptitude so requisite for this colony. I have noticed a great stupidity in many of the immigrants, and some of them I consider to be as bad as any convict; the females have been badly selected, and picked up at random, I should say, to make the required number; it has, however, been a matter of astonishment to me to observe how rapidly labour has been absorbed.

18. Have you had means, as a member of the Immigration Board, of ascertaining whether the immigrants generally come fairly within the descriptions required by the regulations?—I have not; nor indeed have I turned my attention to the subject; my attention and my efforts have been to ascertain the demand for labour and prices of wages in the districts, so that the immigrant may be informed on landing what are the wages, and in what district he can find a market for his industry. I have prepared, and beg to hand in, a series of tables from information afforded me by various magistrates; and although in a few cases the detail may not be so minute as it is desirable it should be, yet as a mass, I think it may prove a useful document. There are many persons of respectable connexions at home, driven to great distress in Sydney at this time; men who have exhausted the few score of pounds they may have brought to this “El Dorado,” and who are fit for nothing except a clerkship. I have had repeated applications from such persons to be admitted in the police. [*Tables put in.*]

19. Taking the town of Sydney generally, do you think it can be fairly said that there is a want of employment?—Labourers’ wages have decreased; and as I before observed, I think the supply and demand in the labour market are nearly balanced in the town of Sydney.

20. Have you held any appointments in England, which have enabled you to become acquainted with the labouring classes?—I have. I was one of the Assistant Commissioners of Inquiry on the Poor Law, on the Rural Police, on the Hand-loom Weavers, and I was a Commissioner of Public Charities; in all of which my inquiries were directed to the condition of the working classes.

21. Did you receive the impression, so far as you had been brought into contact with the labouring classes, that the means of occupation were generally sufficient for the support of the population?—In the agricultural districts in England, I do not consider labour to be redundant in a degree to meet the wants of this colony. In the manufacturing districts, where the services of the artisan are displaced by the introduction of machinery, there is great privation and distress; and these persons, by changing their occupations, would be useful in the colony.

22. Your opinion then is, generally speaking, that agricultural labourers are earning sufficient wages, and therefore feel a repugnance to emigrate?—Generally speaking, the agricultural labourer earns such wages that he is not induced to overcome the repugnance to emigrate; he is a steady settled character, and would rather linger in his native parish than seek the adventure of a distant colony. The class of persons likely to come out in numbers are the hand-loom weavers. In my Report to the House of Commons upon the subject of emigration, as a means of relief to the hand-loom weavers, I state, p. 527—

“There is a great desire for emigration at this time (1839) among the working classes in Gloucestershire; but unfortunately for the weavers they are not a class of persons in request; yet there are many of them fully capable of following rural occupations, and would prove useful members in a colony.”

The opinion I entertained in England has been confirmed by my residence here; and I quote a letter, which I published in my Report to the House of Commons, from a weaver who had emigrated here. He dates from Parramatta, June 1838, and writes to the clergyman of his parish of Kingswood,—

“I have 40*l.* a year, with house, food and firing. Provisions are much cheaper than at home; clothing somewhat dearer. The privileges held out to immigrants are extremely good. We were free the moment we landed, and were provided with a comfortable house and victuals at no expense, until we got situations; but the greatest number were engaged the first day. A mechanic can earn from 35*s.* to 50*s.* a week; a labouring man gets 25*s.* a week. If any persons are desirous of emigrating to New South Wales, I would recommend them to come out immediately, for with industry people can do extremely well, and maintain their families respectably. They will find employment directly, and good wages for their labour; they will soon be masters of many pounds; and if we choose to return to England, we can save money enough in two years to pay our passage back.”

The Rev. W. Cockin, of Hampton, county Gloucester, in reference to the condition of the weaver, states—

“The distress of the entire district is beyond the conception of any one who has not witnessed it. It was not mere want, but actual starvation, that was endured last winter (1838).”

I inquired into the condition of 250 weavers’ families, and found the average to be about five in each family, and that their entire earnings amounted to 10*s.* a week, out of which they had to pay—

	s.	d.
Rent - - - - -	1	8 <sup>3</sup> / <sub>4</sub>
Rates - - - - -	-	1 <sup>1</sup> / <sub>2</sub>
Fuel, soap and candles - - - - -	1	7 <sup>1</sup> / <sub>2</sub>

Leaving only 6*s.* 6 <sup>1</sup>/<sub>4</sub> *d.* a week to feed and clothe the family of five persons.

23. The

23. The weavers would make good shepherds, but would they, accustomed as they have been to the atmosphere of towns, be willing to go into the interior?—Yes, and very glad of the change; I consider that they would make excellent shepherds. The occupation of a weaver at his loom is silent and sedentary, and the loneliness of the bush would be less irksome to him than it would be to many other callings. The weavers in Yorkshire, and at Bisley, and Chalford in Gloucestershire, have been employed weaving a peculiar cloth for the China market, called “stripe cloth,” and by the introduction of these labourers, this colony may ultimately become exporters of cloth to China. I beg leave to quote from my Report a few remarks upon the general character of the hand-loom weavers:—

“Relative to the general habits of the weavers, as to diligence, providence, frugality, honesty, and temperance, they rank in common with their fellow workmen. Low wages tend to destroy the energy requisite for active diligence; the earnings of the out-door weaver are too low to afford a surplus for provident savings, therefore, frugality and temperance are the results of necessity. It might be presumed, that persons in so low a condition would sink into a low moral state; the weavers, however, are not a class addicted to daring crime or hardened theft; their pilferings are confined to vegetables, or to obtain a little wood for firing, and to minor offences, emanating from extreme distress; they commit no offences in order to obtain the means of riot or debauchery, and in many cases, hunger is the sole and only cause.”

In further reference to the weavers, I found, that in the prison at Horsley, 782 persons had been confined in the term of two years, and that only 27 of that number had been weavers, 11 of whom had deserted their families through distress, six for assault, and four only for stealing; the rest for vagrancy and minor offences.

24. What means do you conceive it would be proper to employ, to encourage the emigration, from England, of a proper class of persons?—By communicating with the Poor Law Commissioners, who would, I am sure, afford every facility in promoting the emigration of a useful class of persons.

25. Would that be the only means you would recommend?—I should especially recommend a careful selection of the emigrants, by an agent to be named by the local government, but paid for his services by the colony; he should be a person known to the colonists, and have a thorough knowledge of the working classes, both here and at home.

26. Might not the applying to the Poor Law Commissioners expose the colony to the danger of obtaining the services of only the least effective, whom it might be thought desirable in England to get rid of?—The appointment of an agent, as I have suggested, would partly prevent this; some check would be absolutely essential, or the colony would be made a poor-house for England.

27. Would you propose that the agent so appointed should have a positive veto upon those persons who might be proposed?—Most decidedly; otherwise his appointment would be stultified and nugatory.

28. Is it to be expected that an individual holding an appointment on these terms would be of sufficient standing, or possess sufficient firmness, to oppose such influence as might be used to get inefficient persons sent out?—That depends upon two things—the man you choose, and the salary he receives.

29. Do you suppose, then, that any one individual holding such an office could undertake to execute those powers to the full extent necessary for the whole emigration required, supposing it to amount to 10,000 persons per annum?—A man might inspect and pass 50 persons per diem, and he would have 19 weeks out of the year for other purposes, such as travelling, &c.

30. Are you aware that the Land and Emigration Commissioners have already agents employed whose duty it is to inspect the intending emigrants?—Yes; at the ports, I believe.

31. You appear to be acquainted with the county of Gloucester; have you perused the Return now before the Committee, which sets forth the number of persons who emigrated from that county?—I have; and the number is rather more than 200.

32. Do you consider this the fair number that might have been expected, if due diligence had been used?—Probably it is; but if machinery has been more introduced since I held my commission, there will be an unemployed population.

33. Have you a general acquaintance with the inland counties of England?—Yes, I know a little of Cambridge.

34. You are acquainted with Cambridge, you say?—I am.

35. It appears from the Return that the number from Cambridge was 23; do you think that a fair number?—I do, and for this reason—the population are all employed, and at fair wages, in cultivating low land which has been recently drained.

36. Do you conceive, then, there is disposition to emigrate from Cambridge?—There might be from towns and districts of the higher land of that county; but I should doubt it.

37. Are there any other counties in England from which you think it more practicable to obtain labour than Cambridge?—Yes, from Lancashire, Warwickshire, and from Yorkshire.

38. Your expectations then, it would appear, are principally fixed on the manufacturing districts?—Yes, because I think in those districts you will find a greater redundancy of population; and if it be objected that they have lived in towns, necessity will force them to a change of habit and occupation.

39. What degree of assistance do you think it possible to obtain from the Poor Law Commissioners, in aid of emigration?—For information, every assistance; for monetary assistance, I cannot say; but I remember having proposed some time ago in England, that the parishes should pay a portion of emigration charges; and now that I touch upon that point, I should wish to observe, that as all aid from the Boards of Guardians is lent, and recoverable when

Esq., J. P.

8 June 1842.

the man gets work, (it is a fundamental principle of the new Poor Law,) so I think that the emigrant who comes out here should repay or refund a portion of his passage out of wages; there may be some serious difficulties in the way, but I am anxious to make the suggestion.

40. Are you not aware, that although there be no marked superabundance of labour in the agricultural districts, yet it often is the case, that the wages of the labouring classes are barely sufficient for mere subsistence?—I am aware of it, but an agricultural labourer is almost as a serf upon the soil, and is loth to leave his home. I find that the labourer, in the time of Edward III., could obtain in exchange for his labour, just or nearly the same quantity of wheat as he can in the present day; and this is a class whose wages I find to have always been just sufficient, or little more than a mere subsistence.

41. Do you not think that many persons, whose means are so limited, might be induced to better their condition by emigrating to this colony?—I do not think the landed interest could spare the labour in large quantities; if restrictions as to age could be much extended, parents might come over with good sized children, and I think it would be advisable to offer inducements for transplanting the young shoots.

42. Do you consider that much advantage would arise from communication being opened with the parochial clergy in England, with a view to obtain a desirable class of emigrants?—I think the best persons would be the guardians of the parishes, assuming a check in the shape of an agent for the colony; the clergymen could render great assistance, and the agent should be in communication with them; I always applied to the clergy during my official investigations.

43. Do you not think that the influence of the clergy, among the young people who would wish to marry, and cannot do so at home, might be useful?—I do.

44. Does not the reluctance of the peasantry to emigrate arise from their ignorance of this country, and some apprehension that they may be deceived by false representations?—The geographical knowledge of the English peasant seldom extends beyond his parish.

45. Have you any acquaintance with Scotland or Ireland?—I have not; but from information afforded me by my brother Commissioners, I think a large supply of labour might be had from the manufacturing towns of Scotland, Paisley and others; and I may also add, from Yorkshire.

46. Do you think a suitable class of persons could be obtained from the weavers of Manchester?—I think they might make good shepherds.

47. Do you think, generally speaking, that they would be persons of good character, and such as it would be desirable to introduce into the colony?—I do; because the poor weavers are a depressed and harmless set of men; I have seen them much emaciated.

48. Are they emaciated from distress or dissipation?—Some few perhaps from dissipation, but mostly from distress and confinement in small unhealthy rooms at their sedentary occupations; nevertheless, I think it a place from which much labour might be procured.

49. Might not their addiction to combination render them undesirable as emigrants?—All trades are given to combination, and in Sydney there is a great tendency to it; I am aware that combinations in Sydney have, since my arrival, subscribed to send newly-arrived immigrants to New Zealand, in order to keep up wages. I am also of opinion, that state-ments emanate from these societies injurious to immigration.

50. Have you any documents which you would put in, and which you think would be serviceable?—I have compiled Returns in a tabular form, which relate to the state of labour, wages, food and clothing in Sydney, and throughout the colony, and which I have already read to the Committee and laid upon the table; and I will now also hand in answers from the police magistrates of different districts, relative to labour. [*Put in.*]

51. As a member of the Immigration Board, can you offer any suggestion for the improvement of the present system of immigration—as to the selection of the immigrants, the conduct of the ships, or the appointment of the officers taking charge of them?—When I became a member of the Immigration Board, I suggested to Mr. Merewether the expediency of communicating throughout the districts, relative to the prices of provisions and clothing, as well as rates of wages, and the prospective demand for labour, in order that the newly-arrived immigrant might be furnished with the most accurate knowledge of the rates of wages, and where labour was in demand. I was induced to make this recommendation, because I saw that many immigrants had left England in expectation of much higher wages than the colony could afford, and that for want of authentic information, they were loth to accept fair and reasonable tenders of engagement. To obviate this, I circulated, under sanction of his Excellency, a series of inquiries, from which I compiled the Returns and the remarks handed in; and although these tables may be useful, they are not so valuable as I could wish, owing to the desultory manner in which some of the information has been afforded me. I should further suggest, that the appointed agent should select due and fit persons to act as superintendents and surgeons of the ships; men of experience and of character, who have already acted in similar situations, might be selected. Surgeons of the navy might be found well fitted for the duties. I am induced to make these suggestions in consequence of my knowledge, that improper persons have come out in authority on board of emigrant ships; in one case, a notorious housebreaker and bank robber came here as a surgeon. Some of the surgeons, who have come out in immigrant ships, have been left destitute, and committed suicide; others have gone home as ship stewards. It is, therefore, desirable that respectable and responsible persons should be appointed to the important task of attending immigrants to the colony.

Thursday,

## PAPERS RELATING TO EMIGRATION.

109

NEW  
SOUTH WALES.

Thursday, 9 June 1842.

*Thomas Icely, Esq., called in, and Examined.**Thomas Icely,  
Esq.*

9 June 1842.

1. You are a proprietor of land and stock in the district of Bathurst?—I am.
2. Do you also hold stations beyond the boundaries?—I do.
3. Do you employ labour to a considerable extent?—I do; I employ from 100 to 120 working men, of whom about two-thirds are free; the others are bond; part of the latter are assigned to myself; and part to my partner, and the remainder have been transferred to me with estates which I have purchased from persons who had convicts assigned to them.
4. Have you had any difficulty in obtaining free labour lately, and at a reduced rate of wages?—I have not.
5. Will you state the average rate of wages you are now giving?—To shepherds I am now giving from 18*l.* to 20*l.* per annum.
6. What do you think is the average cost to you of each free man's rations?—I generally give a ration and a half between a man and his wife, the cost of which I would state to be about 6*s.* per week.
7. You have been absent from the colony; will you state for what period?—From the beginning of 1840 to the commencement of 1842.
8. Did you observe that any great difference had taken place in the circumstances of the colony between the periods of your departure and return?—A marked difference.
9. Will you state in what respect?—About the time of my departure from the colony, the demand for labour was much greater than the supply; and shepherds' wages were at least 50 per cent. higher than they are at present; indeed the difficulty of obtaining shepherds on any terms was very great.
10. Were your profits as great when you paid the higher rate of wages you have spoken of, as they now are on the lower rate?—They were then remunerative, whilst there are not any profits at all now, even at the present lower rate of wages, in consequence of the absence of all demand for surplus stock.
11. You say your profits were remunerative when you left the colony; do you mean that at that time you could effect sales for actual cash, or did you give credit?—Sales could then be effected for actual money.
12. By what description of persons were purchases then generally made?—By settlers who had realised money, and also by persons who had embarked in the business of supplying the South Australian and other markets, which latter outlets for our surplus stock no longer exist.
13. Does the clip of wool pay the annual expenses incident on the management of the sheep?—Yes, it does.
14. If there were a ready market for the surplus stock, would sheep farming be profitable now?—It would.
15. From your long residence in the colony and extended experience, do you not think that in the present condition of the colony, considering the cheapness of land and the low price of stock, there is a very great inducement to capitalists to come here?—I do not consider the present minimum price of land cheap; but from the very low and easy rate at which stock can now be obtained, no time could be better for capitalists to arrive.
16. What then, in your opinion, is the reason that capitalists do not come, when they might so profitably invest their money?—This colony suffers greatly by the reports which are circulated at home of the distressed state of our money market, which induces a want of confidence on the part of the English capitalists, who will not emigrate hither in the present doubtful circumstances of the colony. Indeed I find that little, if any, of the money already in the colony is invested in the purchase of either land or stock.
17. Can you state any other circumstances which, in your opinion, have operated to prevent capitalists from coming to the colony?—Yes; I think the raising the minimum price of land has had that effect, as no person can profitably farm sheep on land purchased at the present price.
18. Would the reduction of the minimum price of land to its old standard, of 5*s.* per acre, have the effect of inducing capitalists to come to the colony?—I have no doubt it would.
19. Will you have the goodness to state what you consider to have been the effect of raising the minimum price of land from 5*s.* to 12*s.* an acre upon the land fund and the general interests of the colony?—I consider it has had the effect of totally annihilating the land fund, in consequence of its having prevented the capitalist from investing his capital in the purchase of land, and thereby deprived the settler of all opportunity of effecting sales of his surplus stock, and thus put it out of his power to purchase fresh land from Government; I was consulted by several capitalists when in England, who were desirous of embarking in the purchase of stock and land in this country, as to their prospects of profit if they purchased at the increased price of land, and my Report confirming the opinions they had themselves previously entertained, they were deterred from doing so; whereas, if the minimum price had been lower, they would have had no doubts on the subject; I feel satisfied that it has had the effect, not only in these cases, but generally, of preventing capitalists from emigrating.
20. Have you ever turned your attention to, and can you state what, in your own mind, should be fixed as the minimum price of land of fair average quality in this colony, so as to make the purchase of it profitable for grazing purposes?—I should say that 2*s.* 6*d.* per acre

NEW  
SOUTH WALES.

*Thomas Icely,*  
Esq.

9 June 1842.

acre would be quite as much as the sheep farmer could afford to give for land, if he were confined to his purchased land; but I am of opinion that land of a better description would always find ready sale at a price proportioned to its quality.

21. How many acres of land does it take on an average to support one sheep?—About three acres.

22. Do you mean selected land, or land of average quality?—Land of average quality.

23. You are an extensive holder of purchased land?—I am; I hold upwards of 40,000 acres of purchased land.

24. Will you state what effect the change in the minimum price of land has had on the value of your own property?—Its effect has been to depreciate it so much in value, that it does not now pay expenses.

25. You have spoken of the diminished means of the settlers to purchase land; do you not think that labour being more expensive now than it was five years ago, is the chief cause of this decrease of means?—It has undoubtedly had some tendency to decrease the settlers' means.

26. You have stated your opinion, that the increase of the minimum price of land has prevented capital from being brought out to the colony; do you not think that if a loan had been effected for immigration purposes, at the time such a measure was recommended by the committee, it would have had the effect of retaining in the colony all the money that has since been expended in the importation of labourers, and of furnishing the colonists at the same time with an abundant supply of labour, and thus have enabled them to pay the higher price since demanded for land?—I certainly think that one of the causes of the present depression of the monetary affairs of the colony has been the immense sums sent out of the country for the introduction of labour; and I am satisfied that had a loan been effected, much of the evil would have been prevented; if we could sell our surplus stock, as in former years, we should continue to purchase land, if it was to be obtained at a remunerative price, beyond which no prudent man will embark his capital, either in land or any other commodity.

27. But are you satisfied or prepared to show that the want of a market for your surplus stock is the consequence of the increase in the minimum price of land?—I am satisfied that such is the case.

28. When was the minimum price increased?—About three years and a half ago; the beginning of the year 1839.

29. Are you aware of the comparative sums of money which have been laid out upon land since the increase in the minimum price?—I have no knowledge of the comparative sums which have been received by Government under the old and new systems, but I believe that the present price has caused a very great reduction of the land fund, if indeed it has not totally annihilated it.

30. Supposing that to have been occasioned by the increase in the minimum price, ought it not to have immediately begun to show itself?—I think it did; from the commencement, applications for land, in the older settlements, became less frequent.

31. Taking the colony generally, and speaking of country lands, not of town allotments, are you aware that the money invested in land in 1838, amounted to 100,000*l.*?—I know the amount was very considerable.

32. That was about the time of the rise in the minimum price of land?—It was about that time, and before the effect of the rise had been felt.

33. When do you think the effect began to be felt?—I think, in the older settlements, immediately.

34. Are you aware that in 1839, upwards of 141,000*l.* was put in circulation by the price of country lands?—Yes; but the greater portion of those lands had been applied for at 5*s.* and had not been surveyed.

35. Was the effect, do you conceive, more felt in 1840?—In the latter part of 1840, the effects of the change began to be materially and practically felt.

36. Are you aware that in the year 1840, upwards of 198,000*l.* were invested in the purchase of country lands in the colony at large?—I am aware that a very large sum of money was so invested; the greater part by speculators at Port Phillip, and the recently opened country to the south.

37. Are you aware that in that year, there were no country lands whatever sold for so low an average price as 12*s.*?—I am.

38. Do you think that if the sum of money invested in these purchases, and spent in the introduction of labour, had been retained in the colony, the rise in the price of land would seriously have affected the price of stock, and the general interests of the settlers?—I think it would have injuriously affected both, but the effect would certainly not have been so serious.

39. Are you aware that a very large proportion of these sums was laid out in 1839 and 1840?—I am.

40. Are you not also aware that the people knew that the price was about to be raised?—That was the general impression.

41. Do you not think that that knowledge induced persons to speculate in land with a view to profit by the anticipated rise?—The general impression was that the price of land would be raised throughout the colony.

42. Are you not also aware that a very large amount of capital was brought into the colony by the English Banks at that time, and that that also tended to induce speculation in land?—I am, and that the introduction of that capital afforded increased facilities to parties to raise money.

43. What

43. What is the present state of the parties who so speculated?—Many of them are ruined.

44. Do you think that the raising the minimum price of land has had the effect of sustaining the value of your land at what you paid for it, or has it depressed it?—It has diminished the value of my land; I was offered 15s. per acre for my land when the minimum price was 5s., but I could not now obtain that sum, although many thousands of pounds have since been expended on the property.

45. Do you not think that it is more probable now, than it was in 1839, that the minimum price will be raised to 20s.?—I do not think it probable, but should it be so, nothing can be more fatal to the welfare of this country.

Friday, 10 June 1842.

*Lawrence V. Dalhanty, Esq.*, called in, and Examined.

1. In what part of the colony are you settled?—In the Wellington district.  
2. As an owner of purchased land, or an occupier under a depasturing license?—As an occupier under a depasturing license.

3. Can you state to the Committee what you suppose to be the extent of the land you occupy?—I cannot, my stations are so unconnected.

4. Can you say what may be the area of your head station?—About 6,000 acres.

5. What description of stock have you there?—Principally sheep, with some few head of cattle.

6. What number of sheep might 6,000 acres be considered generally adequate to keep?—That depends principally on the seasons, and the description of the land; the seasons latterly have been very bad, but in ordinary seasons, I might keep with advantage from about 1,800 to 2,000 sheep.

7. With cattle besides?—The run is scarcely of sufficient extent for depasturing cattle also.

8. Supposing you had a cattle station of the same extent, and adapted for cattle or horses, what number could you keep on it?—It would require about 8,000 acres for 1,000 head of cattle.

9. What do you consider ought to be the extent of a cattle station?—From 8,000 to 10,000 acres, provided the country was well watered, with a rich description of soil.

10. Would horses take as great an extent?—Horses are never kept in the same numbers, and would not consequently require such an extent.

11. Do you consider that the country is pretty nearly as fully occupied as it can be, or is there still room for other stations?—The occupied country is overstocked; many persons' flocks, in consequence, have suffered from being too much confined.

12. What extent westward is this the case?—As far as Mount Harris.

13. What number of depasturing licenses do you suppose are issued for the country you are now alluding to?—About 100 licenses are issued for the district of Wellington.

14. Do you venture with much confidence to make improvements at your head station, considering that you have only a yearly license?—I make only such rude improvements as are absolutely necessary.

15. Would you venture to make what might be considered permanent improvements, such as a house for a respectable family?—No, I should not.

16. Does this mode of life engender carelessness, idleness and uncivilized habits among the population?—I think not; the people are generally industrious, and well-behaved; I attribute the regularity amongst them principally to the absence of public-houses, and the circumstance of most of my shepherds being married, and their wives acting as hut-keepers, a duty they perform well.

17. Would you conceive it desirable to improve the condition of your buildings, so as to make them suitable for more permanent purposes, if you had a longer license?—I should think it very desirable.

18. Do you not think it would be desirable if some system were adopted which would secure to the settler the value of any improvements he might make on his station, and warrant the erection of such permanent buildings as would induce him to reside there?—I do, and should probably make a residence for myself on my own station, as I consider that an absentee cannot expect that his property could be so well managed as if he were on the spot.

19. Would it not be more advantageous to you, to obtain possession of the run itself, for a term of years, than to take out an annual license?—It would be much more advantageous, because I should then hold my stations with some degree of certainty; my improvements would not be wrested from me, and I could carry on my operations with greater advantage, and might eventually become the purchaser of the land.

20. Suppose it were possible to purchase a small quantity, sufficient to secure the buildings, would you purchase?—I do not think I should be inclined to do so, unless I could purchase or secure to myself the whole of my stations; the one being useless without the other.

21. You at present hold your station under a yearly license only; suppose you could obtain a small portion, by purchase, to secure your buildings, would you not do so rather than remain under your present uncertainty?—I should rather not purchase at all, than purchase only a small portion.

22. By purchase it might be more desirable to secure your station for a certain number of years?—I do not see what benefit I should derive from it, except it would give me an additional security as to possession.

109.

23. By

*L. V. Dalhanty,*  
Esq.

10 June 1842.

NEW  
SOUTH WALES.

*L. V. Dalhenty,*  
Esq.

10 June 1842.

23. By enabling you to lay out capital, would it not be beneficial?—It would be so if I should have the advantage of securing the original possession of all the stations I now occupy.

24. Suppose the purchase-money were converted into a rent for a certain number of years?—An annual rent would be more beneficial.

25. Suppose a proposal of this kind were made, that by paying a certain annual rent for 14 years, at the termination of that period you should have the option, either to retain the land with the improvements, or to receive back the value of the improvements, would that not be advantageous?—I think that this would be a very fair arrangement, as it would not subject me to the loss of my outlay.

26. Do you conceive that a plan of that kind might induce stockholders to reside at their stations?—I think that such a plan might lead settlers to reside on their stations instead of committing them to the charge of overseers.

27. What security do you think you could give to the government that the rent would be paid, or what remedy would you give the government in case of non-payment?—If a party fail to pay, the rent might be levied by distress, and his goods and chattels sold for the amount.

28. Do you think the government ought to insist on a certain sum being laid out in improvements, as a security that the rent would be paid?—I should think that a respectable person would voluntarily make such improvements as would afford adequate security to the government.

29. Then you do not think that a respectable man would have any objection to be required to lay out a moderate sum in improvements, by way of security to government?—I do not think any respectable man would see a ground of objection to his being required to make such improvements as would afford security to the government; in fact, to occupy the land with advantage he must of necessity do so.

30. Would the institution of such a system be beneficial to you even now?—I think it would.

31. What is the utmost sum per annum that a settler could afford to pay, to obtain a section or 640 acres of land on the terms mentioned?—If it were optional with him to select his station in one block, and he were, as proposed, to have a lease of it for 14 years, I think about 40*l.* per annum would be as much as a settler could afford to give in the district of Wellington.

32. Do you not conceive it would be a very difficult undertaking to fix upon the value of the improvements at the expiration of the 14 years?—A public auction would probably best show their value.

33. Do you not think a higher sum than you have mentioned could be afforded by individuals?—The district I allude to, being a grazing country, and not suited to agriculture, I do not think more could be given with reasonable advantage to the occupant.

34. Do you think the land you speak of is fit for any other purpose than grazing?—I do not think any grain could be grown on it with advantage, owing entirely to the prevalent want of rain; it is this dryness of the climate, however, which so peculiarly adapts the district to sheep farming.

35. Do you see any prospect of its ever being fit for any other purpose?—I do not.

36. At the present prices of sheep, wool and land, what could the settlers afford to pay for licenses to occupy land?—In the present state of the country, no man could afford to give more than he is at present required to pay for his license and assessment.

37. All you want, then, is a tolerable certainty of occupying it, and that you might acquire, by merely paying the rent, and so securing to yourself your run and the improvements?—A settler could afford to pay rent for his station, in order to secure his occupancy, but he could not afford to buy an extent of land sufficient for grazing purposes.

38. But the district you allude to, being so well adapted for sheep, though not for agriculture, do you not think, that obtaining the certain occupation for 14 years of the extent of land you have named, besides the permanent tenure, if you wished it, of the selected section, would make the whole together worth more than 40*l.* per annum above what it is worth now?—I do not mean to say that it may not be worth more, but I think that in their present circumstances, settlers could not afford to pay more.

39. Do you not think that this system might have a tendency to bring about a better state of things, by disposing persons to purchase stock when they had the means?—I do not think that persons would be willing to buy on any terms, unless they had cheap labour, and could rent land on easy terms.

40. What rate of wages would you consider you could afford to pay?—The wages should not be higher than 15*l.* per annum, which, with 15*l.* for rations, including tea, sugar and tobacco, would be quite as high a sum as the settler can afford to give for one man's labour, under present circumstances.

41. Suppose the wages were 20*l.* per annum?—If the luxuries of tobacco, tea and sugar were not allowed, 5*l.* could be added to the wages.

42. Do you think there would be any difficulty on the part of government to regain possession of the leased land, after the expiration of the 14 years?—I should think that the government would have no difficulty in recovering possession at the expiration of the 14 years.

43. Do you think this system better than the system of sale?—I think it is; sale under present circumstances being impossible.

44. Do you think no portion of land would be sold even at 5*s.* per acre?—I do not think that any person could afford to buy land even at that price, except for the purpose I have already stated—to secure the head station, with its improvements.

45. Would

NEW  
SOUTH WALES.

L. V. Dalhenty,  
Esq.

10 June 1842.

45. Would such persons not probably also purchase the water frontage, so as to secure the runs permanently for their own use?—They might buy small portions for head stations, but they could not afford to buy the whole extent required at that or any other price; but I think they most probably would buy the water frontage, as they would thereby secure to themselves the occupancy of three or four other sections behind.

46. The government would, of course, be as capable of guarding against such an occurrence under that system, as any other that might be devised; it would not be peculiarly felt under that system?—I think it would be less so, because a settler would buy the land where he had already placed himself with advantage.

47. Do you think such a system would induce a desirable class of emigrants with capital to come out to this colony?—I do not think it would have that effect.

48. Would you not think it a preferable system at once to put up the lease for sale for the term of 14 years?—The land would in that case require survey, which could scarcely be done.

49. Do you think that 5s. per acre, paid down in cash, to be employed in bringing labour into the colony, would be more or less beneficial to the colony, than the price of about 16s. an acre, to be paid during a period of 14 years, and to be annually laid out for the same purpose?—I should think that paying the 16s. per acre, and expending it yearly, according to the plan proposed, would be more beneficial to the colony, as it would immediately create a fund.

50. Then you think it would be better to expend in that manner 25 per cent. annually, than the 100 per cent. at once?—Yes.

51. To what do you attribute the present distress of the settlers?—To various causes, particularly the want of labour, and the absence of new settlers to purchase the surplus stock.

52. Do you find any want of labour yourself?—The want has latterly been less felt, and wages have in consequence been reduced from 25*l.* to 20*l.*

53. Do you consider that the present low rate of wages would continue, if immigration were to cease?—The fall in wages is to be attributed wholly to a prospect of continued immigration, and if immigration were to cease, an immediate rise in wages, would, I think, take place.

54. Have you found the immigrant labourers of a suitable class for shepherds?—I have, after they gain a little experience.

55. Have you found them as useful, upon an average, as the prisoners were?—I do not consider them so available as the prisoners, in consequence of their not being so much under control.

56. Have you not an advantage in being able to reimburse yourself for any loss that may be occasioned through their negligence or misconduct?—Their wages are so paltry, that they would not be sufficient to compensate proprietors for losses, and it is not to be supposed a servant would serve his master with advantage if his wages were withheld; the only remedy a proprietor would have would be to send them to gaol, in case the losses were occasioned by their neglect or carelessness.

57. Do you know what class of persons those immigrants have been at home?—Those that I have hired have generally been Highlanders, and persons accustomed to a country life; and therefore I have not experienced many losses.

58. Have you not found that the immigrant shepherds have been more careful than the convicts?—I have.

59. Have you ever had any immigrants from towns, and employed them as shepherds?—Yes.

60. Have they proved good shepherds?—After a little teaching they have made quite as good shepherds as any other class of men.

61. Then you have no doubt that from emigrant labourers, from the United Kingdom, a good class of persons can be obtained as shepherds?—Certainly; the immigrants can be made shepherds without any difficulty.

62. Do any practical means suggest themselves to you, for restoring the colony to its former prosperity?—Cheap labour and an influx of capital are the only means which occur to me as being likely to bring about that result.

63. Do you think the clip of wool at present pays for the management of the sheep?—It depends wholly upon the management; with good management, the wool at its present price would pay all expenses attendant on sheep farming, but would not pay for luxuries.

64. If there were a ready market for the surplus, would sheep-farming be a profitable pursuit?—Certainly; we only require to get rid of our surplus stock to make our business profitable.

65. Then do you think that if there were an abundant supply of labour, capitalists would be induced to invest their money in the purchase of your surplus stock?—Yes, a continued supply of labour would certainly be the most effectual restorative of the prosperity of the colony.

66. Are there any unemployed labourers in your district?—There are no persons constantly out of employment; as soon as a man is out of one service he can find employment in another.

67. To what cause do you principally attribute the non-investment of capital in the purchase of stock?—Principally to the want of labour; the rate of wages being still too high to induce capitalists to invest their money in stock.

68. What means would you propose to adopt, to reduce wages to what the settler could afford to pay?—I would propose that immigration should be carried on to an equal extent with that of the last two years.

109.

69. What

NEW  
SOUTH WALES.

*L. V. Dalhanty,*  
Esq.

10 June 1842.

69. What do you consider has occasioned the cessation of immigration?—The want of funds.

70. To what do you attribute the want of funds?—The government not having been able to raise a land fund.

71. To what do you attribute the fact of the government not being able to raise a land fund?—One of the principal reasons is, the price the government have fixed for land being too high to allow persons to buy it for sheep farming.

72. What effect has the rise in the minimum price of land had on your own property?—It has had the effect of increasing the rate of wages, and thereby preventing the sale of surplus stock.

73. Then it has depreciated the value of your stock?—It has.

Tuesday, 14 June 1842.

*Laurence V. Dalhanty, Esq., re-called, and further Examined.*

*L. V. Dalhanty,*  
Esq.

14 June 1842.

1. HAVE you ever known the price of grazing land and of stock so cheap in the colony as at this moment?—In the years 1828 and 1829, stock was as cheap or cheaper than it is now, owing to the depressed state of the colony during that period.

2. Have you ever considered the possibility of reducing the money wages of shepherds, or labourers generally, by giving them an interest in your sheep or stock establishments, or by commuting sheep or stock for money wages?—I have in several instances paid part of wages in cattle, instead of money; I have found that some of the immigrants, particularly the Scotch, prefer this mode of remuneration.

3. Would not that system, where the sale of cattle is so restricted as at present, afford great relief to the settlers?—It would be paying wages in property instead of money, and would so far be beneficial.

4. Would it not assist materially in removing the present difficulties of the settlers?—It would certainly, in some measure, assist in the removal of present difficulties.

5. If it were shown to your servants, that by persevering in such a system for a few years, they might themselves become capitalists, do you not think they would generally prefer that mode of payment to any other?—I think they are even now anxious to obtain property in this manner.

6. Are you aware of any objections which might be urged against this system?—There are objections to the system; the principal of which is, the confusion that would ensue were it generally acted on between the master's stock, and that of his servants, which would too often lead to the suspicion, that the servant had appropriated his master's stock.

7. Might not a resident master, with due vigilance, guard against that?—Yes, provided the servant's stock was not permitted to increase on his station beyond a certain number.

8. Would you venture to allow your men to possess as many as 100 head of cattle; supposing them to be good men?—I should not like to do so; If I did, I should grant it as an indulgence only to trustworthy servants. It is only by management such as this that an estate can now be made to pay; but I would remark, that it is a plan which can only be pursued where the master resides on his property, and only by an experienced person.

9. Do you suppose when 20*l.* or 25*l.* wages are spoken of, that they are generally, or in many cases, paid in cattle?—No; I do not think that wages are generally paid in produce, although I am aware they are frequently so.

10. How is the price at which the cattle are estimated settled between you and your servants?—I generally put such a price on the cattle as the servants are ready to admit as reasonable, and will at once give for them.

Thursday, 16 June 1842.

*George Cox, of Winboure, Penrith, Esq., called in, and Examined.*

*George Cox,*  
Esq.

16 June 1842.

1. Do you find the supply of labour more adequate to your wants at present than in former years?—I do.

2. Have wages in consequence been considerably reduced?—They have been reduced, but not very considerably; in respect to rations, however, we have been enabled to do away with tea and sugar in most cases, which has much reduced our expenses.

3. Do you consider that at the present rate of wages, the growth of wool is remunerative to the settler?—Taking the growth of wool, and the sale of stock together, I think it hardly is; and therefore, the growth of wool alone, certainly will not pay the expenditure; but with the wool, and a ready remunerating market for stock, sheep-farming would pay in most seasons. At present, I feel it impossible to pay my servants' wages.

4. What is the state of the market for surplus stock at the present time?—There is no demand at a remunerating price. I have sheep now ready for sale, and which I must sell, but I have not yet been able to obtain an offer for them, although they are butchers' meat.

5. Have you formed any calculation of what the actual consumption of sheep is in the colony, for the purposes of food?—I have not.

6. Is there any exportation of sheep at the present time to other colonies?—Not that I am aware of.

7. Do your remarks apply in an equal degree to horned cattle as well as sheep?—Yes, they do.

8. Will you inform the Committee to what you attribute the present depression?—It has principally arisen since the rise in the minimum price of land, which has placed it beyond the

NEW  
SOUTH WALES.

---

George Cox,  
Esq.

---

16 June 1842.

the power of parties to purchase land with any prospect of profitably breeding stock; and to this circumstance I attribute the depression.

9. At what rate do you think it would answer a newly arrived colonist to purchase land for grazing purposes, supposing wool to remain at its present price?—Before determining this price, it would be necessary to ascertain the price of stock—the one being dependent on the other. At the present time, it would not answer an old colonist, much less a new comer, to purchase land even at 1s. per acre. There is no demand for stock, except amongst the butchers, and they have screwed down the breeders to the very lowest possible price. The returns from stock are at present so reduced to the grazier that they will produce no profit, but on the contrary, a loss. Breeders are obliged to kill female stock, and thus the profits are still further reduced. I have killed this season more than the increase of my female sheep.

10. In your opinion, would it effect the removal of those difficulties, if the price of land were again reduced?—I think it would, if it caused speculation in stock, and thus created for us a market for sheep, which at present we have not.

11. It would no doubt relieve the present holder of stock, in so far as it would put the purchaser in his position, but would it relieve the colony generally, by the creation of a permanent demand for the surplus stock?—I should think it would relieve the colony generally, inasmuch as it would increase the annual export of wool, by inducing capitalists to come to the colony and invest their capital in sheep.

12. Would not this increase the annual income of the colony, and give the old settlers the means of improving their establishments, and of employing additional labour?—If we had a permanent and fixed sale for stock, it would enable us to keep more servants, and carry on improvements which we cannot now do.

13. It is very evident that this would follow, if a permanent demand for sheep were created, but the question is, in what manner this change would be brought about by the reduction of the minimum price of land to 5s.?—I can only say, I suppose it would be brought about in this way; capitalists would come if it appeared to be to their advantage.

14. What was the state of the colony, with respect to the interests of the graziers, when the minimum price was 5s.?—The state of the graziers was then prosperous beyond measure.

15. Do you think that prosperity was owing entirely to the minimum price being at 5s.?—I conclude it was to a considerable extent; it induced parties to purchase stock; they felt that they could afford to purchase; and the sale of the stock of the old settlers enabled them to purchase land from the government, and thus increase the fund for the importation of labour, which to a young colony is most valuable if it can be employed.

16. Did not that enable and induce the old settlers to give a price for land far beyond 5s. per acre?—In some instances old settlers would give a higher price for land in particular situations rather than lose it, although they might feel assured that they were giving more than the actual value of that spot of land. I myself was induced to give as much as 13s. per acre, which I knew was much more than the land was worth; but I was unwilling that any other party should purchase it.

17. You think then, that the minimum price of 12s. per acre is beyond the present value of grazing land, and that this causes the newly arrived immigrant to hesitate as to the outlay of his capital in live stock?—I am quite sure it is; the old settlers themselves could not afford to give 12s. per acre for grazing land, and the newly arrived immigrant, perceiving this, refrains from the purchase of either land or stock, and puts out his capital at interest, as affording the most certain return.

18. Has not this the effect then of leaving the unsold land in the occupation of the old settlers without purchase?—It has, to a trifling extent; the unsold lands, adjoining the old settlers' purchased lands, are left for his benefit. He is not interfered with in any way, while he refrains from establishing stations on them.

19. So far then the raising the minimum price is an advantage to the old settlers?—So far it is, because no one will purchase at the increased rate; but this advantage is more than counterbalanced by its having prevented the purchase of such.

20. Can the old settler, under the existing depressed circumstances of the colony, avail himself of that advantage?—He cannot avail himself of it in the present extremely depressed state of the colony, and for this reason; finding he has no sale for his stock at a remunerating price, he cannot afford to hire servants to look after an increased number of sheep, and even if he could, he would not be able to sell any portion of that increased number; therefore waste lands within the boundaries are almost valueless to him in the present circumstances of the colony.

21. Was there more land sold at 5s. per acre, than is actually occupied for grazing purposes; that is, is there any land purchased at that price now lying waste?—I do not know of any purchased land in my district which is unoccupied, and I know of none which is allowed to lie waste; I have not enough of land for my stock.

22. Is that the case generally with the settlers, even the large purchasers of land?—I do not think there is an individual in the colony who has purchased land enough to graze his stock upon.

23. If you had a market for your surplus stock, would you purchase land at the present price?—If I had sale for my surplus stock, and land was at a reasonably remunerating price, I should purchase every year.

24. Are you a purchaser to a considerable extent at present?—I have purchased about 16,000 acres.

25. Is that land fit for any other purpose than grazing?—Some is, but generally speaking it is only suited for grazing.

109.

26. What

NEW  
SOUTH WALES.

George Cox,  
Esq.

16 June 1842.

26. What proportion of it may be fit for agricultural purposes?—I can hardly say; a great deal might be fit for agriculture, but from want of a market for the produce, or its great distance from a market, it would be of no use to put it under cultivation.

27. Does the climate in the district you allude to, admit of agricultural pursuits?—I think the climate is favourable to the growth of wheat; we suffer from drought, but the crops are heavy, and the wheat keeps well; we have found that it has kept for two years perfectly well.

28. Do you consider the value of your land depreciated lately, as well as your stock?—In the present depressed state of the colony, I do not think that there would be a purchaser for grazing land at all, if it was put up in any quantity.

29. To what do you attribute this depreciation in the value of your land?—I attribute it to the minimum price of land being raised by government to more than the real value of the land.

30. Then you do not think the keeping up the government minimum price of land has had the effect of keeping up the value of land generally in the colony?—I think not, but rather the reverse; it certainly appears that ever since the raising of the minimum price by government, the sale of land for grazing purposes has come to an end.

31. Do you include the land at Port Phillip in your observations?—I speak in reference only to lands in this part of the colony, and such as are required for grazing purposes, not to lands in the district of Port Phillip.

32. The value of your property then generally has depreciated, and you are thereby deprived of that means of engaging labour, which you have been in the habit of employing?—Such is the case; and I am reducing my establishment every day, and must continue to do so. I have not the means of paying the wages of the servants at present employed on my establishment.

33. Do you think the general distress now prevailing will cause a reduction of wages?—It must cause a reduction of wages; we cannot afford to employ our present number of hands at the present rate of wages, and therefore we must discharge our servants, unless wages come down.

34. Do you not think the present low price of stock affords an excellent opportunity for capitalists to invest their money?—I have been much surprised that capitalists have not invested capital in stock, as they could not fail to derive a large profit from purchases made at the very low and ruinous rate to the seller for which stock may at present be obtained.

Thursday, 16 June 1842.

Henry O'Brien, Esq., J. P., called in, and Examined.

H. O'Brien,  
Esq.

16 June 1842.

1. ARE you in the occupation of a large extent of government land beyond the boundaries of location?—I am.

2. Can you state the number of sheep or cattle which you generally have on such land?—I have at present, I think, about 12,000 sheep; I have no cattle under my own management on the government lands.

3. What extent of land do you occupy in that way?—From about 20,000 to 25,000 acres; I am not certain as to the exact quantity.

4. Do you consider that the uncertain tenure of such land exposes the occupier to any disadvantages, in the event of any change of system on the part of government, tending to cut up his land?—Not under the present state of the colony; but by a change of system on the part of the government, at a time when sales could be effected to a great extent, stockholders might be subjected to very ruinous consequences.

5. Would you upon any fair and moderate terms avail yourself of an opportunity to ensure the possession of the land you speak of for a term of years; and do you think that such would be the disposition of the settlers generally?—I should certainly avail myself of such an offer, and, as far as I am able to judge, other settlers would do so too.

6. Suppose you were secured in the occupation of that land for a reasonable number of years, and on the same terms, would you think it advisable to purchase any portion of the run, in order to form your head station upon it, and to carry improvements into effect?—Much would of course depend upon the conditions of purchase, and extension of the lease.

7. Suppose, for example, that the lease was granted for 14 years?—Then I should be very glad to purchase, on being allowed time for the payment of the purchase-money; it could be paid with ease by the purchaser, by annual instalments during the lease.

8. Can you make any calculation as to what it would be worth while paying annually, during the 14 years, to secure the occupation of the whole run, and the fee simple of the head station?—I should say that the present minimum price of 12 s. per acre could be paid with advantage. The land to be occupied with each section so purchased, I suppose to be sufficient to support 10,000 sheep in all seasons, making allowance, of course, for the great proportion of perfectly useless land annexed to the grazing grounds now occupied by stockholders throughout the colony; some parts being so from their utter worthlessness, and others from either the total or occasional absence of water.

9. Do you think such a plan would encourage parties to embark capital in stock and sheep farming, and so bring about a demand, which does not exist at present, for your surplus stock?—I think it would induce parties to invest their capital in that way, and thus of course create a demand for stock; I feel persuaded that even under present circumstances large sums would be invested in stock, but for the high rate of interest allowed on deposits in the colonial banks, which if withheld, would at once induce investment to a large

large amount in stock, to the great benefit of our banking companies themselves, as well as of all other classes.

10. Can you form any opinion as to whether this would be as great an inducement to persons to invest their capital in sheep farming, as a general reduction in the price of land would be?—I think it would be a greater inducement than a reduction in the minimum price of land. Even if the price of land were reduced to the lowest possible amount, I do not think persons could afford to purchase it, as their capital would be much more advantageously invested in the purchase of stock, and few have the means to invest in both stock and land to any great extent.

11. Does it appear to you, if persons had such an occupation of these lands as would enable them to derive a profit from them, that they would be disposed to become purchasers of land?—I think it would be a very natural consequence.

12. If it should be productive of a demand for land in that way, would it not advance the value of landed property generally?—I think it would certainly have that tendency, both within and without the boundaries of location.

13. Does your experience satisfy you that the landed interest is at this moment in a very depressed state, and that it requires some such measure as that alluded to to relieve it?—I do not think that it has ever been so much depressed, as at the present time, or so much in want of support.

14. What practical measure can you suggest to relieve that distress?—The only measure I can recommend is a loan, which, however, I fear is beyond the reach of the government.

15. To what purpose would you propose that that loan should be applied?—I would propose that it should be lent in sums to individuals, on mortgage, for three years, at bank interest.

16. If the government had a large sum of money to lend to persons wishing to mortgage their lands, do you think it would have a beneficial effect?—I certainly think it would.

17. Would the borrowing of money in that way have any effect in increasing general profits?—I should think so; there are many persons who, if they had the present means of carrying on their operations, must eventually make profits.

18. To what causes do you attribute the present unexampled depression of the grazing and landed interests of the colony?—The want of a market for the surplus sheep and cattle, the high rate of wages paid for labour, and the low prices obtained for wool both in the colonial and English markets, during the past three years.

19. Can you explain how it arises, that whilst there is no market for surplus stock, the import of provisions from foreign countries should be so great?—I should imagine that it is the result of speculation from foreign markets.

20. Can you suggest any means of creating a market for surplus stock?—Not any.

21. Would not the arrival of men of capital, as formerly, be likely to revive the demand?—It might, and most assuredly would have that effect, were the banks to discontinue interest on deposits, a system which must injure even themselves eventually.

22. To what cause do you attribute the falling off in the number of capitalists coming to the colony?—It is probably owing to the unfavourable accounts which they have received of the state of our affairs, which in many instances has been exaggerated by writers in the public prints of the colony.

23. From what time do you date the present depression, and to what do you particularly attribute it?—I think the depression commenced about three years ago, and was occasioned in a great measure by a fall in the price of wool, and the high price of labour at that period.

24. Is not the price of labour falling very fast?—Not now.

25. Have you any difficulty in procuring labour in your neighbourhood?—Not at present.

26. What is the average wages now given in the country you allude to?—From 25 *l.* to 30 *l.* per annum, with rations, in the Murrumbidgee district. I have discharged some men, to whom I was paying 25 *l.* each per annum, owing to their demanding 30 *l.*, and have been compelled in consequence, to instruct my superintendent to put two flocks of sheep in one, rather than subject myself to the payment of such high rates of wages.

27. What do you reckon to be the value of the ration?—At the lowest estimate 14 *l.*; the meat and flour are produced on the station, the tea and sugar are taken at the Sydney prices, allowing for the cost of carriage to the interior, and for waste in the issuing.

28. Will the profits of your establishment enable you to continue these wages?—Certainly not.

29. Are you a large holder of land by purchase?—I have purchased about 9,000 acres.

30. Do you find the value of that land depreciated as well as your stock?—I cannot say, as I have not offered any of my land for sale.

31. What effect has the raising of the government minimum price of land had on the interests of the colony?—I have not given this matter sufficient consideration to be able to afford any information to the Committee on the subject.

32. Do you think it calculated to prevent men of capital coming to the colony?—I should say that persons at home would be much more likely to come out with capital, if they could purchase land at 5 *s.*, particularly when they know that the return to be obtained from land purchased at the increased minimum rate is but small, if indeed any.

33. If men of capital had been induced to come out by the low price of land, would not that have afforded a considerable market for the surplus stock of the settlers?—Most assuredly.

109.

34. Would

NEW  
SOUTH WALES.

H. O'Brien,  
Esq.

16 June 1842.

NEW  
SOUTH WALES.

H. O'Brien,  
Esq.

16 June 1842.

34. Would that not have tended in a great measure to relieve the colony from its present state of depression?—Certainly.

35. If there was a sale for the surplus stock, would not there be considerable profits to the sheepholder in this colony, supposing that the price of the wool would cover all the expenses attendant upon sheep farming?—Most assuredly; and at no time within my recollection has there been a more favourable opportunity than the present, owing to the low price of stock, for persons of capital to invest money in stock with a certainty of realizing large profits.

36. So far as the price of stock is concerned, do you not consider the present a very favourable opportunity for newly arrived capitalists to invest money in the colony?—At the present low price of stock, I know of no more certain source of profit than the investment of capital in stock. Some years ago stock was very high, and persons newly arrived purchased largely; the sudden fall in the price of stock, which took place shortly afterwards, caused embarrassment to some of these purchasers, and total ruin, it is said, to others.

37. What was the state of the graziers when the minimum price of land was 5 s. per acre?—Very good.

38. Did it remain so during the whole of that period, or was there any interruption to their prosperity?—There was no interruption to the prosperous state of their affairs, so far as I can recollect.

39. Were there any other circumstances which, in your opinion, contributed to that prosperity?—Yes, we had a large influx of immigrants at that time, which considerably reduced the price of labour; wool brought a high price both in England and in the colony; and the government took about 500 tons of salted meat from the settlers annually, for some years, but do not do so now, owing to the diminished numbers of convicts whom they have to provide for.

40. Did not this enable the old settlers to purchase lands in the neighbourhood of their establishments, and to give a much higher price than 5 s. per acre for them?—It did in many instances; I have known so much as 17 s. 6 d. per acre to have been paid for crown lands put up for sale at the then minimum price of 5 s.; indeed, crown lands would, in my opinion, bring their real value in nine cases out of ten, even if put up for sale at the low price of 1 s. per acre; whilst few, if any, bidders have been found since the price has been raised to 12 s.

41. You have already stated, that the colony was in a prosperous state when the minimum price of land was 5 s.;—what do you think would have been the state of the colony now, if that price had remained unchanged?—If persons of capital would have been induced to come out, and purchase land at 5 s., the circumstance of its having been raised to 12 s. must have materially injured the colony, by having prevented the investment not only of English but colonial funds in the purchase of crown lands, the intrinsic value of which, taking them as a whole, is most assuredly not more than three shillings, owing to the utter worthlessness of a great portion of them, and the total or occasional absence of water in some otherwise desirable portions.

42. In what way do you think, the giving greater facilities to squatters beyond the boundaries, would operate as an inducement to purchase land within the boundaries?—It would induce men of capital to invest their money in stock, to be depastured on lands leased from the government on moderate terms, for a certain number of years, and place the settlers residing within the limits in a condition, by means of such sales, to improve their purchased lands, or to extend their purchases.

43. Would it not have a tendency to prevent the present holders of such lands from becoming purchasers, if they could obtain a certain tenure of them for a number of years on the terms alluded to?—I think it would not, inasmuch as their purchase on the leased lands would only extend to a section, out of 30,000 acres, or a sufficiency to support 10,000 sheep.

44. Then they would purchase only about the 47th part of the run in that case?—They are limited in their purchase, I understand, to a section only.

45. Do you think if they were allowed to purchase to a larger extent, purchases would be made at the present minimum price?—I think so, with a credit of 14 years, or 21 years in case of the purchase of 4 sections, which I think would be still more desirable;—the purchase-money to be paid by instalments within those periods.

46. Do you think it would be judicious to bind up 30,000 acres for 14 years, for the sake of selling a single section of that property?—I think not; the settler should have liberty to extend his purchase beyond the one section, and in case of a purchase of four sections, the time should be extended from 14 to 21 years.

47. Are you aware that it is intended that the land shall be put up to auction at the expiration of the 14 years, paying to the occupier the then value of the improvements he may have made, taking them at the estimated value of the day?—I have heard that such was intended.

Wednesday, 22 June 1842.

George M'Leay, Esq., of Brownlow Hill, called in, and Examined.

1. You are a good deal concerned in agriculture and in sheep farming?—I am.

2. Can you inform the Committee what may be the present state of those interests?—With respect to sheep farming, nothing can be in a more depressed state; as to agriculture, it too is declining every year, and will continue to do so, in my opinion, until some enactment is passed against the introduction of foreign grain. I have found it to my advantage

G. M'Leay,  
Esq.

22 June 1842.

advantage to put the greater part of my arable land under lucerne—a permanent grass, and have thus been enabled to keep a dairy establishment on a large scale; as I live at no great distance from Sydney, I find in this way I can get some return for the capital invested, whereas had the land remained under the plough a very considerable loss must have accrued.

3. What observation would you make with respect to the profits on cattle generally? Where there is no dairy, and the cattle are at a distance from market, horned stock are scarcely at present more profitable than sheep.

4. If a market could be found for the surplus cattle even at the present prices, would cattle establishments be profitable?—Not at the present prices, which are ruinously low, in consequence, I have reason to believe, amongst other causes, of the large number of stolen cattle that are brought into the various markets, and which can of course be disposed of to the butchers at a much lower rate than that at which the owners of cattle establishments can sell without loss.

5. Can you suggest any manner in which that may be prevented?—Some check might be given to the practice, by making it imperative upon parties having fat stock to dispose of, to make a report to the nearest police magistrate of the number and brands of the cattle they are about to remove, some weeks previous to their being driven away; and by establishing stations for the inspection of all such cattle, on all the principal roads; but in a country like this, it is obvious that though such a system might check, it could not altogether prevent the evil.

6. Supposing all cattle that come to market were the property of the real grazier, and not of the cattle stealer, do you think there would be a market for all the surplus stock so as to make cattle establishments profitable?—In good seasons certainly not; we require capitalists to salt down meat for exportation. Some of the large stockholders are about to commence this, but it is not the proper business of the stockholder.

7. Have you enquired into the details of that plan, and do you think it likely to be profitable?—I am not acquainted with the details, or the expenses of such a business; I know that it has hitherto been considered profitable to salt down meat for consumption in the colony, but we have now to contend with a large quantity of imported meat, sufficient it is said for a year's consumption, and have consequently to look out for a foreign market; and I here may be permitted to observe, that if such a market were discovered, the quantity of beef withdrawn from colonial use, would make room for an increased consumption of mutton, and a new impetus would thus be given to sheep farming.

8. Do you know what price would pay a grazier to rear cattle for salting down?—No price under 7*l.* per head would pay for really good cattle, that is to say, 20*s.* per cwt.

9. What do you reckon into the price, as constituting the price?—The interest upon the value of the land occupied, upon that of the original stock, the costs of servants, horses, and a respectable superintendent to check depredations, which, under the best management, are but too frequent. Few stockholders realize more than 60 per cent. increase, and it must be borne in mind that cattle are not disposable for slaughter before they are four years old. I may add the expense of bringing down to market, which forms a very considerable item in the cost.

10. Would not the difficulty last mentioned be much diminished, if not removed, if ports to the north or south of Sydney could be fixed upon, from which the exports of beef could take place?—No doubt, very considerably, even if the meat were afterwards sent to Sydney for exportation.

11. But you would fix upon other ports than Sydney?—Certainly, because the less cattle are driven the better; by long journeys the quality of meat is much deteriorated, more particularly for salting down.

12. In what degree do you conceive the present depressed condition of the colony is attributable to the mode in which immigration is carried on, or to the extent of immigration?—Immigration, *per se*, most assuredly has not had a bad tendency, but much of the present distress may be attributed to the very large sums of money drained from the colony to pay for immigration.

13. Should you not think likewise, that the preventing an accumulation of capital would in effect, have the same influence as the expending it?—Decidedly.

14. Do you conceive that immigration to the same extent would be prejudicial?—Certainly not; we do not however, I think, require for the immediate years, a greater number than we have received during the two past; the present depression cannot be attributed to scarcity of labour; most persons have, it is true, reduced their establishments; many have begun to slaughter their female stock, and others have ceased to allow them to breed; but this is owing to there being no demand whatever for this kind of stock, and if labour were as cheap again as it is, the large proprietors would be compelled, under present circumstances, to curtail their establishments.

15. Do you apprehend that, by any means, the consumption of animal food could be increased in the colony itself?—I do not think that a larger quantity of animal food could be consumed; even if no foreign meat had been imported into the colony, we should sooner or later have had to look elsewhere for a market.

16. With respect to cattle, is it not observable, that the want of a market is the true cause of the present depression?—In a great measure it is the cause; but were it not that people are frightened at the present aspect of the colony, I think that even now breeding stock might be sold. Many capitalists who came here with the intention of embarking in pastoral pursuits, were originally deterred from so doing by the high price of land, and

G. M<sup>c</sup>Leay,  
Esq.

22 June 1842.

the enormous rate of wages; and though the last cause is comparatively removed, the general stagnation in all farming occupations induces them to keep their money invested in other ways.

17. If the general profits of the colony are not increasing, do you think it possible that those persons should continue permanently to obtain the interest on the money they have laid out?—Certainly not.

18. If by the improvement of markets, any profit, however small, were ensured upon sheep and cattle, would not that be the means of obtaining purchasers, and making the cattle profitable?—No doubt; I believe that almost all immigrants of capital come here with the intention of becoming farmers or graziers, and that a great many have been diverted from their original design by the causes I have before mentioned.

19. Do you not consider the present a favourable opportunity for investing money in agricultural and pastoral pursuits?—This would be the very best time to purchase stock of all kinds, on account of their extremely low price. With respect to agriculture, my belief is, that it will ruin all those who embark in it, unless some check is given to the importation of foreign grain.

20. Has it ever occurred to you, that by an alteration or improvement in the system of location beyond the boundaries, a greater inducement would be held out to persons to go there, and so create a market for stock?—In the present state of the markets, I do not conceive that any greater number could be induced to locate themselves beyond the boundaries; the present minimum price of land makes those so located, feel as secure in the runs they occupy, as if they possessed leases of them; but there can be no doubt when the very great importance of the wool grown beyond the boundaries is taken into consideration, that every possible protection and encouragement should be given to the squatter. It is so essential for the health and improvement of stock that they should not be limited within range, that on that account these districts are preferred by many of the old settlers, as well as by parties who have lately arrived.

21. Is it then your opinion, taking things as they now are, that the occupiers beyond the boundaries are doing well?—I think that they are doing better, in proportion, than those who bought their land, but only in that respect; the superior condition of their stock, in the present state of the market, is counterbalanced by the higher wages they have to give, and their greater distance from a market; the squatters just now must find it difficult to pay their assessments, and the sums required for licenses.

22. Do you think it probable, if the price of government land were reduced to its former rate, that purchasers would be found so as to create another land fund?—After public confidence is again restored, I think that by degrees there would; though I am of opinion that no person would purchase land for sheep farming at that rate; the pastures most in request for sheep are dry hills and downs, unfit for any other purpose whatever, so far as we yet know; and the value of such land can clearly only be tested by the quantity of wool and mutton it can produce. Just now, when the expense of keep absorbs the whole proceeds of sheep farming, such land could not be sold at any price; if the government should attempt to force the purchaser by threats of ejectment, the only export of the colony would be all but destroyed. Much of the land sold at the sums which caused such an extravagant notion of the value of our lands to obtain, secured to the purchasers ten times the quantity purchased; much was bought for the sake of the convict labour to which it gave a title; for the sake of keeping out bad neighbours, for making properties complete, and for other reasons unconnected with its intrinsic value. Many of these causes will of course still operate in enhancement of the value of land, but should not be taken into consideration in determining a minimum price.

23. After consideration of this subject, do you think, if the land fund could be replenished, it would be advantageous to send the money out of the colony as formerly?—Decidedly not; I am of opinion that the colony has been injured by so much money having been sent out of it, and that it will suffer still more were the system to be continued.

24. Then as a means of preventing that great abstraction of capital, would you be favourable to the measure of a loan?—Certainly; I should have been so on another ground as well, which is this; of the immigrants we are now introducing, a very considerable number consist of children, who will hereafter be a valuable addition to the labour of the colony, but are of no present service; the expense of their importation ought therefore to fall upon those who will hereafter enjoy the benefit of their labour; I also think that raising money in England, might increase the interest already felt there for the colony.

25. Do you think, with the present prospects of the land fund, a sufficient security could be given for such a loan as 1,000,000*l.*, to be raised in eight years, by annual instalments, in sums of 125,000*l.* at 5 per cent interest?—I believe that there are about 14,000,000 acres of unalienated land in the 19 counties within the boundaries, of which 1,000,000 at least may be said to be of a certain value; these lands, together with the extensive districts beyond the northern and southern limits, would, I think, afford ample security. The value of these lands, I would beg to observe, would be enhanced tenfold at least, if convict labour were to be employed in laying them open by roads, and forming new lines of communication with the coast. Indeed, in my opinion, upon the continuance of this species of labour, for such purposes, depends, in a very great measure, the prosperity of the colony.

26. Could you suggest any means by which the present general depression might be relieved?—I think if the price of land were reduced, that in due time there would be a reaction.

27. How would that reaction be brought about?—It is natural for every one to wish to possess

possess land, which is after all the only safe and true property. There are many in the colony, I have reason to believe, ready to purchase whenever land shall be put up at a fair price; having land, they will purchase stock; and whenever there is any true value assignable to stock, instead of its present nominal value, confidence will return, and by degrees, things will flow on in a more favourable channel; with the knowledge of an improvement in our affairs, and of the price of land having been reduced, immigrants of capital would again flock to our shores, and give new impulse to the progression.

28. Unless a better market were provided than at present, would those purchases of land and stock benefit the purchasers?—Certainly not for any great length of time; but I think that there is a prospect of a market being found—at any rate it will be sought—I mean for our beef, which, if exported, as I said before, will leave a better market for our mutton.

29. Do you not think it might be still more advantageous if, by means of leases, persons were enabled to settle without purchase of land, and so have their money for the purchase of stock?—There can be no doubt of it; instead of going at once into the treasury, the capital introduced would be put into the hands of the stockholder, and thus create a wholesome circulation; ultimately it would be spent in land, no doubt.

30. Would you obtain by such means a permanent class of settlers?—I think I may say that such a class of settlers would be obtained, provided such leases were for a period not less than 10 years, and the lessees had a prospect of being entitled at the end of that time to a right of pre-emption, or of being indemnified by the purchaser of the lands leased for their improvements.

Wednesday, 22 June 1842.

*Robert Scott, Esq., of Glendon, called in, and Examined.*

1. You have been more than once examined before the Immigration Committee?—Yes, either twice or thrice.

2. Last year was one of these occasions?—It was.

3. With reference to the evidence then given by you, will you have the goodness to say, whether your subsequent experience has confirmed the opinions you then expressed, or whether they have undergone any change, and if so, in what particulars?—I think my opinions are the same now as then. In many points they have been strongly confirmed, particularly respecting the “Squatting Act.” I am, however, able to hire as many servants now as I please; then I could not; but the immigrants have not been of so good a description as they ought to have been, considering the cost of their introduction, and that the money was supplied by this colony. Indeed, if the parochial authorities, or others in England, had sent out such people as they were desirous of getting rid of, I think we could not have been worse supplied, as to the class of persons, than we have lately been. I do not think we could have a worse description of people than the immigrants sent us recently.

4. Why did not those who desired a better description of immigrants avail themselves of the services of their friends in England, to select for them such as they required?—I will answer that personally. I sent to an old friend of mine at Higham Ferrers, the clergyman of the parish, and he engaged for me 20 persons, after considerable trouble; but when the day for starting arrived, only one lad would consent to come out. Another reason is, because the servants, if good, are very soon inveigled away by one’s neighbours; and the labour and expense of introducing them are thus lost to the importer for the benefit of some worthless person; and again, the indentures under which servants must be introduced are not sufficiently defined or recognized by the law.

5. If there be no possibility, even with such care and diligence, to obtain a better class of people, what then is our remedy?—Removing the ignorance at present existing in England with reference to the colony; the persons to whom I have alluded as refusing to come out, said that they would have no objection to follow if the lad would send home good accounts of the country. I have written to other friends in England, and they have experienced the same difficulty, in inducing good people to emigrate to this colony. They feel a great repugnance to come here. I hired some very good men from the Immigrant Barracks some time ago, and they are in my employ still.

6. Are the good men you speak of from one of the counties of England, and which?—I do not know the county, but they are Englishmen.

7. What is your opinion as to the present state of the pastoral and agricultural interests of the colony?—Both are in a very depressed state.

8. Have you ever known them more so?—I have; in the years 1828 and 1829 they were much worse.

9. In what respect?—The bankruptcies were more numerous than amongst those engaged in agricultural and pastoral occupations, in proportion to the population; and the price of stock was lower than it is now, or quite as low, and we then fed our stock over lands for nothing, great part of which we have now bought, and have to contend against the interest on the capital; labour then was both cheap and abundant.

10. There was no outgoing for labour then comparatively to what there is now?—No; labour was not paid for by money-wages as now, nor had we then to pay for its introduction as we have now; not for ourselves only, but for the whole colony. Every class of the community employs labour, and it seems unfair, therefore, that the land-owners only should pay for its introduction.

Esq.*

22 June 1842.

NEW  
SOUTH WALES.

Robert Scott,  
Esq.

22 June 1842.

11. Was there abundance of labour in the colony at that time?—There were then assigned men to be obtained as shepherds.

12. To what causes do you attribute the present embarrassment of the colony?—I think the present depression amongst agriculturists is attributable to many causes; one has been the scarcity of labour, and the difficulty of obtaining it even at a high rate of wages. It appears to me, however, to be a not unnatural reaction. The state of the settlers a year or two ago was, I think, quite as unnatural as it is now; the feverish height of the one state was quite as unhealthy as the depression of the other. Another great cause is the application of the land fund to other purposes than the introduction of labour; by the amount of that abstraction the land-owners have paid too high for their property, and they have not had value for their money.

13. Do you think the high price of labour for the last two years is one cause of the present depression?—Certainly, we are now suffering from that cause; the high rate of wages running away with all profits, no man would enter into pastoral pursuits, and in consequence there has been no sale for our surplus stock. This has, as a natural consequence, deteriorated the price of land; as the less the produce derived from land, of the less value that land becomes; whereas, in the face of this, the Government have increased the price of their land from 5s. to 12s. an acre, and thereby, I am of opinion, disorganized the agricultural system, and the relation between land and produce. The squatting system also has materially contributed to these effects, as it has deteriorated the price of land, and prevented its sale; I may here say I am an extensive squatter myself.

14. Then you attribute the present depression of the agricultural interests to the high price of labour for the last two years, and to the Government raising the minimum price of land?—Yes, and whilst they raised the price of land on the one hand, they lowered it on the other, by charging the squatters so small a sum for occupation licenses; the squatters, too, have considerably raised the price of labour, by employing a large portion of persons brought out at the expense of the land fund, whilst they have not contributed to the increase of that fund. I must, however, at the same time admit, that the squatters are the thews and sinews of the country.

15. Then while you would lower the price of land to the purchaser within the boundaries, you would raise it to the squatter?—Undoubtedly, and in just proportion, though that proportion may not be very easy to determine; I would weigh his advantages with his disadvantages, and fix the price accordingly. I would induce him to purchase land by every means in my power, and thereby render his interests identical with those of the community, which certainly is not the case, so long as he continues a squatter only, as at present.

16. Then you would recommend some system should be adopted which would give the squatter a more permanent lien upon the land he occupies?—I would strongly recommend such a system to be adopted; I would not permit any man to dispossess him at any time, except by purchase at auction. Indeed, I am so anxious that squatters should be held to consider themselves as denizens of this colony, that I would even abandon my most favourite system of sale by auction, and give them the right of pre-emption; but sale by auction, at a fair upset price, is undoubtedly the best, and I would give the squatter compensation for all improvements which he had made, to be paid by the person purchasing the station, or by the Government if they resumed the land, leaving the value of such improvements to be settled by arbitration.

17. Do you not think that the existence of a good market for all the produce of the colony would be the best mode of relieving the present distress?—Unquestionably; a good and steady market; I look upon a steady market as much better than a high one.

18. With respect to wool, do you not think there is a steady market in England for what can be raised in the colony, although at rather a low price?—I do; a fair market; but I think its management capable of improvement.

19. To what cause, then, do you attribute the circumstance, that a sufficient number of capitalists is not found to embark in that trade, or which is the same thing, to purchase the surplus stock?—Because it is a losing business at present.

20. Will you have the goodness to favour the committee with your opinion as to the means which might be adopted to prevent its being a losing concern?—I think it hinges on the labour question; the price of land will adjust itself, for no man will buy land at a ruinous price; and so far as sheep farming is concerned, its future existence depends on Coolie labour, of the expediency of introducing which I am becoming daily more and more convinced; and I would beg, with the deepest earnestness, to impress upon the attention of his Excellency the Governor and the Honourable the Legislative Council this most vital subject.

21. Do you mean to state it, as your opinion, that it is impossible to obtain European labour in this colony at such a rate as would make it profitable to the settler to employ it?—I do not mean to say that; but I hope that good European labour in this colony will never be so badly rewarded. I consider the employment of European labour in sheep-farming to be a misapplication; it is using a giant's strength where that of a child would suffice.

22. With respect to the other great branch, that of cattle, will you state what steps have been taken to provide for the disposal of the increase every year?—I am not aware of any steps having been taken; but they will naturally follow the depreciation of stock. We shall have recurrence to salting down and exporting, so soon as the price will enable us to enter into competition with other countries. Yet here again the price of labour will interfere. The wages of coopers will eat up all profits. The price, in America, of a beef barrel is 4s., whereas it would be esteemed cheap at 8s. in Sydney.

23. Do

23. Do you not think, that with the steady market for wool which you have spoken of, and a market which might be created for the salt provisions, together with an improvement in the supply of labour, the colony need not despair?—I have never despaired of its return to prosperity, nor do I now; I have no doubt of its recovery, but I tremble at the cost; and there is no knowing who will fall sacrifices, and how long it may last; these three are the main points from which returning prosperity is to be looked for; with labour at a moderate rate, and a steady supply of it, we could raise many articles for ourselves, which are now imported, to the value of hundreds of thousands of pounds yearly.

24. With reference to the present depressed price of land and stock, do you not consider this a favourable opportunity for investing money in agricultural and pastoral pursuits?—I could not answer that question, unless I could foresee the future; the prices of stock are now far below their real value; if labour could be had at a reasonable rate, then it would; but, on the contrary, if labour becomes dearer than it now is, pastoral pursuits must be destroyed. In either case, stock cannot possibly be profitably depastured on bought lands, at the exorbitant price of the day; indeed the old rate is too high, unless a return to the high prices of stock could also be ensured.

25. Unless there is a market for the surplus stock, do you consider that the demand for labour will continue, keeping in view the large number of labourers lately imported?—If our concerns are to fail, we cannot employ labour at all; unless we have a profitable market for our stock, which we have not now, we must be ruined, and of course discharge our servants; I myself have reduced my establishments to some extent; I should be glad to have at least 100 more men in my employ than I have at present, if I could obtain a good return; in consequence of the extreme depression, there is now no encouragement to go to any expense in improving the breed of stock; those of an inferior description, and reared at a lower cost, will now sell equally as well as the best breeds.

26. If the price of labour were to fall, would not that probably create a new demand for stock, tending to make it comparatively profitable?—The moment that labour fell to such an extent, that care of stock would pay, many persons would undoubtedly engage in that pursuit.

27. What are the ingredients that enter into the expense of keeping stock?—Cost of provisions, the expense of bringing cattle to market, and the price of labour; the risk of loss by drought also has great weight.

28. Is there not another material ingredient, the price of land?—Certainly, this is an essential ingredient in the maintenance of stock; but I do not think that any stock, except the most improved, and consequently the highest priced, can be profitably bred upon bought land, even at 5s. per acre, and interest at 10 per cent.

29. You have stated, that you have thought it desirable to raise the terms of the tenure of land beyond the boundaries; what is the highest amount that a squatter could afford to pay, to make it profitable to him?—Under present circumstances he can do nothing; all his operations would be at a loss; in other circumstances, much would depend upon distance; he should have a lease; the name of assessment is odious; that of rent is not; nothing but a permanent lease will do.

30. What do you mean by a permanent lease?—I have already said that he should not be ejected, except by the sale of the land.

31. You have stated that he should be paid for his improvements; do you mean that he should be paid to the extent of his outlay, or the estimated value of the improvements at the time?—I mean the estimated value of the improvements at the time when the land is sold—the in-coming possessor to have full value for his money.

32. If greater facilities were given to squatters, and greater securities to the occupiers of land beyond the boundaries, would not that, do you think, prevent, in a proportionate degree, the sale of Crown lands?—I am of opinion that there would not be a single squatter but would purchase his head station at least, when an opportunity might be afforded him to do so, and he had the means of paying for it; and that the sales of land within the boundaries would not be affected by such advantages being allowed to squatters; I myself would purchase land of no value to any body else, in order to make my estate complete.

33. Do you assume that the plan proposed would involve permission from the Government to purchase land beyond the boundaries?—Yes; I would present every inducement, and afford every facility to the purchase of land; the squatters should have the power to buy whenever they choose and are able, but at auction, that the public may have the fair value, and the squatters would then pay their fair quota to the labour fund.

34. You think, then, if people had permanent security of land beyond the boundaries, that it would not affect the sale of land within the boundaries?—I think that squatters generally would do what I myself have done; from my profits made by feeding over unoccupied land free of expense, I have yearly laid out the money so made in the purchase of land, and thus added to my estate, and returned to the public what I otherwise should have been wholly unable to do.

35. You have an opportunity of doing so now; why do you not do so?—Because the price now fixed by the Government is far too high.

36. Is it not probable that this land would sell to other parties at the present price, within a reasonable time?—I do not think it would sell to any person, even at 5s. an acre, as I have picked all the good land out of that to which I refer at that price, and very dear it has been; for when I bought it, it was under the distinct understanding that with the land I bought labour also.

37. Do you not obtain an advantage, then, by the price being fixed beyond what could be

NEW  
SOUTH WALES.

NEW  
SOUTH WALES.

Robert Scott,  
Esq.

22 June 1842.

be given by other parties, inasmuch as you are thereby secured in the possession of the land without purchase?—Under these circumstances, I undoubtedly do obtain an advantage, being secured without purchase; unoccupied lands are often beneficial to an individual, but at the expense of the community; and that private benefit is very precarious, from the liability to intrusion from any quarter.

38. You are aware that a measure for raising a loan in England, for the purpose of obtaining funds for the introduction of labour into the colony, has been under the consideration of the committee for a number of years past?—I am.

39. Do you consider such a measure advisable?—I look upon it as indispensable, though I cannot but regard it in some measure as an evil.

40. Why is it indispensable?—Because I think labour will be scarcer, and consequently at a higher rate, during the present year, than at any former period, unless immigration is continued; immigration being indispensable, I consider a loan also indispensable, as it is impossible to look for any fund from the sale of Crown lands. I look forward with hope to the scheme of a general system of emigration mooted in England; this will be our preservation; I consider that a great change must take place in the management of property in the colony; stockholders will no longer be able to carry on the extensive operations which they have hitherto done; their large establishments must be split into small stations.

41. As the land fund is destroyed, upon what security is the loan to be raised?—The land, and not the fund, will be the proper security for the loan; but it is to be hoped that the land fund will be revived when we understand the subject better.

42. Has not the system of paying immediately in cash to the British merchant for the introduction of immigrants been attended with great disadvantage to the colony, by the rapid abstraction of so large an amount of capital?—No doubt; but even that is a less evil than the want of labour, which, but for the expenditure of that capital, would have existed.

43. Had that capital remained in the colony, is it not probable that there would have been a demand for the surplus stock?—The evil would not have been so great, but the keeping of the funds here would not have altogether prevented the evil.

44. Are you aware that during the last four years, 800,000*l.* have been expended on immigration, and that a great portion of the labour introduced has been unavailable?—I am aware that that sum has been expended, and that a large portion of the labour introduced has not been immediately available, because of the great number of women and children; and, with rare exceptions, the women will not do any field-work.

45. Must there not be a great difference, as to amount, between a land fund sufficient to provide security for a loan, principal and interest, and a land fund which should be sufficient, *per se*, to bear the entire expenses of immigration?—A very great difference.

46. May it not be possible to provide a land fund sufficient for the former purpose, although it may be impracticable to raise the latter amount?—I look forward to the land fund being again raised to something like what it has been in former years.

47. Do you think, then, that the land fund may be relied on as the means of paying principal and interest on such a sum as it might be thought advisable to raise by way of loan, to be expended in the introduction of labour?—I question whether it would be beneficial to expend the land fund, because I think that the demand for labour will so increase, as prosperity returns, that it will be our interest to lay out the entire land fund in the introduction of labour, and to leave the debt standing. Indeed I am disposed to think that no land should be virtually sold, but only the quit-rent, so that the Government would have a perpetual revenue from this source, and be unable to touch the principal.

48. Does not all that has now been said turn upon the expectation that there will be a profitable market created to the settler?—Certainly, all must depend upon a profitable employment of the settler's capital, which cannot exist without the creation of markets for his produce.

Wednesday, 20 July 1842.

Matthew Henry Marsh, Esq., of New England, called in, and Examined.

M. H. Marsh,  
Esq.

20 July 1842.

1. THE Committee understand that you are engaged in sheep farming in this colony?—I am so engaged beyond the boundaries of location.

2. How long have you been so engaged?—For nearly two years.

3. In what district?—In New England.

4. Have you experienced any difficulty in carrying on your operations, from want of labour, or otherwise?—When first I commenced my operations, I experienced considerable difficulty, owing to the ill-behaviour of my men, and my inability to discharge them, in consequence of the then scarcity of labour. Labour now is more plentiful; and being able to supply their place without much difficulty, I discharge men who behave ill, and give additional wages, according to agreement, to those who behave well, which I find promotes good conduct.

5. What do you consider the total expense of a shepherd at this time?—I give generally 25*l.* a-year and rations, and 5*l.* extra to men who behave well, besides presents at the lambing season and on other occasions. The rations which I give consist of ten pounds meat, ten pounds flour, two pounds sugar, one quarter pound of tea, and two ounces of negro-head tobacco, a week. I generally allow married men half a ration for their wives, and there is a deduction, not however equal to the half value of the ration, in their wages, where the women cannot make themselves useful by washing; and where a man has a son who can shepherd, two rations are amply sufficient for the family, even should there be another child, as where a woman cooks, the waste must be very much less than is generally the case. What their

cost

NEW  
SOUTH WALES.

M. H. Marsh,  
Esq.

20 July 1842.

cost is I cannot easily calculate, as I grow my own wheat; and in making an estimate of the cost, I must take into account various expenses attendant on wear and tear of ploughs, bullocks, fencing of fields, reaping, thrashing, grinding, &c. My actual yearly expenditure in money for the purchased articles, tea, sugar, and tobacco, does not, I should say, exceed 4*l.* per man. The meat issued is of course produced on the establishment; there is a further expense incurred in providing the men with pots, pans, buckets, &c., which, although apparently trifling, amount in the aggregate to a very considerable item, chiefly owing to the great carelessness and waste of the men, which was a natural consequence of the late convict system, and is not yet entirely eradicated.

6. What would you consider the additional expense incurred in raising wheat?—I have one man grinding wheat about four days a week; reaping is a considerable expense. In grinding and thrashing I employ the labour of about one man per annum, besides a horse at the mill. The wear and tear of the horse, mill, &c., must be taken into consideration. I am now building a windmill to grind for others as well as myself, which I calculate, when completed, will save the labour of about twenty men in the district.

7. Since you have resided in the district you speak of, have the seasons been such as to enable you to grow wheat, and do you intend to continue the growth of wheat?—With proper management, a crop of wheat would never fail; I have had this year five different crops sown at different times, and all succeeded; there was about six weeks' difference in the time of their ripening.

8. Do you consider that as applicable to your own station, or to the colony generally?—I am speaking only of the district of New England; I know no other part of the colony where it is at all applicable; and in that district I am aware that many crops failed during the present year. These failures were, however, in my opinion, entirely owing to bad management. There are only about three of the settlers in the district who have grown enough wheat this year for their own consumption.

9. In engaging labour, have you found any difficulty in procuring agricultural labourers?—I have found no difficulty whatever in getting agricultural labourers from among the immigrants; but it is difficult to get them from among the ticket-of-leave holders, or expirers, few of the latter classes being able to plough, thrash, &c. I have no convicts on my establishments.

10. Do you consider the occupation of land, under a yearly lease, long enough?—I do not consider it long enough, in consideration of the large outlay upon buildings which it is necessary to make, and also the expense and risk of running stock to a new station. I have a station, the buildings on which cost my predecessors and myself near 1,000*l.*

11. Were those buildings so essential to the welfare of your station, as to induce you to lay out so large a sum on their erection?—I do not say that so large an outlay would be absolutely necessary. The buildings of which I speak could have been built good enough to answer the purpose for 600*l.* or 700*l.*

12. Then you would be satisfied if you had such a tenure of your station, as to length of time, as would enable you to retrieve this outlay?—A great many things are to be considered besides this outlay; it would be more advantageous for a man to give 800*l.* for a station, for 7,000 sheep, already formed, than to commence a station himself; he would save a very great expense and risk of catching disease, &c., in removing his sheep. There would be extra wages of men for travelling with the sheep; and it is probable that the first year his wheat crop, owing to the ground being fresh broken up, would be a partial, if not a total failure, and the consequent cost of flour would be very great.

13. Is it usual to sell those stations?—Very usual indeed.

14. Has the squatter power to hold his station against all parties but the Crown?—No doubt.

15. In case a person purchase a station already formed, would he have the same tenure and privileges as the original occupier?—Yes, he would be in exactly the same position that the original occupier stood in.

16. Do you proceed with these improvements on the assumption, that though the Crown has the power, yet it will not break up your establishments by selling them?—Most decidedly; we go on the ground, first, that it would be ruinous to the colony to break up this system; and secondly, that if the land were resumed by government, with a view to sale, it would, except in the times of a land mania, produce nothing whatsoever. It is obvious that it would answer no man's purpose to give anything whatsoever for the land, for the legitimate purpose of grazing; and it is to be hoped that the ruin to so many, and the general disastrous state of the colony now brought about by the land speculations of from two to five years ago, will operate as a warning to prevent people in future from buying land of no intrinsic value, and fit for no other purpose but to sell to others at a premium, who, in their turn, would sell again, until the bubble burst, and discounts were contracted. I am satisfied it can never answer any legitimate purpose to buy land for grazing, as the rent—the only real test of value—could be very little, if any at all. From ten to thirteen per cent, after deducting interest on capital, is all that the squatter now gains, and a smaller profit would not answer his purpose, considering the liability to disease amongst his sheep, and other casualties; it is clear, therefore, that he can afford to pay no rent.

17. Will you be so good as to shew, in the method of an account, what profit may fairly be calculated upon from sheep-farming on land occupied under pasturage license?—I consider that under the best management, and the most favourable circumstances, the wool may be made to pay the annual expenses, in which case the increase is the profit; and the difficulty in answering this question, consists in estimating the value of such increase in a colony where the price of sheep, owing to circumstances with which sheep-farming has

nothing

NEW  
SOUTH WALES.

*M. H. Marsh,*  
Esq.

20 July 1842.

nothing to do, is frightfully fluctuating. The only possible way in which the calculation can be made, is by supposing that the sheep farmer will be able to sell his increase at the same rate that he originally gave for his stock; it is well known that sheep have been sold in this colony within a few years, at from 3*l.* to 3*s.* each, and although the average price, and perhaps the real intrinsic value, is from 1*l.* 5*s.* to 1*l.* 10*s.*, let me first, for the purposes of this calculation, suppose the price of a mixed quantity of sheep (the way in which they are almost always sold), to be 1*l.* per head, and let me suppose that the sheep farmer has—

15,000 sheep, at 1 <i>l.</i> - - - - -	£. 15,000
Fixed capital, including buildings, working oxen, drays, horses, &c., necessary for carrying on an establishment of 15,000 sheep -	1,500
Floating capital, being an average of from thirteen to fifteen months' advance in wages, on articles purchased, &c., before the wool can be disposed of - - - - -	2,000
<b>TOTAL - - -</b>	<b>£. 18,500</b>

Out of 15,000 mixed sheep, about 7,000 will be breeding ewes, and the increase from them, after deducting the decrease amongst the whole 15,000, in consumption of mutton and deaths, may be put at 70 per cent., or in round numbers, 5,000; but one half of this increase must be wethers, which being a necessary article of consumption, and not the subject of speculation, are not liable to so great a variation in price; reckoning the wethers at 10*s.*, and the ewes at the original price, 1*l.*, gives 3,750*l.* as the annual profit on 18,500*l.*—that is to say, the sheep farmer, at the end of the first year, can sell stock to the amount of 3,750*l.*, and have the same number left as he originally purchased. It will be suggested, that if the average of the sheep is 1*l.*, and of the wethers only 10*s.*, the ewes ought to be worth something more than 1*l.*; but when it is considered that the sheep farmer, to keep up the character of his original stock, and, if possible to improve them, ought only to sell his oldest and worst ewes, perhaps 1*l.* is very little less than the value. Let me, in the second place, put the price at 10*s.*, which on 15,000 sheep is 7,500*l.*, and with fixed and floating capital as before, 11,000*l.*, which, with increase as before, and reckoning the wethers at 10*s.*, still gives 2,500*l.* as profit on 11,000*l.* Let me, in the third place, suppose that the original stock are purchased at 5*s.*, that is, 15,000 sheep for 3,250*l.*, and with fixed and floating capital as before, 6,750*l.*, increase as before, 5,000; I will now reckon wethers as worth only 7*s.* 6*d.* each, which gives the value of 2,500 ewes at 5*s.*, and 2,500 wethers at 7*s.* 6*d.* 1,550*l.* annual profit on an original investment of 6,750*l.* In times of such very great monetary depression, as to allow sheep to sink to 10*s.* and 5*s.*, it is true that the floating and fixed capital required will not be so great as at other times; horses, working oxen, &c., will be cheaper, and the price of labour will be somewhat lessened, from the inability of others to employ it in that wasteful and extravagant manner unfortunately too common in this colony, either in their own personal gratifications, or in wild speculation; but at the same time, most of the great expenses of a sheep establishment, such as taxes, ironmongery, tea, sugar, &c., will not be materially altered. The profit on sheep-farming, after deducting 10 per cent. interest, is from 10 to 13 per cent. per annum. These calculations are made without any reference to the casualties of the diseases of sheep, so dreadful in their consequences, and which even the best management cannot entirely ward off. Many are only applicable to districts where the sheep farmer can grow his own wheat. The profit I have spoken of, can only be obtained by the very best of management; and, I think I am within the mark in stating that it is not obtained in one case out of twenty. It may perhaps be obtained with a very small number of sheep as well as on a large scale, as although, in the latter case the proportion of expenses is less, in the former instance the squatter's own personal labour and exertions will be proportionably more. The calculations are also wholly inapplicable to a sheep farmer who has not ample room on his runs; where he is is the slightest degree hedged in and stinted at his stations, the difference is incalculable, as, under such circumstances, his flocks cannot be so large, and consequently his expenses will be greater; his sheep cannot be in such good condition, and consequently his wool and increase will be less; and in both instances to a degree of which no one who has not seen the fatal effects of overstocking can have the slightest conception; I am convinced that the indigenous grasses, with fair treatment, do not deteriorate in quantity and quality; but when a run has once been overstocked, and the grasses pulled up by the roots by the sheep, it is impossible to say how long it may be before the country can recover, as in this climate, where once vegetation has been entirely stopped by trampling down, or otherwise, it appears that an almost indefinite time is required before grass will grow there again, when the ground is bare, and open to the drought and the powerful action of the sun's rays.

18. At what distance are your stations from the port whence you ship your wool?—At present one is 250 miles, another 35 miles farther; but the new road will reduce the distance 100 miles; I have another station on the edge of the table land, near Darling Downs, which is about 120 miles from the navigation of the Brisbane.

19. Will that road proportionately lower the expense of transit?—It may reduce it by about 50*l.* or 60*l.* per annum; not more.

20. Suppose you had a better tenure of your land than you at present enjoy, or a right of ownership, by purchasing a small quantity, would that assist you?—Very much indeed.

21. Do you consider there is arable land enough in New England to cultivate wheat extensively?—I think so.

22. What is the extent of the district?—It is about 130 miles by 30.

23. What portion of that land is suitable for the growth of wheat?—I should say wheat might

might be grown upon about one-half, supposing the best system of English or Scotch farming were introduced; there is, however, a very large quantity of land that will produce good wheat by merely being ploughed and harrowed.

24. Have you any rotation of crops yet introduced into the district?—I grow a little maize where the soil is too strong for wheat, and some barley, oats and millet; but there is very little occasion to grow any food for stock, as the indigenous grasses of the country are superior to anything artificial.

25. You think wheat more congenial to the district?—Yes; but barley, oats and potatoes do very well.

26. Do the native grasses supply the place of all green crops?—The grass is fully sufficient in all ordinary seasons.

27. Do you make any hay?—I made some this year.

28. What is the general character of summer there; is the country subject to the drought as in other parts?—This summer we have had very slight rains, not more than eight or nine inches in all. The country, however, is in a very good state, and we have not in the least suffered from drought. I should say, upon the whole, the character of the country is rather too wet than too dry.

29. Is there any failure of water?—No; I know no place in the district half a mile distant from water.

30. Is it a country difficult of access or to travel over?—The table land may be galloped over from one end to the other; there is no obstacle, with the exception of two or three not very high ridges. The rise up to the table land is, however, difficult on all sides, particularly towards the sea.

31. Speaking of sheep only, you compute that the produce of wool pays the expenses; if stock remains at the present nominal price, do you calculate on a profit of 25 per cent.?—Yes, if the increase were saleable at the present nominal price; I believe, however, there are but very few stations where the wool pays expenses.

32. Do you suffer from hot winds?—Hot winds have never been known in the district before last summer, when it was said there was one; I do not, however, believe it, and did not experience it myself.

33. Is the climate such as admits of wheat being preserved above ground longer than a year?—Yes; there is no weevil; I have wheat now by me in stack of the growth of 1840.

34. Supposing the government were to allow a certain occupation of the pasturage for a large number of sheep, and to enable the occupier to purchase a portion of the station, on which to effect his improvements, do you conceive it would tend to improve the condition of the squatter?—It would materially improve his condition in a moral point of view. Many of the squatters, whilst resident on their stations, live in the most wretched way, and without any sort of comfort. When they come to Sydney, they spend their money extravagantly, and remain much longer than is necessary for the transaction of their business. They are in many instances away from home half the year, and even considerably more, much to the detriment of their property. The difference observable at stations where the proprietors are resident, and those where they are non-resident, is extraordinary. I think that if they had a permanent interest in the soil they would become much more stationary.

35. What sum do you think it would answer a squatter to pay for a portion, say one section, of the whole of the land he occupies, continuing to pay the 10*l.* for license, and the assessment on sheep and cattle as at present?—I think he might afford to give 12*s.* an acre, to be paid by instalments during five years; most people would purchase on these terms; but in no case should the purchase exceed one section, and where the stock was not large it should be very much less; the amount of the purchase-money should not bear interest.

36. The Committee assume that your observations are made on the supposition that the government regulations, with respect to water frontage, &c., would be enforced in the case of these lands as well as of those within the boundaries?—The case would then be materially altered; if the purchase cannot be less than one section, and both sides of the water frontage cannot be occupied, no person could afford to pay 12*s.* an acre; the price should not in this case be more than 6*s.*; the occupancy of both banks of the water is not so much for the sake of the run the water commands as for convenience in other respects; the most suitable sites for the buildings of a station are in places where the streams closely approach the basis of the hills, and the ground sloping from them affords a dry and sheltered position; in cases where such a choice is made, the buildings must of necessity be on one side of the river; the best place for cultivation is on the flat below, on the other side of the water; this is almost invariably the case at every station already formed.

37. Would they be called water frontages, according to the colonial custom?—I imagine that they would.

38. What number of stations do you consider to exist in the tract of country of which you have been speaking?—There are about 60 stations, exclusive of those on Darling Downs.

39. The Returns furnished by the Commissioners of Crown Lands shew 76 stations in New England; as you say there are about 60, how do you account for the difference?—I suppose them to be on Darling Downs, which are at present under the same commissioner.

40. Is the character of the country on the Darling Downs equally as good as that of which you have been speaking?—There is a very great difference; the Downs, I believe, are not at all suited for agriculture; the crops of wheat and maize have failed there this year; I have seen only one station myself, but I believe the general character of the country

NEW  
SOUTH WALES.

M. H. Marsh,

NEW  
SOUTH WALES.

M. H. Marsh,  
Esq.

20 July 1842.

is similar to that portion of it which I have visited, and that is not suited to agriculture; the pasture is, I think, superior to that of New England, if the country is not subject to droughts.

41. Could supplies for the Darling Downs be obtained from the table-land without much difficulty?—I think they could, from some portion of it; but this could only be to a very slight extent, and to a very short distance, the carriage being so great, and drays having to be sent empty on purpose; whereas, if the squatters on the Downs obtained their flour from the coast, their return wool drays would, perhaps, be able to bring back their supplies of flour.

42. Do the Downs lie in a lower elevation?—Yes, from 800 to 1,000 feet below the actual fall of the table-land.

43. Suppose the plan of the purchase of a section were carried into effect, do you consider it would tend to introduce a class of tenants, or of small holders?—To a very limited extent, if at all; there would be no market for the produce raised by such small holders. The carriage to the thickly-peopled part of the colony must, for an almost indefinite period, be very expensive; the cartage of flour, for instance, would, at the present time, be considerably more than the value of the article on the coast.

44. Might they not sell sufficient to procure for themselves and their families as many superfluities as they now obtain in service?—Certainly not; their situation would not be at all improved by quitting service. I very much doubt whether in any part of the colony, the situation of a small farmer is as desirable as that of a labourer; and this would apply much more forcibly to New England, where wages are higher, and rations better, than near the coast.

45. You do not think, then, that the tendency of that measure would be to unduly promote labourers becoming themselves employers of labour?—Decidedly not; it would have no such effect.

46. Under present circumstances, what prospect has a labouring man of rising to the condition of an independent land-owner?—Any industrious man of decent habits cannot fail to save money. Most of my men are possessed of sums of money. I have two men who have between them more than 100*L.*, which is lent out at interest, and is yearly accumulating. A good man may expect at some time to rise to be an overseer, in which case he is almost sure to accumulate cattle and horses, which, as they run with his employer's and cost him nothing, is almost always allowed. In this way, a man may in a reasonable time acquire an independence.

47. Have they any disposition to invest that money in the purchase of land, rather than remain in service?—They have some disposition to speculate in land, but not to purchase with a view to occupying it themselves.

48. Have you ever turned your thoughts to the possibility of giving the shepherds an interest in the flocks rather than wages?—I have thought of regulating the amount of their wages by the number of sheep under their care, but I think that payment in stock would be attended with numerous difficulties.

49. You are of opinion that to raise wool to any extent, the flock-masters must be men of capital?—Decidedly; the floating expenses are so very large. I must now myself provide for expenses up to March, 1843, and have not yet received the account sales of the whole of my wool (and consequently not the full value of it) of the clip of 1840. To carry on sheep-farming it would be necessary to have a floating capital equal to an average of about one year and a quarter's expenses.

50. That state of things will be lessened when the distance from the shipping ports is shortened?—Slightly so; but even supposing the settler to receive immediate payment for his wool, he would have been obliged to procure supplies for his station during the previous year in advance; it is of the greatest consequence to a squatter not to be in debt in his agent's books; I know instances where parties, having to pay interest on borrowed floating capital, are on the very verge of ruin, while their immediate neighbours, under circumstances otherwise the same, but having prudently reserved sufficient money for floating capital, are thriving.

51. Then you think it more advisable, in commencing sheep farming, that the settler should not expend the whole of his capital in stock, but keep a portion to meet expenses?—Decidedly.

52. Is it practically a matter of much difficulty to determine the boundaries of the different stations?—By no means; little squabbles sometimes arise; but there have been scarcely any cases of dispute brought before the Commissioner.

53. Do you think the district is too extensive for one Commissioner?—One Commissioner can well perform the duties of the district of New England, not including Darling Downs.

54. Are you much annoyed by the native blacks?—No, the blacks have not been troublesome lately; whenever attacks have been made by them, they have in general been caused by injudicious treatment of them on the part of the settlers, in attempting to civilize them prematurely; there is, I should say, a strong disposition in their favour, as well amongst the men as the settlers, and consequently they sometimes get them to come to the stations before they fully know the power and habits of white men; and murders and atrocities are sometimes committed by them, which would not have occurred if they had not been admitted to the stations before they had got gradually acquainted with the customs of the whites, from civilized tribes or otherwise.

55. What time do you think it would take to teach newly arrived immigrants shepherd-ing?—They might learn the duty in ten days; one of my best shepherds is a boy of about  
13 years.

## PAPERS RELATING TO EMIGRATION.

129

NEW  
SOUTH WALES

13 years of age, and began shepherding for the first time in his life with me about 14 months ago.

56. Do you allude to persons used to a country life?—Yes; mechanics, and others used to a town life, do not like shepherding. In general I prefer the Irish as shepherds; they are very apt, and make good bushmen; they are less afraid of losing themselves in the bush than Englishmen.

57. Then you have no dearth of labour in your district?—Not at present; I do not wish to see wages reduced much more if the men are good.

58. Are there many convicts in your district?—Very few.

59. Have you observed any change in the character of the people in consequence?—I consider that the character of the people has been most decidedly improved; ticket-of-leave holders, and expirers now no longer boast of having been transported to the country, as they were in the habit of doing some time ago, but wished to be classed among the immigrants.

60. How many sheep do you keep in a flock?—Up to 1,500.

61. Do you find that answer well?—I do.

M. H. Marsh, Esq.

20 July 1842.

Thursday, 21 July 1842.

Evan Mackenzie, Esq., of Moreton Bay; called in, and Examined.

1. THE Committee understand you are an occupier of land for pasturage beyond the boundaries?—I am.

2. In what district?—In Moreton Bay.

3. At what distance from Brisbane Town are you settled?—About from 60 to 70 miles.

4. Have you easy communication for your produce?—Yes, I have two roads.

5. Where do you ship your produce; is there no other port nearer to you at which produce might be shipped?—At Brisbane Town; I could ship at Limestone (in a punt), which is higher up the river; but it would not be nearer for me; there is a sufficient draft of water from Brisbane Town to Limestone, but there are some rocks in the river, which will require to be blasted.

6. Can you at all calculate what extent of ground you occupy for grazing purposes?—I have no accurate idea of the extent; my neighbours are my limits at present; the limits are determined by a ridge on three sides, and by an impassable mountain at the back.

7. Could you not form any computation as to the extent?—I think about eight miles square.

8. Is the soil very suitable for pastoral purposes?—Portions of it are so.

9. But is it adapted for sheep or cattle?—For both; but perhaps the nearer the coast the better for cattle.

10. What is the general size of your flocks?—What are called dry flocks, we generally run to about from 800 to 1,100; on an average about 1,000; but in a flock of breeding sheep, seldom more than 700.

11. What number of men do you employ to superintend your flocks generally?—One man as shepherd to the dry flock, and a hut-keeper attending two flocks in fold at home; the lambing flock requires another man occasionally.

12. What would be a fair average of men to attend 2,000 sheep?—About one man for every 700.

13. Do you discover any defects arising from running your flocks in such large numbers?—Yes, they do not get fat so soon in large as in small flocks; I find no other disadvantage, except as regards sheep for slaughter; the wool and health of the sheep are kept up.

14. Have you any difficulty in procuring the supply of labour you require on this calculation?—I have not as yet; I have imported almost all my servants; I have not depended on the Government Immigration.

15. Do you consider that that arrangement has been more advantageous to you than if you had been dependent upon a supply of Government labour?—Had the amount that was given for wages been the same now as when I commenced to import, I should have been a large gainer; but as the rate of wages has diminished, I think on the whole I have been a loser.

16. Had you facilities greater than general in having labour sent out to you?—Yes, I had friends at home on whom I could rely; the labourers were mostly sent from my father's property; they were personally known, and had a wish to follow me; but where the men were not known, my father had great difficulty in inducing them to come out, on account of the evil reports current concerning the colony; they were labourers at home, and readily learnt to become shepherds; about three months was sufficient to teach them.

17. Can you state what the general average of wages is in your district for shepherds?—At present the wages of a good shepherd are 18*l.* to 22*l.* with rations, which consist of 10 pounds of meat, 10 pounds of flour, and tea, sugar and tobacco, the value of which would be 18*l.* per year.

18. What proportion of that is the produce of your own farm, and what amount do you purchase?—As yet I have had no opportunity of growing wheat, or other agricultural produce.

109.

19. But

E. Mackenzie, Esq.

21 July 1842.

NEW  
SOUTH WALES.

E. Mackenzie, Esq.

— —  
21 July 1842.

19. But do you contemplate hereafter raising produce on your own station?—Certainly.  
20. Do you consider the climate of your district adapted for the growth of wheat?—I should say it was very well adapted for maize, and also for wheat, but there have hitherto been very few experiments tried.

21. Can you give the Committee any information as to the number of stations, and the quantity of land uncultivated to which your remarks refer?—From seven to ten stations; the land under cultivation is too inconsiderable to mention.

22. But from your knowledge of the district, you have no doubt as to the productiveness of the soil?—It is most undoubtedly very productive.

23. Is the district subject to hot winds?—No; I have felt no hot winds during my residence there—about 10 months including last summer.

24. Is the district sufficiently supplied with water?—Well supplied.

25. Do you consider that upon the present system, the price of wool pays the expenses of an establishment, and leaves a remunerating sum besides to the wool grower?—It certainly does not pay the expenses of a new establishment; and if it does pay the expenses of an old one, which I doubt, there would be no surplus;—I speak of the wool.

26. Is there such a sale of the surplus stock as might make up the deficiency in the profit?—Hitherto there has been no sale at the Bay.

27. Is it in your power to suggest any measures likely to improve the present deficiency?—I think that a plentiful supply of labour would be the best method.

28. Have you likewise attended to the management of cattle?—I have in other districts, but my cattle have not yet arrived at Moreton Bay; they are now on the way.

29. Supposing your cattle there, and multiplying; how do you contemplate disposing of your surplus?—At Brisbane Town, and by salting; only two months in the year the heat would interfere with the process.

30. Of what nature do you consider the market at Brisbane Town will be?—I consider a market might be opened, both for consumption on the spot, and for exportation.

31. Have you calculated the expenses of a salting establishment, as compared to the profits to be derived from it?—I am not versed in that matter.

32. Are you sufficiently acquainted with the woods of the colony requisite to make casks?—The varieties of wood are very great, especially at Moreton Bay, and I think it very probable that some may be found fit for casks.

33. Do you consider that tobacco, sugar and coffee might be grown there?—Sugar and tobacco, I know, can be grown, but I am not acquainted with the culture of coffee; arrow-root grows extremely well; also maize, which is a very prolific crop; sweet potatoes, yams, bananas, grapes, oranges and fruits, of almost every description, are growing in the district at present.

34. Then you consider that the articles of export from Moreton Bay might be considerably increased?—I do.

35. What do you consider the chief disadvantages of the district?—The hostility of some of the aborigines, and hitherto the want of a market; I have myself, and all my neighbours, suffered from loss of sheep, and attacks from the aborigines.

36. Are they in considerable numbers in the district?—I should say there are about 1,000 in the whole district.

37. Has it been found possible to approach them, so as to hold communication with them without danger?—It is after they have become used to our manners a little that they commence their attacks, and therefore it is safe always to keep them at a distance; so long as they remain ignorant of our weakness there is no danger.

38. Then you would consider at present all idea of improving their condition almost hopeless?—I think it hopeless.

39. Do you consider that the insecurity of the tenure of your station is an impediment to your making improvements?—Most certainly; we consider ourselves merely yearly occupants, having no security beyond the lease for a year.

40. Could you make any suggestion to improve the tenure of the station, and thereby the condition of the occupier?—I think by lengthening the lease to a period of five years, and leaving the terms of occupation the same as at present.

41. The Committee understand that the domestic arrangements on the stations in the interior are in a very imperfect state, owing to the shortness of the license; do you consider that extending the lease to five years would induce the occupiers to build good and substantial houses?—Certainly, if the improvements were taken off his hands at a valuation, at the expiration of the lease.

42. Supposing at the expiration of the lease, that no person was found to take the improvements at a valuation, might it not be more satisfactory if he were to become the purchaser of a small portion on which these improvements were made?—I should prefer extending the lease at the option of the lessee, with a proviso, that at the end of the extended period he should give up all claim to the land and improvements.

43. Might it not be more satisfactory if he were to become the purchaser of a small portion on which the improvements were made?—It might, were the price of land such as he could afford to give; but at the present price of 1*l.* per acre, it would certainly not be in his power.

44. Would the difficulty be diminished, if instead of paying at once, he was allowed to pay by instalments every year?—It certainly would, in a great degree, and render the occupier much more willing to purchase.

45. Do you think that the indisposition to purchase at present arises more from want  
of

NEW  
SOUTH WALES.

*E. Mackenzie, Esq.*

21 July 1842.

of capital, or a fear that a realization will not be made?—More from the apprehension that it would not make an adequate return than from the want of capital.

46. Then is it to be concluded, if it could be promised that an advantageous return of the capital would follow, there would be no want of persons to embark?—I certainly think that there would not be any want of persons to embark the capital.

47. If the terms of payment were thus rendered completely easy, and a continued immigration kept up, so as to keep the price of labour at a moderate rate, may it be concluded that persons would be found willing to purchase to the limited extent that has been mentioned, even though the price were fixed at 1*l.* per acre?—Certainly not, with the present price of wool.

48. Do you not think, with all the advantages you have mentioned, that such a plan would be productive of advantages even independent of sheep farming?—Where the purchased land is near a market or water carriage, it might possibly be productive.

49. Is the district calculated for small farms?—Many portions of the district are exceedingly well calculated for small farms.

50. Might not then the purchaser of a section sublet small portions of it to persons, and thereby remunerate himself considerably?—Provided his section would not interfere with his grazing establishment. I think where the tenants are judiciously chosen, it would repay the proprietors by additional comforts, as well as in other respects.

51. Do you think the effect of such a plan would give too great facility to labourers to become occupiers of land, and consequently become employers of labour themselves?—I do not think so; I think there is a sufficient check to prevent their being employers. I do not think it would at that price give any undue facility; besides, their services would not be lost.

52. Under present circumstances, what prospect can a labouring man entertain of ever raising himself above that condition?—At present his prospects are very slight; it is morally impossible that he should become a proprietor.

53. Are you aware in what manner they dispose of any surplus or savings from their wages?—Those who are prudent either deposit it in the savings' bank, or in the hands of their employers, at interest.

54. Speaking only of prudent persons, do you think they would be willing to embark their money in the purchase of land, if facilities were afforded them?—Those who had any trade to depend upon besides the land, would certainly do so, but not mere labourers.

55. Should you not consider it preferable to have people scattered about your district, than the desolation, if it may be so called, by which you are at present surrounded?—I think it would be a great advantage, and personal security would be greatly improved.

56. Might it not afford a greater opening for moral and religious improvement than at present exists?—Most certainly.

57. You say there are 10 stations at Moreton Bay, do you include the Darling Downs—are you aware how many stations there are on the Downs?—The 10 stations I have spoken of are exclusive of the Darling Downs; I should think there are 20 to 25; Brisbane is the outlet of the whole of that country.

58. Speaking of the seven to 10 stations, you have mentioned to be on this side the range, what quantity of land do you suppose to be occupied by them?—There are about 40,000 acres to each station, that is speaking vaguely; miles even are not computed.

59. Do you think it would be judicious to lock up so large a portion of land for five years, merely to sell from seven to 10 sections?—I see no other way in which the land could be made serviceable; it would be preferable to the present mode of sale.

60. But if there were the power to put up a section, do you think persons would purchase?—I think not, at present prices, except in the immediate neighbourhood of towns.

61. You infer, then, that without a sheep station, persons would not purchase?—Certainly.

62. If that land was liable to be put up for sale at the end of the lease, would persons make improvements?—No, I certainly think not; my opinion is founded on the presumption that the land would become their own, without competition, at a moderate price.

63. Do you think if they were guaranteed the value of the improvements at the expiration of the lease, would persons be willing to enter into the arrangements spoken of?—If they were aware of that they would improve, but not make permanent improvements to the same extent.

64. But as relates to improving the country, both morally and physically, you have no doubt the system would be advantageous?—I have no doubt that both morally and physically the plan would be advantageous.

65. Do you think that would be a preferable mode to selling as much land as he chose, at such a price as would remunerate the purchaser, and enable him to carry out his improvements?—I think it would perhaps afford the settler a better chance of purchasing than the speculator, as no one would be likely to rent a sheep station, who had not the stock.

66. What price do you think a settler can afford to give for land for sheep farming?—About 2*s.* 6*d.* per acre.

67. Do you think that any one on such an uncertain tenure would be likely to advance money to make improvements?—The value of the improvements being guaranteed by Government, the lender would, to the extent of that guarantee, advance money, but would not advance so much as if the settler owned the property.

68. Do you understand it to be contemplated that the holder of land upon this proposed system is to be at liberty to put up the section to auction at the ordinary price in the first instance

NEW  
SOUTH WALES.

E. Mackenzie, Esq.

21 July 1842.

instance?—I do, for sale, but not by auction; there is no uncertainty, except as to whether the settler shall retain the land or not.

69. What are the facilities for building in the district?—Brick earth, stone, lime and timber are plentiful; coal is also to be obtained, and timber for fencing; coal is found near Limestone, and elsewhere in the district.

70. Do you consider that the permission to import coolies would tend to improve your condition in Moreton Bay, both physically and morally?—I think it would, decidedly; I do not think that it would tend to produce immorality; on the other hand, they would be improved.

71. Do you not think that the present low price of stock, and the facility of obtaining it, ought to operate as an inducement to persons to come out and invest their capital in it?—In the present state of the country, I am of opinion that the uncertainty of obtaining labour more than counterbalances the inducement held out by the low price of stock.

72. Then you are of opinion that a loan should be obtained for the purpose of introducing a supply of labour?—Yes, provided the interest of the loan be paid by the proceeds of the sale of land. Indeed, I think that the first thing requisite to relieve us, unless coolie labour be introduced, which might be effected without a loan.

Thursday, 21 July, 1842.

*Frederick Ogilvie, Esq., of the Clarence River, called in, and Examined.*

F. Ogilvie, Esq.

21 July 1842.

1. You have been many years conversant with the system of settling and sheep farming in this colony?—Yes, I may say all my life; in the concerns of my father, who is the owner of considerable property, and likewise holder of lands beyond the boundaries, in several districts; latterly I have been engaged in similar pursuits on my own account.

2. In what district is the land principally situated which you occupy on lease?—Clarence River.

3. What distance is that from Sydney?—About 250 miles by water.

4. Is it in that mode that you chiefly communicate with Sydney?—Entirely.

5. Where do you ship your produce?—At the Clarence River.

6. At what distance from the mouth of the Clarence?—About 25 miles in a straight direction from the coast.

7. What size vessel can come that distance up the river?—The largest vessel that has ever been up was about 150 tons, but she did not then either come in or go out with full cargo.

8. Is there a bar at the mouth, and if so, what depth of water is on it?—The shallowest part is within the bar, where at high tide there is about nine feet water.

9. How long have you been in the habit of shipping wool at that port to Sydney?—Two seasons.

10. Have you found reasonable facility in doing it, so that you would be encouraged to go on?—I have found much facility.

11. What number of stations are there connected with your family on which you have control?—Eleven stations, extending about 14 miles along the river, and in depth about an average of from two miles to two miles and a half on each side.

12. Is the soil in that district peculiarly fit for sheep or agriculture, or what purpose?—There are portions fit for each purpose; some for sheep, some for cattle, and some for agriculture; most of the upper part of the river is not very rich, and is fitter for sheep than cattle; nearer the mouth of the river there is rich alluvial land, which will be found very valuable for agriculture.

13. Is it a country which admits of the sheep being in large flocks?—No, not to the same degree as interior districts, there being a good deal of wooded and broken ground.

14. What do you consider your average number?—From 600 to 1,100 or 1,200; but sheep are capable of being run in much larger flocks in new countries than in those places which have been longer stocked, in consequence of the grass not having been eaten off, and there being a better selection open.

15. What number of men do you consider necessary for the management of a flock of 1,000 sheep?—One man, with half the labour of another man, that is, three men to two flocks, or about 1,600 or 1,800 sheep, exclusive of men raising and conveying food; many others are required on particular occasions.

16. Could you calculate what would be the number you require, including all these things?—To between 12,000 and 13,000 sheep we have 30 men.

17. Do you raise any agricultural produce on which you employ these men?—Yes; we have brought into cultivation this year about 12 acres, but this quantity is not sufficient to supply the wants of the station.

18. This would give then, for all purposes connected with sheep, about one man for every 400 sheep?—From the beginning of August to the end of December, we require extra hands for lambing and shearing; for the latter, for about two months, we require 10 or 12 extra hands, and for the former, about four or five.

19. Do you raise the whole of your agricultural supplies on the station?—With the number of men I have employed hitherto, I have not been able to bring a sufficient number of acres into cultivation, but I intend to cultivate more, and anticipate in good seasons to be able nearly to do so, but in bad ones we shall be obliged to purchase.

20. Would extra hands be necessary for that purpose?—I think that that number would be sufficient.

21. Do you find any difficulty in obtaining the supply of labour you require for your operations?

operations?—I have not for the last 18 months found any difficulty in hiring men in Sydney, and defraying the expense of their conveyance to the Clarence River.

22. Has it been at a reduced rate of wages compared with those given before that period?—Yes, decidedly reduced.

23. What do you consider to be the present rate of wages for shepherds, farm labourers and useful men of every description?—Twenty pounds per annum, with rations, but rather smaller than formerly; the ration now given and purchased by us, is 10 pounds of flour, at 3*d.* per pound,—2*s.* 6*d.*; one pound of sugar, 6*d.*; two ounces tea, 4½*d.*; and salt, 1*d.*; that not purchased, is 10 pounds meat, at 2*d.* per pound,—1*s.* 8*d.*; or a total cost of between 13*l.* and 14*l.* per annum, supposing flour to be plentiful, and consequently cheap; I have paid as much as 50*l.* per ton, besides freight and other charges in the transport of it from Sydney to the Clarence.

24. Do you consider, at the present price of wool, and the facilities afforded for disposing of your surplus stock, that sheep-farming is advantageous?—I think that persons giving their whole attention, and with frugality, can (after they have once formed their stations) maintain them within the amount derivable from the wool; whether they receive a per-centage for their capital must depend upon the price which can be procured for the surplus stock; this of course only applies to those whose capital is already sunk in the business; I have no doubt that purchasing sheep at the present reduced prices would be a profitable investment, supposing the management of the business to be afterwards conducted with the care which I have before alluded to.

25. Do you consider, if, instead of occupying the land under yearly lease, it were proposed to purchase it, that it would be advantageous?—I think that would depend on the price at which it was proposed to sell the land; supposing persons were required to purchase a whole extent of run, I do not think they could afford to give any price approaching the lowest minimum price at which land has ever been sold in this country; if they were to purchase only water frontage commanding a back run, then they might perhaps afford to give 5*s.* per acre.

26. Must they not be better circumstanced now that they possess both the water frontage and the back run, without the necessity for any such outlay of capital?—There are some disadvantages in squatting, viz., constant danger of being turned out; the uncertain tenure under which the stations are held prevents people from making improvements which would otherwise be very profitable; and the expense and loss sustained in moving is very considerable.

27. What extent of land in your own case would suffice for making the improvements you speak of, which you are now unable to do from the uncertainty of tenure?—If the question merely refer to the improvements of a homestead, I should say that 640 acres would be sufficient, but I doubt whether a person occupying such a small portion would find it to his interest to make expensive improvements, unless he were secure of a sufficient run for his cattle at the same time, as in case of his being obliged to remove his stock to a distance he could not remain there with profit to himself.

28. Suppose a system which secured the occupation of the run for a certain number of years limited, upon the present terms, and subject to the assessment on stock, and enabling you to obtain the ownership of such ground as would secure the buildings, would that in any degree obviate the difficulty of which you speak?—It would depend much on the number of years for which the land would be secured.

29. Can you mention what you would consider the shortest period for which it would answer your purpose to obtain the land securely?—I should think 14 years would be the shortest; any longer period would of course be more advantageous.

30. As that would enable you to keep the greater part of your capital in your hand, would you consider it more advantageous than allowing you to purchase at 5*s.* per acre?—I think it would be more advantageous; but the question being new to me, and presenting many different points of view, I am unable to give a decided opinion.

31. Do you consider that the introduction of such a system might induce many persons to embark in sheep speculation, and so afford the old settlers a market for their stock?—I have no doubt, as such a system would be a very great improvement on the present one, that it would have that effect.

32. If it should effect an increased sale of your surplus stock, would that not be what is principally now wanting to render sheep farming profitable to the owners of flocks?—Decidedly so.

33. Would it encourage the residence of proprietors on the grazing stations more than at present?—I think it would, though a large proportion of proprietors of stock do now reside on their stations; I think it would also have the effect of making them be more constantly on the spot, and would make them settle themselves in a more comfortable manner.

34. Do you think that the present system is favourable to the social, moral and physical condition of the people beyond the boundaries?—As the sale of spirits is entirely prohibited in all the interior districts, one of the strongest incentives to vice is removed; from the necessarily scattered state of an entirely pastoral population, there is of course but little means of education, but the number of children in those districts is small.

35. Are you aware of the proportion of males and females in the district at this time?—The disproportion is very great, but I am not aware of the amount.

36. With reference to the navigation of the Clarence, has it ever been considered by you, or others, that by an outlay of money, the river might be made more navigable?—I

am

NLW  
SOUTH WALES.

*F. Ogilvie, Esq.*

21 July 1842.

am not acquainted with the subject, nor have I ever had any conversation with persons competent to form an opinion.

37. What materials have you for building purposes at the Clarence?—There is free-stone in many places, and I think plenty of brick earth might be procured; there are also the same kinds of wood as are found in other parts of the country, though the cedar is now nearly all cut; there are plenty of shells at the mouth of the river, but I have not seen limestone; there are pine bushes in places.

Wednesday, 27 July 1842.

*Alfred Robert Denison, Esq., of Cassilis; called in, and Examined.*

*A. R. Denison, Esq.*

27 July 1842.

1. IN what part of the colony are you settled?—My purchased land is at Cassilis, under Liverpool Range; and my out stations are on Melville Plains, about 12 miles from the Namoi River.

2. Are you an extensive proprietor of flocks and herds?—Yes.

3. You employ, of course, a considerable number of persons in the capacity of shepherds and stockmen?—Between 40 and 50 hands of different descriptions; I had more.

4. Have you diminished the number in consequence of the difficulty of obtaining men, or the increase of wages?—I did not reduce the number on account of either of these causes; some men I dismissed on the completion of buildings and wells upon which they had been employed; others I dismissed in consequence of extensive losses of sheep, which rendered the continuance of their services unnecessary. With a view to reduce my expenditure, I have also increased the number of sheep in my flocks, so as to diminish the number of men required for their attendance.

5. You state you have not decreased your establishment on account of difficulty in obtaining as many men as you desire; can you do so at satisfactory wages?—For the last two months I have been able to obtain men at tolerably satisfactory wages; but I am still giving higher than I can well afford to give; 20 £. per annum is the utmost which I ought to give in justice to myself; and I consider that these are wages amply remunerative to the labourer.

6. What do you value the rations at?—I estimate the rations of a man at about 17 £. per annum.

7. In that calculation, how do you estimate the portion of the produce of the farm given in the ration?—The produce of the farm is only meat, which I calculate at a certain rate.

8. What proportion in money do you estimate that produce to bear to the cost of the whole ration?—The actual outlay in money is about two-thirds; thus, the meat costs about 6 £., the other parts 10 £. 10 s. I would take this opportunity of observing, that the whole system of rations ought to be got rid of; the waste consequent upon it is excessive; the master might have his store so well supplied, as to be able to furnish his men at a low rate, and so remove that necessity for the continuance of the system, which the absence of retail shops might otherwise require.

9. Supposing the price of meat to remain as at present, and labour to rise above its present rate, under such circumstances do you consider that sheep farming could be carried on to advantage?—By squatters it might be, but certainly not by those who have purchased land—because there is no market for surplus stock.

10. Do you mean then, that if land were obtained upon easier terms than you obtained it, and stock were sold at a lower rate, it would be worth while for persons to engage in sheep farming?—It would depend on the terms on which land was procured; it can never be profitable to buy land at any price to feed stock, that is, to buy the entire quantity over which the sheep are to graze; I am speaking in reference to present circumstances, and from such experience as during a residence of two years I have been able to gain.

11. Your district has been visited by draught during the last two years, which has not been the case in other districts?—It has been the case with the whole northern parts of the colony.

12. Have you sustained great losses in consequence of those draughts?—Yes, I have.

13. Do you include that circumstance among those which may be considered as the fixed causes which render sheep farming unprofitable?—It is one amongst the causes.

14. Do you consider that the wool would pay the expenses of the sheep, including the interest on the purchase-money of both land and sheep?—Certainly not.

15. What do you assume to have been the prices given for land, sheep and cattle?—I am speaking of the price given by myself, viz., 15 s. per acre for land, 17 s. for sheep, and 5 £. per head for cattle.

16. The prices are at present merely nominal?—They are.

17. If stock were readily saleable at the prices mentioned by you, do you consider there would then be a profit?—I should say so.

18. Would these prices admit of any reduction, and yet leave profit?—I am not prepared with any calculation on that subject.

19. Would it not be necessary also, that the price of land should be reduced in like proportion?—Certainly, in order to leave a profit to the purchaser.

20. Have you found any difficulty in teaching the immigrants to be shepherds?—No, the occupation of a shepherd is readily learnt; it merely requires a little attention.

Wednesday,

Wednesday, 27 July 1842.

NEW  
SOUTH WALES.

The Hon.  
C. D. Riddell, Esq.

27 July 1842.

The Honourable C. D. Riddell, Esq., Colonial Treasurer, called in, and Examined.

1. THE Committee would wish to learn the opinion formed by you, from your observation of the progress of land sales, as to the prospect of obtaining a revenue during the next 12 months from that source?—I think with regard to grazing land in the colony, there is very little chance of raising much revenue at the present minimum price. I think some revenue should be obtained from good suburban land, if such exist in the neighbourhood of Brisbane Town.

2. Have you calculated what minimum price would be such, as to render it profitable to a person to become the purchaser of a large extent, for grazing purposes?—I have made some calculations, though not any very precise; I have been informed by very competent authorities, and I am myself disposed to think, that the average quantity of land required to feed one sheep is not less than from three to five acres; the actual value of purchased grazing land, estimated by the profit derived from it, must therefore be very small; but there are many persons wishing to purchase land for the sake of forming a property, who would give more than its actual value for grazing purposes, but who would not give a price so utterly unremunerating as the present minimum.

3. Then do you consider that the present minimum price acts as a total prohibition to the sale of land?—I do at the present time.

4. Are you enabled to state what quantity of land has been actually sold at that rate, during the last 12 months, in quantities of a section and upwards?—The Return which I made some time ago, by desire of the Committee, shows that there have been advertised for sale at 12s. per acre, about 132,353 acres in all parts of the colony; and at prices higher than 12s., 7,996, making a total of 140,349. Of those put up at a higher rate than 12s., 507 acres were purchased for 1,392l. 18s. 11d., being for the most part suburban allotments in the neighbourhood of Sydney. If this sum is deducted from the whole amount obtained for land during the last year, 5,515l. 5s. 11d., a balance of 4,122l. 7s. remains; but from this a further sum of 521l. 2s. must be deducted, as deposits to the extent of 57l. 18s. appear to have been forfeited, thus leaving a balance of only 3,601l. 5s. received for land put up at the minimum of 12s. per acre, during the year, from the 30th June 1841 to the 30th June 1842. Out of the number of acres put up at 12s., viz., 132,353, only 5,644 were actually disposed of; and of these, only three lots equalled or exceeded a section, the others averaging from 17 to 372 acres each.

5. Do you see any prospect of a revival of demand for grazing lands?—Not if wool continues at its present price, and labour be at as high a rate as it now is.

6. Do you see any prospect of a revenue from the sale of suburban and town allotments?—I do, in the neighbourhood of Brisbane. From the last sale, there appeared to be a competition amongst monied men and speculators, and the prices bid were very good. I have however since heard that those who purchased, without being acquainted with the locality, are discontented with their bargains, and that deposits to a considerable amount will be forfeited in consequence.

7. Can you form any approximate estimate of the whole amount likely to be realised during the next 12 months, from the sale of every description of lands in all parts of the colony?—I am not aware of the extent which will be put up; and even if I had this information I could form no estimate.

8. Putting out of the question the description of persons you have spoken of, who might give more for land than its actual worth, for the sake of profit by its re-sale, can you fix any limit to which the minimum price must be reduced, to encourage persons who look merely to a return for their capital, to become large purchasers?—No; I cannot fix any limit; people who merely look to a return for their capital will rather squat beyond the boundaries than purchase at any time.

9. If the minimum were reduced to 5s., or 2s. 6d., or 1s., or any other price you may fix upon, would it then suit persons to become purchasers for grazing purposes, bearing in mind that, as you say, it would take from three to five acres to keep a sheep?—I should say that if the price were reduced to 1s., it might answer to purchase in preference to squatting; but it would not answer to purchase at 5s. the whole quantity required; people might be found to purchase head or home stations, but they could not purchase their whole grazing land at that rate.

10. Do you suppose, then, that if the upset price were fixed at 5s., persons would engage in sheep farming, and thus afford a market for the surplus stock?—I think so to a great extent. I am credibly informed that there is a great deal of money now in the banks, which would be laid out in the purchase of land, if it were to be obtained at anything like a remunerating price.

11. You mean, then, that if such parties could obtain land at 5s., it would be worth their while to purchase stock, and this would create a demand for sheep and cattle which does not now exist. I think it would; it would create a demand for stock which does not now exist; not that persons would purchase the entire quantity of land required to feed their stock, but they would purchase to a considerable extent.

12. How then do you account for it, that that demand for stock does not exist where persons may obtain land beyond the boundaries, at a price even below 5s.?—They are two different classes of people; the money of which I am speaking belongs to individuals not now colonists, but who are supposed to be willing to make a permanent investment of capital in the colony.

13. Suppose that the squatter could obtain a property in some portion for his land, at a price

NEW  
SOUTH WALES.

The Hon.  
C. D. Riddell, Esq.

27 July 1842.

price the Government might fix, would not that bring about sales?—I think that they would purchase a certain portion of the land on which their stations are, for the purpose of making improvements and rendering themselves more comfortable.

14. You assume that they would not purchase the whole extent they occupy, yet they would be willing to purchase such portion as would secure their buildings and other improvements?—I should think that if Government were now to allow squatters to purchase at 5s., a very large sum would be realized.

15. Do you not think that the ability to become proprietor of a certain portion of the run, and thus to effect improvements without risk of losing the cost of them, would encourage capitalists to lend their money to squatters to carry on their operations?—Any person possessed of well chosen land could raise money to a certain extent to enable him to carry on his operations. The fee-simple of a certain portion of run would be very valuable as being a fixed property.

16. If in addition to the purchase of a part, a lease were given, for a certain number of years, of the remainder of the run, would not the effect of that be to create a market for the increase of stock?—To a limited extent it would, if a lease were given for a certain number of years.

17. Are you aware that a difficulty, amounting almost to an impossibility, now exists on the part of the owners of stock in disposing of their surplus?—I am aware of it.

18. As you say that the measure just referred to would encourage persons of capital to connect themselves with such establishments, would it not seem to follow that this would create the demand for surplus stock, which you say does not now exist?—If any capital not at present laid out in stock could be brought into operation, it would certainly create a demand for stock, limited to the extent of the capital so to be laid out.

19. If investment of capital upon such terms would be profitable, and the demand for wool at the present price may be assumed capable of an indefinite increase, upon what grounds do you assume that the disposition to invest capital in this manner would be so limited?—It was not the investment of capital to which I alluded, but to the demand for surplus stock. The stations are most of them stocked already, and many parties occupying those stations are suffering from a want of sale for their surplus stock.

20. Do you believe that the country is now as full of sheep as it will admit of?—That I would not venture to say, but large graziers are stopping the increase of their flocks.

21. But as you admit that the plan suggested would make this application of capital beneficial, and that there is still government land unoccupied, which might be covered with sheep, why should there be a limit to the demand for sheep?—I conceive that sheep farming does not pay at the present price of wool, price of labour, and want of sale for surplus stock; though perhaps purchases might be made, as I have already mentioned, I do not think that even then it would be so profitable as to induce people to send capital into the country to be so embarked, unless they could, at the same time, secure a permanent interest for their families in the land of the colony.

22. Do you suppose that the demand for stock has reached its limit, and what measures would you propose to revive it?—I think it has reached its limit at this moment at the present price of land; but I think if the price of land could be lowered, and so the introduction of capital into the country be encouraged, the price of stock would be immediately raised.

23. But have you not stated you doubt whether any lowering of the minimum price that could take place would have the effect of inducing persons to become purchasers?—I think that the graziers in the country are so depressed that they would not be purchasers, but monied immigrants would come in with a view to purchase; the price of land at 5s. per acre being known in England would, I feel persuaded, induce capitalists to emigrate, and invest their capital in land and stock.

24. Do you consider then that purchasing land at 5s. an acre, with a view to put sheep and stock upon it, is a profitable investment?—No; but if monied immigrants could be induced to purchase land, they would then have to purchase stock also, which would create a demand for sheep and cattle which does not now exist.

25. Would not this create a revival of the demand for, and consequently tend to raise the price of stock, so as to render the investment of capital in stock profitable?—I am decidedly of opinion that it would.

26. To whom do you mean that the rise in the price of stock would be profitable?—To the present graziers.

27. Would that form part of the inducement which would arise to persons of capital to come from England?—I think not; they would look to their own profits only, and not to the interests of the present graziers.

28. Would not the knowledge of the prosperity of this colony induce capitalists in England to come out?—Most undoubtedly; it has done so before.

29. Do you think that a general impression of the prosperity of this colony would induce parties to bring their capital, unless they saw a reasonable prospect of prospering themselves?—No; but I think that a general belief of its prosperity entertained at home, would induce capitalists to emigrate, whether they invested their capital in stock or land, or in any other profitable investment.

30. Do you think that the expectations of those who have come out under the impression that the colony was prospering have been answered?—Not latterly, because they came out without a knowledge of the depression now existing; when they left England the colony was supposed to be in a state of prosperity.

31. Do you think if those capitalists, who arrived two years ago, and who, you say have been

been disappointed, had delayed their arrival to the present time, they would have had a better prospect of success, with reference to the present prices of land and stock, and supposing that they became squatters, and did not purchase land?—I think they would, because they would have made their purchases at lower prices, and so been enabled to keep part of their capital entire to meet the difficulties of the times, without running into debt; and thus, when any improvement takes place, which I sincerely hope may be the case before long, they can turn it to immediate advantage.

NEW  
SOUTH WALES.

The Hon.  
C. D. Riddell, Esq.

27 July 1842.

Wednesday, 27 July 1842.

*Lachlan Macalister*, Esq., called in, and Examined.

1. You are extensively engaged in sheep farming?—Yes, and cattle farming also.
2. You have stations in the district of Corner Inlet?—I have.
3. Do you find any difficulty in obtaining labour in that remote part of the colony?—I am obliged to send labourers from here, and have much difficulty in getting them down; I have also to pay their expenses.
4. Have you been able to obtain labour at a moderate rate at Corner Inlet?—No.
5. What wages do you give shepherds and labourers there?—I have none at less than from 24*l.* to 30*l.* per annum, and some few at 32*l.*
6. Does that include families?—I have only one family.
7. Is there any demand for stock in that district?—It depends on the market in Van Diemen's Land, where there is now a market; I have a vessel plying between Corner Inlet and Hobart Town with fat sheep and cattle.
8. Do you obtain remunerating prices for them in that market?—Such as have been sent have brought very fair prices; about 14*l.* per head has been obtained for bullocks, and I have some for which I am led to expect 17*l.*
9. Do you find that you can still undersell the grazier of Van Diemen's Land?—Assuredly we can; Van Diemen's Land has been overstocked for the last 14 years; they must provide artificial food.
10. Have you raised any grain in the district of Corner Inlet?—I have a crop in the ground this year for the first time.
11. Are you enabled to state whether it is favourable to the growth of grain generally?—It is impossible that it can be surpassed either in this colony or Van Diemen's Land.
12. Have your opportunities of observation in Van Diemen's Land been such as to enable you to judge of it?—I was in Van Diemen's Land for 13 months in the army, and subsequently I visited it, I think in 1837, and travelled across the country from Port Dalrymple to Hobart Town.
13. And from what you saw there, and also from past experience, you come to the conclusion that wheat may be raised as plentifully at Corner Inlet as in any part of Van Diemen's Land?—Assuredly, and in immense tracts of it; there is a larger tract of land there available for agriculture than I have seen any where in the colony.
14. How long have you had stations in that part of the country?—For better than two years.
15. Has there been any drought there during the period that it prevailed in other parts of the colony?—There has been none there since my cattle went down in 1839.
16. Is the district well watered?—It is.
17. Could you describe how it is watered?—The district is bounded to the northward and westward, and south-west, by the Australian Alps, the summits of which are covered with snow; these mountains give rise to six considerable streams, or rather rivers, and each of them navigable from 10 to 15 miles, from a very large fresh water navigable lake, called Lake Victoria, by Mr. Angus MacMillan, who first explored that part of the country in January 1840. These streams in the driest seasons run perpetually, in consequence of the melting of the snow on the mountains.
18. What is the extent of the district?—I think about 70 miles in length, and 30 to 40 miles in depth.
19. Do you state, then, that the greater portion of it is fit for agricultural purposes?—A great portion of it; on the banks of the rivers there is rich alluvial land, without either a tree or stone on it, and immediately fit for the plough, without any expense of clearing, exclusively of large tracts of brush land of the richest description.
20. Is the alluvial soil of considerable depth?—Of a very considerable depth; I know an instance of a native boy digging 14 feet; the soil to that depth was alluvial.
21. Are there many stations in that district?—Only 11 or 12.
22. Are they all abundantly supplied with labour, or does the great want of labour still prevail?—The want still prevails; the people who came out with Mr. Macdonnell, of Glengarry, when discharged from his employment after he had disposed of his stock, obtained higher wages than those given by him.
23. Do you think if it were thrown open to purchase, that much of the land would sell?—I have no doubt of it; the water carriage is so convenient; I can receive supplies in that district at a cheaper rate than at my residence at Clifton, 45 miles by land from Sydney.
24. In what manner are supplies conveyed to that district?—By water from Sydney; sometimes from Melbourne; vessels drawing from 11 to 12 feet can go in at low water; I think that a vessel of any size could enter at high water.
25. Do you think that land would sell readily in that district at the present minimum price?—A considerable quantity would sell, for agricultural purposes, if its quality was sufficiently known, but not for grazing.

*L. Macalister*, Esq.

27 July 1842.

NEW  
SOUTH WALES.

L. Macalister, Esq.

27 July 1842.

26. Do you think that there would be sufficient land in that district to raise grain enough to supply the present population of New South Wales?—I should certainly say that in that district might be grown as much wheat as is now grown in Van Diemen's Land.

27. Suppose it were proposed to raise a loan of 500,000*l.* for the purpose of introducing, within seven or eight years, an industrious agricultural population into that district, do you think from your knowledge of the value of land, that security might be given upon the land in that district, for the regular payment of interest at five per cent. on that loan, and the repayment of the principal within a limited number of years?—I have no doubt that the land in the district would afford ample security; some of it, were sufficient labour introduced, would let for 1*l.* per acre, and the produce would afford an ample remunerative return to the tenant.

28. Will you enumerate, as far as you are able, the several kinds of produce which you consider could be advantageously raised in that district, and what market might be found for them when raised?—It would produce wheat, oats, barley, rye, potatoes, clover, lucerne and all artificial grasses; turnips and all vegetables grown in England: all European fruits might also, I am persuaded, be grown there with advantage; for grain, Sydney would afford a market; and Van Diemen's Land would take the stock. The country is also admirably calculated for dairyfarms, the sward of natural pastures being extremely rich, and the milk yielding an unusual quantity of butter. I may have seen as good land in Ireland, but never in Scotland. The country is full of game, kangaroos, emues, wild turkeys, geese, &c.; there is likewise abundance of fish in the lake and harbour.

29. Have you turned your thoughts to the possibility of forming establishments there for the purpose of salting and exporting beef and pork?—I have taken it into consideration, and it was my intention to commence a salting establishment on a very large scale, but the imported salt beef has been selling at so low a rate, that it has been more profitable to send the stock alive to Van Diemen's Land.

30. What do you mean by the harbour of Corner Inlet?—It is an immense sheet of water, having, I suppose, about 100 islands in it; it is about 30 miles one way, and four or five the other.

31. Is there depth of water in the Inlet itself for ships to enter the harbour, and room for them to swing at anchor when they are in?—Abundance of room for vessels drawing 11 or 12 feet, even at low water; the tide rises 10 feet.

32. Have you ever had the opportunity of hearing the opinion of a naval man upon the recommendation of the harbour?—I have had the opinion of two masters of vessels who were there; they state that the entrance is perfectly safe for vessels drawing 11 or 12 feet water, at any time of the tide, and that at high water vessels of large tonnage could enter; the anchorage within the bar affords security for vessels of any size; it is considered a better and safer harbour than Port Phillip.

Thursday, 28 July 1842.

Sir Thomas Livingstone Mitchell, Knight, Surveyor-General, called in, and Examined.

Sir T. L. Mitchell.

28 July 1842.

1. THE Committee are desirous of obtaining from you information as to the prospects of the Land Fund during the next twelve months; can you form any estimate of the probable amount?—It is impossible for me to do so, as I am not at all aware what price his Excellency the Governor may fix upon any land which may be put up for sale.

2. Is there any probability of any large portion of grazing ground being sold during that period?—I should say it was not at all likely.

3. To what cause do you attribute the falling off in the demand for land?—To the present embarrassed affairs of those engaged in sheep speculations.

4. Do you think that portions of agricultural lands are likely to be sold?—I am afraid not; I have one particular reason for making this answer; the pressure of the times will bring into the market a quantity of eligible and improved lands, already in private hands, which will of course be purchased in preference to the wholly unimproved lands remaining in the hands of the government. I would suggest, as a means of effecting some sales in the mean time, that such lands as are measured and ready for sale, should be put up at the minimum price of 12*s.* per acre, which might be tempting to speculators now, whilst the colonists are under the impression that a permanent value is to be given to all lands in the colony by Act of Parliament, of either 1*l.* or 2*l.* per acre.

5. Do you consider that, when such a price has been fixed, there will be a demand for land?—I think the permanency of price is likely to enhance, after a time, the value of land in general.

6. From your experience in the colony, do you consider the ordinary lands to be worth 1*l.* per acre?—I do not; I look to the return for the interest of money, and how it is derivable from the land; and doing so, I cannot see how it can make a return adequate to the purchase price of 1*l.* per acre. Whether I am right in fixing a value from immediate prospects of a return from the land may be questionable, as the purchasers of land in these new colonies seem all, more or less, to speculate on the future value; and which, reviewing the progress of the colony, until now, cannot, perhaps, be termed wholly an imaginary value, if its future prosperity were sure, or likely to be like the past.

7. Do you allude merely to grazing lands, or to lands for other purposes?—I allude to both kinds of land. The purchaser of either looks to its becoming ultimately valuable for other purposes; the arable land for subdivision, and the purposes of increased population; the pasture land to be finally peopled and cultivated.

8. Would

NEW  
SOUTH WALES.

Sir T. Mitchell.

8. Would not the effect of fixing so high an upset price be to render the great bulk of lands in the colony unsaleable for an indefinite period?—It would.

9. Measuring the value of the land by the return which it will yield at 1 *l.* per acre, do you consider that under such circumstances, parties with capital would be induced to emigrate from England to the colony?—It seems to me very doubtful that they would, if land is not to be had for less than 1 *l.* per acre.

10. What effect do you consider the low upset price of land, which prevailed from 1831 to 1838, had in inducing the parties to emigrate to the colony?—It seemed to increase immigration progressively; at least the sales increased; I am far from taking the sales of land however as a test of the increase of immigration, as much of the lands sold were purchased by old settlers. I do not think the low price had any direct effect in increasing immigration, but I have little doubt that the raising the price from 5 *s.* to 12 *s.* an acre has tended much to check that immigration which was setting towards Australia when I was in London. To the numbers of emigrants who consulted me there, my advice constantly was, "Avoid competition at sales—there is abundance of land; give no more than 5 *s.* per acre;" and I have had the mortification to meet such persons in the colony, complaining of the sudden rise in the price; and have witnessed the return to England of whole families who came here to settle.

11. Were not the old settlers enabled to purchase land, by having a ready sale for their surplus stock, to persons arriving with capital?—I think the high price of wool was the chief source of their means of purchase, together with the cheapness of labour; they had the means then of improving the land. Much land had been given to whoever had 500 *l.* ready for the improvement of each square mile so given, when convict labour was also available for that purpose; now the buyer of a square mile must part with at least 500 *l.*, and has no convict labour for improving it. The money goes out of the country to pay for the introduction of many non-productive consumers, as women and children are for the most part, thereby increasing the necessity at present for sending more money still out of the country to bring wheat, potatoes, &c. from other countries for their present maintenance, however much such additional population may finally become productive.

12. Was not the principal source of profit to the grazier from the sale of his surplus stock rather than from that of his wool?—That was another source of profit, and I believe very considerable.

13. Supposing that a loan were to be raised, do you consider that the extent of unalienated lands in the colony would afford security to a considerable amount for such a loan to be applied to the purposes of immigration?—I very much doubt whether it would, without a better prospect of making those public improvements necessary for bringing land into the market at present prices than exists at present.

14. To what public improvements do you chiefly allude?—The formation of harbours, construction of bridges, opening of roads, the stumping and burning off wood for the purpose of opening streets in towns, the farmers requiring a market, to which towns there must necessarily be roads; it seems to me quite clear, that without such works being effected, at least in some parts, first, the lands could not be sold in such manner as to afford support to even an agricultural community.

15. Can you suggest any measures by means of which such improvements could be effected?—By the introduction of labourers.

16. Supposing it were determined to establish a system of periodical land sales, can you inform the committee of the extent and general description of land, which, in your opinion, might be brought forward at such sales within the next twelve months?—There are many portions which could be brought forward; but I cannot at present state to what extent, as so much ineligible land in this country is interposed between the spots which would be eligible to purchase.

17. But speaking in general terms, you suppose that a considerable extent of average land might be surveyed and offered for sale within the next twelve months?—I think so; but wherever I look, I find the construction of a bridge or the opening of a road requisite to render it saleable, or even accessible.

18. You have stated in a former answer, that you anticipate very small land sales, owing to the quantity of good and improved lands in private hands, which you expect must soon be forced into the market?—I have.

19. Do you not think it might be advisable, that the Crown should abstain from endeavouring to make any considerable sales, until the excess in the hands of private individuals is to a certain extent absorbed?—I think it would be rather in favour of the present colonists to do so, supposing there were purchasers to buy the land at 1 *l.* per acre.

20. When that absorption has taken place to such an extent as to remove the now existing inducement to sell private property at a reduced rate, will the natural tendency be to direct the attention of buyers to government lands again, and to encourage by degrees the purchase of them at the higher minimum price, which it is expected will be fixed?—I think it would.

21. You understand by excess of land, that individuals have more land than they can use?—I understand you to mean more land than there are purchasers for; or that the excess exceeds the demand.

22. Is it not a fact that there is three or four times more land used for grazing purposes than has been alienated by the Crown?—At least sixty times as much.

23. Can you say what effect the raising of the minimum price of land by the Government has had on the landed property of the settlers?—I do not think that it has had any effect, at least on the value of cultivation lands, which depended chiefly on the improvements

made

NEW  
SOUTH WALES.

Sir T. L. Mitchell.

28 July 1842.

made upon them; but the mere grazing lands purchased at 5s. an acre were of course saleable at a higher figure.

24. To what, then, do you attribute the present depressed state of the settlers?—To various causes: the sending so much money out of the country as 800,000*l.* to increase the consumers of an article in part brought from South America; the sudden deprivation of convict labour; the great fall in prices of wool; and, as I have understood, from excess of commercial shipments. I should say too, that the raising of the price of land was another cause; the raising of the upset price from 5*s.* to 12*s.* per acre I consider to have had a very injurious effect in checking that emigration of persons with money, which might have fructified in the colony.

25. Do you not think that the diminution of the commissariat or government expenditure in the colony has likewise materially affected the interests of the producers?—In alluding to the deprivation of convict labour I contemplated this amongst the evil consequences thereof.

26. To these causes, then, you attribute the distressed state of the settler, and the necessity for his bringing his land into the market?—As far as I understand the circumstances of the colony, I should say so.

27. To what do you attribute the want of a market for surplus live stock?—Chiefly to the want of additional immigrants with capital; that which was in it having been drained by the exportation of the land fund.

28. To what do you attribute the cessation of the introduction of immigrants with capital?—I should say chiefly to the sudden changes which have taken place in the price of land; the uncertainty which has been produced in the minds of people in England; and the consequent reaction of the speculative sales at Port Phillip.

29. Do you not think that the present low price of stock offers a favourable opportunity for investing capital in live stock?—I should say it was, were I certain that it had reached its minimum price; even at present rates I think it must be favourable.

30. The committee are desirous of being informed if you can oblige them with a plan of the land adjacent to Corner Inlet?—I can; I have a map here.

31. Will you have the goodness to explain to what extent the survey in that direction has proceeded?—The town of Albert has been marked out; and Mr. Townshend, the surveyor, has just arrived on Manero Plains, having completed a survey of the road to that point; and where he has been joined by two other surveyors who are to be employed with him in a general survey of the country towards Cape Howe and the eastern coast.

32. Have the approaches by water been sounded, and has there been found access for vessels of large burthen?—They have; vessels of considerable tonnage may approach within three miles of the township, near the point of junction of the rivers Albert and Tarra.

33. From the reports of your surveyors, can you give the committee any information as to the extent of good land in that neighbourhood?—I have not received Mr. Townshend's last report.

34. Will you have the goodness to state, whether your impression as to the general character of the land there is favourable?—Not so favourable as it was as respects the land immediately in the neighbourhood of Corner Inlet and Alberton; but I believe there is a vast extent of well-watered and very valuable land between that and the district of Manero.

Friday, 29 July 1842.

Mr. William Jaques, Auctioneer, called in, and Examined.

Mr. W. Jaques.

29 July 1842.

1. You are auctioneer for conducting the sales of Crown lands in Sydney, and have been so for many years?—I am, and have been so for eight years.

2. In your evidence before the committee in 1840, you will perhaps remember that you gave statements of what land fetched?—I did, taken from the sales' books.

3. Have you since seen reason to believe that such prices can no longer be obtained, or do you think land still retains that value?—Certainly, if there were funds at the disposal of persons to whom the purchase of lands must be an object of desire.

4. The question is put practically, with reference to lands which, on your former examination, you stated to have been sold at particular prices; whether, if the same lands were now put up to sale, you continue to think they would bring the same prices?—It would depend upon the spirit of competition which might exist at the time of sale; at present there is no competition.

5. Now, there is not that competition?—There is not, because there are not the same funds unappropriated as at the time of my last examination.

6. How long back do you trace that indisposition to purchase lands with avidity?—The first falling off of the sales arose from the contemplated division of the colony. Despatches arrived about the day before that fixed for the sale of certain lands at Moreton Bay, and the lots were withdrawn; since then there has been general embarrassment, and less speculation; parties were obliged to provide for their liabilities, and therefore refrained from expending money on real property, or from locking up their money in the purchase of what they might be unable to reconvert into money, should their exigencies at any time require it. I think also, that there was a general opinion that the minimum price might be reduced, and that other measures, more affecting other parts of the colony, might be adopted here; and therefore capitalists refrained from making purchases.

7. In stating your belief, that there was an expectation that the minimum price would be reduced, do you found your opinion upon conversations which you have had with

NEW  
SOUTH WALES.

Mr. W. Jaques.

29 July 1842.

with parties interested?—Upon general conversation with others, and from my own observation.

8. Have you perceived an equal disinclination to purchase town allotments?—No further than that local purchasers have already made their purchases; and as speculation has ceased, those who bought merely for resale do not now bid at the sales as heretofore.

9. Do you think that the belief as to reduction of the minimum price of land still prevails?—I think not, except with those who will retain their opinion in spite of all proofs that such will not be the case; if it was imagined that the minimum price would be raised, it would, I think, induce buyers to come forward.

10. What was the highest price obtained at the sale of Moreton Bay lands the week before last?—About 1,100*l.* per acre; and if cultivation and town allotments were brought forward, the prices which have been given, great as they are, would be increased upon.

11. Do you consider the expectation well founded, that if more land in the Moreton Bay district were brought into the market at this time, it would find purchasers at a high price?—I hear so from those who have purchased, and those who are inclined to purchase, in that district.

12. Did you discover from the parties who made these statements, that they had formed any well-digested plan for making such purchases remunerate them for the outlay; or do they, in purchasing, proceed merely upon speculation of selling them again at a profit?—I conceive that a great number of the purchasers intend to subdivide their purchases with a view to resale at a profit; others have purchased with a view to the immediate erection of stores, and other buildings from which they expect to derive immediate profit. There was also a great desire expressed for cultivation allotments; many inquiries were made at the sale, when more land suited for cultivation would be offered for sale.

13. You stated in 1840 that there was a growing spirit for the purchase of Crown lands; do you think that that spirit continued until the proposed division of the colony became known?—I do.

14. During what portion of the period of your holding the situation of auctioneer for the sale of Crown lands has the sale of them been most brisk?—Upon the alteration of the minimum price, there was a great desire to purchase lands applied for previously to the rise, and gazetted at 5*s.* This created a brisk sale; the time to which I refer was in the years 1838 and 1839.

15. Was there at that period a considerable importation of capital into the colony by the introduction of new banks, and the increase of the capital of the existing banks?—Immense, and sudden.

16. Did not that create a very extensive demand for Crown lands?—I should think that it must.

17. Did not, in fact, capital flow into the colony faster than it could be employed?—I am not competent to give a decided opinion, but such is my impression. I should say that banks, from surplus capital, became too lax in their system of accommodation.

18. Was not the effect of the introduction of that capital so suddenly, that of creating an artificial value upon all property, including Crown lands?—It evidently must.

19. Have you reason to believe that the purchases of Crown lands made at that time have been profitable to the buyers?—I think so, because as far as I am able to judge, very few of them have been resold. I am not aware of any large portions having been sold, except at what is called a sacrifice.

20. At the late sales has there been any competition at 12*s.* per acre?—There has.

21. How much Government land has been sold during the last twelve months at 12*s.* per acre?—I cannot from memory say, but there was very little; I think that there was one sale of 138 lots, at which there was not a single bidding, and these were chiefly lands which had been offered on former occasions at 5*s.* per acre.

22. Generally speaking, have the lands put up at 12*s.* per acre been sold?—I should say not much more than one-tenth.

23. Has the attendance at the Government sales been the same as it was previous to the raising of the upset price?—By no means; but I do not think that this falling off was in consequence of the raised price.

24. When the upset price was raised there was a great demand for town allotments?—Yes.

25. To what do you attribute that?—To general speculation; the desire of investing small capitals in a way likely to be hereafter beneficial, and to the existence of a large amount of spare capital.

26. When the colony recovers from its present depression, do you consider that grazing land will sell at 12*s.* per acre?—Such is my opinion, derived from a long experience as a surveyor.

27. Upon what data do you found your calculation; do you conceive that at that price the land will yield a profitable return to the purchaser?—I do, from the general improvements in land which will take place throughout the colony.

28. Do you think that in a new country capitalists can, generally speaking, afford to look to remote return from lands and to forego an immediate income?—I conceive that the immediate profit ought not so much to influence purchasers as the prospect of future improvement. I have advised private friends to act on that principle, and I think that there was no reason why they should not act upon it. Those persons who have not other means upon which to live, independently of any immediate return from the lands which they may purchase, should not in this country invest their capital in real property and dead speculations.

NEW  
SOUTH WALES.

Mr. W. Jaques.

29 July 1842.

29. In point of time which occurred first, the rise in the minimum price, or the proposition to divide the colony?—The rise in the price preceded.
30. Then as you have stated that the demand for Crown lands continued till the proposal to divide the colony was made known, what ground can there be for the opinion that the rise in the price caused the demand to cease?—I do not think that it did; the decrease of demand was rather occasioned by a species of combination, with a view to enforce a reduction of the price.
31. Have you not recently had allotments in Sydney proposed for sale, for which there were no bidders?—Yes; I do not think the allotments were eligible, from want of depth, and also from their not being in very desirable situations.
32. Do you remember the upset price for those allotments?—I believe it was 15*l.* per foot.
33. Was there not some land sold in George-street?—There was.
34. Did it not realize a good price?—I believe it did.
35. Do you consider that the value of property in Sydney has declined during the period since the rise in the minimum price?—I do not draw any such conclusion; for desirable sites a higher price than ever would be given.
36. Then, in point of fact, the same causes which operate to prevent the sale of grazing land, have not prevented the sale of town allotments in Sydney?—Not of land in the town of Sydney. The trade is now reviving, and there is an immense quantity of capital in the hands of certain people, who will stop at nothing to obtain land in suitable situations for business.

Friday, 29 July 1842.

William Miller, Esq., Deputy Commissary-General, called in, and Examined.

W. Miller, Esq.

29 July 1842.

1. THE Committee have requested you to attend for the purpose of ascertaining what has been the rate of payments in the colony on account of the British Government, from the period at which the practice of selling Crown lands commenced (from 1831) to the close of last year?—In consequence of the letter I received this day from the clerk of Councils, I have prepared a return, embodying the information required, which I now beg to submit to the committee. [*Return put in.*]

EXPENDITURE from the Military Chest at Sydney, New South Wales.

Year	Military.	Convict.	Miscellaneous.	TOTAL.
1832	68,890	83,010	16,091	167,991
1833	61,814	90,018	4,066	155,898
1834	83,290	115,169	18,649	217,108
1835	100,491	113,602	5,294	219,387
1836	105,364	130,948	92,003	328,315
1837	99,029	124,023	26,205	249,257
1838	93,667	127,651	104,495	325,813
1839	100,410	162,307	70,169	332,886
1840	96,507	142,898	41,936	281,341
1841	78,082	98,638	37,108	213,828

2. Since the discontinuance of transportation, has the expenditure within the colony (exclusive of Norfolk Island) been diminishing for convict services?—The expenditure for Norfolk Island differs in no respect from convict expenditure for any other station, and I cannot readily separate it; but I think the maximum expenditure from the military chest has been about 330,000*l.*; it is now reduced to about 250,000*l.* or less, per annum, chiefly from the decrease of the convict expenditure.
3. Do you anticipate a further decrease?—For the present year it will probably be under 200,000*l.*
4. For all services, military, convict and miscellaneous?—Yes; but the miscellaneous service is very uncertain, and not always connected with this colony; it includes the expenses of ships of war, both British and Foreign, when they happen to touch here; considerable sums expended for the armament now on the coast of China have been classed under this head; and I have formerly and am at present sending money to Van Diemen's Land, in aid of the military chest there; which, in a statement such as that now required, can appear only as miscellaneous.
5. What was the amount of the current expenditure of the convict establishments within the colony during the year 1841?—Last year it was about 100,000*l.*, independent of stores, &c., which were furnished by the Ordnance department to the various convict establishments.
6. Is, then, the expenditure on account of convict establishments continually diminishing, and likely after a few years to be still further reduced?—It is; the decrease in the number of

## PAPERS RELATING TO EMIGRATION.

143

of convicts has already been found to admit of the establishments hitherto maintained for them, at some places, being entirely discontinued, and at others, greatly reduced; and I consider that the period is fast approaching when the whole will be dispensed with.

NEW  
SOUTH WALES.

W. Miller, Esq.

29 July 1842.

Enclosure, No. 2, in Sir *George Gipps'* Despatch, 20 September 1842.

## RESOLUTIONS OF THE COUNCIL.

VOTES and PROCEEDINGS of the LEGISLATIVE COUNCIL.

Friday, 9 September 1842.

Present:—His Excellency the Governor, and Twelve Members. Absent:—His Honor the Chief Justice, and Sir John Jamison.

Proceedings  
of the Council.

9 Sept. 1842.

COUNCIL met pursuant to adjournment—His Excellency the Governor in the Chair. Report of the Committee upon Immigration further considered, and the following Resolutions adopted:—

1. *Resolved*, That this Council, having had under consideration the Report from the Committee, appointed during the present Session to inquire into and report on the subject of Immigration, concurs generally in the opinions therein expressed.

2. *Resolved*, That this Council especially concurs in the statement of the Committee, that notwithstanding the unprecedented influx of immigrants during the past year, in which the number added to the population have been no less than 23,426, at an expense to the colony of 328,563*l.* 6*s.* 8*d.* there are no symptoms of a superabundance of labour in any part of the territory, there being few, if any, instances of industrious and skilful artisans or labourers wanting employment;—and although wages have been so far reduced, as in some degree to meet the circumstances of the employer, they have not fallen below that level which enables the labourer to provide an honest and comfortable subsistence for himself and family.

3. *Resolved*, That the large and increasing sums at the credit of the working classes, in the Savings Bank of New South Wales, afford a gratifying proof of their continued prosperous condition, notwithstanding the recent extensive increase of their numbers;—the deposits in that Institution having increased from 143,000*l.*, on the 30th June 1840, to 178,000*l.*, at the same date of the present year; whilst the accounts opened during the past year average no less than 170*l.* per month, being a considerable increase on the average of all former years.

4. *Resolved*, That this Council also concurs with the Committee, that although the copious supply of labour recently received has, amongst other beneficial effects upon the welfare of the colony, had that of enabling the settlers to carry on the operations of their industry for a certain period, yet that unless measures be taken in the early part of the ensuing year for the resumption of emigration the want of labour will be as injuriously felt as ever;—wages will rise to their former exorbitant rate, and the consequent exhaustion of property, and embarrassment among the settlers, will be again experienced even with aggravated severity.

5. *Resolved*, That this Council, adverting to the Resolutions passed on this subject in former years, has, in common with the Committee, had reason to find the opinions previously entertained as to the expediency of negotiating a loan on the security of the unsold Crown lands of the colony, for the purposes of immigration, more than fully confirmed.

6. *Resolved*, That although the Land Fund has declined for the present, from a concurrence of circumstances which it is not necessary here to particularise, yet that, in the opinion of this Council, the vast tracts of vacant Crown lands must form a fully adequate basis of security for any loan of reasonable amount, which could be contracted for the promotion of immigration in this season of emergency;—nor can reasonable doubt be entertained, that to whatever extent it may, upon trial, be found that the colony is capable of receiving, and advantageously employing, an additional population, to the same extent a loan may be securely applied to the purpose of introducing that population.

7. *Resolved*, That this Council also concurs with the Committee, that the immediate abstraction of capital in payment for the importation of emigrants, a portion only of whom add to the productive labour of the colony, the families being for the most part consumers and not producers for a considerable period after their arrival, must so materially contract that circulation of money which is required to carry on successfully the business of an active community, that it would be impolitic to continue a system fraught with such serious inconveniences. During the last five years no less than 46,000 souls have been introduced at a cost to the colony of 850,000*l.*, exclusively raised within itself, and remitted to the United Kingdom; so vast an effort for so infant a community could not fail to produce considerable exhaustion, nor be made without leading to a state of temporary depression.

8. *Resolved*, That this Council agrees further with the Committee, that these inconveniences would be in a great measure abated, if the introduction of labour could for a time be paid for by borrowed funds, the repayment of which there can be no doubt would be provided for by the capital which would in a short time be created by means of the labour introduced, and the circulation of the capital retained.

9. *Resolved*, That if the raising of a loan in England for the purposes of emigration, should wear the appearance of drawing upon the resources of the mother country, its welfare is involved in a degree not inferior perhaps to that of the colony itself in the first

expenditure,

NEW  
SOUTH WALES.

Proceedings  
of the Council.

9 Sept. 1842.

expenditure, as well as in the final result of the application of the funds so raised. The entire amount of every such loan would be ultimately repaid from the resources of the colony, and in the meantime, no part would be withdrawn from the United Kingdom, but the whole would be expended in the advancement of the three chief and leading interests of the mother country, as well as for the benefit of the labouring classes of the British community, now suffering from a superabundant population. The shipping interest must be promoted by the extent of tonnage employed in the emigration service. The agricultural interest would derive benefit through the demand for victualling so many persons during a voyage of such duration; while few events would be so favourable to the manufacturing interest of Great Britain as the rapid growth in this colony of a population dependent for the supply of their wants upon the products of its industry, and engaged in raising a staple article of export, which, while it supplied the raw material for an important article of manufacture, would enable them to be extensive consumers of British goods.

10. *Resolved*, That on the grounds set forth, this Council fully relies on the assistance of Her Majesty's Government in raising a loan on the most advantageous terms to the colony; nor can such assistance be drawn into a precedent which might be inconvenient as regards the claims of other dependencies of the Crown, if, in every such case, the whole amount is to be expended in the mother country, for the promotion of emigration, with the same advantages to the several classes of the British community, and upon the same undoubted security, as are proposed in the instance of this colony.

11. *Resolved*, That this Council repeats its recommendation of former years, that it is highly desirable that all ships in which emigrants may be brought to this colony should be conducted on temperance principles; and especially that the sale of fermented and spirituous liquors on board, a practice which there is reason to apprehend has prevailed in the ships of the last season, and has been attended with injurious consequences to the maintenance of order, and to the moral habits of the emigrants, should in future be strictly prohibited.

12. *Resolved*, That this Council would especially recommend as a measure of vital importance to the preservation of health, order, and morals, in all emigration ships, whether under the Bounty System, or engaged by the Government, that the surgeons should be men, not only of professional skill and experience, but accustomed to the sea, and of undoubted character—if possible, officers of the Royal Navy—and that they should be appointed under the authority of the Government, and responsible to the Government alone for the due performance of the highly important duties intrusted to them.

13. *Resolved*, That his Excellency the Governor be respectfully requested to communicate a copy of these Resolutions to the Right honourable the Secretary of State for the Colonies.

Council adjourned at Four o'clock *sine die*.

Francis L. S. Merewether,  
Clerk of Councils.

Enclosure, No. 3, in Sir George Gipps' Despatch, 20 September 1842.

SPEECH of his Excellency Sir George Gipps, in Council, on Friday, 9th September 1842, on the Resolutions proposed by the Colonial Secretary, in approval of the Report of the Committee on Immigration.

Gentlemen,

Speech of  
Sir George Gipps.

9 Sept. 1842.

THE question before the Council still is, that the first Resolution, proposed by the Colonial Secretary, be adopted. I feel it would be scarcely proper for me at any time, or under any circumstances, to allow matters of such deep importance as those which are involved in the Immigration Report of the present year to be disposed of without giving to the Council some expression of my sentiments upon them; but more especially do I feel it necessary, on the present occasion, to offer some explanations to you, since it is well known I do not share in some of the opinions which have been broadly put forth in the course of the present debate. It behoves me, I am well aware, under such circumstances, to speak both with moderation and caution; as, however, this is the third day to which the discussion has extended, and it would be inconvenient to many members were we to enter on a fourth, I will proceed at once to the important points of the subject.

I concur generally with the Committee in the views which they have this year taken of the subject of Immigration; and I fully concur in the opinions so generally expressed by the members now present, of the obligations which we are under to the Right Reverend Prelate, the Chairman of the Committee, for the great attention which he has given to the subject, and the ability with which he has treated it; and though there are some parts of the Report which I cannot altogether adopt, I do not think it unfortunate that I differ from the Committee on the points which I allude to, since the principal reason why I differ from them is, that I take a less gloomy view of the state of the colony than they do.

In respect to the Bounty System, my views coincide very nearly with those of the Committee, and still more closely with those which were developed by the Lord Bishop himself on the first day of this discussion, but I do not, on that account, the less consider the Bounty System, as carried on during the last five or six years, to be at an end: some modification of it may, perhaps, be advantageously adopted, but, for various considerations, some affecting the government, others affecting the bounty agents themselves, I think the system must undergo considerable alterations, or be abandoned altogether. The supply of immigrants under it is far too precarious to be depended upon, sometimes not furnishing us with a sufficiency, at other times threatening to pour immigrants in upon us in excess;  
and

and this precariousness must exist so long as the promises of bounty to persons bringing immigrants to the colony continue to be made in the colony instead of in England.

In consequence of these promises being made in the colony, a considerable period of time, usually two years, is allowed for them to remain in force; and this is too long for the government to remain in doubt whether the immigrants will arrive or not. The promises or agreements, moreover, or bounty orders, as they have been very improperly called, have no mutuality in them, being binding only on the government, and not on the parties with which the government treats. The government binds itself to pay the promised bounties, provided the immigrants arrive in the colony within two years; but there is no corresponding engagement on the part of the bounty agent to bring them. The disadvantages of the system are indeed so evident, that Lord John Russell, in a despatch which has, I believe, been printed, directed that all agreements for the future importation of immigrants on bounty should be drawn by the law officers of the Crown, with a view, I conclude, of making them equally binding on both parties; these instructions I have not had occasion to carry into effect, because, since I received them, I have granted no permissions to import immigrants, but, I fear, that even had I had occasion to do so, any attempt to introduce mutuality into our agreements would have been unsuccessful; indeed, long before the receipt of Lord John Russell's despatch, I had tried to introduce the principle of mutuality, and failed, as no one could then, nor ever will, I think, be found in this colony willing to incur so great a risk as he would do in binding himself to import any certain number of immigrants within two years, or, indeed, within any specified time. The cost of introducing a company of immigrants must depend upon many circumstances, such as the disposition to emigrate in the working classes at home, the price of freight and provisions, as well as other expenses attendant on the fitting out of an emigrant ship, all of which can be known readily in England, but cannot be known in the colony. The disposition to emigrate from the United Kingdom is very fluctuating. The last ships which left England, under the government system, in 1839, came out half empty, and of the bounty orders that were issued prior to 1840, scarcely one-third were acted on; whilst those issued in 1840 and 1841 would, in all probability, have been acted upon to their fullest amount, but for the interposition of the Home Government in the autumn of the latter year.

The uncertainty of the supply, however, and the inconveniences to the government which grow out of it, are not the only reasons which I have for thinking that the bounty system cannot be continued in the way in which it has hitherto been conducted: there are other considerations, affecting the bounty agents themselves, which lead me to the same conclusion. I doubt very much whether persons will so readily embark, as they hitherto have done, in the business of emigration, or what may be called the immigrant trade, when they learn the extent to which bounties have been disallowed in this colony, and are made aware that some 22,000*l.* of their expected profits have been cut off. I, long ago, recorded my apprehension that the new speculators, who were attracted to the trade by the rise in the bounties in 1840, would not carry it on so satisfactorily as it had been conducted whilst in the hands almost of a single individual, and that individual, one, who, I will say to his honour, appears to have been actuated not solely by a love of gain, but also, in no small degree, by the honourable ambition of being looked upon as a public benefactor by the people of this colony. But I never did contemplate, nor could any man in his senses, I think, have contemplated, the entire heedlessness with which these new speculators rushed into the trade, disregarding all our regulations, and, above all, disregarding the warning given at the end of them, that all the conditions contained in them would be rigorously enforced. It is, I know, said, that the bounty agents have, in many instances, been themselves deceived; and I have received a letter pointing out this, from a gentleman (Mr. Nicholas James) who has been long engaged in the bounty trade, both on his own account, and as agent for Mr. Marshall. Certificates may, I will readily allow, have been forged, and various sorts of imposition resorted to, in order to deceive the bounty agents in respect to the ages or callings of different individuals seeking passages to New South Wales; but there was one regulation, at least, in respect to which they could not have been deceived, and whatever loss may have accrued to them from inattention to this regulation must be attributed to their own carelessness or avarice. The regulation which I allude to is that which regards unmarried women. It would, indeed, be unreasonable to make the bounty agents responsible for the virtue of every unmarried woman who comes to the colony; but the regulation, which requires that every unmarried woman shall come out under the protection of a married one, is one which might easily have been complied with, and yet it has been in a vast number of instances disregarded. The unmarried women, indeed, seem most frequently to have been put on board without any regard to the protection of married women, though they indeed were sometimes *told off*, as it was called, to families, towards the end of the voyage, or as the ship was entering the harbour; and in some instances, I regret to say, that the surgeon in charge of the immigrants has been known to assist in this operation of "telling off." Wherever cases of this nature have occurred, I cannot consider the bounty agents entitled to any pity for the losses they may have sustained.

For the reasons which I have thus stated, I think all future engagements for bringing out emigrants should be made at home, and not in this colony, except it be in the case which I shall presently come to, of persons resident in the colony who may desire to import labourers to be employed *bonâ fide* by themselves.

At home the contracts may be made absolute, and the parties entering into them be compelled under penalties to fulfil them. The time, too, within which they are to be fulfilled

NEW

fulfilled may be limited to two, three, or at most six months, and the local government being advised of these contracts as soon as they are entered into, will be relieved from all doubt or uncertainty as to the number of immigrants to be expected. With respect to the selection of persons to be brought out under this proposed modification of the system, I should be disposed to leave it still to the bounty agents, or contractors, which would be a more proper name for them; and this for two reasons: first, because I am convinced that selection by government agents will never give satisfaction in the colony; however zealous or unexceptionable their conduct, whatever care or solicitude they may exercise, they will always be accused or suspected of acting under some improper influence, such as that of the poor law commissioners, guardians of parish unions, or of rich proprietors, anxious to get rid of their paupers; and, secondly, because I am anxious to preserve the great check and safeguard of the bounty system, that which, in fact, is the characteristic of the system, namely, the power of withholding the bounty if the parties for whom it is claimed be not eligible under our regulations. It is this check, and this alone, which can, I think, ensure to the colony a good class of immigrants; and it cannot be preserved if the emigrants be selected in England by the agents of the government. Some people are, doubtless, unreasonable in their expectations, and seem to think that those who may be called the very cream of the labouring population of the United Kingdom are ready to emigrate, and wait only for an invitation to come to this colony. Such people forget altogether that, though even the frugal and the industrious may sometimes at home feel the pressure of the times, the disposition to emigrate is generally most strong amongst persons of a different description. Whether emigration from England be conducted by bounty agents or by the immediate agents of government, all we can in reason expect is to obtain fair samples of the class of persons amongst whom the desire to emigrate is strongest: if the disposition to emigrate be stronger amongst artisans or labourers of one class than of another, then we must expect to have more of that class;\* and in the same way if the desire to emigrate be stronger in one part of the United Kingdom than another, as, for instance, stronger in Ireland than in Scotland or in England, then shall we assuredly get more Irish than either Scotch or English; and I cannot expect that the government will ever interfere to show favour or disfavour to persons of any class or district. The disposition to emigrate is the only thing, or, at any rate, the chief thing, that the government will look to. If we want immigrants possessed of any peculiar qualifications—Protestants rather than Catholics, or Scotchmen rather than Englishmen—we must send our own agents to select them; and this brings me to what I just now alluded to as the excepted case, or the case in which I would propose still to retain the bounty system in its actual shape.

When persons resident in the colony require labourers for their own purposes, I would still propose to give them permission to import them, and to receive bounties on them as heretofore. They should; however, first satisfy the local government that they do want them *bouâ fide* for their own use, and that they will employ them on their arrival. Consequently, the government would be at no expense whatever on account of such immigrants beyond the bounty payable on them; and such bounty might, I think, very well be reduced to what it was prior to 1840, if not even to a lower amount. The parties wanting such immigrants would, of course, select them in England, Scotland or Ireland, by their own agents; and I feel satisfied that if immigrants of any particular qualifications as to country or creed be required, it is only in this manner that a supply of them can be ensured. I need scarcely observe that this, moreover, would only be a return to what the bounty system was intended to be by Sir Richard Bourke, who was the inventor of it, though the principle of it was early departed from; and even before Sir R. Bourke left the government, permission to import immigrants on bounty had been given to persons who did not pretend that they had employment for them.

But, gentlemen, the manner in which emigrants may be best procured and brought to this colony, forms only one portion, and, indeed, but a very small portion, of the questions which are opened out to us by this year's report of the committee on immigration. So long as we had money to pay for immigrants, it was the only question; but we now want money as well as immigrants, and the various ways by which a government may procure money involve many considerations of political economy, which, of all the speculations that are called sciences, is the one in which persons are most apt to mistake effects for causes. We have to do also with that branch of political economy, namely colonization, which is the least understood of any, and in which men of the present day—not ordinary men, but men of a high rank of intellect—have been led into gross errors,† and by the failure of their schemes have involved many of their followers in disaster and ruin. It behoves us, therefore, to be cautious how we proceed, and not to come to hasty conclusions; to be distrustful of our own judgments, lest, like others, we find out hereafter that we also have been in error.

Our position now is, that we want immigrants, but have no money to pay for them. Why do we want immigrants? Because the capital of the colony is rapidly increasing, and every interest in it extending itself. Such being the case, why have we no money? Simply because the funds dedicated to the support of immigration are derived from the sale of land, and at present we can sell no land. So far we are all agreed. But why, again,

do

---

\* Of classes, that is to say, equally eligible under the regulations of this Government.

† And, above all, into the error of supposing, that colonies can be advantageously formed without the aid of Government.

NEW  
SOUTH WALES.Speech of  
Sir George Gipps.

9 Sept. 1842.

do we sell no land? Because, it is answered, the minimum price of it has been raised. To a certain extent, also, I will admit this; at least I will not attempt to deny that the rise in the minimum price is likely in the present circumstances of the colony to diminish for a time the proceeds of the sales of land. But when I find by the report of your committee, or by the evidence appended to it, that the present depressed state of the colony is attributed by witnesses from all parts of it to the same rise in the minimum price of land, and that, as a remedy for the evils we are suffering, the same witnesses advise a return to the old minimum price, I cannot go along with them, notwithstanding that I know they speak the opinions of the great majority of the people out of doors, and that those opinions are, with one solitary exception (that of the Bishop of Australia) entertained also by the members of the council which I am now addressing. The distress of the flock-masters is attributed to the fact of there being at present no market for their surplus stock, or rather for the annual increase of their stock; and the want of a market, or of a demand for stock, is attributed to the unwillingness of persons to engage in sheep-farming, on account of the rise in the minimum price of land. That there is an unwillingness at present to embark in sheep-farming I readily admit, but that such unwillingness can justly be charged on, or ought to have been produced by, the rise in the minimum price of land is the point on which we are to join issue. I do not think that the distresses under which the colonists now labour are to be attributed at all, or, if at all, in any more than a very small degree, to the increase in the minimum price of land.

I must ask the indulgence of the council whilst I speak upon this subject. I feel the difficulty in which I am placed in thus holding and expressing opinions with so great a majority against me. I know well that it behoves me to be cautious, especially as I may be exposed to the suspicion of seeking to support my arguments by some portion of the authority which belongs to my station. I have often, indeed, felt the inconvenience of the position which I occupy in this council, and which causes any thing spoken by me to be more eagerly caught at, and perhaps I may say occasionally cavilled at, than if the same proceeded from any other place at the table. This I have particularly felt when called upon in the course of debate to give unpremeditated opinions on points of importance to the interests of the colony. At present, however, whether right or wrong, I speak advisedly, and after mature consideration.

That the colony now is labouring under serious difficulties must be admitted; but it does not follow that these difficulties are occasioned by the increased minimum price of land. The complaint of the graziers is that there is no sale for their surplus stock, or, in other words, for the increase of their flocks and herds. If this were the case in respect to horned cattle only, it might be supposed that it was an actual superabundance of cattle which rendered them valueless, as we know that cattle are almost valueless in some parts of South America, where they are killed only for their hides and their tallow. Had the depreciation been confined to horned cattle, I should have been inclined to think that such was the true state of the case; but the depreciation is greater even in sheep than in cattle; and, as it is admitted that the wool of sheep alone will very nearly, if not entirely, pay the whole expense of sheep-farming, and there is not a day in the year in which ready money cannot be obtained in Sydney for any quantity of wool that may be brought to market, it can scarcely be said that there are too many sheep in the colony, or that the depreciation of sheep is owing to their superabundance.

But still people will not buy sheep even at the price to which they are now reduced; and what is the reason that they will not? It cannot be because land is dear, because land is depreciated too, and in fact far cheaper than it was when sheep were dear. It is true that the Government will not sell any land under 12s. per acre, and that it even contemplates the raising of its price to 20s.; but there are plenty of people who will sell land for almost anything they can get for it; in fact, they are obliged to sell land, or the sheriff will sell it for them. Land is, in fact, cheaper now than it has been for the last five, if not for the last ten, years, and, whatever may be the ultimate effect of raising the minimum price of land, the present depression in the price of stock cannot be attributed to a cause which has not yet taken effect. I have not the smallest doubt that if any person were to advertise to-morrow for 10,000 acres of land, he would receive offers of three or four times that amount immediately, and at prices considerably under 12s. per acre. Why, there is not, perhaps, a member of this council who would not be glad to sell land at less than 12s. an acre, except, indeed, the Bishop and myself, who cannot sell land, because we neither of us have any. The indisposition, therefore, to invest money in sheep or land cannot be caused by the increase in the minimum price. On the contrary, instead of lessening the inclination to purchase, its effect ought rather to be to induce people to purchase. If they regarded the minimum price at all, they would say, "Let us buy now while we can buy cheap; land will shortly be 20s. an acre, and then we shall not be able to buy." But if it be not the dearness of land which prevents people from purchasing, neither can it be the scarcity of money, for money is by no means scarce in the colony; on the contrary, it must be plain to every body that there is plenty of money wherewith to build houses, or to enter into any speculation which promises profit, except sheep or cattle farming. The bank returns, moreover, prove beyond dispute, that the quantity of money in the colony is not diminished. Gold and silver have increased within the last two years, and the deposits of individuals have also increased—those deposits which may at the pleasure of individuals be any day withdrawn for the purposes of investment. The gross deposits in the banks are indeed less than they were two years ago, but the diminution is occasioned solely by the decrease in the government deposits, not in the deposits of individuals; these latter have increased. The present indisposition to buy either land

NEW  
SOUTH WALES.Speech of  
Sir George Gipps.

9 Sept. 1842.

or stock cannot therefore be attributed either to the dearness of land or to the scarcity of money.\* To what, then, is it to be attributed? I answer, principally, if not solely, to the general panic which has succeeded a general mania. There is no occasion to go far in search of reasons for the existing derangement of the colony. Wherever a mania for excessive speculation rages, there surely will follow a season of depression; the one, in fact, succeeds the other as naturally as the hot fit of an ague succeeds the cold one. It is this general panic which causes people to hold back from purchasing either land or stock; they hold back, for the most part, in the expectation that prices will fall still lower than they now are, some few, perhaps, in the apprehension that the whole colony is really going to ruin.

I need not go at length into all the causes which produced the late mania, or (which is the same thing) brought capital to this colony in excessive quantities between the years 1835 and 1840. Various circumstances conspired during that period to turn the attention of English capitalists to the Australian colonies. I will allude only to the attractive theories which were then put forward by the disciples of the Wakefield school, and to the vauntings of the excessive riches of New South Wales, which are to be found in the evidence taken before the Transportation Committee of the House of Commons. The real El Dorado was at last said to be found in Australia; and the only question asked was, why people would not come and share in the vast profits we were making. Capital then began to flow into the colony a great deal faster than it could be advantageously invested. For a time, however, all looked well, and the demand for stock which the opening of Port Phillip and South Australia created, caused the price of sheep, oxen, and especially of horses, to rise very rapidly. That during these years far too much capital came into the colony will, I think, be admitted, if we only consider the shape in which it must have come; and here I must be permitted to say that there appears to me to be a great want of clearness of apprehension as to what capital consists of. Many persons talk of bills of exchange or letters of credit, as if they were capital, which they are not, but only the representatives of capital. To transfer capital from one country to another, there must be a transfer of something corporal, something which in the widest acceptance of the word constitutes "merchandize." A man who, when about to emigrate to New South Wales, purchases in London a bill on Sydney, does not himself transfer his capital; he only makes a bargain with another party, who engages to do it for him; and that other party must send merchandize to meet the bill he draws, or it will be only a matter of account between himself and his correspondent, without any real transfer of capital having been effected.

The desire to emigrate to Australia during the years I have mentioned, causing a great demand for bills on Sydney, such bills were drawn, and, in order to meet them, vast quantities of goods were sent to Sydney, which were never ordered; in fact, the consignments of goods were no longer regulated by the state of the market in the colony, or by the demands of the merchants resident in Sydney, but by the demand which existed in London for bills on Sydney. Hence, enormous quantities of goods were sent to our market, quantities altogether disproportioned to the demand; the bills, however, drawn on account of these goods, were honoured, and the parties to whom they had been given were here with money in their hands. A great deal of this money was invested in mortgages or in loans—in loans, perhaps, to parties who never ought to have been trusted; much of it, also, was invested in the purchase of government lands, and especially of town allotments (or building land) not immediately productive, but expected rapidly to rise in value. The large sums realized by the sales of land were deposited, by the government, in the banks; the banks, consequently, increased their discounts; credit became greatly extended, and there was what is called an abundance of money. The colony appeared to be in a state of extraordinary prosperity; the number of ships in our harbour was pointed to with exultation; and it became a matter of boast, that we imported more goods from England than did the whole empire of Russia. And so matters went on—consignments increasing, land sales increasing, government money in the banks increasing, and discounts increasing, until the hollowness of the whole system was at length exposed. Merchants then found out that they had goods which they could no longer sell at any price, or at any credit; that their stores were full of articles for which there was no demand, from steam-engines down to pocket-handkerchiefs; and, what was still worse, of articles which had better been sunk to the bottom of the sea than brought into the colony,—such as carriages, champagne and bottled porter. The quantity of these latter articles consumed during the period of this fictitious prosperity was enormous. Why, the whole country, for miles, almost for hundreds of miles, round Melbourne, is strewed, to this day, with champagne bottles.

All these articles of luxury or folly, whether consumed or not consumed, constituted a dead loss to some party or other (it is to be hoped that the greater part of the loss fell upon the parties who sent them here); other articles, useful in themselves but perishable in their nature, rotted in the merchants' stores; and even articles, not perishable in their nature, were sold so far below their value, or to persons who have since become insolvent, that a large proportion of the capital introduced into the colony during the last five or six years, whatever shape it came in, may be considered as already absolutely lost, and more, I fear, is going the same way; nevertheless the cry is, that we want more capital from England, and that part of our distress is owing to our having sent capital out of the

country

\* See Note (A.), p. 156.

NEW  
SOUTH WALES.Speech of  
S<sup>r</sup> George Gipps.

9 Sept. 1842.

country to pay for emigrants! Capital, I will allow, we do want, but only under certain conditions; that is to say, on condition that the capitalist, or the person to whom it belongs, come with it—that he come and form one of us, and identify himself with our interests; and I do not doubt that any one possessed of common prudence, who will do this, will find that Australia is not yet a ruined country. But I desire to see no capital come here without its owner, to be invested only in loans or mortgages, at usurious interest; let us, rather than accept such fatal offerings, resolve, one and all, to exercise the most untiring industry, and the most pinching economy; and let those who cannot afford to hire shepherds go themselves and tend their sheep, as did the men who laid the first foundations of the wealth of Australia. This is the true way to dispel the existing panic, and to cause those to make investments in the country, who now hold back.

If there be any further reasons wanting to show that the existing distress is not to be attributed to the rise in the minimum price of land, I would point to other parts of Australia, where the distress is as great, or even greater, than in New South Wales, though no one can pretend that it is owing to such a cause. In South Australia, matters are far worse than they are here, though there has been no alteration in the price of land, and there is neither maximum nor minimum; land being sold by the Government at a fixed price, which remains the same as it was five years ago. In Van Diemen's Land, the depression is as great as it is here, though the quantity of land sold by the Government at any time is so small, that a rise in the price of it can have little or no effect on the prosperity of the colony.

At Port Phillip again, the rise in the minimum price to 12*s.* could have no effect, since scarcely any Government land was sold under 12*s.*, even when the minimum price was 5*s.*

And now allow me to ask, what is the real meaning of a minimum price, or the object of establishing one? It is merely a declaration on the part of Government, that it will not bring any land into the market under a certain price; or, in other words, that it will not, for the present at least, sell any land of an inferior quality. The Government does not pretend to prevent other persons, who have land, from selling it at any price they may choose to put upon it; the only thing the Government says, is, that so long as they sell their lands for less than a certain sum, the Government will not compete with them in the market. Neither does the Government attempt to force its own land into the market at or above its minimum price, though some persons argue very much as if it had attempted to do so; there is one way, indeed, in which the Government might attempt to do it, which would be, at the same time that it raised the minimum price of land, to declare that no person whatsoever should occupy or make use of any unalienated lands of the Crown; or in other words, for the Government at once to put an end to what is called "squatting." The Government might have said, your flocks and your herds shall not set their feet on an acre of Crown land, unless you choose to purchase it for 20*s.*; but the Government has said no such thing, and I have recorded my opinion in a despatch, which has been published in the colony and alluded to in the course of this debate, that any such attempt on the part of the Government would end in failure—that "it would be as easy to confine the Arabs of the desert within a circle traced upon their sands, as so confine the graziers or wool-growers of New South Wales within any bounds that can be assigned to them—that all the power of the Government would not suffice to bring back, within the limits of the lands which have been alienated, the flocks and herds which now stray over the boundless plains of New South Wales."\* The Government will not, it is true, henceforth sell any land at less than 20*s.* per acre; but it will continue to allow persons, as heretofore, to depasture their flocks on the ungranted lands of the Crown, on easy terms. The refusal to sell land at a low price may occasion some temporary falling off in our land fund, but that it will permanently destroy that fund I do not believe. I am entirely opposed to the selling of large breadths of land at a low price, for the purpose of raising a temporary revenue. I am an advocate for selling at a comparatively high price, or not selling at all. I do not think land should be sold, except to persons who have some intention of improving it; and for any land that is worth improving, 20*s.* an acre is not too much. But it will be asked, if land in large quantities be not sold, how are we to get money with which to pay for immigrants? This question I will answer by another: who are they who want immigrants the worst? The reply must be—the squatters; and next to them the parties who received in times past large grants of land gratuitously. If the land fund fail, therefore, these are the parties to whom we must look for funds wherewith to bring immigrants to the colony.

The South Australian theory is, that the money obtained by the sale of land should be spent in the importation of labourers, to be employed upon the land which is sold; but this part of it is as inapplicable to New South Wales, as is the part which is founded on what may be called the Anti-dispersion principle, the fallacy of which in Australia has been so often exposed. The South Australian theory may be applicable to a country such as has been conjured up in vision, where land is valuable only in proportion to the labour that is bestowed upon it, and where no part of the land has been given away gratuitously; but in New South Wales land is valuable for grazing purposes, without the outlay on it of any labour†, whilst labour is required for extensive tracts of other lands which have been given away

\* Despatch to the Secretary of State, dated 19th December 1840.

† Shepherds indeed are required, but it can scarcely be said that they lay out labour on the land.

NEW  
SOUTH WALES.

Speech of  
Sir George Gipps.

9 Sept. 1842.

away for nothing. Any attempt, therefore, to measure the quantity of labour wanted, by the quantity of land sold, must be futile. Labour is wanted in New South Wales, and I believe every where else, not in proportion to the land that is sold, but in proportion to the increase of capital in the colony. Sheep and oxen increase much faster than the human species; consequently in proportion as their increase is greater than the increase of our population, we should want immigrants, even though the Government were never again to sell an acre of land.

The squatters may not be, and indeed I do not think they are, at the present moment, in a condition to contribute largely to the funds wanted for the importation of immigrants, but their condition will, it is to be hoped, improve; and as soon as the present depression or despondency shall have passed away, some new regulations respecting the occupation of Crown lands will be required. The squatters are now the most numerous class of our colonists; the squatting interest is becoming the prevailing interest in the country; squatting is superseding settling; and in fact, almost every body who has any property at all is a squatter. And what, I would ask, do the squatters now pay? Comparisons have been made between the price of sheep and the minimum price of land, and the Government is accused of a design to make persons pay 20 s. an acre for land, of which three acres are required to feed a sheep. Was there ever in the whole world, it is asked, so foolish a Government as this of ours, which seeks to make us pay 60 s. (the interest of which, at 10 per cent. is 6 s. per annum), for as much land as will feed a sheep, which, when it has arrived at maturity, is worth only 5 s.? I allow it would be a foolish Government, indeed, that were to attempt to do this; but what, let me again ask, does the Government really make a squatter pay for as much land as will feed a sheep? He pays for his license 10 l. per annum, which license allows him to depasture on Crown lands any number of sheep or cattle which he may happen to possess, even though they may amount to 10,000 or 20,000. If we take, therefore, the very low average of 2,400 sheep to a station, he will pay 1 d. per annum for the feed of each sheep, in lieu of 6 s., which it is assumed the Government seeks to make him pay; and if we add to this, the assessment which he pays towards the maintenance of a police beyond the boundaries of location, the amount will be only 2 d. per annum, which is only about the seventh part of the price of one pound of wool, or about the seventeenth part of the fleece of the sheep. Now if, under such circumstances, people really mean to say, that they cannot compete with the Saxon wool-grower in the home market, notwithstanding that they have a protective duty in their favour of a penny per pound, I do not think we ought to invite immigrants to the country, but that on the contrary, we ought to prepare to pack up our goods and abandon it, as a concern that is worthless. For the rent or use of the land on which the fleece is produced, the Australian wool-grower pays less than 2 d. per annum; and supposing it to weigh two and a half pounds, he has in the English market an advantage over the Saxon wool-grower of 2½ d. on the same fleece, in the shape of a protective duty; yet it is said, that he cannot compete with the Saxon; if such be the case, it must be clear, at any rate, that the minimum price of land in Australia can have nothing to do with it.

It is well known to you all, gentlemen, that I have never myself advocated a very high minimum price. What I have always laboured to establish is, that the distinction should be well preserved between the minimum price and the upset price. I think the Government should abstain from bringing large quantities of land into the market, and that the upset price of all land should be regulated by what was the last selling price of land in the same locality, or of equal value; and if this principle were steadily acted upon, it would be of little importance what the minimum might be. A minimum price, however, has the effect of relieving the Government from the inconvenient pressure which would without it be felt, so long as the present erroneous views respecting the sale of land prevail in the colony. Public opinion is in favour of a low price; the officers of the Government, as members of the public, and partaking of the feelings of the public, are in favour of a low price; and under such circumstances, I esteem it fortunate, that the Parliament of Great Britain is about to take out of my hands a discretionary power, which I cannot exercise in a manner to satisfy my own conscience, or in the way which I verily believe to be most advantageous to the public, without placing myself in opposition to the wishes of the colonists, and being obliged constantly to overrule the opinions of those officers, upon whose assistance and cordial co-operation I must mainly rely in carrying on the business of Government. I have no doubt that the increase in the minimum price will ultimately be found beneficial. When the price was raised in 1839, from 5 s. to 12 s., the quantity sold decreased, but the amount of money received did not. About 80,000 acres of land were sold less in 1839 than in 1838, but the money received was 10,000 l. more; and in 1840 the quantity again decreased by 103,000 acres, whilst the money again increased by 10,000 l.; and these numbers and sums have reference only to the old parts of the colony.\* Still it will be said that these were years of speculation, and I acknowledge that they were.

I do not expect that we shall sell much land during the next two or three years; neither should we sell much even though the price were to be reduced to five shillings; but after a time we shall sell again, for land is wanted for other purposes besides the feeding of sheep; and the land which we do not sell we may, in the mean time, in some other way turn to profit. What, I confess, most surprises me is to find the great landed proprietors in the colony

\* That is to say, exclusive of Port Phillip. See Note (B.), p. 157

NEW  
SOUTH WALES.Speech of  
Sir George Gipps.

9 Sept. 1842.

colony opposed to the rise in the minimum price, the tendency of it undoubtedly being to increase the value of their own lands. Whilst I cannot compliment them on their clear-sightedness, I must at any rate honour their patriotism, for their opposition to it can be founded upon no other ground than that of apprehension for the public good.

I now come to the point on which I differ more widely than on any other from the Report of the Committee,—I mean the opinion expressed in it, and still more strongly repeated in the seventh of the Resolutions now before the Council, that some part of the present depression is to be attributed to our having sent out of the colony large sums of money in payment for immigrants—by money meaning capital, the words being used synonymously. “During the last five years,” says the Resolution, “no less than 45,544 souls have been introduced, at a cost to the colony of 829,840 £, exclusively raised within itself, and remitted to the United Kingdom.”

Exclusively raised within the colony, but in what manner raised? Not raised by the industry of the colonists, nor produced by traffic in it; but raised by the sale of land, and principally of unimproved land. What we have given in payment for immigrants is land, and that land we have assuredly not sent out of the colony. We have received in exchange for our land English capital, and that capital has been remitted to us in the shape of immigrants. “So vast an effort for so infant a community,” the Resolution goes on to say, “could not fail to produce considerable exhaustion, nor be made without leading to a serious state of depression.” Now, if we had created this land by any effort of our own, we might reasonably be expected to feel exhausted after it; but all that we have done in respect to the land has been to measure it, and bring it to sale. Moreover, some portion of it has been sold in London, and the price of it remitted to us directly in the shape of emigrants: in such an operation no one, I think, can maintain that there is any sending of capital out of the colony, and yet the effect produced would have been the same if every acre had been sold in London. The operation is precisely that of giving land for emigrants, and is just the same (in regard to the point at issue) as if we had given a number of acres of land to each emigrant arriving in the colony, varying according to the age or sex of each.

This may be again clearly exemplified by taking the case of naval or military settlers, who are, in fact, only immigrants of a superior or a favoured class. Formerly we gave to each officer, according to his rank or length of service, a quantity of land varying from 400 to 1,200 acres; and so long as we did this, no one supposed that there was any sending of capital out of the country. Now, instead of allowing the officer to select a given quantity of land, we allow him to obtain gratuitously a quantity, which is determined, not by the number of acres it contains, but by another measure of value; no money, however, passes between the parties, and no one, I believe, supposes that there is any sending of capital out of the country. The only difference in the case of ordinary immigrants is, that in order to avoid the inconvenience of giving land to the actual immigrants, we allow the intervention of third parties, and instead of absolutely bartering land for immigrants, we make use of the common medium with which all transactions beyond those of simple barter are conducted, namely, money. Let us suppose one hundred persons ready to come from England to New South Wales, and that in consideration of their coming to settle amongst us, we are to give amongst them two thousand acres of land; the most simple plan would be to let each of the hundred find his own way to the colony, and to give to each on his arrival his own proportion of the land, that is to say, twenty acres; the next simplest way of doing it would be for the hundred persons on the one side, and the Government on the other, to make a bargain with a third party, who should receive the whole two thousand acres in return for the trouble and expense of bringing the hundred persons to the colony; this would be a case of simple barter, and would in principle be just the same as if the Government had bartered its land for a cargo of horses or for a steam-engine; though, had the things imported been horses or steam-engines, it would have been clear to every body that there was capital imported, and none whatever exported. Advancing, however, a few steps beyond such primitive methods of doing business, the Government now gives its land to persons who give in exchange for it bits of paper, and gives these same bits of paper (or other equivalent pieces) to other persons, who bring the immigrants to the colony; but, notwithstanding this roundabout method of proceeding, what the Government really gives for the immigrants is still land, and it assuredly does not send that land out of the colony. This explanation must, I think, suffice to show that whether the land be sold in England or in the colony, so long as the money which is paid for the passage of the immigrants be supplied from England, there can be no sending of capital out of the country. But it may, perhaps, be argued that the case is different when the land is sold, not to a newly-arrived immigrant, bringing money with him from England, but to a person long settled in the colony. It may be said that such an old settler pays for the land with money produced by his own industry, and that such money is part of the capital of the colony, or that he pays for it by the sale of his wool, and that, as the wool is exported, capital is sent out of the colony. But here I must observe that the wool would be sent out of the country at any rate, and that it is desirable it should be sent out; the more capital of this description which we can send out of the colony the better; the export does not impoverish, but tends to enrich us. If the settler who is supposed to have sold the wool, and invested the proceeds of it in land, had, instead of buying land with it, kept the money in his pocket, or lodged it securely in some place where he could any day put his hand upon it, it would indeed have been better for him, as by having the money in reserve he might have been able to hold out against a season of depression, like that under which the colony is now labouring; but the acknowledgment of this only goes to strengthen the argument I hold, that our distress is owing

NEW  
SOUTH WALES.

Speech of  
Sir George Gipps.

9 Sept. 1842.

to persons having engaged too readily in speculations of all sorts, including, of course, amongst the rest, speculations in land; but the hypothesis under which I am arguing is that the settler did buy land with the money derived from the sale of his wool, and the only question is, whether after having done so, and thus given his money to the Government, it was or was not for the advantage of the colony that the Government should spend it in the purchase of immigrants. It is allowed that immigrants were wanted, but it is said that the Government should have kept the settlers' money, and paid for immigrants with other money, which it might have borrowed in England. Now, what would have been the result if the Government had so done? Why, first, that the balances of Government at the different banks would have been increased; and, secondly, that the import of capital, that is to say, goods of every description, from England would have been increased, and consequently the mania of speculation which has brought the colony to its present depressed state must have been also increased; that, in fact, every evil which has afflicted the colony must have been aggravated.

The whole controversy, supposing it to be a controversy, may be reduced to this question: Has or has not capital come into the colony too rapidly? I maintain that between the years 1835 and 1840 it did come in too rapidly—more rapidly, that is to say, than it could be profitably employed; and that, consequently, large portions of it have been lost. The effect of paying for the passage of the emigrants out of the proceeds of the sale of lands has been to reduce *pro tanto* the quantity of capital coming into the colony, and consequently, *pro tanto*, to reduce the evils arising out of the excessive importation of capital. If the passage of the immigrants had been paid for by money borrowed in England, more capital must have come to the colony in the shape of goods, and so much more capital must have been lost. The balance of trade, as it is called, or, in other words, the excess of imports over exports, having been notoriously very great during the last few years, it seems to me scarcely possible that any evil can have arisen to the community during the same years from the exportation of capital. In any country where the value of imports greatly exceeds the value of exports, one of two things must be in the course of fulfilment: the country must be increasing in riches, or it must be contracting a debt; it may, however, be doing both things at once, and this is what, I believe, we have been doing in New South Wales. The capital of the colony is rapidly increasing, but a large portion of it is only lent to the colony by England, and has come in the baneful shape of money, seeking for usurious interest, which it will by-and-by take a large proportion of the wool of Australia to pay. A colony like New South Wales can, indeed, bear every year a considerable excess of imports over exports without suffering inconvenience: first, because the home Government has to remit to the colony every year nearly 300,000*l.* for the maintenance of its military and convict establishments; and secondly, because there is (exclusive of money belonging to loan and trust companies) a great quantity of capital yearly pouring into the colony for the purpose of permanent investment in it—capital, that is to say, of which the owners come with it. An excess, therefore, of imports over exports to the value of perhaps 500,000*l.* a year would not entail upon us any heavy debt to England; but during the few last years the balance of trade, as it is called, has been more than that against us, and it is not to be denied that we have during this time been contracting a debt to England—a debt which exists principally in the capital of our English banks and loan companies, but also to a considerable extent in private mortgages.

I come, therefore, to the conclusion that in all cases in which the money spent on the importation of immigrants has been the produce of English capital given in exchange for our lands, there has been no exportation of capital whatsoever, and that, even where the money taken in payment for our lands has come to us from old settlers, such money must either have been English capital too, or it must have been produced by the sale of a description of colonial capital, which it was desirable to export, and the exportation of which does not tend to impoverish, but to enrich us.

The exchange of wool or any other colonial produce, for immigrants, would indeed be hurtful to us, if it were carried to such an extent as to prevent our receiving other articles of which we stand in need, as, for instance, British merchandize of every description, machines, furniture, building materials, tea, sugar, wheat, flour, &c., &c. But have we any reason to complain that these articles have not come into the colony in sufficient abundance? On the contrary, is it not beyond dispute, that they have come a vast deal too fast upon us? Have I not already shown that the present panic is mainly to be attributed to the fact of their having come to us so much faster than we wanted them, that very large proportions of them were actually wasted and lost? It certainly might be possible for a colony to labour under the opposite evils, at the same time, of both importing and exporting too much capital; but then the capital exported must consist of some articles which it would be desirable to retain in the colony. If, for instance, whilst we were importing articles of luxury—carriages, bottled ale and champagne, or, still worse, large quantities of poison in the shape of spirituous liquors—we had been forced to export any article essential to our own sustenance or comfort, in order to pay for them, we should certainly have been acting disadvantageously (and it must be indeed disadvantageous to import such articles under any circumstances); but so long as we send out of the colony articles only which it is desirable to export, and get, in return for them, immigrants, of whom we stand in the greatest need, it does not appear to me that we are making any effort that ought to lead to exhaustion.

That individuals, indeed, have exhausted themselves by buying articles which they did not want, and land amongst the rest, I can hardly perhaps too often repeat, but this was the consequence

consequence of the mania for speculation which existed during the years from 1835 to 1840; which mania itself arose, not from the sending out, but from the pouring in, of capital; the same thing would have happened had Government hoarded its money, instead of spending it; and it would have been far worse had Government sold its land, not for ready money but on credit. The wisest thing for the Government to have done would perhaps have been to have refused to sell land at all; but gentlemen will, perhaps, remember the complaints which were made against me by the people of Port Phillip, for not, as they thought, bringing land fast enough to market.

As it is, capital to the amount of 800,000*l.* has been introduced into the colony in the shape of immigrants, the most advantageous form in which it can come, instead of coming in some other shape in which capital was not wanted. Immigrants, of the labouring class are, in fact, in New South Wales, to be regarded as capital: they are frequently, indeed, designated as "labour," but erroneously. They are the substances out of which labour may be extracted, and so is a steam-engine; but nobody calls a steam-engine labour, neither are horses or elephants called labour.

It may seem paradoxical, but I believe it true, that it is not desirable for any government to have more money at its command than is required for its current services. I believe that far more of the evil which this colony has suffered is to be attributed to our having hoarded money between 1832 and 1838, than to our having spent it since 1838. I often thank God that the money is gone; for I now have a ready answer for every person who comes to ask me to engage in expensive undertakings, which I had not, so long as we had large balances at the bank. Old Frederick of Prussia, a despotic monarch, saved money for his son; but that son shot it all away in gunpowder, in making war upon his neighbours; as the Lord Bishop remarked not long ago, that our own national debt was shot away, or rather, the borrowed money which caused the debt. We have shot away a good deal of our borrowed money, not in gunpowder, indeed, but in champagne.

But to revert to the important point at issue—How are we to get money to pay for the importation of immigrants? The first thing to be done is, I answer, to reduce the expenses of government; and if the council will but go hand in hand with me, I doubt not that much may be done in this way; but what, as yet, have you done, gentlemen? At the commencement of the present session I introduced two measures, calculated to lessen the expenses of government, and which, had they been passed as I presented them, would, I firmly believe, have had the effect, in a few years, if not immediately, of enabling us to apply to immigration every shilling of the revenue which is in any way derived from land; that is to say, not only the produce of the sale of lands, but quit-rents, ordinary rents, and also the produce of licenses to depasture stock beyond the boundaries of location; but of these measures, one (the Police and Public Works Bill) was absolutely and entirely rejected; the other (the Corporation Bill) was only passed by accompanying it with a bribe of between 70,000 *l.* and 80,000 *l.* to the people of Sydney and Melbourne.

I am determined, however, to persevere in the most rigid economy; and still endeavour, if possible, to apply the whole of the money derived, in any shape, from land, to the purposes of immigration; and until this shall have been done, or at least until the attempt shall have been made, I do not think we ought to have recourse to a loan, even if it were in our power to get one. The proposal to apply to the purposes of immigration the whole of the money derived, in any shape, from land, is not so chimerical as many may suppose. This colony has been accused of applying to other purposes than those of immigration large portions of its land fund; but it may surprise the persons by whom these accusations have been put forth, to learn, that, of the whole amount derived from the sale of land, since the system of selling land first began in 1832, more than 87 per cent. has been spent on immigration, and that a vast deal more than the remaining 13 per cent. has been expended in the survey and sale of the land, and in the protection of the aborigines—objects which are allowed to form charges on the land fund, even prior to that of immigration itself. It is not true, therefore, that the colony of New South Wales has applied any portion whatever of its land fund to purposes, the expense of which ought to be defrayed out of its ordinary revenue; and it is much, I think, to be desired, that the groundlessness of the charge which has been made against the colony should be exposed.\* I have always contended, that the expense of the survey and sale of land, and also that incurred for the protection and civilization of the aborigines, are legitimate charges on the land fund; but am free also to contend, that if the exigencies of the colony be such as to require the expenditure of the whole land fund on immigration, it is quite legitimate, also, to defray such expenses out of the ordinary revenue. So long as we had a large and even superabundant land fund, it was proper to defray the expenses in question out of that fund, especially as our ordinary revenue was not then able to bear them; but circumstances having changed, our land fund having ceased to be productive, whilst our ordinary revenue has greatly increased, a different state of things has arisen, justifying, and even calling for, a different arrangement.

And here I must observe that, though I do not reckon on selling much land during the next two or three years, neither do I look on the land fund as by any means extinct. As soon as the present panic shall have passed away, and the futility be proved of any attempt to reduce the minimum price of land, when people, in fact, become thoroughly persuaded that a high price will be maintained, then will they begin again to buy readily enough, and

Speech of  
Sir George Gipps.

9 Sept. 1842.

at prices too above 20s. an acre. I do not say they will do this for mere grazing purposes; but wherever grazing and other pursuits of industry can be combined, there we shall sell land; in less quantities, certainly, than before, but realizing, perchance, more money. And where land cannot be sold, it must be rented; the rents of all government lands must be rigidly collected, as, above all others, must the quit-rents. At the present moment we are paying interest on debentures at eight per cent., when nearly as much money is due to us for quit-rents as would enable us to pay them off. This state of things must not continue; the government cannot allow it. It is not just to those who regularly pay their quit-rents; and still less just to those who have redeemed their quit-rents, to allow these debts to remain outstanding.

Until all other means of providing money for the purposes of immigration shall have been tried, and the insufficiency of them proved, I must declare that I cannot, in the conscientious discharge of my own sworn duty to Her Majesty and to the people of this country, advise Her Majesty's Government to authorize the raising of any larger loan for the service of this colony than may be necessary to equalize, from year to year, the supply of immigrants, so as to relieve the local government, as far as possible, from the inconvenience of uncertainty in respect to the number of immigrants to be expected in any year.

I do not say, gentlemen, nor have I ever said, that I am absolutely opposed to a loan. Should the capital of the country go on increasing, and should we still sell no land, I think a loan would be justifiable; because, as I have already said, the want of labour is proportioned to the increase of capital, of which increase the sale of land is no criterion. Under the squatting system, it cannot be contended that the sale of land is any measure of the want of labour, and the squatting system has been so extended as to have become the system of the colony. But when we talk of a loan, it is essential to bear in mind, that there must be two parties to it—there must be a lender as well as a borrower, and where is this colony to look to for a lender? As to borrowing to any extent in the colony, at the exorbitant interest which is now demanded for money, it must be out of the question; and, though I have no doubt that interest must come down, until it bear a natural proportion to the rate of profit in the colony, I doubt whether it will, for a number of years, come down to five or even six per cent.; and to borrow money at any rate of interest beyond five per cent. would hardly be advisable under any circumstances. We must, therefore, look to the English capitalist; and what inducements have we to offer to him? Is it the way to induce him to lend us money to be constantly crying out that we are ruined; that things are come to such a pass, that it is absolutely better to be without property than to have it? Do we take the proper means to induce people to lend us their money, when we declare, day after day, that we cannot compete in the English market with the Saxon wool-grower, notwithstanding we depasture our flocks upon crown land, at only a nominal rent, and have a protection in the shape of a discriminating duty of a penny on every pound of our wool? Whether from the inferiority of the soil, or from the inferiority of the people, we do not say; but we declare that we cannot do it. Are statements such as these, I will ask, likely to induce people to lend us their money?—put forth, moreover, as they are, not by the ignorant multitude, who take their impressions from the events of the moment—not merely by newspaper correspondents or periodical writers—but gravely announced in this council by the sages of the land! I apprehend that the capitalists of England will not be very ready to lend us their money so long as this strain be continued. But it will be said, that the guarantee of the Home Government may be obtained, and that then every thing will go on smoothly. I grant that the guarantee of the Home Government *may* be obtained, and, if absolutely necessary, I trust that it will; but again let me ask, do we go the right way to obtain it or any other assistance from the Home Government? Can we expect the Home Government to be very ready to give us their assistance, when every thing they do or attempt to do for us is construed into evil? No matter whether it be Lord Glenelg, Lord John Russell, or Lord Stanley that is in office, every thing done is denounced as injurious to the colony, and even as intended to injure it; when it is stated, as it was no longer ago than yesterday in this council, that there is some sinister influence at work behind the scenes, some deep design to bring this colony to ruin, and that the government lends a willing ear to the designers!

I will not say that the statesmen whose names I have mentioned, or any one of them, would refuse to lend us assistance, because what they have hitherto done for us has been thanklessly received; but I must say, that we do not take the most courteous means of inducing them to help us. Secretaries of State are undoubtedly liable to error, like other mortals; and it has been my duty to point out some errors which have been committed in respect to this colony; but I am, nevertheless, as sincerely convinced as I am of any article of my faith, that nothing affecting the colony has been done in England from any other motive than a sincere desire to advance its prosperity in every way that is consistent with a due regard to the interests of other portions of the empire.

To return, however, to the question of a loan. It will naturally be asked, what security have we to give? I believe that we have very ample security; that the unsold lands of the colony, if properly administered, furnish as ample security as any one can desire; but then comes the question, how should they be administered? and this brings me to the plan of which the outline has been developed by the Lord Bishop.

I greatly regret that I cannot go the whole way with his lordship; that in fact I can only go a little way with him; and the sincerity with which I regret this will not be doubted by those who know that it is from the Bishop alone I have received any support in the views which I take of the minimum price. I go along with his lordship in thinking  
that

that the lands beyond the boundaries, or the lands now occupied by the squatters, are the sources from which the revenue may be drawn equal to all our wants; and I agree with his lordship also in thinking that, in order to draw a larger revenue from these lands, some alterations may be advantageously made in the tenure by which they are now held, and that some security should at least be given to the squatter for the value of the improvements which he may make upon them, since it must always be the interest of the landlord to have his land improved, whether the landlord be the Queen, or any private individual; but in the details of his plan I am forced to differ from his lordship, because those details involve a vast number of conditions, the observance of which experience forbids me to expect the Government would ever be able to enforce; and a vast number, too, of deferred payments, which I fear the Government would never be able to collect.

It should be borne in mind that the grants, which are called free or gratuitous in this colony, were not professedly gratuitous when they were made; that they involved a variety of conditions, such as those of settlement, cultivation and payment of quit-rents, and in many cases of other deferred payments, which the Government has in very few instances been able to enforce. I will ask the Colonial Secretary and the Auditor-General, who are here present, what the experience of Government is in respect to these deferred payments? Why, that even the quit-rents are collected with the greatest difficulty, and at an expense which makes it hardly worth while to collect them, notwithstanding that the security for their due payment is as ample as any that can be shown by the proprietor of Belgrave-square for the payment of his ground rents. And if such be the case in respect of quit-rents and of other rents, such as those, for instance, of the leases granted in the time of Sir Thomas Brisbane, all of which are due on lands situated in the older parts of the colony, and comparatively near the seat of government, how much more difficult would it be to collect dues arising out of lands situate hundreds of miles off, extending from Darling Downs to the Bogan, and from the Bogan to Corner Inlet. Any government that attempted to enforce deferred payments of this nature would certainly be defeated; the whole strength of the colony would be arrayed against it. For these reasons, therefore, I think no dependence is to be placed on a revenue to be raised by deferred payments, or, in other words, out of lands sold or given on credit. The only sure system which the Government can go on is that of sale for ready money. I beg also very distinctly to state, that I held these opinions long before I had any knowledge of an Act of Parliament, which, there is every reason to suppose, has already passed, and which, if passed, must entirely prevent the carrying into effect of the plans of the Lord Bishop. The proposed Act of Parliament is not confined to the fixing of a minimum price below which no land shall be sold; there are other provisions in it, such as, first, that all land shall be sold by auction; secondly, that it shall be sold only for ready money; and, thirdly, that no land shall be let on lease for any period longer than 12 months. It will scarcely, therefore, be prudent to rest our hopes on a plan which proceeds on principles directly opposed to such an Act of Parliament. But the Act of Parliament, it may be said, will be repealed. So it will, I have no doubt, if, after a fair trial, it be found to work badly; but I am equally certain that it will be allowed a fair trial; and for such a trial I do not think that four, five, or even six years will be considered too long a period; and that, consequently, even allowing the Act to be an injudicious one (which I am very far from thinking it), it would be most imprudent in us to rely upon any scheme which cannot be carried into effect whilst the Act remains in force.

Before I conclude, I must say a few words more respecting the squatters.

It has been said that I am the enemy of the squatters, and that I am bent on destroying the squatting interest. Now, although squatting did not owe its origin to me, I may safely say that I have been the best friend to the squatters that they ever had, and I believe I may add, I was the first person to point out to the Home Government, which I did in my despatch of the 19th of December 1840, the vast importance of the squatting interest to this colony. I am and always have been the advocate of squatting, but I do not advocate the putting of the squatter on a par with the purchaser of crown land. To do this would be effectually to nullify all the regulations which have been introduced for the disposal or sale of land, since land began to be of any value in the colony; and if I could even so far forget my own duty as to allow the person who may be the first to seize on any quantity of crown land to become the virtual proprietor of it, there are other and superior authorities who will not allow their regulations to be so evaded.

So obviously does the squatting system act to prevent the sale of crown lands, that the late Secretary of State, in a despatch which has been laid before the council,\* pointed out the propriety of raising the price of a license to depasture stock beyond the boundaries to five or six times its present amount. Nor was his Lordship prompted to this by any communication from New South Wales beyond a simple narration of facts. It scarcely appears to me that we can go at present as far as his Lordship's suggestion would lead us; but I am satisfied that whilst it is desirable, on the one hand, to improve the tenure of the squatter in every way in which it can be done without indisposing him to become a purchaser of land, so we must, on the other, as soon as the present despondency shall have passed away, make several important alterations in respect to squatting licenses. The opportunity may, if possible, be afforded to the squatter of purchasing as a homestead some moderate portion of the land which he occupies, without forcing him to take a quantity,

NEW  
SOUTH WALES.

Speech of  
Sir George Gipps.

9 Sept. 1842.

\* Dated 20th June 1841.

NEW  
SOUTH WALES.  
Speech of  
Sir George Gipps.  
9 Sept. 1842.

tity, which, at the present high minimum price, his means might not enable him to pay for; such, purchase, however, must be at auction (so long as the contemplated Act of Parliament remains in force), and for ready money. On the other hand, every station must be separately licensed (which is not the case at present), and the quantity of land held under any single license must not exceed what may be necessary for a given number of sheep or oxen. In fact, licenses must be more nearly assimilated to leases than they now are, and the occupation of any land without lease or license (whether within or without the boundaries) must be most strictly prohibited.

The practice which is growing up of forming stations only for the purpose of selling them must be prohibited also; and I am very much disposed to think that a person who may form a station without the previous permission of the Government must in no case whatever be allowed to retain it. The formation of stations without the permission of Government is the principal cause of those atrocities, whether committed by or on the aborigines, which bring discredit on the whole colony, and render necessary the maintenance of an expensive police force, even in the uttermost parts of the wilderness.

I have already spoken of the difficulty with which the rights of the Crown, and even its most unquestioned rights, can be enforced at great distances from the seat of Government, if ever suffered to fall into abeyance, or if the assertion of them be deferred. I will, in conclusion, only on this head remind the council of an instance which occurred but as yesterday—the first and only instance in which I have exercised the undoubted right of refusing to renew a license. What then occurred has acted, I may say, on me as a warning (and it will be, I trust, a warning to all future governors) of the necessity of proceeding with great firmness, but, at the same time, with great caution, in the administration of the lands which form in this colony the domain of the Crown.

Note (A.)

COMPARATIVE STATEMENT of the QUANTITY of SPECIE in the Colony of *New South Wales*, in the First Quarter of the Year 1841, and in the Second Quarter of 1842.

	Quarter ending					
	31 March 1841.			30 June 1842.

## AGRICULTURAL PRODUCE (CANADA).

---

RETURN to an Address of the Honourable The House of Commons,  
dated 26th May 1843;—for,

COPIES or EXTRACTS of such Parts of the JOURNALS of the HOUSE OF ASSEMBLY of *Canada*, for the Year 1842, as relate to the Imposition of a DUTY on AGRICULTURAL PRODUCE imported into the said Province.

Colonial Office, Downing Street, }  
30 May 1843.

G. W. HOPE.

---

*Ordered, by The House of Commons, to be Printed, 30 May 1843.*

---

COPIES or EXTRACTS of such Parts of the JOURNALS of the HOUSE OF ASSEMBLY of *Canada*, for the Year 1842, as relate to the Imposition of a DUTY on AGRICULTURAL PRODUCE imported into the said Province.

*Lunæ, 12<sup>o</sup> die Septembris, 1842.*

---

Pursuant to the order of the day, the following Petition was read:—

OF the North American Committee of the Colonial Society, setting forth the importance of a free trade with Great Britain in the agricultural productions of British North America; and praying that a duty may be laid on the importation of those productions to protect the farmers of this Province from the competition of foreigners.

Extracts from  
Journals of Legis-  
lative Assembly  
of Canada;  
Sess. 1842.

On motion of the Honourable Mr. Jones, seconded by Mr. Hale,

Resolved, That this House will, on Wednesday next, resolve itself into a Committee of the whole House to take into consideration the expediency of imposing a duty on the agricultural products of the neighbouring States when imported into this Province.

*Mercurii, 14<sup>o</sup> die Septembris, 1842.*

---

THE order of the day for the House in Committee to take into consideration the expediency of imposing a duty on the agricultural products of the neighbouring States, when imported into this Province, being read,

Ordered, That the said order of the day be postponed until Monday next.

*Jovis, 15<sup>o</sup> die Septembris, 1842.*

---

Pursuant to the order of the day, the following Petition was read:—

OF the Municipal Council of the Niagara District, praying that a duty be imposed upon American products introduced into the Province; and that the Imperial Parliament be addressed to pass a law admitting the products of this Province into Great Britain, free of duty.

Extracts from  
Journals of Legis-  
lative Assembly  
of Canada ;  
Sess. 1842.

*Lunæ, 19<sup>o</sup> die Septembris, 1842.*

Resolved, That the Petition of the North American Committee of the Colonial Society, presented to the House on the 8th instant, be referred to a Special Committee, to examine the contents thereof, and to report thereon from time to time; with power to send for persons, papers and records.

Ordered, That Mr. Merritt, Mr. Williams, the Honourable Mr. Hincks, the Honourable Mr. Neilson, Mr. Burnet, the Honourable Mr. Moffatt, Mr. Leslie, Sir Allan N. MacNab, and the Honourable Mr. Viger, do compose the said Committee.

Ordered, That the Petition of the Municipal Council of the Niagara District, praying that a duty be imposed upon American Products introduced into the Province, be referred to the Special Committee to which was referred the Petition of the North American Committee of the Colonial Society.

*Jovis, 22<sup>o</sup> die Septembris, 1842.*

Pursuant to the order of the day, the following Petition was read:—

OF the Municipal Council of the District of Brock, praying that a duty be laid on American produce introduced into this Province, for the protection of Agriculturists.

On motion of Mr. Merritt, seconded by Mr. Williams,

Resolved, That an humble Address be presented to his Excellency the Governor-general, praying that his Excellency will be pleased to cause to be laid before this House a copy of a Despatch from the Right honourable C. Poulett Thompson, Governor-general of this Province, to Lord John Russell, dated, Government House, Montreal, 26 May 1840, transmitting an Address from the Legislature of the late Province of Upper Canada, praying for the introduction of Canadian corn into Great Britain free from duty, and to empower the Legislature of this Province to originate measures relating to the colonial trade generally; together with copies of all Despatches or other communications with the Colonial Secretary, on the subject of duties on the agricultural productions and commerce of this Province since that period.

Ordered, That the said Address be presented to his Excellency by such Members of this House as are of the Honourable the Executive Council of this Province.

*Lunæ, 26<sup>o</sup> die Septembris, 1842.*

Pursuant to the order of the day, the following Petition was read:—

OF William Morris and others, inhabitants of the eastern townships of Canada East, praying that a protecting duty be laid on all foreign produce introduced into this Province.

The Honourable S. B. Harrison laid before the House, by command of his Excellency the Governor-general:—

Return to an Address from the House of Assembly to his Excellency the Governor-general, dated 22d September 1842, praying “for a copy of a Despatch from the Right honourable C. Poulett Thompson, Governor-general of this Province, to Lord John Russell, dated Government House, Montreal, 26 May 1840, transmitting an Address from the Legislature of the late Province of Upper Canada, praying for the introduction of Canadian corn into Great Britain, free from duty, and to empower the Legislature of this Province to originate measures relating to the colonial trade generally; together with copies of all Despatches or other communications with the Colonial Secretary, on the subject of duties on the agricultural productions of this Province since that period.”

Kingston, 24th September 1842.

*Rawson W. Rawson.*

On

## OF CANADA; IN 1842, RELATIVE TO AGRICULTURAL PRODUCE. 3

On motion of the Honourable Mr. Harrison, seconded by the Honourable Mr. Hincks, Extracts from  
Journals of Legis-  
lative Assembly  
of Canada;  
Sess. 1842.

Resolved, That this House will, on to-morrow, resolve itself into a Committee of Ways and Means to consider the propriety of laying a duty upon imports of Foreign Wheat into the ports of this Province, and that it be then the first order of the day.

Ordered, That 250 copies of the Despatch from the Secretary of State for the Colonies, on the subject of the free admission of Canada Corn into Great Britain, be printed in each of the English and French languages, for the use of the members of this House.

---

*Martis, 27<sup>o</sup> die Septembris, 1842.*

---

THE order of the day for the House in Committee of Ways and Means to consider the propriety of laying a duty upon imports of Foreign Wheat into the ports of this Province, being read,

The House, accordingly, resolved itself into the said Committee.

Mr. Leslie took the chair of the Committee, and after some time spent therein, Mr. Speaker resumed the chair;

And Mr. Leslie reported, that the Committee had made some progress, and had directed him to move for leave to sit again.

Ordered, That the said Committee have leave to sit again to-morrow.

---

*Mercurii, 28<sup>o</sup> die Septembris, 1842.*

---

Pursuant to the order of the day, the following Petition was read:—

OF Richard Robinson, and others, of the township of Gwillimbury West, praying that a protecting duty may be imposed on American produce introduced into this Province.

The order of the day, for the House in Committee of Ways and Means, to consider the propriety of laying a duty upon imports of Foreign Wheat into the Province, being read,

Ordered, That the said order of the day be postponed until to-morrow, and that it be then the third order of the day.

---

*Jovis, 29<sup>o</sup> die Septembris, 1842.*

---

Pursuant to the order of the day, the following Petition was read:—

OF George Pringle, and others, of Hemmingford, and other places, praying that a protecting duty be laid on American produce introduced into this Province.

On motion of Mr. Merritt, seconded by the Honourable Mr. Moffatt,

Ordered, That the Return to the Address of this House, of the 22d instant, with the several Despatches, on the subject of the importation of Wheat and Wheaten Flour, be referred to the Special Committee to which was referred the Petition of the North American Committee of the Colonial Society.

On motion of Mr. Hale, seconded by Mr. Child,

Ordered, That it be an instruction to the Committee of Ways and Means to consider the propriety of laying a duty upon imports of Foreign Wheat into the ports of the Province; to consider at the same time the expediency of imposing a proportionate and simultaneous duty upon all other sorts of agricultural produce.

Mr. Simpson moved, seconded by Sir Allan N. MacNab, That it be a further instruction to the said Committee to inquire into the propriety of continuing the construction of the canals on the St. Lawrence, in the event of the said duties being imposed.

Extracts from  
Journals of Legis-  
lative Assembly  
of Canada ;  
Sess. 1842.

The question having been put upon the said motion, a division ensued, and it passed in the negative.

The order of the day for the House in Committee of Ways and Means, to consider the propriety of laying a duty upon imports of Foreign Wheat into the ports of the Province, with an instruction to the said Committee, being read,

The House accordingly resolved itself into the said Committee.

Mr. Leslie took the chair of the Committee; and after some time spent therein,

Mr. Speaker resumed the chair;

And Mr. Leslie reported that the Committee had come to several Resolutions, which he was directed to submit to the House, whenever it shall be pleased to receive the same.

Ordered, That the Report be received to-morrow.

---

*Veneris, 30<sup>o</sup> die Septembris, 1842.*

---

MR. LESLIE, from the Committee of Ways and Means, to consider the propriety of laying a duty upon imports of Foreign Wheat into the ports of the Province, with an instruction to the said Committee, reported, according to order, the Resolutions of the said Committee, which Resolutions were again read at the Clerk's table, and are as followeth:

Resolved, As the opinion of this Committee, that it is expedient, in order to encourage the agricultural interests of this Province, and facilitate the free admission of Canadian Wheat into the ports of the United Kingdom, to impose a duty on Foreign Wheat imported into this Province.

Resolved, As the opinion of this Committee, that the said duty be Three Shillings sterling per Imperial quarter.

Resolved, As the opinion of this Committee, that in addition to the duty resolved to be imposed upon Foreign Wheat by the preceding Resolutions, a duty be imposed upon all other agricultural products imported into this Province from the United States of America.

Ordered, That the question of concurrence be now separately put upon the said Resolutions.

The first of the said Resolutions being again read,

Mr. Black moved, in amendment, seconded by the Honourable Mr. Neilson, that the following words be added to the said Resolution, and do make part thereof: "Provided that such duty be levied only when Canadian Wheat shall be admitted into the ports of the United Kingdom duty-free, or at a merely nominal duty; and Foreign Wheat, imported into Canada, and exported thence to the United Kingdom, shall be admitted on the same terms as if the produce of Canada."

The House divided on the motion of amendment, and the names being called for, they were taken down as followeth:

#### YEAS.

Black, Burnet, Boulton, Chesley, Christie, Dunlop, Dunscomb, Forbes, Hale, Hamilton, Kimber, Leslie, D. McDonald, McLean, Neilson, Noel, Simpson, and Thompson. (18.)

#### NAYS.

Armstrong, Barthe, Berthelot, Boswell, Boutillier, Cameron, Child, Cook, Daly, Delisle, Derbishire, De Witt, Dunn, Durand, Foster, Gilchrist, Harrison, Hincks, Hopkins, Jones, J. S. Macdonald, McLean, Moore, Morris, Noel, Parent, Parke, Quesnel, Roblin, Harmannus Smith, Steele, Taché, Taschereau, Thompson, Turcotte, Turgeon, D. B. Viger, Williams, and Woods. (39.)

So it passed in the negative.

The question being then put on the said third and last Resolution, the House divided thereon, and the names being called for, they were taken down as followeth :

## YEAS.

Armstrong, Boswell, Boutillier, Boulton, Cameron, Chesley, Child, Cook, Derbishire, De Witt, Dunn, Dunscomb, Durand, Foster, Gilchrist, Hale, Harrison, Hincks, Hopkins, Jones, Kimber, Sir Allan N. MacNab, J. S. Macdonald, Moore, Morris, Parke, Roblin, Harmannus Smith, Sherwood, Steele, Taché, Taschereau, Thompson, Turcotte, Turgeon, Watts, Williams, Woods, and Yule. (39.)

## NAYS.

Barthe, Berthelot, Black, Burnet, Christie, Delisle, Dunlop, Forbes, Hamilton, Leslie, D. Macdonald, McLean, Moffatt, Neilson, Noel, Papineau, Parent, Quesnel, Simpson, D. B. Viger, and L. M. Viger. (21.)

So it was carried in the affirmative, and,

Resolved, That this House doth concur with the Committee in the said Resolutions.

## 6      EXTRACTS FROM JOURNALS OF LEGISLATIVE ASSEMBLY

Extracts from  
Journals of Legis-  
lative Assembly  
of Canada;  
Sess. 1847.

Ordered, That the Honourable Mr. Harrison have leave to bring in a Bill to impose a duty upon Foreign Wheat imported into this Province.

He accordingly presented the said Bill to the House, and the same was received and read for the first time, and ordered to be read a second time on Monday next.

---

*Sabbati, 1<sup>o</sup> die Octobris, 1842.*

---

Pursuant to the order of the day, the following Petition was read:—

OF R. Jones, and others, of the county of Missisquoi, praying for a protecting duty on American produce introduced into this Province.

---

*Lunæ, 3<sup>o</sup> die Octobris, 1842.*

---

Pursuant to the order of the day, the following Petition was read:—

OF Joseph Thompson, and others, of the township of Brock, Home district, praying for a protecting duty on American produce introduced into this Province.

A Bill to impose a duty upon Foreign Wheat imported into this Province was, according to order, read a second time.

Ordered, That the said Bill be now referred to a Committee of the whole House.

The House accordingly resolved itself into the said Committee.

Mr. Boulton took the chair of the Committee, and after some time spent therein,

Mr. Speaker resumed the Chair;

And Mr. Boulton reported that the Committee had gone through the Bill, and had made an amendment thereto, which he was directed to report to the House, whenever it shall be pleased to receive the same.

Ordered, That the Report be received to-morrow.

---

*Martis, 4<sup>o</sup> die Octobris, 1842.*

---

ORDERED, That the Petition of William Morris and others, inhabitants of the Eastern Townships of Canada East, presented to the House on the 22d of September last, be referred to the Special Committee to which was referred the Petition of the North American Committee of the Colonial Society, and other references.

Mr. Boulton, from the Committee of the whole House, on the Bill to impose a duty upon Foreign Wheat imported into this Province, reported, according to order, the amendment made by the Committee to the said Bill, which amendment was again read at the Clerk's table.

The Honourable Mr. Harrison moved, seconded by Mr. Parke, That the question of concurrence be now put upon the said amendment.

Mr. Black moved in amendment, seconded by Mr. Hale, That all the words after "That," in the said motion be struck out, and the following substituted: "The said Bill be now re-committed to a Committee of the whole House, for the purpose of adding after the word 'next,' in the ninth line of the second page, the following words: Provided, Wheat and Wheat Flour imported into the United Kingdom from Canada be then admitted into the said United Kingdom free of duty; and if they be not then so admitted, then from and after the day on which and so long as they shall continue to be so admitted.'"

The question having been put on the motion of amendment, a division ensued, and the names being called for, they were taken down as followeth:

YEAS.

Berthelot, Black, Burnet, Boulton, Cartwright, Chesley, Christie, Delisle, Dunlop, Dunscomb, Forbes, Hale, Hamilton, Leslie, Sir Allan N. MacNab, McLean, Neilson, Simpson, and Yule. (19.)

NAYS.

## OF CANADA, IN 1842, RELATIVE TO AGRICULTURAL PRODUCE. 7

## NAYS.

Armstrong, Boswell, Boutillier, Cameron, Cook, Daly, Derbshire, De Witt Dunn, Durand, Foster, Gilchrist, Harrison, Hincks, Hopkins, Jones, J. S. Macdonald, Merritt, Moffatt, Moore, Morris, Papineau, Parke, Quesnel, Roblin, Harmannus Smith, Thompson, Turcotte, D. B. Viger, L. M. Viger, and Williams. (31.)

Extracts from  
Journals of Legis-  
lative Assembly  
of Canada;  
Sess. 1842.

So it passed in the negative.

The question being then put on the main motion, it was agreed to by the House.

And the said amendment being again read, and the question of concurrence being put thereon, it was agreed to by the House, and

Resolved, That this House doth concur with the Committee in the said amendment.

Ordered, That the said Bill, as amended, be engrossed.

An engrossed Bill, to impose a duty upon Foreign Wheat imported into this Province, was read for the third time.

Resolved, That the Bill do pass.

Ordered, That the Honourable Mr. Harrison do carry the said Bill to the Legislative Council, and desire their concurrence.

---

*Sabbati, 8<sup>o</sup> die Octobris, 1842.*

A MESSAGE from the Legislative Council by John Godfrey Spragge, Esquire, Master in Chancery.

Mr. Speaker,

The Legislative Council have passed the following Bill, without any amendment:

“An Act to impose a Duty upon Foreign Wheat imported into this Province.”

Mr. Merritt, from the Special Committee to which was referred the Petition of the North American Committee of the Colonial Society, and other references, presented to the House the Report of the said Committee, which was again read, at the Clerk's table.

Ordered, That the said Report be referred to a Committee of the whole House on Monday next.

---

*Lunæ, 10<sup>o</sup> die Octobris, 1842.*

THE order of the day, for the House in Committee on the Report of the Special Committee, to which was referred the Petition of the North American Committee of the Colonial Society, and other references, being read,

The Honourable Mr. Hincks moved, seconded by the Honourable Mr. Viger, That the said order of the day be postponed.

The question having been put upon the said motion, a division ensued, and the names being called for, they were taken down as followeth:

## YEAS.

Armstrong, Berthelot, Boswell, Boutillier, Cameron, Christie, Cook, Derbshire, Durand, Forbes, Gilchrist, Harrison, Hincks, Hopkins, Killaly, Kimber, Leslie, Moore, Morris, Neilson, Noel, Papineau, Parke, Powell, Roblin, Henry Smith, Taschereau, D. B. Viger, L. M. Viger, and Woods. (30.)

## NAYS.

Cartwright, De Witt, Dunlop, Foster, Johnston, Sir Allan N. MacNab, D. McDonald, J. S. Macdonald, McLean, Merritt, Moffat, Simpson, Harmannus Smith, Sherwood, Thompson, and Williams. (16.)

So it was carried in the affirmative; and,

Ordered, accordingly.

Extracts from  
Journals of Leg-  
islative Assembly  
of Canada;  
Sess. 1842.

Ordered, That 250 copies of the Report of the Special Committee, to which was referred the Petition of the North American Committee of the Colonial Society, and other references, be printed in each of the English and French languages, for the use of the Members of this House.

*Mercurii, 12° die Octobris, 1842.*

THE Titles of the following Bills were then read :  
An Act to impose a Duty upon Foreign Wheat imported into the Province.  
An Act, &c.

To each of which it was his Excellency the Governor-general's pleasure to say, that he reserved the said Bill for the signification of Her Majesty's pleasure thereon.

COPY of a DESPATCH from Lord *Stanley* to the Right Honourable  
Sir *Charles Bagot*, G.C.B.

Sir,

Downing-street, 2 March 1842.

No. 1.

Despatch from  
Lord Stanley to  
the Right Hon. Sir  
Charles Bagot,  
2 March 1842.

IN the anxious consideration which it has been the duty of Her Majesty's Government to give to the important and complicated question of the importation of corn into this country, they have, of course, not overlooked the interest which is felt in this question by the province of Canada, and which has been expressed in Memorials from the legislative body, and from other parties, addressed to Her Majesty and the Legislature of this country, and although in present circumstances Her Majesty's Government have not felt themselves justified in recommending to Parliament a compliance with the general request of the various memorialists, that Canadian corn and flour should be imported at a nominal duty into the United Kingdom, I trust that the steps which we have taken, and the grounds upon which we have declined to advance further in the same direction, will convince the people of Canada that the course which we have pursued has been dictated by no unfriendly feeling towards the interests of Canada, and especially of Canadian agriculture.

The steps which have been taken, so far as they go, have been decidedly in favour of those interests. By the law, as it has hitherto stood, Canadian wheat and wheat flour have been admissible into Great Britain at a rate of duty estimated at 5*s.* per quarter, until the price in the English market reached 67*s.*, at which amount the duty fell to 6*d.* By the Bill which is now before Parliament, the duty of 5*s.* is leviable only while the price is below 55*s.*, and at 58*s.* falls to 1*s.* only. But in addition to this reduction in the amount of price at which the lower duty becomes payable, it is proposed to take off the restriction which has hitherto been imposed upon the importation of Canadian flour into Ireland, and thus to open a new market to that which may justly be considered as one of the manufactures of Canada.

In the measures which they have adopted, not without the most anxious attention to the various interests involved, Her Majesty's Government have been desirous, while they gave a general facility of admission to the British market, of disturbing as little as possible the relative advantages possessed by the colonial and foreign suppliers of that market. In this sense, while they have continued to the Channel Islands the facilities which they have heretofore enjoyed, of a free importation of their own produce (limited as it necessarily is in extent) into Great Britain, together with the means which they at present enjoy, of having their own supplies furnished from the neighbouring and cheaper market, they have not felt themselves called upon to remove from the Isle of Man the restrictions which have been recently imposed on that island, as to its foreign imports, while it possesses the advantages of an unrestricted commerce with Great Britain. The same principle has guided Her Majesty's Government in the course which they have felt it their duty to pursue with regard to Canada.

It is impossible to be more fully convinced than are the Members of Her Majesty's Government of the importance to the interests, both of the colony and of the mother country, of maintaining between the two the most unrestricted freedom of commercial intercourse. Even a cursory examination of facts and figures must demonstrate the value to be attached in a commercial, and much more in a moral and political, point of view to the continuance and improvement of that rapidly-increasing intercourse; and Her Majesty's Government would have had much less difficulty in approaching the question of an unrestricted admission of Canadian wheat and flour into the British markets, if it had been in their power to look at that question as one of intercourse between Great Britain and her most important colony, and independent of all considerations of foreign trade. But it was impossible for Her Majesty's Government so to regard it,—it was impossible that they should not advert to the geographical position of Canada, in

reference to the great corn-growing States of the West of America,—it was impossible not to see that, however desirable it might be even to encourage the transit through Canada of the produce of those States, with the advantage to Canada of any manufacturing process which it might undergo in the transit, a relaxation of duty to the extent of free, or nearly free, admission would have been a relaxation not limited, as in this case it ought to be, to the produce of a British colony.

It is true that the Imperial Parliament, at the time that they admitted Canadian produce at a nominal duty, might constitutionally have imposed a corresponding duty upon the import of American wheat into Canada, and might thus have placed a check upon the undue influx of foreign, under the name of Canadian, produce; but looking back to the proceedings of the last Session of the Legislature of Canada, I find that such an impost was considered, and ultimately rejected; and whatever might be the view taken by Her Majesty's Government under a different state of circumstances, in which a tax imposed by Colonial authority, and of course receivable into the Colonial Treasury, upon wheat imported from the United States might secure the agriculturists of England against the competition of foreign growers, they have been unwilling to impose such a tax, by the authority of Parliament, upon a raw article which might be required for home consumption in Canada, and, in the absence of such a tax, have felt it impossible to propose to Parliament a further reduction than that which they have submitted in favour of wheat and wheat flour shipped from the ports of Canada.

I have to request that you will take an early opportunity, after the assembling of the Provincial Parliament, of laying before them so much of this despatch as may put them fully in possession of the principles on which Her Majesty's Government have proceeded in reference to wheat and flour imported from Canada, in the general consideration which it has been their duty to give, in the most impartial spirit, and with an earnest desire to consult and conciliate all conflicting interests, to the amendment of the laws regulating the importation of corn into the British Islands.

I have, &c.

No. 2.

Despatch from the Right Hon. Sir *Charles Bagot* to Lord *Stanley*, 14 April 1842.

My Lord,

Government House, Kingston, 14 April 1842.

I HAVE the honour to acknowledge the receipt of your Lordship's despatch of the 2d ultimo (No. 83), explaining the course which Her Majesty's Government have felt it their duty to adopt with reference to Canadian produce, in the measures which they have submitted to the Imperial Legislature for an alteration of the laws affecting the importation of corn into the United Kingdom. In obedience to your Lordship's commands, I shall communicate the substance of this despatch to the Legislature at their next meeting.

I have, &c.

(No. 234.)

EXTRACT of a DESPATCH from the Right Honourable Sir *Charles Bagot*, G.C.B., to Lord *Stanley*, dated Government House, Kingston, 11 November 1842.

No. 3.

Despatch from the Right Hon. Sir *Charles Bagot* to Lord *Stanley*, 11 November 1842.

THE Wheat Duty Bill I have reserved for the signification of Her Majesty, because its provisions are mainly based, as its preamble declares, upon an anticipation that the Imperial Parliament may be induced to alter the law with regard to the duty on Canadian wheat and wheat flour imported into the United Kingdom. I shall have occasion shortly to address your Lordship further upon this important subject, and to transmit to you such information as may assist Her Majesty's Government in forming an opinion upon it.

Enclosure

## DUTIES ON WHEAT (CANADA).

5

## Enclosure in No. 3.

(No. 134.)

AN ACT to impose a Duty upon FOREIGN WHEAT imported into this Province.

WHEREAS the free introduction of wheat and wheat-flour into the United Kingdom of Great Britain and Ireland from this Province would, by affording a market for these articles at all times certain and available, promote essentially the agricultural and commercial interests of Canada: And whereas foreign wheat is at present admitted free of duty into Canada: And whereas the intention of the laws of the United Kingdom aforesaid is to preserve the home market for Her Majesty's subjects by certain restrictions, and by the imposition of duties: And whereas the introduction of foreign wheat into the United Kingdom free of duty, after the introduction of the same into Canada free of duty, would be in manifest violation of the said intention of the laws of the said United Kingdom: And whereas the chief objection to the free admission of wheat and wheat-flour into the said United Kingdom from Canada arises from the free admission of foreign wheat into Canada: And whereas a certain despatch, addressed to the Governor of this Province by Her Majesty's Secretary of State for the Colonies, dated the Second day of March last, a copy whereof has been laid by his Excellency's command before the Legislature of this Province, affords the strongest ground for the confident belief and expectation that, upon the imposition of a duty upon foreign wheat imported into this Province, Her Majesty will be graciously pleased to recommend to Parliament the removal or reduction of the duties on wheat and flour imported into the said United Kingdom from Canada: Be it therefore enacted, by The Queen's most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the Province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, and intituled, "An Act to re-unite the Provinces of Upper and Lower Canada, and for the Government of Canada," and it is hereby enacted by the authority of the same, That from and after the Fifth day of July next, there shall be raised, levied, collected and paid to Her Majesty, to and for the public uses of this Province, upon all wheat imported into this Province, except from the said United Kingdom, or any of Her Majesty's Possessions, and being the growth and produce thereof, a duty of Three shillings sterling money of Great Britain, for each imperial quarter of such wheat, and so in proportion for any greater or less quantity thereof.

Encl. in No. 3.

And be it enacted, That foreign wheat imported by sea into this Province, for the use of the fisheries, shall be free of duty, and subject to the regulations expressed and enacted in regard to certain articles specified in the Eighth section of the Act of Parliament of the said United Kingdom, passed in the last Session of the said Parliament, and intituled, "An Act to amend the Laws for the Regulation of the Trade of the British Possessions Abroad."

And be it enacted, That the duties imposed by this Act shall be levied, recovered and received, under the same regulations, and in the same coins, to be received at the same rates, and according to the same weights and measures, and under the same penalties, to be enforced and applied in the same manner, and with the same restrictions and regulations for ensuring the payment or punishing the evasion thereof, as the duties imposed in and by the said Act, intituled, "An Act to amend the Laws for the Regulation of the British Possessions Abroad."

And be it enacted, That all sums which shall arise from the duty hereby imposed shall be paid over, by the officers receiving the same, to Her Majesty's Receiver-General for this Province and shall form part of the Consolidated Revenue Fund thereof, and shall, as shall also all fines, penalties and confiscations incurred under this Act, be accounted for to Her Majesty, Her heirs and successors, through the Lords Commissioners of Her Majesty's Treasury for the time being, in such manner and form as Her Majesty, Her heirs and successors, shall direct.

I do hereby certify the above to be a true copy of a Bill passed by the Legislative Council and Legislative Assembly of the Province of Canada, in the second Session of the first Provincial Parliament, and reserved for the signification of Her Majesty's pleasure, by his Excellency the Governor-General, on Wednesday, the Twelfth day of October, One thousand eight hundred and Forty-two.

(signed) *James Fitz-Gibbon,*  
Clerk Legislative Council.

COPY of a DESPATCH from Lord Stanley to the Right Honourable  
Sir Charles Bagot, G. C. B.

Sir,

. Downing-street, 1 February 1843.

YOUR despatch of the 11th November last (No. 234), enclosing authenticated copies of the Acts passed by the Legislature of Canada during its last Session, and assented to by you in Her Majesty's name; together with copies of two Bills reserved for the signification of Her Majesty's pleasure, intimated your intention of transmitting by the next mail an explanation of the grounds of those measures. Especially with regard to the Wheat Duty Bill, you expressed your intention

18.

No. 4.

Despatch from  
Lord Stanley to  
the Right Hon.  
Sir Charles Bagot,  
1 February 1843.

intention of transmitting to me such information as might assist Her Majesty's Government in forming an opinion upon it.

I am well aware that, since the date of that despatch, the state of your health has furnished but too conclusive an impediment to your execution of the purpose which you thus announced to me; but as the time within which Her Majesty's decision on these laws ought to be pronounced is rapidly passing away; and as it is scarcely possible for me to proceed to that decision, unaided by the information which you have led me to expect; I would suggest to you that, if the state of your health should still prevent, as I fear it will prevent, the fulfilment of your intention, you should request the Executive Council of Canada to enter upon the consideration of the subject, and to furnish me with such information as to these enactments as may assist Her Majesty's Government in forming their decision. I would particularly direct your attention, in reference to the Wheat Duty Bill, to the exemption contained in the second clause, and request that you will consider how far that exemption might facilitate the commission of frauds upon the revenue; and especially report what security may be taken that, under it, foreign wheat may not be landed, converted into flour, and fraudulently re-shipped for importation, free of duty, into the United Kingdom.

I have, &c.  
(signed) *Stanley.*

---

—No. 5.—

(No. 39.)

COPY of a DESPATCH from the Right Honourable Sir *Charles Bagot*, G.C.B.,  
to Lord *Stanley*.

No. 5.  
Despatch from the  
Right Hon. Sir  
Charles Bagot to  
Lord Stanley,  
21 February 1842.

My Lord, Government House, Kingston, 21 February 1842.

I HAVE the honour to transmit to your Lordship herewith Petitions from the Board of Trade of Montreal to the Throne, and to the two Houses of the Imperial Parliament, praying the repeal of the duties now levied on the importation into the United Kingdom of certain articles of provision, the produce of Canada. I also enclose, for your Lordship's information, a copy of the Memorial to myself, which accompanied these Petitions, and of the Answer which I returned to it.

I have to request that your Lordship would lay at the foot of the Throne the Address to Her Majesty, and would intrust to Members of the Houses of Lords and Commons the Petitions addressed to those Houses respectively.

(signed) *Charles Bagot.*

---

Enclosure 1, in No. 5.

To The QUEEN's most Excellent Majesty in Council.

The PETITION of the undersigned Merchants of Montreal, in Canada.

Encl. 1, in No. 5.

Humbly sheweth,

THAT the rapid increase of the trade and agriculture of Canada is in great danger of receiving a check from the want of a market for the produce of her soil.

That it is of the highest importance that the agricultural interests of Canada be fostered with the greatest care, as giving a means of subsistence to a numerous and rapidly-growing population, as well as of affording the best encouragement to the emigrant from the British Isles.

That the duties hitherto imposed on wheat and flour, although apparently moderate, act injuriously, inasmuch as, from the great distance from which those articles are transported, the remuneration afforded the Canadian farmer is not sufficient to allow even of the smallest impost: the duties on the coarser grains are almost prohibitory; while on beef, pork, butter, lard and cheese, they are completely so.

That the expense of inland transport, and freight across the Atlantic, is greater, in proportion to the produce of the soil in Canada, than are the rent and taxes paid by the farmer in Great Britain to the produce of the soil there; wherefore your Petitioners submit he is already sufficiently protected.

That the inhabitants of Canada, a British province, produce in abundance those articles which the mother country particularly requires, and take in return almost exclusively articles of British manufacture; therefore their produce ought to be regarded with especial favour.

Your

## DUTIES ON WHEAT (CANADA).

7

Your Petitioners would also respectfully suggest, that as the trade of Canada is carried on exclusively in British ships, the prosperity of that province is intimately connected with the maritime interests of the empire.

Wherefore your Petitioners most humbly pray, that your most Gracious Majesty will be pleased to recommend to Parliament the repeal of all duties now levied in the United Kingdom upon beef, pork, cheese, butter and lard, as well as upon wheat, rye, Indian corn, barley, oats, buck-wheat, beans, peas, and other grain, and the flour or meal made therefrom, such being imported from Canada.

And as in duty bound your Petitioners will ever pray.

Montreal, 1 February 1842.

(Here follow the signatures of 159 persons.)

---

Enclosure 2, in No. 5.

To his Excellency the Right honourable Sir *Charles Bagot*, G. C. B., Governor-General,  
&c. &c. &c.

The MEMORIAL of the Board of Trade of the City of Montreal,

Respectfully sheweth,

THAT your Memorialists, considering it would be highly advantageous to the prosperity of Canada if the produce of its soil were allowed to be imported into the United Kingdom free from duty, have joined their fellow-citizens in a Petition to Her most Gracious Majesty and both Houses of Parliament, to grant the privilege prayed for. Encl. 2, in No. 5.

That your Excellency's expression of your desire to have the prayer of their Petition granted would, no doubt, have great weight with the Legislature of the empire.

Wherefore your Memorialists respectfully pray your Excellency to forward the same, accompanied by such remarks as to your Excellency may seem fit.

And as in duty bound your Memorialists will ever pray.

Montreal, February 1842.

(signed) *J. T. Brondgeest*, Chairman,  
and others.

---

Enclosure 3, in No. 5.

A N S W E R.

Gentlemen,

I SHALL lose no time in transmitting to the Secretary of State the Petitions which you have addressed to Her Majesty and the two Houses of Parliament, praying the repeal of the duties on certain provisions, the produce of Canada, on importation into the United Kingdom. I feel quite confident that this Petition, affecting as it does to so great an extent the interests of this Province, will receive an attentive and respectful consideration from Her Majesty's Government. Encl. 3, in No. 5.

(No. 115.)

COPY of a DESPATCH from Lord *Stanley* to the Right Honourable  
Sir *Charles Bagot*, G. C. B.

Sir,

Downing-street, 3 April 1842.

I HAVE received your despatch (No. 39) of the 21st February, enclosing Petitions to the Queen and to the two Houses of Parliament from the Board of Trade of Montreal, praying the repeal of the duties now levied on the importation into the United Kingdom of certain articles of Canadian produce. No. 6.

I have to instruct you to inform the Petitioners, that I have had the honour to lay their Petition to the Queen before Her Majesty, and that Her Majesty was pleased to receive it very graciously, and to direct it to be referred for the consideration of the Lords of the Committee of Her Privy Council for Trade.

The Petition to the House of Lords will be intrusted to the Earl of Ripon for presentation; that to the House of Commons will be presented by myself.

I have, &c.

to Lord *Stanley*.

No. 7.  
Despatch from the  
Right Hon. Sir  
*Charles Bagot* to  
Lord *Stanley*,  
28 April 1842.

My Lord, Government House, Kingston, 28 April 1842.  
I HAVE the honour to transmit to your Lordship herewith, in order that it may be laid at the foot of the Throne, a Petition from the merchants, millers, agriculturists, and others of the Home District of the late Province of Upper Canada, praying for the admission into the United Kingdom, duty free, of Canadian corn, and the imposition of the foreign duty upon American corn upon its importation into Canada.

This Petition is very numerously signed, and was presented to me on my late visit to Toronto. Although I fear that it will arrive too late to receive the consideration of Her Majesty's Government before the measures now before the Imperial Parliament for the alteration of the Corn Laws shall have become law, I have not felt myself at liberty to refuse the request of the Petitioners, that it might be transmitted to your Lordship.

I have, &c.  
(signed) *Charles Bagot*.

Enclosure in No. 7.

To Her most Gracious Majesty VICTORIA, Queen of Great Britain and Ireland.

The PETITION of sundry Merchants, Millers, Agriculturists and others.

May it please your Majesty,

Encl. in No. 7.

WE, your Majesty's most dutiful and loyal subjects, merchants, millers, and other inhabitants of the Home District, in the Province of Canada, humbly beg to represent to your Majesty, that the agricultural interests of this province are frequently subjected to great depression, from the impossibility of procuring for the surplus grain, and other articles of provision which form the staples of our trade, such prices as will repay the labour and expense necessary for their production.

If these recurrences, so severely felt by your Majesty's Canadian subjects, were solely attributable to the peace and abundance which for many past years have prevailed throughout the greater part of the civilized world, we should be compelled to make up our minds to yield to the pressure of circumstances, and to take our chance of those changes which must at intervals be produced by the fluctuation of seasons, and by the operation of other causes equally uncertain; but we persuade ourselves that the evils which we feel admit of a remedy, through your Majesty's gracious interposition, and without injury to any of those great interests which it is the anxious care of your Majesty to protect.

The cultivation of wheat is undoubtedly the object to which, more than any other, your Majesty's subjects inhabiting this fertile region are destined to devote their exertions. The climate and the soil are alike favourable to its growth; the labour which it requires furnished ready employment, of the most desirable kind, to the multitudes which emigrate annually from the British islands; and while in each year it converts thousands of acres of barren wilderness into fertile fields, it supplies to a numerous, intelligent and loyal people that occupation which is of all others the most favourable to virtue and happiness, and to that manly independence of character which is necessary to the preservation of rational freedom.

Whenever a period occurs in which the farmer can obtain a fair price for this commodity, prosperity is every where visible; he is encouraged to extend the sphere of his industry by reclaiming larger tracts from the wilderness; the lands of the province immediately rise in value; our fellow-subjects from Europe are led to employ their capital in a pursuit which yields them an adequate profit; an increased consumption of British goods produces a revival of trade beneficial alike to the parent state and to the colony; an augmented revenue affords us the means of prosecuting those improvements in our roads and inland navigation to which the inhabitants of Upper Canada are as much tempted, by the natural advantages held up by a kind Providence to their view, as any people that can be named.

We should be ungrateful, indeed, if we doubted for a moment that it is the anxious wish of your Majesty, and of those who, under your Majesty, are intrusted with the powers of Government, to give to this province, of which the value is now well known, the earliest and most ample enjoyment of such advantages as our position in the empire can be made to confer. Your Majesty's royal predecessors have constantly given proofs that the welfare of Canada was an object earnestly desired by them; and at the very commencement of a reign, which we fervently pray may be long and glorious, it has been our happiness to recognize, in the powerful exertion promptly made for our protection in the liberal arrangement

## DUTIES ON WHEAT (CANADA).

9

ment of the Government, which has given to the British American Colonies the advantage of a direct intercourse with England with the aid of steam, and in the reduction of the rate of postage (an amount little more than nominal), the most convincing assurance that we shall experience under your Majesty's rule no diminution of that fostering care under which we have hitherto flourished.

We have observed the discussions which have taken place in Great Britain of late years upon the important and interesting question of the Corn Laws; and, however difficult it may be to reconcile the opinions which are entertained respecting them, it is yet evident that no class of persons endeavours to vindicate restriction upon the trade in grain on any other footing than that of absolute necessity.

But we can scarcely believe it possible that the most zealous defender of the Corn Laws, if he will apply his mind fairly to the subject, can imagine that the regulation, to which we now earnestly entreat your Majesty's attention, can be maintained in its application to this province by any such argument.

As the law now stands, the average price of grain in England is such as generally subjects the wheat of this country to a duty of Five shillings per quarter upon importation. It can hardly be supposed that such a duty can form a real and substantial protection to the English farmer; and yet it is sufficient to make the article of wheat in general a precarious and hazardous remittance from this country; and it disables the merchant from giving the price for it which is necessary for repaying to the farmer the cost of its production.

If it be apprehended that, under such encouragement, the surplus quantity of grain raised in the Canadas and exported to England, would interfere inconveniently with the English agriculturist, we are convinced that a slight examination of the subject will show the apprehension to be unfounded. The quantity of bread required for consumption in England is so immense, that the proportion which this province could furnish for many years to come would be too small to be felt as an injury to any interest; and yet the privilege of a free market for wheat, which would, in fact, supply but a very few days' consumption, would speedily elevate this province to a condition she must otherwise be very long in attaining.

If the ground of alarm should be, that a large quantity of the wheat grown in the United States would find its way through Canada into the British market, and be received free of duty to the prejudice of the home-grower, the answer is, that such an inconvenience may be obviated by collecting in Canada, upon all grain of foreign growth, when it is introduced into that province, the same imperial duty to which such grain floured in Canada is now subjected when imported into Great Britain, or by making the trade subject to such other regulations in that respect as Parliament may deem expedient; and your Majesty may be assured that it would be the disposition of the people of this province to assist, for their own sakes, in carrying into execution strictly, and in good faith, whatever regulations might be prescribed for securing to their own productions a discriminating advantage in the market of the mother country.

We do most earnestly entreat your Majesty, that the experiment may be made of a policy, which is certain to be attended by the following benefits to this rising colony:—It would bring rapidly into cultivation large tracts of wilderness, which will otherwise lie for a much longer period unproductive to the empire. It would enrich the province by a great annual accession of wealth won by patient labour from the soil. It would spread content and habits of industry throughout the land, by holding out a certain and adequate reward for exertion. It would strengthen the ties between the parent state and her colony, by augmenting largely the demand in this country for British goods; and by encouragement which it would hold out to emigration, it would relieve the English landholder, by diminishing the direct burthen of the poor's rates, and the many indirect taxes upon industry which are necessarily occasioned by a multitude of unemployed poor.

When we enumerate among the advantages of a free trade in grain the increased demand for British manufactures, which it would assuredly create, we speak of no doubtful or unimportant benefit; for the official information in possession of your Majesty's Government will show, that even at this early period, and under present circumstances, the provinces of Canada alone purchase a larger amount of British manufactures, and furnish employment to a much greater number of British ships, than several of the most populous kingdoms in Europe combined.

We shall anxiously hope to find that no class of your Majesty's subjects will be opposed to a relaxation which we sincerely believe would bring advantage to many, and injury to none; and, assuring ourselves of your Majesty's earnest desire to advance the welfare of the Canadas, and to accede to the reasonable wishes of Her people, we shall confidently look for a favourable answer to our prayer through your Majesty's most gracious interposition.

We beg to renew on this occasion our assurances of entire devotion to your Majesty's Person and Government.

Lord Stanley to  
the Right Hon. Sir  
Charles Bagot,  
29 May 1842.

Sir,  
Downing-street, 29 May 1842.  
I HAVE received your despatch (No. 93) of the 28th April, enclosing a Petition to the Queen from the merchants, millers, agriculturists and other inhabitants of the Home District of Western Canada, praying for the admission into the United Kingdom, duty free, of Canadian corn, and the imposition of the foreign duty upon American corn on its importation into Canada.

I have to instruct you to acquaint the Petitioners, that I have had the honour to lay their Petition before the Queen, and that Her Majesty was pleased to receive it very graciously.

Previously, however, to the arrival of this Petition, the Bill for amending the Acts regulating the corn trade had passed into a law.

I have, &c.  
(signed) *Stanley*.

## — No. 1. —

EXTRACT of a DESPATCH from the Right honourable Sir *Charles Bagot*, G.C.B., to Lord *Stanley*, dated Government House, Kingston, 27th January 1843, No. 20.

THE BILL for imposing a duty on Foreign Wheat will form the subject of a separate Despatch.

No. 1.  
Extract of a  
Despatch from the  
Right hon. Sir  
Charles Bagot to  
Lord Stanley,  
27 January 1843.

## — No. 2. —

EXTRACTS of a DESPATCH from the Right honourable Sir *Charles Bagot*, G.C.B., to Lord *Stanley*, dated Government House, Kingston, 27 January 1843.

I HAVE the honour herewith to transmit a Petition addressed to Her Majesty by the Board of Trade at Quebec, praying that the Royal Assent may be withheld from the Bill passed in the last session of the Canadian Legislature, by which a duty was imposed on the importation of foreign wheat into Canada, until the Imperial Parliament shall have passed a law authorizing the free admission into the United Kingdom of all grain and flour exported from this province.

As the preamble of this Bill asserts, and the proceedings in both Houses attest, this measure was passed under the expectation, that if the Canadian Legislature consented to lay a tax upon American produce, the British Government would be willing to recommend to the Imperial Legislature to remove all duty upon grain and flour received from Canadian ports.

To this anticipation they were led by the statements made by Ministers in the House of Commons during the discussions upon the Corn Laws and the Colonial Customs Duties Bill, and by your Lordship's despatches upon this subject, particularly that of the 2d March 1842, No. 83.

It is a boon for which the producers and merchants of this province have long sought, and they hoped that when a change was made in the duty in England on foreign produce, they might, as far as Canadian produce was concerned, look to such an amount of favour as would keep undisturbed their relation to the foreign producer.

When they found that the chief obstacle to such an arrangement was the free admission of American produce into the province, they did not delay passing the measure which had been suggested and was deemed necessary to obtain it.

\* \* \* \* \*

The attention which your Lordship and Her Majesty's Government have so lately given to this subject, renders it almost unnecessary for me to offer any observations or arguments upon it; I will, therefore, rather endeavour to supply such information with regard to prices and cost of transport as will enable you to judge whether any injury can arise to British interests from the desired concession.

Herewith I transmit a copy of a Report of a Special Committee of the House of Assembly of last session, upon a free trade with Great Britain in agricultural products. \* \* \* \* \*

The rate of duty which the Canadian Legislature has fixed upon American wheat is that which was originally proposed by the Vice-President of the Board of Trade on the introduction of the Colonial Customs Bill. It is not excessive, nor likely to be burthensome on the Canadian consumer, while it exceeds the average of the duty now payable by Canadian wheat in England.

## FURTHER CORRESPONDENCE RELATING TO

## Enclosure 1, in No. 2.

Encl. 1, in No. 2.

To The QUEEN'S most Excellent Majesty.

The PETITION of the PRESIDENT and COUNCIL of the QUEBEC BOARD of TRADE,  
incorporated by Act of the Legislature of Canada.

Humbly sheweth,

THAT during the last Session of the Imperial Parliament, a law was passed, imposing a duty of Two shillings per barrel on all foreign flour imported into any of the British possessions in North America, after the Fifth of July next; and that the Legislative Council and Legislative Assembly of this province have since passed an Act, to impose a duty of Three shillings per Imperial quarter on all wheat imported into Canada, after the same date, which Act was reserved for the signification of your Majesty's pleasure thereon.

That hitherto, foreign wheat and flour have been permitted to be imported into this colony free of duty, and that by far the greater part of the flour consumed therein, and exported therefrom, has been so imported, or manufactured from wheat the growth of those parts of the United States bordering on the Great Lakes and Rivers of Canada.

That the transport of such wheat and flour has afforded the chief means of employment to the vessels and craft belonging to your Majesty's subjects on the lakes, rivers and canals of this province, extending more than Three thousand miles above Quebec, as well as to the vessels engaged in the intercolonial trade, and that the whole of such vessels and craft are owned and manned by your Majesty's subjects.

That in the humble opinion of your Majesty's petitioners, the vast improvements made, and now in progress, in the internal communication of the province, would be rendered unproductive and nearly useless, were this trade destroyed or materially interrupted.

That the commercial interests of the province are now depressed and suffering to an unprecedented extent, chiefly in consequence of the measures lately adopted by the Imperial Parliament, withdrawing or greatly limiting that protection which its principal products formerly enjoyed in competing with foreigners in the markets of the mother country and your Majesty's other colonies.

That in consequence of these measures, your Majesty's subjects in this province, from their greater distance from these markets can only now successfully compete with foreigners therein under the most favourable and rare circumstances; and should your Majesty assent to the said Act of the Legislative Council and Assembly of Canada, without at the same time conferring on your Majesty's subjects in this province some countervailing privilege in their trade with other parts of the empire, your Majesty's petitioners firmly believe that the result will be the utter prostration of the trade of the country, and the ruin of those engaged in it.

That it appears from the preamble of the said Act, that it was enacted upon an express assurance by persons representing your Majesty's Government in the Legislature, that some such countervailing privilege would be granted, and that, without such an assurance, it would not have been passed.

Wherefore your Majesty's petitioners humbly pray, that your Majesty may be graciously pleased to withhold the Royal Assent to the said Act, until a law shall have been passed by the Imperial Parliament, authorizing the admission into the United Kingdom and the other colonies, free of duty, of all grain and flour exported from this province.

## Enclosure 2, in No. 2.

Encl. 2, in No. 2.

REPORT of a SPECIAL COMMITTEE of the LEGISLATIVE ASSEMBLY of Canada, on the subject of a Free Trade with Great Britain in the Agricultural Productions of British North America, and of a Protection to those Productions from the Competition of Foreigners in the Colonial and Home Markets.—Ordered by the Legislative Assembly to be printed, 10th October 1842.

The Special Committee to which was referred the Petition of the Right honourable the Earl of Mount Cashell and others, Members of the North American Committee of the Colonial Society in London; the Petition of the Municipal Council of the District of Niagara; and the Return to the Address of the House of the 22d September last; with the several Despatches on the subject of the Importation of Wheat and Wheaten Flour, with power to report from time to time, have the honour to Report:—

THAT they have examined the several documents referred to, and feel gratified to witness the interest manifested by their fellow-subjects in Britain in the prosperity of Canada.  
(See Appendix, No. 1.)

Originating

## THE DUTIES ON WHEAT (CANADA).

5

Originating any measure relating to the alteration of duties, as recommended by the despatch of Lord Sydenham (*see* Appendix, No. 2) in the Provincial Assembly, by Bill, subject to the approval of the Imperial Parliament, as pointed out under the provisions of the forty-second clause of the Union Act, would remove the practical inconvenience and uncertainty which attend the practice heretofore adopted by Addresses.

The despatch from Lord Stanley, No. 83, dated 2d March 1842, has also engaged their attentive consideration.

From our peculiar geographical position; from the relative and nearly balanced advantages possessed by the two rival communications with the Atlantic—the St. Lawrence and the Hudson Rivers; from the magnitude of the object and the various interests involved, your Committee have availed themselves of such statistical information as would enable them to comprehend the practical operation of the proposed duty.

First, with regard to the protection of the English grower :—

From the Statement in Appendix, No. 4, it appears that the cost of conveying a barrel of flour from the Welland Canal to any port in the United Kingdom, by way of the St. Lawrence, is 14s. 6d. It also appears that wheat must command from 4s. to 5s. currency, or 4s. 6d. sterling, per bushel, to remunerate the Canadian grower. (*See* Appendix, No. 6.)

After the completion of our communications, a reduction will be made in the transit of 2s. 6d. per barrel. Flour must still command, in Britain, 33s. sterling, per barrel, to ensure our growers a remunerating price, which will afford ample protection to the English grower, and as it is entirely the result of natural causes, it can only be effected by Imperial legislation.

As it respects the admission into Canada of American products from the Western States, it appears that the freight of a barrel of flour from Cleveland, Ohio, to Lake Ontario, is 1s. 6d., which, added to the above, with the proposed duty, will sufficiently protect the home producer against all American competition from this quarter, through the channel of the St. Lawrence.

With regard to the carrying trade :—

All the grain grown in Canada will not supply the consumption of British North America, and, if it were all shipped to England, and the population of our commercial towns were supplied from the United States, the quantity of our own so exported would be very limited for many years to come.

By reference to Appendix, No. 5, it will be seen that the cost of transit on a barrel of flour to Liverpool, through the Erie Canal, is 3s. 1½d. less than by the way of the St. Lawrence; when this is added to the proposed duty, it will give 5s. 1½d. in favour of New York. By reference to the table of duties, it will be found that this difference only accrues when wheat averages between 61s. and 62s. per quarter. (*See* Appendix, No. 7.) And whenever prices in Britain exceed that average, the products of the Western States will be conveyed by the Erie Canal. After the enlargement of the Erie Canal shall have been completed, which is our most formidable rival, notwithstanding the reduction heretofore mentioned by the St. Lawrence, the cost of transportation through the two channels will be so nearly equal, that to the transit through the latter a decided encouragement should be given by the Home Government for at least a few years. If grain cannot be exported to England at a profit to our grower, unless flour reaches 33s. per barrel, and wheat from 60s. to 61s. per quarter, the transit of Western flour will be diverted through the Erie Canal, and it follows that unless prices in England steadily range from 55s. to 61s. per quarter, our growers cannot benefit by the home market, and our carrying trade will become so uncertain, that few, if any, will embark in it, and the vessels and craft now engaged must be continued at a hazard of employment.

By reference to the despatch, it will be seen that the loss of this trade has never been contemplated by the Home Government: its preservation and encouragement must, then, become a subject of both Imperial and Colonial legislation.

It is most desirable to place this branch of commerce on a certain and permanent footing, which, in the opinion of your Committee, can be effectually accomplished, as far as this Legislature is concerned, by allowing a drawback at Quebec or Montreal, whenever the price of flour exceeds 30s. sterling, per barrel, at the ports of Quebec and Montreal, which, by adding the price of transportation, will bring the average in Britain, at 77s. 11d. per quarter.\* By this arrangement both the English and Canadian grower will be effectually protected, without hazard, loss or injury to any other interest.

With regard to the agricultural interest of Canada :—

One of the most striking advantages which this measure confers upon the Canadian grower is, that although he cannot, for reasons already assigned, successfully compete with the grower in England, still he will realize the full benefit of the home market, as well as that of British

British North America, from which he has hitherto, under the existing system, been too successfully excluded by his more fortunate rival—the American grower.

It appears from the Minutes of Evidence, as well as from the numerous Addresses of the Legislature to the Home Government, that the agricultural interest, as well as the trade of the country, is in a very depressed state.

The protection which will be afforded by the proposed duty will ensure to the Canadian grower a higher price for his products, and induce the investment of capital for agricultural purposes in this province in preference to the United States. It will transfer the duties on the articles when imported from the mother country to articles which compete with what he produces. It will also preserve our carrying trade, by securing the transportation through Canada when prices are high in England, when otherwise it would be directed through the Erie Canal. It will have a direct tendency to create an extensive home market, by the increasing employment in navigating our waters; and it will materially lessen the price of transportation, by diminishing the price of tolls and conveyance through our canals by the increased trade thus created.

The value and importance of the trade with the Western States:—

From the despatch alluded to, it is evident that the value of this trade, together with the advantages to Canada of every manufacturing process which it might undergo in the transit, has been under consideration.

The proposed duty of 3*s.* sterling, per Imperial quarter, on wheat, is equal to 4 $\frac{4}{5}$ *d.* per bushel of 60 lbs. The duty of 2*s.* per barrel on flour imposed by the British Possessions Act, is equal to 5 $\frac{1}{4}$ *d.* per bushel; this difference is insufficient to secure this advantage we now possess, but may be provided for in the scale of duties hereafter to be proposed. If the raw material, say wheat, shipped in Cleveland, is worth 3*s.* 9*d.* per bushel, or 18*s.* 9*d.* per barrel of flour, the remainder of the cost to the consumer in Britain is secured by this trade to British subjects, in the shape of duties, labour, milling, transit, shipping and profit.

If the colonies of the British Empire are maintained at a great expense for the sake of their trade, the securing and controlling that of the Western States, and making them in effect colonies for the like purposes, is an object of no ordinary moment, particularly when it can be obtained without expense or even negotiation. The removal of all existing duties between the ports of the mother country and Canada, so soon as sufficient revenue can be raised from duties on foreign articles, tolls on our canals, and other sources, will not only secure this trade, but supply the Great Western States with the manufactures of Great Britain, and by reducing the price of outward freight, it would enable us successfully to compete with any other channel of trade to Great Britain from the Continent of America.

To accomplish this great object, and to secure Her Majesty's subjects in Canada the full benefit of the declaration of the enlightened statesman who presides over the Councils of the United Kingdom, your Committee recommend the following Resolutions for the consideration of your Honourable House, with a view, if approved, to form an Address to Her Majesty thereon:

*Resolved*,—That this House feels every confidence that the public declaration made by the enlightened Statesman who presides over the Councils of the mother country will be carried into effect, and that Canada will hereafter be treated as though she were an integral part of the empire.

*Resolved*,—That this desirable object can only be attained by removing all duties on the products of Canada, particularly all descriptions of grain and meal, when admitted into the ports of the mother country; and in strict conformity to that principle, the Legislative Assembly will take the earliest opportunity, so soon as the finances of the province for the support of the Government and its engagements for the security of the public debt will admit, to recommend the removal of all duties on the manufactures of the mother country when admitted into the ports of Canada from sea.

*Resolved*,—That they have every confidence that the revenue arising from foreign commerce and the tolls on our canals will enable the Provincial Government to make this reduction in a few years after our great leading communications to the ocean are opened.

*Resolved*,—That with a view of securing the transit of the Western States of America through those waters, it is indispensable to allow a drawback on all grain and flour shipped to Britain from the ports on the St. Lawrence whenever the price of flour exceeds 30*s.* sterling per barrel at the ports of Montreal and Quebec.

*Resolved*,—That an humble Address to Her Majesty be founded on the above Resolutions.

All which is respectfully submitted.

8th October 1842.

Wm. Hamilton Merritt, Chairman.

THE DUTIES ON WHEAT (CANADA).

7

MINUTES OF EVIDENCE.

WILLIAM HAMILTON MERRITT, Esquire, in the chair.

Friday, 30 September 1842.

The following QUESTIONS were submitted to several gentlemen engaged in the forwarding Trade, and their joint replies thereto are annexed :—

1. What is the present price of wheat on the shores of Lake Ontario and Lake Erie?
2. What is the expense of transportation of a bushel of wheat to Montreal?
3. What are the charges from thence to Britain including all charges?
4. Notwithstanding American grain has been admitted free from duty and exported as colonial, has the capital invested in milling and purchase of grain yielded a profit?
5. What should be the price of wheat on Lake Erie to remunerate the grower?
6. Do you think the statement of cost of transportation on a barrel of flour (Appendix Nos. 4 & 5) correct?
7. After the completion of the St. Lawrence Canal, what reduction will take place in freight?
8. At the present rate of duties on flour in Britain, what must be the average price of wheat to ensure the transit from the Western States through the St. Lawrence?
9. What is the price of a bushel of wheat from Cleveland to Liverpool, *via* New York?
10. Is there a sufficient quantity of bread stuffs grown in Canada to supply the consumption of British North America?

ANSWERS to the preceding QUESTIONS.

1. The present price of wheat on the shores of Lake Erie, 2s. 9d.; Ontario, 3s. 1½d.; freight from Chicago, Michigan, to St. Catherine's, Welland Canal, 9d.; from Cleveland, Ohio, to St. Catherine's, Welland Canal, 6 cents, thence to Kingston, 2 cents.
2. Freight from Kingston to Montreal, 7½d. per bushel.
3. Freight from Montreal to England of a bushel of wheat, 2s. to cover all charges.
4. Milling and wheat speculations with very few exceptions within our knowledge, for the last 20 years, have been unprofitable.
5. The price of wheat on Lake Erie, to remunerate the grower, ought not to be less than 4s.
6. The statement of transport, as shown in Nos. 4 and 5, we consider correct.
7. The completion of the St. Lawrence Canal must reduce the rate of freight to Montreal 33½ per cent.
8. The averages in England must be 60s. per quarter, to ensure the trade by the St. Lawrence; when over that, the Americans can send their own wheat more advantageously to England, *via* New York.
9. The freight of a bushel of wheat from Cleveland to Liverpool, *via* New York, is 1s. 8d. per bushel.
10. No.

Macpherson & Crane.  
Hooker, Henderson & Co.  
Sanderson & Murray.  
McGibbon, Ferguson & Co.

H. C. S. Jones.

Mr. W. S. McDonald, of Gananoque, being interrogated, answered :—When the average of wheat in England is 57s. sterling per quarter, our duty advances to 2s. sterling per quarter.

	£.	s.	d.
At 57s. per quarter, 60lbs. of wheat is worth	-	-	6 1
Add exchange and difference of currency	-	-	1 2
Value in currency	-	-	7 3
One bushel wheat free on board in Montreal at	-	-	5 -
Freight and other charges to Britain	-	-	2 -
	-	-	7 0
Only a margin of	-	-	£. - 3

Now, at 5s. per bushel, free on board in Montreal, the farmer on the shores of Lakes Erie and Ontario cannot obtain more than 3s. to 3s. 6d. currency per bushel for his wheat; a price at which it cannot be grown and pay the producer.

The above statement is made to show that the present duty in Britain is not of serious consequence, as we cannot export wheat when the price in England is so low as to bring a duty on colonial.

## Appendix, No. 1.

PETITION of the Right honourable the Earl of Mount Cashell, and others.

To the Honourable the Commons House of Assembly of Canada, in Provincial Parliament assembled.

WE, the undersigned Members of the North American Committee of the Colonial Society, having recently addressed a memorial, of which the annexed is a copy, to the Right honourable Lord Stanley, Her Majesty's Principal Secretary of State for the Colonies, setting forth the importance of a free trade with Great Britain in the agricultural productions of British North America, and of a protection to those productions from the competition of foreigners in the colonial and home markets, humbly entreat the consideration of your Honourable House to the importance of such protection, so that objections may no longer be urged to the admission of those productions free from any duty, in the home market, and that there may be but one imperial interest between the British American provinces and the mother country.

The memorial hereto annexed contains the opinions of the petitioners on this very important subject; and in submitting it to the consideration of your Honourable House, the object of the undersigned is to pray for the adoption of such legislative measures in the Provincial Parliament as may be deemed best adapted to promote the most intimate union of interests between Great Britain and British North America, which the undersigned consider particularly deserving of attention at this time, when a very extensive emigration is taking place to Canada. It appears to the undersigned that the only certain means of enabling this large population to establish themselves in Canada, with advantage to themselves and the province, and of insuring a full stream of emigration to the colony hereafter, is to give every possible encouragement to the cultivation of the soil, by the measures recommended in the annexed memorial.

COPY of the MEMORIAL referred to in the preceding Petition.

To the Right Honourable Lord Stanley, Principal Secretary of State for the Colonies.

My Lord,

THE North American Committee of the Colonial Society considering the extensive emigration now proceeding from this kingdom, which has existed for many years past, and which may be expected still to increase in consequence of the superabundant population beyond the means of employment, and considering the infinite importance to the empire that this surplus of its population should be so directed as to increase its general wealth and prosperity, have ascertained the amount of emigration in the last two years, and the different countries to which it has proceeded, by referring to the Parliamentary Returns for the years 1840 and 1841, from which it appears that a very large proportion, amounting to 156,116 out of 209,335 persons, who emigrated in 1840 and 1841, proceeded to North America, of which 85,659 went to the United States, and 70,457 to the British provinces. The fact of the great number going to North America, amounting altogether to three-fourths of all those who emigrated, and that without public assistance, serves to show that North America is considered to offer greater advantages to British emigrants than any other part of the world, which may be ascribed to its vicinity, the cheap and easy communication with this country, its soil and climate, so well adapted to the health and enjoyment of the inhabitants of this kingdom, and the identity of its language. It appears, also, that the proportion of persons who proceed to the United States is much larger than of those who establish themselves in the British American provinces; and as

this proportion consists in great degree of the class of persons having capital, the Committee have been anxious to ascertain the causes which lead to a result so injurious to the best interests of the empire. There appears to be no reason for supposing that the Government, laws or manners of the United States offer any temptation to Britons; or that the climate or soil have any advantage over those of the British Provinces. They have taken every pains to ascertain whether any real causes exist in Her Majesty's North American Colonies to prevent the introduction and settlement therein of emigrants, particularly those having capital.

In pursuing this inquiry they find that great dissatisfaction has long existed in Canada on a subject which appears not to be correctly understood by the British public. In the Address to Her Majesty from the Legislative Assembly of Upper Canada, dated 4th January 1840, reasons are assigned for the depression of agriculture, which, if well founded, as we believe they are, deserve the most serious attention. It appears that not only the principle of protection extended to the growers in Great Britain is withheld from the agriculturists in Canada, but that whilst the market in Canada is open to the whole world, including the neighbouring States of America, for the importation of agricultural productions, free from any duty, the productions of Canada are subject to a heavy duty on importation into the United States and into the mother country, being the only markets upon which they can depend, as they are deprived of the advantage of the intercolonial markets, particularly that of the West Indies, which was formerly of great importance to Canada, by the alteration of the colonial duties of late years. The natural advantages of situation possessed by the United States, for supplying the British West Indies, were always greatly in favour of the United States, which, added to the alteration of duties, will destroy the trade of British North America with those Colonies.

In 1833, the Commons House of Assembly of Canada addressed the Home Government, praying for relief; and among other reasons assigned for the free admission of their products in the markets of Britain, were the great distance of the wheat-growing districts in Canada from the sea, and the high price of transportation, always affording a natural and certain protection to the British grower, which is fully borne out by the annexed statement marked (A.), showing the expense to the Canadian grower of the transportation of wheat to this country, to be 26*s.* 2*d.* currency, or 23*s.* 7*d.* sterling, per quarter. A further expense attends the transmission of wheat from the Western parts of the United States, and this natural protection the inhabitants of Canada are desirous of increasing, by imposing a duty on American grain and other produce, on their frontier, so as to protect their own home growth in their own as well as the British market. Strong expressions of this opinion have been made recently in Canada, for which reference may be made to the petition from the merchants of Montreal, and to that from a very large body of agriculturists in Western Canada, recently forwarded through the Canada Company; the sentiments contained in which have been brought under your Lordship's notice very recently; and similar addresses and representations have been repeatedly sent home of late years, all tending to show the importance attached by the inhabitants of Canada to an open trade with Great Britain, and to protection in their own market from the competition of the rest of the world, and of the United States in particular, who themselves protect their home growth by duties.

The Committee believe that the great objection entertained in this country to the admission of the agricultural productions of Canada into the home market free of duty, is the fear that it would not be limited to the articles grown in the colonies, but that the grain and other productions of the United States would be introduced through the colony, as if they were Canadian. To obviate this, and to protect their own agriculture, the colonists are willing to impose a sufficient duty on their frontier forthwith; but doubts have been expressed whether this trade would not be conducted by smuggling across the frontier, notwithstanding any regulation in the Canadian ports. The Committee have made inquiry into this question, and they believe that no such smuggling would take place, for the following reasons:—

First. The inhabitants of Canada, whose prosperity depends entirely on agriculture, are very anxious for a protection which a duty levied on their frontier would afford them; and they would unanimously support the execution of a law for that purpose.

Secondly. The growth of wheat in the United States, the chief article respecting the introduction of which through Canada any anxiety exists, is confined to that part of the country bordering on Canada to the west, where the boundary line between the two countries is formed by the lakes; and the produce must necessarily therefore be shipped, and landed on the Canadian ports or shores; if in the former, which are few in number, the duty would always be levied; and if attempted on the latter, which would be difficult, the expense of transportation, the landing in boats, and taking up the country, would be attended with such expense, as to render it worth while to the parties to pay the duty at the ports in preference.

Canada has now become an exporting country, and will be capable gradually of supplying Great Britain with any quantity of corn that may be required, if the British market is open to her productions.

The Committee are desirous of drawing your Lordship's attention to the importance of encouraging the importation of corn from a country which will assuredly receive payment for it in British manufactures, and to the great advantage to this country of such an exchange; particularly considering that the cultivators in Canada are persons settled there, who were unable to maintain themselves at home, but have now become growers of food enough  
for

## THE DUTIES ON WHEAT (CANADA).

11

for their own support, and a surplus to exchange for the labour of their fellow-countrymen at home; and every part of this trade, from the cultivation of the farm to the navigation of the Atlantic with the produce home, directly supports the British manufacturer and mariner.

The Committee would, therefore, strongly recommend, that the agricultural productions of the North American Colonies should be admitted to the home market free of duty; that the colonists should be encouraged to impose such duties on foreign productions as they think desirable for the protection of their own growth, and the British agriculturists; and that the intercolonial duties should be so regulated as to give an advantage to the colonists in the intercolonial trade over the inhabitants of the United States and other foreigners. Canada and the British North American Colonies would then really become an integral part of the British Empire, and rise rapidly in wealth and importance, and the most beneficial effects be produced; perfect confidence would be reposed in the future prosperity, peace and welfare of those valuable colonies, and every British subject seeking a new settlement in North America would at once decide upon establishing himself in the British territories.

The present system of duties never gave satisfaction to Her Majesty's subjects, either in the colony or the mother country; their continuance must inevitably direct the attention and energies of the colonists to encourage manufactures for the purpose of creating a home market for the produce of their soil: this can only be effected by imposing increased duties on our manufactures, and must lead to the establishment of the same adverse interest which exists in the Eastern States of America.

If taxes were imposed by the colonists on foreign productions imported, particularly wheat and flour from the United States, for the purpose of raising revenue to defray the expenses of the local government; the taxation on manufactured or other articles imported from home might be reduced in a proportionate degree, and the coasting trade of Britain might be more easily extended to the utmost limits of Canada, without other restrictions than those which exist between London and Dublin, or Edinburgh.

Not only would the colonists receive their supplies of manufactured goods from the mother country, but the inhabitants of the Great Western Country of the United States would find it for their interest to obtain their supplies of goods by the Canadian frontier; and for all purposes of commerce, this country would derive the same advantages as if that Great Western land continued to be a colony of the empire.

Instead of the continued doubt and uncertainty which prevails in British North America, every inhabitant would be made to see and feel, from the increased value of his products and the diminished cost of the articles he consumes, as well as from the rapid extension of their internal trade, the full value of his connexion with the mother country, and a far more certain and permanent reliance might be placed on the connexion of those valuable colonies by such measures than by the expenditure of millions in the erection of fortifications and the maintenance of troops, as every man's hand and heart would be engaged in supporting the interests of the empire, and the colonists would set at defiance all the efforts of foreign opposition or ambition.

Your Memorialists, considering the whole subject of the greatest possible importance to the welfare of the empire, and entertaining the most sanguine expectation that the measures they have recommended would promote the mutual interests of the mother country and the North American Colonies, have transmitted a similar representation to the Legislature of Canada, urging them to adopt the measures herein recommended; and your Memorialists humbly pray that your Lordship will be pleased to take their opinions into consideration, hoping that you will think it right to recommend their adoption to the Cabinet so soon as in your Lordship's opinion a favourable opportunity arises for the purpose.

Statement (A.) referred to in the preceding Memorial.

From the printed Returns laid before Parliament, we find the following charges for conveying one bushel of wheat from Hamilton, the upper part of Lake Ontario, to Montreal, the nearest seaport:—

	£.	s.	d.
Storage and shipping at Hamilton - -	-	-	2½
Burlington Bay Canal toll - - -	-	-	¼
Freight through Lake Ontario - - -	-	-	3
Freight from Kingston to Montreal, River			
St. Lawrence - - - -	-	-	7½
Insurance 1d., storage in Montreal 2d. -	-	-	3
Commission and guarantee - - -	-	-	3½
Making in all for one bushel of wheat -	-	1	7¾
Eight bushels of wheat to the quarter gives -	-	13	2
The charges from Montreal to London are estimated from 13s. to 16s. per quarter; by taking the least	-	13	-

It leaves a protection to the English grower of - 1 6 2  
without adding the additional price of labour on the original cost of the article.

## Appendix, No. 2.

EXTRACT from a Return to an Address of the Legislative Assembly of the  
22d September 1842.

EXTRACT from a DESPATCH from the Right Honourable *C. P. Thomson*, late Governor-General of Canada, to Lord John Russell, dated Government House, Montreal, 26th May 1840, in as far as the same relates to the transmission of an Address from the Legislature of the late Province of Upper Canada, praying for the introduction of Canadian Corn into Great Britain, free from duty, and to empower the Legislature of this Province to originate measures relating to the Colonial Trade generally.

"THE House of Assembly have transmitted another address, praying for the introduction of Canada corn into Great Britain, free of duty, and they further pray that the Local Legislature may be empowered hereafter to alter the trade regulations of the colony, in those cases in which they may be affected by the Imperial laws relating to colonial trade generally, subject however to the restriction that such laws shall not receive the assent of the Crown until they have been laid before both Houses of Parliament, and shall have been suffered to pass without address from either.

"Upon the first of these objects, it is needless for me to offer any remark. The question can only properly be considered with reference to the whole subject of the Corn Laws, and I certainly do not think that, looking to the average price of corn in ordinary years in Great Britain, the colonies have any right to complain of the footing on which they now stand.

"The second point is an extremely important one. I am undoubtedly of opinion that the regulation of the principles on which colonial trade is to be conducted ought to be reserved entirely to the Imperial Parliament. The power of regulating it is one of the principal advantages resulting from colonial possessions, and, if justly exercised, affords one of the main compensations for the expenditure which the mother country is compelled to incur for the defence and protection of the colony. But whilst I admit this, to its fullest extent, I have at the same time been obliged to observe the great inconvenience, and even loss, which results to the colony from the necessity which now exists for all changes in this respect originating in England. There are a vast number of small points seriously affecting the interests of colonial trade, and not at all disturbing the general principle or objects sought to be established by Imperial Legislation, in which a change is frequently found to be desirable. Great difficulty exists, in the first place, in explaining these points at home, and, next, in proving that they are of sufficient importance to demand legislation there; but even if this be done, I know myself, from experience in that department, too much difficulty and delay unavoidably arise in carrying such measures through Parliament. I am therefore very much disposed in favour of the middle course now suggested by the Assembly. If the Local Legislature be permitted to originate measures of this description, I entertain no doubt that they would be able to introduce many improvements very beneficial to the trade of the colony, and not at all injurious to Imperial interests. These, when sent home, could receive the assent of the Crown and Parliament, whilst, if they meddled improperly with matters affecting the general interests of trade, their work would be without effect, and be open to immediate rejection. If your Lordship shall concur in this view of the case, and shall be inclined to grant this extension of power to the colony, subject to the restriction I have stated, it would be better perhaps to pass an Act specially for the purpose than to incorporate it in the Union Bill."

---

EXTRACT from a DESPATCH from the Right honourable Lord *John Russell*, of the 1st July 1840 (No. 171), to the late Governor-General of Canada, in as far as the same relates to the transmission of an Address from the Legislature of the late Province of Upper Canada, praying for the introduction of Canadian Corn into Great Britain, free from Duty.

"WITH regard to the address on the subject of the introduction of Canada corn into Great Britain, and regarding the proposal to invest the Provincial Legislature with the power of regulating, under certain restrictions, the trade of the empire at large, so far as it affects Canada, I have, in obedience to Her Majesty's commands, communicated that address, with your remarks upon it, to the Lords of Committee of Privy Council for Trade, for their Lordships' consideration."

---

(No. 267.)

My Lord,

Downing-street, 1 December 1840.

I ENCLOSE the copy of a letter which I have received in which a suggestion is offered with respect to the admission into this country, free of duty, of Canada wheat, flour, and other agricultural produce; and I request that you will give this subject your consideration.

I have, &c.

The Right honourable Lord Sydenham.

(signed) *J. Russell.*

THE DUTIES ON WHEAT (CANADA).

13

(No. 320.)

My Lord,

Downing-street, 3 March 1841.

ADVERTING to your Lordship's despatch, No. 115, of the 26th May 1840, in which was enclosed an Address to the Queen from the House of Assembly of Upper Canada, respecting the trade regulations of the province, and the repeal of the duties levied upon agricultural produce imported from Canada into the United Kingdom, to my answers thereto of the 1st July, No. 171, and to your Lordship's recent proposition for altering the clause of the Royal instructions, which prohibits the provincial legislature from legislating on subjects connected with the trade of the British empire, I have to inform your Lordship that the Lords of the Committee of Privy Council for Trade have considered the recommendations contained in your despatch, and the Address, and I shall communicate to your Lordship by the first opportunity the decision of Her Majesty's Government thereupon.

The President of the Board of Trade will bring before the House of Commons on Friday, the 12th instant, several propositions connected with this subject, and I regret that they are not sufficiently matured to enable me to transmit them to you by the present mail.

It will be the object of the Queen's Government to free the trade of Canada from restrictions which are unnecessary, and at the same time to do justice to the industry and manufactures of the United Kingdom.

I have, &c.

(signed) J. Russell.

The Right honourable Lord Sydenham,  
&c. &c. &c.

(No. 330.)

COPY of a DESPATCH from Lord Stanley to the Right honourable  
Sir Charles Bagot, G.C.B.

No. 3.

Despatch from  
Lord Stanley to the  
Right hon. Sir  
Charles Bagot,  
2 March 1843.

Sir,

Downing-street, 2 March 1843.

I HAVE received your despatch (No. 19) of the 27th January, enclosing a petition addressed to the Queen by the Board of Trade at Quebec, praying that the Royal Assent may be withheld from the Bill passed in the last session of the Legislature of Canada, by which a duty was imposed on the importation of foreign wheat into that province, until the Imperial Parliament shall have passed a law authorizing the free admission into the United Kingdom and the British Colonies of all grain and flour exported from Canada.

I have to acquaint you, in answer, that I have laid this petition before the Queen, and that Her Majesty was graciously pleased to signify Her readiness to take the prayer of it into Her consideration when the proper time shall arrive for deciding upon the provincial enactment.

I have, &amp;c.

(signed) Stanley.

—No. 4.—

No. 4.

Extract of a  
Despatch from the  
Right hon. Sir  
Charles Bagot to  
Lord Stanley,  
24 February 1843.

(No. 35.)

EXTRACT of a DESPATCH from the Right honourable Sir Charles Bagot, G.C.B.,  
to Lord Stanley, dated Government House, Kingston, 24 February 1843.

I HAVE had the honour to receive your Lordship's despatch of the 1st instant, No. 320, desiring to be furnished with a report in explanation of the grounds upon which the Wheat Duty Bill was passed by the Canadian Houses of Assembly during the past season.

Your Lordship will have already received a despatch upon this subject, which I transmitted by the last mail, accompanying reports upon the other Bills of the same session.

To these I have now to add a copy of a Minute of my Council drawn up on this document.

The Minute of the Committee of Council will furnish your Lordship with the information required in the concluding paragraph of your despatch relative to the possible effect of the exemption contained in the second clause of the Bill in admitting frauds upon the revenue, and an abuse of the privilege which may be accorded in the United Kingdom to wheat which shall have paid the provincial duty.

Enclosure in No. 4.

Encl. in No. 4.

EXTRACT of a REPORT of a Committee of the Executive Council, dated 23d February 1843, on the subject of the Bill passed last Session, for imposing a Duty upon American Wheat.

WITH respect to the inquiry contained in the last clause of his Lordship's despatch, regarding the exemption from duty of wheat and flour introduced by sea for the use of the fisheries, and the facility which such an exemption may give to the commission of frauds upon the revenue, which inquiry, the Committee observe, is not anticipated in your Excellency's despatch, the Committee beg respectfully to observe,

1st.—That Canada is very little concerned in the fisheries on the coast, as the fish taken there are exported directly to foreign countries; and the supplies are derived directly from England, in the shape of fishing-tackle, sails, rigging, and other like necessities; and the provisions are imported, by sea, from the ports in the United States.

2dly.—That the British fisheries trading with foreign countries and having no protection, would be absolutely ruined by any financial measure which would increase their expenses, and thus place them at a disadvantage as compared with the foreign fisheries, particularly as the former do not enjoy the encouragement of bounty on the exportation of fish, afforded by the eastern colonies and by the Americans.

3dly.—That the exemption was introduced to favour a trade in which British shipping and British capitalists are interested; and that the only possible interest which the interior of Canada could have in the question would be in favour of a duty on foreign supply

For Lord Stanley's  
Despatch, 1 Feb.  
1843, vide Papers  
ordered by the  
House of Commons  
to be printed,  
13 Feb. 1843,  
No. 18, p. 5.

## THE DUTIES ON WHEAT (CANADA).

17

supply to the fisheries, and in forcing them thus to take the supplies from the provinces ; but, for the reasons above stated, it is not desired to acquire such an advantage at the expense of the fisheries.

4thly.—That the exemption was introduced in accordance with the policy of all the Canada Trade Acts, which contain the same exemption in favour of the fisheries.

5thly.—That the geographical position of the fisheries is such as to prevent it from being the interest of persons disposed to defraud the revenue to import, by sea, wheat from a foreign country, and to send it illicitly into Canada, there to acquire the character of wheat or flour of Canadian growth, or of the same articles which had paid the duty.

6thly.—That wheat or flour introduced *by sea* for the use of fisheries not on the sea-coast, would not bear the expense of transportation to the interior for the purpose of avoiding the duty.

7thly.—As to the danger of wheat being introduced by sea at the fisheries on the coast, which may there be converted into flour, and thereby acquire the character of colonial produce or manufacture, the Committee would observe, that the country on the coast not being wheat growing, any importation or manufacture of wheat for exportation would immediately be observed by the officers of the Customs, and the traders in the article, on importing what evidently was not for the use of the fisheries, or on attempting to export it to England, would be liable to have the property seized, and would be subject to the pains and penalties of the British Trade Act, re-enacted by the Bill in question.

And, lastly, as the exemption was introduced into the Bill in favour of British interests, any act removing or lessening the duty on wheat and flour imported from Canada may contain any precautionary enactments regulating the details of importations for the use of the fisheries, which may be devised by the Commissioners of Customs, and which would effectually prevent the fraud of which his Lordship apprehends the probability.

## —No. 5.—

(No. 43.)

COPY of a DESPATCH from the Right honourable Sir *Charles Bagot*, G.C.B., to Lord *Stanley*.

Government House, Kingston,

20 March 1843.

My Lord,

WITH reference to your Lordship's Despatch of the 2d March, No. 330, relative to the petition addressed to the Queen by the Board of Trade at Quebec upon the subject of the Wheat Duty Bill, passed by the Provincial Legislature in its last session, I deem it expedient, although I am confident that Her Majesty's Government will allow no unnecessary delay to occur in determining upon the course which they will adopt with regard to this measure, to transmit to your Lordship a copy of a communication from the same body, pointing out the importance of an early decision upon this matter with reference to the trade of the approaching season.

I have, &amp;c.

(signed) *Charles Bagot*.

No. 5.

Despatch from the Right hon. Sir Charles Bagot to Lord Stanley, 20 March 1843.

## Enclosure in No. 5.

Office of the Council of the Quebec Board of Trade,  
Quebec, March 4, 1843.

Sir,

I AM requested by the Council of the Quebec Board of Trade respectfully to inquire if any information has yet been received regarding the fate of a Bill passed in the last session of our Provincial Legislature, imposing a duty of 3s. per quarter on wheat imported into the British Possessions in North America from the United States, and which was reserved by his Excellency the Governor-general for Her Majesty's pleasure thereon. When the aforesaid Bill was passed by the Legislature, it seemed to be generally understood that it was the intention of the Imperial Government to permit the importation of wheat from Canada into Great Britain at merely a nominal duty ; and as the season of business is now approaching, it is of great importance to the inhabitants of the province generally that they should receive authentic information on these questions with the least possible delay.

Encl. in No. 5.

I have, &amp;c.

(signed) *W. Walker*, Chairman.

WHEAT (CANADA).

No. 1.  
Right Hon. Sir  
*C. T. Metcalfe* to  
Lord *Stanley*,  
26 October 1843.

My Lord,

I HAVE the honour to submit, for your Lordship's information, a copy of a Resolution of the House of Assembly, for the presentation of an Address on the subject of the Civil List of this Province, together with a printed copy of my reply.

I have, &c.  
(signed) *C. T. Metcalfe*.

Legislative Assembly, Thursday,  
5 October 1843.

*Resolved*, That an humble address be presented to his Excellency the Governor-general, requesting his Excellency will be graciously pleased to inform the House whether any communications have been made since the last session to Her Majesty's Government by the executive of this province, with respect to a reduction in the Civil List and other expenses of the civil government thereof, and that his Excellency will be pleased to lay before the House all such information and correspondence respecting the same, as he may deem himself at liberty to communicate.

*Ordered*, That the said address be presented to his Excellency by such members of this House as are of the honourable the Executive Council of this Province.

Attest.

(signed) *Wm. B. Lindsay*,  
Clerk of Assembly.

MESSAGE from the Governor-general to the Legislative Assembly, on the Subject of the Civil List.—Presented 16 October 1843.

*C. T. Metcalfe*.

Government House, Kingston,  
10 October 1843.

THE Governor-general informs the House of Assembly, in reply to their address regarding the Civil List, that communications have been made to Her Majesty's Government on that subject by the Governor of this province since the last session, and that a correspondence is still pending. He does not consider himself at liberty to lay before the house any portion of that correspondence. Neither is he able to make any declaration, which should have the effect of fettering the discretion of Her Majesty's Government, as to the view which may be taken of the subject, by Her Majesty's Ministers, or the Imperial Parliament, whose intervention is absolutely necessary to effect any alteration in the amount of the existing Civil List, or in the authority by which it is granted. The Governor-general, however, is not aware of any obstacle to a practical diminution of the civil expenditure, whether borne on the Civil List or otherwise, by such reasonable and judicious reductions as it may be in his competency to authorize; and, in conformity to the desire which he has always entertained in favour of all practicable economy, he has recently abstained from filling a vacancy

#### 4 ADDRESS OF THE HOUSE OF ASSEMBLY OF CANADA

in the secretariat, trusting that the public service will not require more than one provincial secretary. As connected with the subject of the Civil List, the Governor-general has authorized the inspector-general to lay before the house some documents, being portions of a memorandum furnished by that officer, at the Governor's desire, for the information of Her Majesty's Government.

##### CIVIL LIST.

Memorandum laid before the Legislative Assembly, by Command of His Excellency the Governor-general, and referred to in His Excellency's Message on the Subject of the Civil List, presented to the House on the 16th October 1843.

Kingston, May 1843.

MR. HINCKS has the honour to transmit to the Governor-general, a memorandum containing some information respecting the Civil List, with suggestions for putting it on a more satisfactory footing. Mr. Hincks has also the honour to state, that having communicated the memorandum to such of his colleagues as are at present in town, it has met with their concurrence.

##### *Memorandum.*

THERE is no Canadian question requiring more serious consideration than that relating to the Civil List, of 75,000*l.* sterling, granted annually to Her Majesty by the Imperial Act, 3 & 4 Vict. c. 35, intituled, "An Act to re-unite the Provinces of Lower and Upper Canada, and for the Government of Canada."

By the 50th section of the said Act, it is enacted, that "all Duties and Revenues over which the respective Legislatures of the said Provinces before and at the time of the passing of this Act had, and have, power of appropriation, shall form one Consolidated Revenue Fund, to be appropriated for the public service of the Province of Canada, in the manner and subject to the charges hereinafter mentioned."

By the 52d section of the said Act, the said Consolidated Revenue Fund is permanently charged with the annual sum of 45,000*l.*, for defraying the expense of certain services and purposes named in a Schedule, marked (A.), annexed to the Act; and also with an annual sum of 30,000*l.*, for defraying the expense of certain services, named in a Schedule, marked (B.), also annexed to the Act, and which latter sum is granted during the life of Her Majesty, and for five years after the demise of Her Majesty.

It is not desirable to enter at present upon the constitutional question, of the right of the Imperial Parliament to make a grant to Her Majesty of a portion of the revenue over which, as is admitted in the 50th section of the Act, the Provincial Legislatures had, before and at the time of its passing, the sole power of appropriation.

It ought not, however, to be concealed from the Governor-general, that the Members of his Government, in common with the vast majority of Her Majesty's subjects in Canada, claim for the Legislative Assembly of the Province, the sole right of appropriating to the public service, at its discretion, the whole of the revenue raised within the Province, whether arising from taxes or any other Canadian source.

It must be admitted that this claim is one which has always been denied by Her Majesty's Imperial Government, and that this difference of opinion was one of the principal causes of the misunderstanding, which unhappily existed in former times between that Government and the Houses of Assembly of Lower and Upper Canada.

For this very reason, it is important that no time should be lost in placing the Civil List on a satisfactory footing.

It is earnestly hoped that the information and suggestions contained in this memorandum may aid in bringing about so desirable a result.

The grant to Her Majesty, of 75,000*l.* as a Civil List, was made by the Imperial Parliament, in consequence of the recommendation of the late Lord Sydenham, at that time Governor-general of British North America. It is stated in the despatches of his Lordship, that he had previously obtained the consent of the Legislature of the Province of Upper Canada, and of the Special Council of Lower Canada.

On reference to the resolutions adopted by the Legislative Council and House of Assembly of Upper Canada, it will be found that they give no sanction to the establishment of such a Civil List as that granted by the Imperial Parliament. It must be borne in mind that, previous to this question being submitted by Lord Sydenham to the Canadian Legislatures, clear and definite propositions had been made by the Imperial Government for the surrender of the entire revenue claimed by the Crown as hereditary, casual, or territorial, on an adequate provision being made for the support of certain officers of the civil government.

It is important to notice that the grant of a Civil List had been invariably refused, on the ground of its excess, although the services for which provision was then asked fell very far short of those included in the Schedules annexed to the Re-union Act.

On the 14th February 1837, Lieutenant-governor Sir Francis Bond Head communicated, by message, to the House of Assembly of Upper Canada, a proposition for surrendering all the hereditary, territorial, and casual revenues of the Crown, on a provision being made for certain expenses of the civil government, specified in a schedule transmitted to the House, also for certain annuities to the Indian tribes, certain payments guaranteed to religious bodies, and pensions, the latter charges being merely temporary.

The

## TO GOVERNOR-GENERAL, RESPECTING CIVIL LIST, &amp;c. 5

The House of Assembly declined acceding to the proposition contained in the message of the Lieutenant-governor, principally in consequence of the stipulation in favour of the religious bodies, which the House did not think should have been made. Fresh negotiations were opened on the subject, which had not terminated when the House was invited to consider the propositions for a re-union of the Provinces.

The message of his Excellency the late Lord Sydenham, to the House of Assembly of Upper Canada, communicating the terms on which Her Majesty's Government were of opinion that a union of the Provinces of Upper and Lower Canada might be effected, stipulated for the permanent grant of a sufficient Civil List, "for securing the independence of the judges, and to the Executive Government that freedom of action which is necessary for the public good." Beyond a promise that the salaries and expenses would be calculated with a strict regard to economy and the state of the provincial finances, the Message contained little further information on this subject.

It appears evident that the House, in pledging itself to the grant of a sufficient Civil List, never contemplated a permanent provision for any officers but those for whom such provision had been required previously by Her Majesty's Government, when the offer of the surrender of the casual and territorial revenue had been made. The Resolution adopted by the House is as follows:—"That this House concur in the proposition that a Civil List be granted to Her Majesty for securing the independence of the judges, and to the Executive Government that freedom of action which is necessary for the public good; the grant for the person administering the Government, and for the judges of the several superior courts, to be permanent, and for the officers conducting the other departments of the public service, to be for the life of the Sovereign, and for a period of not less than 10 years."

It is manifest, from the tenor of the foregoing Resolution, that the House of Assembly never contemplated the grant of a Civil List embracing the services provided for in the schedules annexed to the Re-union Act. The permanent grant is expressly limited to the Governor and the judges, whereas provision is made in Schedule (A.) not only for the salaries of the Crown officers, but for all the contingent expenses of the administration of justice.

As the constitution of Lower Canada was suspended when the terms on which the union might be effected were submitted for consideration in that province, no expression of opinion was obtained from any parties claiming to represent public opinion.

But it will be found that negotiations had taken place on the subject of a Civil List, between Her Majesty's Imperial Government and the House of Assembly of that province, previous to the suspension of the constitution.

It is satisfactory to find recorded in the despatches, both of the Earl of Aberdeen and of Lord Glenelg, who successively held the seals of the Colonial Department, an admission that it was expedient that the hereditary and territorial, as well as all other branches of the provincial revenue, should be surrendered to the appropriation of the House of Assembly on the grant of a moderate Civil List. In none of the numerous propositions made during a series of years by Her Majesty's Government was there a demand for a Civil List to anything like the extent or amount granted by the Re-union Act. In the sister provinces of Nova Scotia and New Brunswick difficulties have been experienced very similar to those which have existed in Canada, owing to the Imperial Government having stipulated that a provision should be made for services which the Legislatures of those provinces were unwilling to sanction. The question of the Civil List is still unsettled in Nova Scotia; but the Imperial Government have never claimed from the Legislature of that province that provision should be made for the services provided for in the schedules annexed to the Re-union Act.

It is impossible for any Government to support a Civil List to which objections are raised, and with justice, by the people at large; first, on the ground that its establishment was a violation of their constitutional rights; second, that the services provided for are more than ought to be placed on the permanent Civil List, more than the Imperial Government ever asked previous to the union, and more than they now ask from the sister colony of Nova Scotia; third, on the ground that the salaries provided are higher than the province can afford to pay with a due regard to the public interests, and more especially to the maintenance of the public credit.

However strong may be the objections to the present arrangement of the Civil List, yet, with a view to preserve a good understanding between Her Majesty's Imperial Government and the Canadian Legislature and people, an effort should be made to avert the evils which must unavoidably arise, if this question be suffered to remain much longer in its present state.

It is right that the Governor-general should be informed of the anxious desire which is generally felt that the Civil List to be granted to Her Majesty out of the Consolidated Revenue Fund of Canada should, as far as possible, be analogous to that of the United Kingdom, and that the permanent grant should be limited to the Governor, the private secretary to the Governor, and the necessary contingencies of his office, and the judges of the superior courts, who hold their offices during good behaviour; and that the salaries of the principal officers of the Civil Government and of their clerks, together with their contingent expenses, should be voted annually, as in England.

Although this opinion is very strongly entertained, and although the members of the Provincial Government would experience great difficulty in advocating a Civil List of a greater extent than that which they have hitherto supported, it may be found expedient, in consideration of the strong feeling entertained by the Imperial Government on this subject, and in view of the interests of the people of Canada, that they should waive their objections and agree to propose to the Canadian Parliament the grant of such a permanent Civil List

## 6 ADDRESS OF THE HOUSE OF ASSEMBLY OF CANADA

as will, it may be hoped, fully meet the views of Her Majesty's Government. There does not seem any sufficient reason for dividing the appropriation into two classes, and specifying the services to be provided into two distinct schedules. This has been found already to produce confusion; but the principal objection to it is, that it may re-open, at a future day, a question which has already given rise to most serious difficulty. It would therefore be expedient, in bringing forward a Bill for granting a Civil List to Her Majesty, to make the appropriation permanent, and to include all the services to be provided for in one schedule.

With a view of meeting the general demand on the part of the public for retrenchment and economy, and in view of the large debt contracted for public works, the interest of which it is of the highest importance should be punctually met, it is necessary that a reduction of salaries should take place. A schedule, annexed to this memorandum, will explain the extent of the reduction which is recommended, and which will leave the salaries of public officers quite as high as any Canadian Legislature will be willing to sanction. The reduction proposed in the salaries of the chief justice, vice-chancellor, judge at Three Rivers, and deputy inspector-general, ought not to affect the present incumbents. The only items provided for in the schedules annexed to the Re-union Act which are not included in the proposed Civil List, are a portion of those under the head of "Contingent and Miscellaneous Expenses of the Administration of Justice in Schedule (A.), and Contingencies of Public Offices in Schedule (B.)." There are many reasons why it is inexpedient to include these services. The charges in Schedule (A.), which it is proposed to exclude, consist chiefly of the contingent expenses of sheriffs, gaolers, coroners, and other judicial officers in the late province of Lower Canada. Services of a similar character have always been cheerfully provided for in Upper Canada, as they are in England, by local assessment, and it is possible that some similar mode of defraying them in Lower Canada may be adopted by the Legislature.

It is necessary to offer some observations on one item of the services provided for in the present Civil List; viz. the pensions.

The system which prevails in England of granting pensions and gratuities to retired servants of the Crown is considered highly objectionable in Canada, and any attempt to persevere in it will lead to very great discontent. The Pension List at present amounts to the very large sum of about 7,000*l.*, 2,000*l.* of which is included in Schedule (A.) as pensions to the judges, to which, however, there is no objection; and 5,000*l.* in Schedule (B.). It has already been noticed, that in the propositions formerly made by the Imperial Government for the grant of an adequate Civil List, in exchange for the hereditary and territorial revenues of the Crown, the amount granted for pensions was to cease on the death of the recipients. Although there is a very general feeling against the principle of pensioning retired servants of the Crown, there can be no doubt that the Legislative Assembly would at any time hereafter, as heretofore, be most ready to co-operate with Her Majesty in granting a retired allowance to any of Her old and meritorious servants who might be in actual want. This is the utmost extent to which any of the sister colonies have been called upon to go, and it would be necessary that, in proposing the same amount fixed in the present Civil List for pensions, the Members of the Government should be enabled to assure the Legislative Assembly that every effort will be used to reduce this item of expenditure as much as possible.

In the annexed Schedule, remarks have been made on such of the different heads of service as appear to require explanation. The amount of the proposed Civil List is 60,000*l.*, a sum much greater in proportion than what has been claimed for any of the other colonies on this continent, and much more than what has ever been required from the Legislature of Lower and Upper Canada, in exchange for the surrender of the hereditary, casual, and territorial revenues of the Crown.

The plan suggested will be received, it is hoped, as evincing an anxious desire to meet the wishes of Her Majesty's Imperial Government on this question; and, if approved of, there can be no doubt that the members of the present Provincial Government will be able to procure the assent of the Canadian Legislature to a Bill for granting a permanent Civil List to Her Majesty, to the amount and for the services specified in the annexed Schedule.

It is manifestly impossible that the members of the present Provisional Government, having a regard to their conscientious convictions, and to the oaths which they have taken, can vindicate in Parliament the present arrangement of the Civil List; and were they to attempt such vindication, they would, by entirely losing that public confidence which they now enjoy, be deprived of the power of affording the Governor-general any assistance in the administration of the government. It is quite possible that calamities may result, both to the colony and the parent state, if a serious difference of opinion should again arise between the Imperial Government and the Canadian Legislature, but it will be satisfactory to reflect that a mode has been pointed out in this memorandum for averting these calamities.

The Civil List now proposed is greater than the people of Canada will approve of, and the members of the government will have to rely entirely upon an appreciation by the Legislative Assembly and the people at large, of the motives which could alone induce them to bring it forward.

The question is in the hands of Her Majesty's Government, and it is earnestly to be hoped that they may sanction the arrangement which has been suggested in this memorandum, and that they may authorize it to be carried into effect before any excited feelings on the subject shall have been manifested either in or out of Parliament.

## TO GOVERNOR-GENERAL, RESPECTING CIVIL LIST, &amp;c.

7

## PROPOSED SCHEDULE FOR THE CIVIL LIST.

	Proposed Appropriation.			Present Appropriation.			
	£.	s.	d.	£.	s.	d.	
1. Governor - - - -	7,000	-	-	7,000	-	-	1. The Governor-general is entitled by law to one-third of all seizures. The propriety of a reduction of this salary is suggested, although if on consideration Her Majesty's Government are of opinion that it is not excessive, it would not be an insuperable difficulty.
2. Lieutenant Governor - -	-	-	-	1,000	-	-	2. There is at present no such officer, and there appears no reason for swelling the Civil List by such a charge.
3. Secretary to the Governor and his office.	1,415	-	-	2,676	10	-	3. The principal saving under this head has been effected by striking out the charge of 1,620 <i>l.</i> for a civil secretary, and increasing the salary of the Governor's secretary from 324 <i>l.</i> to 750 <i>l.</i> , which appears to be a liberal compensation for his services; the salaries of private secretaries in England being 300 <i>l.</i> a year. It is to be observed, that orders have been given by the Secretary of State for the Colonies, that the salary of the civil and private secretaries should be paid in army sterling, or dollars at 4 <i>s.</i> 2 <i>d.</i> , although all other officers of the Government are paid in provincial sterling, of dollars at 4 <i>s.</i> 6 <i>d.</i>
Contingencies of the same -	500	-	-				
UPPER CANADA :							
4. Chief Justice - - - -	1,125	-	-	1,500	-	-	4. There is a very general opinion, that the difference between the salaries of the Chief Justice and Puisne Judges is much too great; and it is believed that 225 <i>l.</i> sterling, in addition to the salary of a Puisne Judge, will be quite sufficient for the Chief Justices, who may all be put on the same footing. The change should not affect the present incumbents.
4. Four Puisne Judges - - -	3,600	-	-	3,600	-	-	
5. Vice-Chancellor - - - -	1,000	-	-	1,125	-	-	5. It is proposed to reduce the salary of the Vice-Chancellor, on a change taking place, to 1,000 <i>l.</i> , which is a medium between the Chief Justices and the Puisne Judges, as at present.
LOWER CANADA :							
4. Chief Justice at Quebec - -	1,125	-	-	1,500	-	-	
4. Three Puisne Judges - - -	2,700	-	-	2,700	-	-	
4. Chief Justice at Montreal -	1,125	-	-	1,100	-	-	
4. Three Puisne Judges - - -	2,700	-	-	2,700	-	-	
6. Judge, Three Rivers - - -	600	-	-	900	-	-	6. The salary of the resident Judge at Three Rivers ought not to be so much as that of the Judges at Montreal and Quebec, and it is therefore proposed to reduce it, on a change taking place.
6. Judge, Saint Francis - - -	500	-	-	500	-	-	
7. Administration of Justice in Gaspé.	600	-	-	500	-	-	7. It may become expedient to make changes with regard to the administration of justice in Gaspé. It is therefore proposed to name a larger sum than at present for the service "Administration of Justice in Gaspé."
Pensions to Judges - - - -	2,000	-	-	2,000	-	-	3. The saving under this head will be effected by a reduction of salaries.
8. Attornies and Solicitors-general, and allowance for clerks.	3,850	-	-	4,620	-	-	
Court of Vice-Admiralty - - -	425	-	-	425	-	-	
Circuit allowance for Judges -	1,000	-	-				
9. Court of Appeals - - - -	3,000	-	-	-	-	-	9. This amount is a mere estimate. The salaries would be fixed in the Act establishing the Court.
10. Provincial Secretaries and their offices.	3,995	-	-	4,640	-	-	10. The saving on this head would be effected by such a reduction of salaries as would assimilate them more to what were paid previous to the establishment of the Civil List.
10. Registrar - - - -	887	10	-	1,025	-	-	
10. Receiver-general and his office -	1,697	10	-	1,937	10	-	
10. Inspector-general and his office -	2,275	-	-	2,598	-	-	
10. Board of Works - - - -	1,845	-	-	1,885	-	-	
Emigrant Agent - - - -	400	-	-	400	-	-	
Pensions - - - -	5,000	-	-	5,000	-	-	
11. Indian Annuities - - - -	6,000	-	-	-	-	-	11. It may be more expedient to pass a separate Act for securing the Indian annuities; but the amount has been included in the Schedule, to show the aggregate amount to be provided.
12. Executive Council - - - -	2,387	10	-	3,450	-	-	12. It is proposed to discontinue paying salaries to the Executive Council, who are all paid as Heads of Departments. The present salary of the chief clerk is not thought commensurate with his position, and is much less than what was paid formerly to the clerk of the Executive Council in Lower Canada. It might with propriety be raised.

(No. 145.)

No. 2.  
Right Hon. Sir  
C. T. Metcalfe to  
Lord Stanley,  
11 Dec. 1843.

EXTRACT of a DESPATCH from the Right Hon. Sir *C. T. Metcalfe*, Bart. G. C. B. to Lord *Stanley*, dated Government House, Kingston, 11 December 1843.

I HAVE the honour to submit an Address from the Legislative Assembly of Canada to Her Majesty, relating to the Civil List.

TO the QUEEN's Most Excellent Majesty.

Most Gracious Sovereign,

WE, your Majesty's dutiful and loyal subjects, the Commons of Canada in Provincial Parliament assembled, actuated by a consideration of the heavy and increasing liabilities of the Province, the decrease of the revenue, and a just regard for economy, humbly beg leave to approach Your Majesty, and to lay at the foot of the Throne certain resolutions we have at the present Session deemed it our duty to adopt in reference to the expenses of Your Majesty's Civil Government in this Province, and other matters in connexion therewith.

We are humbly of opinion, that no appropriation of any monies levied upon Your Majesty's subjects in this Province ought to be made without the free consent of their representatives in the Legislative Assembly thereof.

That the appropriation by the Act of the Imperial Parliament, commonly called in this Province "The Union Act," of 75,000*l.* annually of the monies levied upon Your Majesty's subjects in Canada, towards defraying the administration of justice and support of Your Majesty's Civil Government therein; that is to say, the annual sum of 45,000*l.* permanently for salaries and pensions to the Judges, Attornies-general, and Solicitors-general, and other expenses of the judicial establishment; and 30,000*l.* annually during the reign of Your Majesty (whom God long preserve), and for five years next thereafter, to defray a Civil List, and certain expenses of the Civil Government, however expedient such appropriation by Act of the Imperial Legislature may have been, under the peculiar circumstances of the Canadas at the period when the Act was passed, now that those circumstances happily have passed away, which may have rendered it a measure of necessity, is unsatisfactory to Your Majesty's loyal subjects in this Province, inasmuch as it withdraws from the control of their representatives a large proportion of the public revenue raised upon them, and is of a tendency to create, foster, and perpetuate abuses in the misapplication of the public monies, and also is in contravention of the declaratory Act of Parliament of Great Britain in 1778, by which it is declared, that "the King and Parliament of Great Britain will not impose any duty, tax, or assessment whatever, payable in any of His Majesty's Colonies, Provinces, and Plantations in North America, or the West Indies, except only such duties as it may be expedient to impose for the regulation of commerce; the net produce of such duties to be always paid and applied to and for the use of the Colony, Province, or Plantation in which the same shall be respectively levied, in such manner as other duties collected by the authority of the respective general courts or general assemblies of such Colonies, Provinces, or Plantations, are ordinarily paid and applied."

That the repeal of the aforesaid appropriation would be conducive to the general contentment of Your Majesty's loyal subjects in this Province, and to the peace, welfare, and good government thereof, and tend to strengthen and perpetuate the bonds which happily unite it with the parent state.

That Your Majesty's faithful subjects, the Commons of Canada in Provincial Parliament assembled, not less mindful of their duty towards Your Majesty, our Most Gracious Sovereign, than of the trust reposed in them by Your Majesty's dutiful and loyal subjects in this Province, are of opinion that the necessary provision for the support of Your Majesty's civil government and administration of justice therein, in a manner suited to the honour and dignity of Your Majesty's Crown, ought to proceed solely from the free and voluntary vote of Your Majesty's faithful subjects, the Commons aforesaid, to whom also the right of controlling the outlay and application of all monies levied in the Province, and of defining and fixing the Civil List thereof, and of setting limits to the same, constitutionally belongs.

That the existing salaries, those of the Judges excepted, upon the Civil List of the Province, and generally the expenses of the Civil Government, in all departments thereof, are exorbitant, and ought to be reduced, on a scale corresponding to the resources and liabilities of the Province.

That

## TO GOVERNOR-GENERAL, RESPECTING CIVIL LIST, &amp;c. 9

That Your Majesty's faithful subjects, the Commons of Canada, are prepared, and will, when thereunto called upon by Your Majesty, make, in conformity with the well understood wishes of Your Majesty's dutiful and loyal Canadian subjects, a constitutional and permanent provision for the salaries to the Judges in this Province, and for suitable retiring pensions to such of them as from age, infirmity, or accident shall become incapacitated for duty, and generally for such other permanent salaries and charges as are indispensable to the due administration of justice therein, as well as a provision during Your Majesty's reign (which God prolong) for a Civil List, agreeably with the usages of the Imperial Parliament in the like case; it being provided in the enactments to be passed on the subject, that the same shall only go into effect when the aforesaid appropriation of 75,000*l.* sterling annually by "the Union Act" shall have been repealed by the said Imperial Parliament; and the public monies levied upon Your Majesty's subjects in this Province have been replaced at the free disposal of their representatives.

That the office of Chief or Civil Secretary, to which is annexed a salary of 1,620*l.* sterling, exceeding considerably any of those appertaining to the highest and most important offices in the Province, including those of the Chief Justice in Lower Canada, the Chief Justice of Upper Canada, and the Vice-chancellor thereof, respectively, and next to that, of Your Majesty's representative in this Province, the Governor-general thereof, is an unnecessary and burdensome charge on the Civil List of the Province, and ought, in the opinion of Your Majesty's faithful Commons, to be forthwith abolished, and the duties thereof transferred to the Provincial Secretary responsible to Your Majesty's faithful Commons, as a member of Your Majesty's Executive Council in this Province, and in that quality a responsible adviser of his Excellency, Your Majesty's representative, the Governor-general aforesaid.

All which Your Majesty's faithful Commons humbly beseech Your Majesty graciously to receive.

Legislative Assembly Hall,  
Wednesday, 6 December 1843.

(signed) *Austin Cuvillier*, Speaker.

## SEIGNIORIAL TENURE.

COPY of the REPORT presented by the COMMISSIONERS appointed, pursuant to an Address, of the 7th day of September 1841, of the House of Assembly of the Province of *Canada*, to inquire relative to the SEIGNIORIAL TENURE existing in *Lower Canada*.

## — No. 1. —

EXTRACT from the Journals of the Legislative Assembly of *Canada*, of the 28th June 1841.

*Resolved*,—THAT the House will, on Wednesday week, resolve itself into a committee of the whole House, to take into consideration the laws of that part of the Province heretofore known as Lower Canada, touching the tenure of lands, and commonly known as "Feudal Tenure," and to consider the expediency of altering and amending the same; and the best and most equitable mode of effecting the alterations that may be deemed necessary.

No. 1.  
Committee of whole on Wednesday week, to take into consideration the Laws relating to "Feudal Tenure."

## — No. 2. —

EXTRACT from the Journals of the Legislative Assembly of *Canada*, of the 28th July 1841.

THE order of the day for the House in Committee to take into consideration the laws of that part of the Province heretofore known as Lower Canada, touching the tenure of lands, and commonly known as "Feudal Tenure," and to consider

No. 2.  
House goes into Committee of whole on "Feudal Tenure."

## 10 ADDRESS OF THE HOUSE OF ASSEMBLY OF CANADA

the expediency of altering and amending the same, and the best and most equitable mode of effecting the alterations that may be deemed necessary, being read,

The House accordingly resolved itself into the said Committee.

Mr. Woods took the chair of the Committee, and after some time spent therein,

Mr. Speaker resumed the chair.

Several resolutions reported.

And Mr. Woods reported, that the Committee had come to several resolutions, which resolutions were again read at the clerk's table as followeth :

Resolutions on "Seigniorial Tenure."

1st. *Resolved*,—That from the increasing improvements of the country, and from the abuses which have grown out of the operation of the tenure of lands now existing in that part of the Province heretofore called Lower Canada, commonly known as the "Seigniorial Tenure," the said tenure has become less adapted to the wants, prosperity, and advancement of the Province, and, in many instances, burthensome and oppressive to the people.

2d. *Resolved*,—That the different legislative enactments passed in the Parliament of the United Kingdom touching and concerning the said tenure, have not attained the end sought for by their framers ; and that it is expedient to adopt other efficient and equitable means for relieving the people from the above difficulties, and of gradually substituting for the seigniorial system, a free tenure more consonant to their condition, interests, and wishes.

3d. *Resolved*,—That in the changes to be made in the laws of tenure, due regard should be had to the vested rights of all parties concerned, and provision made for ascertaining the same, with a view to an equitable adjustment.

*Ordered*,—That the question of concurrence be now separately put upon each of the said Resolutions.

And the first and second of the said Resolutions being again severally read, and the question of concurrence being separately put thereon, the house divided on each, and the names being called for, they were taken down, as followeth :

## Yeas.—45.

The

## TO GOVERNOR-GENERAL, RESPECTING CIVIL LIST, &amp;c. 11

The third and last of the said resolutions being again read, and the question of concurrence being put thereon, it was agreed to unanimously, and

Third Resolution carried.

*Resolved*,—That this House doth concur with the Committee in the said Resolutions.

Mr. Dunscomb moved, seconded by Mr. Morin,—

That the said Resolutions be referred to a Committee of seven Members, to inquire into the best means of investigating the subject with a view to its final adjustment, and to report thereon from time to time by Bill or otherwise, with power to send for persons, papers, and records.

Resolutions referred to Committee of seven.

The Honourable Mr. Viger moved in amendment, seconded by Mr. Berthelot, that the words "by Bill or otherwise," be struck out of the said motion.

The question having been put upon the motion of amendment, a division ensued, and it passed in the negative.

The question being then put upon the main motion, a division also ensued, and it was carried in the affirmative.

*Resolved*,—Accordingly.

Mr. Dunscomb moved, seconded by Mr. Armstrong,—

That the following members do compose the said committee, Mr. Morin, Mr. Noel, Mr. Raymond, Mr. Taschereau, Mr. Armstrong, and the Hon. Mr. Moffatt; and that the 77th rule of this House be dispensed with, in so far as relates to the appointment of this committee.

The question having been put upon the said motion, a division ensued, and it was carried in the affirmative.

*Ordered*,—Accordingly.

MR. BURNET, from the committee of the whole House on the Report of the select committee, to which were referred the resolutions of this House of the 28th of July last, relative to the laws of that part of the Province heretofore known as Lower Canada, touching the tenure of lands, and commonly known as "Feudal Tenure," reported, according to order, the resolution of the said committee, which resolution was again read at the clerk's table, and is as followeth:—

Chairman of Com-  
mittee of whole, on  
Report on Feudal  
Tenure, reports  
Resolution.

*Resolved*,—That an humble address be presented to his Excellency the Governor-general, representing that this House, being desirous of improving the condition and promoting the welfare of the people, by removing in a manner consistent with justice to all parties concerned, the difficulties and inconveniences which have resulted and may hereafter result, from the tenure of lands commonly called the "Seigniorial Tenure," as it obtains in that part of the Province heretofore called Lower Canada, and being of opinion that, to facilitate legislation on this important subject, an inquiry ought to be had into the state of the law, and other circumstances connected with the said tenure, and its operation generally, into the relative position of the seigniors and the censitaires, and into the means of establishing a general and uniform system of commutation, on a fair and equitable basis, do humbly pray his Excellency to be pleased to appoint a commission for the purpose of prosecuting the said inquiry, and assuring his Excellency that whatever expense may be incurred for the accomplishment of that purpose, will be made good by this House; also humbly representing to his Excellency, that the end in view, in the opinion of this House, would be best attained if a fit and proper person residing in that part of this Province formerly known as Lower Canada, and well versed in the law and practice of the said tenure, and being a practitioner at the bar, or a notary of long standing, were appointed to inquire into the feudal and seigniorial tenure, and two other commissioners, having been long resi-

Resolution for

Excellency on the  
Feudal Tenure.

Resolution for  
Address to his  
Excellency on the  
Feudal Tenure.

dent in the said part of this Province, were appointed to be commissioners jointly with the commissioner above mentioned, and if the said chief commissioner were instructed to make the necessary examination and search into all public records and notarial acts, from the time of the settlement of the country, and to establish for several distinct periods the true conditions on which grants of land on seigniory have been made by the Crown, and on which lands have been conceded *en arrière fief* or *en censive et roture*, and to collect all other requisite information connected with the said subjects ; to inquire into the laws which have from time to time governed, and now govern the said tenures ; to inquire generally into the present working of the system, by proper investigation in every section of Lower Canada, in a number of seigniories, indifferently chosen by a majority of the said commissioners, for the purpose of ascertaining as far as possible the present rents, dues, reservations and charges of any kind ; the probable quantity of unconceded seigniorial lands in the Province, and their quality and value ; and also the quantity of lands conceded but not improved ; the value of seigniorial mills in the Province, and the annual average value of *lods et ventes* paid or accruing thereon, and of obtaining such further information as may tend to throw light on the subject ; to consult the seigniories and censitaires respectively upon the most proper and equitable means of effecting, by law, a commutation of the Feudal and Seigniorial Tenures (such commutation being founded upon a due regard to the rights and interests of all parties), and also upon the most proper means of effecting an arbitration in cases where it may be required ; and if, upon consideration of such information and statements obtained by him and the other commissioners, the said commissioners should report their proceedings and opinions to his Excellency, in order that the same might be submitted, with the original minutes of all proceedings, to the Provincial Legislature.

Motion to concur  
in Resolution.

Mr. Dunscomb moved, seconded by Mr. Watts,—  
That this House doth concur with the committee in the said resolution.

The question having been put upon the said motion, a division ensued, and the names being called for, they were taken down as followeth :

EXTRACT from the Journals of the Legislative Assembly of the Province of  
Canada; 3d of October 1842.

THE Honourable D. Daly laid before the Board, by command of his Excellency the Governor-general, copy of a preliminary Report made to him by the Commissioners of Seigniorial Tenure Inquiry:—

“ To his Excellency the Right honourable Sir Charles Bagot, G.C.B., one of Her Majesty's most Honourable Privy Council, Captain-general and Governor-in-chief of Her Majesty's Provinces of Canada, New Brunswick, and Nova Scotia, and of the Island of Prince Edward, and Governor-general of all Her Majesty's Provinces on the Continent of North America and the Island of Prince Edward, &c. &c. &c.

“ May it please your Excellency,

“ Having been honoured by your Excellency with the joint commission to inquire into the Feudal and Seigniorial Tenure of lands in that part of the Province called Lower Canada, appointed by you in pursuance of an Address of the Honourable the House of Assembly, of the 7th September 1841, we have the honour of reporting that we proceeded, on the 7th July last, to continue the labours of the former Board of Commissioners, and to discharge, as far as we might be enabled to do so, the important trusts reposed in us.

“ Since that period our Board has been constantly in session, and we have unceasingly employed such powers and opportunities as lay within our reach to obtain the information deemed by the Honourable House of Assembly necessary as a basis of legislation, and to accomplish the objects of the present investigation.

“ We respectfully invite your Excellency's attention to the variety of matters submitted for our inquiry by our Commission, which is founded on the said Address

“ By that Commission we are commanded—

“ 1. To make the necessary examination, and search into all public records and notarial acts, from the time of the settlement of the country, and to establish for several distinct periods the true conditions on which grants of land in seigniority have been made by the Crown, and on which lands have been conceded *en arrière fief*, or *en censive et roture*, and to collect all other requisite information connected with the said subjects.

“ 2. To inquire into the laws which have from time to time governed and now govern the said tenures.

164.

“ 3. To

## 14 ADDRESS OF THE HOUSE OF ASSEMBLY OF CANADA

" 3. To inquire generally into the present working of the system, by proper investigations in every section of Lower Canada, in a number of seigniories indifferently chosen, for the purpose of ascertaining, as far as possible, the present rents, dues, reservations, and charges of any kind; the probable quantity of unconceded seigniorial lands in the Province, and their quality and value, and also the quantity of lands conceded, but not improved; the value of seigniorial mills in the Province, and the annual average value of *lods et ventes* paid or accruing thereon; and of obtaining such further information as may tend to throw light on the subject.

" 4. To consult the seigniors and censitaires respectively, upon the most proper and equitable means of effecting, by law, a commutation of the feudal and seigniorial tenure (such commutation being founded upon a due regard to the rights and interests of all parties), and also upon the most proper means of effecting an arbitration in cases where it may be required.

" To show how far the purposes of the Commission may be served or advanced by us, we beg leave to follow the order of classification above stated.

" As regards the first section, we have humbly to represent that the powers conceded to us by the Commission have enabled us to secure valuable evidence derivable from the public records existing in the Secretarial Department, and in the custody of judicial officers, in which last category are the original documents of notaries deceased and absent; but we have the honour of declaring that we have no authority to compel the attendance of persons, or to force the production of instruments in the hands of notaries actually exercising their professional functions, a voluntary production of which by them would be an unauthorized breach of duty towards individuals.

" On this head, therefore, we have to say, that we are in possession of information requisite to form an opinion touching the conditions upon which grants of land in seigniority have been made by the Crown; but we regret to say that, from our limited powers, we cannot exhaust the subjects of the rates and conditions of concession *en censive*, of the relations of seignior and censitaire, and of those arising out of sub-infeudation.

" We, consider that our arriving at something proximate to the real state of the matter, would not provide the means of revising any judgment to which we might now be led, by what may be deemed defective examination.

" Having had more clearly within our control and consideration the topics secondly enumerated, we have the honour of stating, for your Excellency's information, that as an isolated portion of the matter referred to us, we might, with a due allowance of time for discussion, prepare ourselves to make a final report on the conclusion we may come to on that leading principle in our inquiry.

" On the third of the heads into which we have divided the subjects proposed for our investigation, we have to remark, that unless we are clothed with some sufficient compulsory power and authority to discover the truth, and arrive at accuracy of detail, we cannot indulge the least hope of being able to lay before your Excellency that degree of purely statistical information which it would seem to have been the wish of the Honourable the House of Assembly to be furnished with. Although a willingness has been expressed by the parties interested in the question to afford us that statistical information, which can be procured only through their means or by their instrumentality, and although by inviting personal conference, and soliciting written statements, we have used our utmost endeavours to prevail on those parties to place us in possession of the objects of our researches, we have to regret that our efforts have been so far unavailing as to leave our knowledge on this extensive branch of the subject extremely imperfect, and in an unfit state to be transmitted to your Excellency.

" It remains for us respectfully to observe to your Excellency, with regard to the fourth division of the subject, that both by oral intercourse and in written communications, a great number of schemes have been proposed, as well by seigniors as by censitaires, for effecting by law a commutation of the feudal and seigniorial tenure; yet there is in these plans a variety so perplexing and difficult to reconcile or compromise, that, apart from the other labours of our Commission, we have not had sufficient leisure to decide which may be the most eligible or most conformable to the views entertained by the Honourable the House of Assembly, of establishing a mode of commutation by equitable means, and founded upon a due regard to the rights and interests of all parties.

" It

## TO GOVERNOR-GENERAL, RESPECTING CIVIL LIST, &amp;c. 15

"It becomes necessary also to represent to your Excellency, with respect to many of those schemes of commutation, prepared with great care and consideration, that they are dependent for their value and soundness upon accurate statistical information and details, the attainment of which, however, for the want of compulsory powers and authority, we must confess we deem a fruitless task.

"All which is respectfully submitted, by your Excellency's

"Most obedient humble servants,

(signed)

COPY of a DESPATCH from the Right Hon. Sir *C. T. Metcalfe*, Bart. G.C.B. to Lord *Stanley*.

My Lord,

Government House, Kingston,  
18 November 1843.

I HAVE the honour to submit an Address to Her Majesty from the Legislative Assembly of this Province, relating to the importation of foreign, and especially of French, works into this Province; which I beg leave to recommend to your Lordship's favourable consideration.

I have, &c.  
(signed) *C. T. Metcalfe.*

TO the QUEEN'S Most Excellent Majesty.

Most Gracious Sovereign,

WE, Your Majesty's dutiful and loyal subjects, the Legislative Assembly of Canada in Provincial Parliament assembled, humbly beg leave to represent,

That the advancement of useful knowledge is of such primary importance as to merit the attention of every government, but more especially of any government conducted on the principles of the British Constitution:

That to promote this invaluable object, one of the most efficacious means is to facilitate the introduction of the best works of useful information at the least possible expense:

That, without now calling in question the wisdom of those regulations by which the importation of reprints of copyright works published in the United Kingdom is prohibited,

No. 1.  
Right Hon. Sir  
*C. T. Metcalfe* to  
Lord Stanley,  
18 Nov. 1843.

it cannot, in our opinion, be wise or consistent with sound policy to discourage the importation of works promoting useful information, originally written and published in foreign countries:

That, in consequence of the peculiar situation and peculiar circumstances of this country, a very large portion of the inhabitants speak the French language, and that, for this reason, the standard works required by them in the three great departments of religion, literature, and law, are French, and must be obtained from France.

We therefore humbly pray that Your Majesty will be pleased to adopt such measures as may in Your wisdom be deemed expedient to remove the discouragement arising from the duties imposed by the Imperial Act on works of the class above mentioned, and calculated to promote the dissemination of important knowledge; and we beg to assure Your Majesty of our conviction that in complying with this prayer, Your Majesty will increase the happiness and prosperity of Your Majesty's subjects in this province.

Legislative Assembly Hall, Kingston,  
10 November 1843.

No. 2.  
Lord Stanley to  
Right Hon. Sir C.  
T. Metcalfe, 21  
Dec. 1843.

COPY of a DESPATCH from Lord *Stanley* to the Right Hon. Sir *C. T. Metcalfe*,  
Bart. G.C.B.

Sir,

Downing-street, 21 December 1843.

I HAVE laid before The Queen the Address to Her Majesty from the Legislative Assembly of Canada in Provincial Parliament assembled, dated the 10th November 1843, praying "that Her Majesty will be pleased to adopt such measures as may in Her wisdom be deemed expedient to remove the discouragement arising from the duties imposed by the Imperial Act on works of the class above mentioned\*, and calculated to promote the dissemination of important knowledge."

The Queen's solicitude for the general welfare of Her Majesty's Canadian subjects, and especially for the diffusion of useful knowledge among all classes of the inhabitants of the Province, would have recommended this subject to the Queen's most careful attention, even had it not been brought under Her notice with all the authority derived from the opinion and wishes of the House of Assembly. But Her Majesty finds that the Imperial import duty leviable in Canada on foreign books originally printed and published in foreign countries, is the same as on all other manufactures of paper; that is, seven per cent. *ad valorem*, a duty imposed in the fifth & sixth year of Her Majesty's reign, in substitution for a previous duty of 30 per cent. *ad valorem*. If any evidence has been collected by the Assembly to show that this low rate of duty materially impedes the introduction into the province of original French works from France, the Queen, on being placed in possession of that evidence, will lose no time in considering how the evil may be best corrected. But in the absence of any such information, Her Majesty being unapprised of the extent or of the sources of the mischief, is not able to judge by what means it may be most effectually and properly remedied.

I have, &c.  
(signed) *Stanley*.

COPY of BILL to Incorporate the CHURCH SOCIETIES of the United Church of *England and Ireland*, in the Dioceses of *Quebec and Toronto*.—(Passed 1 December 1843.)

(*Presented pursuant to Act 3 & 4 Vict. c. 35.*)

---

*Ordered, by The House of Commons, to be Printed, 1 April 1844.*

---

AN ACT to Incorporate the Church Societies of the United Church of *England and Ireland*, in the Dioceses of *Quebec and Toronto*.

WHEREAS it has been represented to the Legislature of this province, that certain persons hereinafter named, and divers others, inhabitants of Lower Canada, and also certain other persons hereinafter named, and divers others, inhabitants of Upper Canada, have respectively established themselves together under a constitution, rules, and regulations, and have contributed or engaged to contribute considerable sums of money, and have given or granted, or promised to give or grant, lands or real estate for the following objects; that is to say, First, for the encouragement and support of missionaries and clergymen of the united Church of England and Ireland severally within the dioceses of Quebec and Toronto, and for creating a fund towards the augmentation of the stipends of poor clergymen, and towards making a provision for those who may be incapacitated by age or infirmity, and for the widows and orphans of the clergy of the said Church respectively, in the said dioceses: Secondly, for the encouragement of education, and the support of day schools and Sunday schools in the said dioceses respectively, in conformity with the principles of the said Church: Thirdly, for granting assistance, where it may be necessary, to those who may be preparing for the ministry of the Gospel in the said church within the said dioceses respectively: Fourthly, for circulating within the said dioceses respectively, the Holy Scriptures, the Book of Common Prayer of the said Church, and such other books and tracts as shall be approved by the several central boards or managing committees of the said associations: Fifthly, for obtaining and granting aid towards the erection, endowment, and maintenance of churches, according to the establishment of the said Church in the said dioceses respectively, the creation and maintenance of parsonage houses, the setting apart of burial grounds and churchyards, the endowment and support of parsonages and rectories according to the said establishment, and the management of all matters relating to such endowments. And whereas it would tend greatly to facilitate and promote the purposes of the said associations that they should be severally incorporated and empowered to hold property in mortmain without letters of licence, and to manage, administer, alienate, or dispose of the same for the uses and purposes aforesaid; and to make and enforce rules and regulations respectively for the government of the said associations severally, and for the better attaining the purposes aforesaid; be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the Province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, intituled, "An Act to re-unite the Provinces of Upper and Lower Canada, and for the Government of Canada," and it is hereby enacted by the authority of the same, that the Lord Bishop of the said diocese of Quebec, the Lord Bishop of Montreal, or the Bishop administering the said diocese for the time being, and William Smith, Andrew W. Cochran, Henry Jessopp, Henry J. Noad, John Racey, James H. Kerr, David Burnet, W. H. Leaycraft, John M. Fraser, the Reverend C. L. F. Haensel, George Hall, James Bolton, the Reverend George Mackie, the Reverend Edward Cusach, Robert Symes, the Reverend Edmund W. Sewell, William Price, Noah Freer,

Edward Bowen, John G. Irvine, Hammond Gowen, Sir James Stuart, Baronet, Matthew Bell, William Phillips, Henry Le Mesurier, junior, Edward L. Montizambert, Thomas Triggs, Peter Patterson, George B. Hall, James Turnbull, William Stevenson, James B. Forsyth, Alexander D. Bell, James Dyke, William Bowes, R. M. Harrison, H. S. Dalkin, Edward Boxer, Archibald Campbell, Charles Secretan, James Mackenzie, E. P. Woolrich, George H. Parke, Samuel M'Caulay, James J. Lowndes, G. Newton, Charles Secretan, Thomas Glover, Robert Daikers, H. W. Welch, and such other persons as are now members of the said association of the diocese of Quebec, according to the existing constitution, rules and regulations thereof, and their successors to be elected in the manner hereinafter provided, and such other persons as shall from time to time hereafter be elected to be members of the said association in the manner hereinafter provided, shall be and are hereby declared to be a body corporate and politic, in name and in deed, by the name of "The Church Society of the Diocese of Quebec," and that the Lord Bishop of Toronto, the Reverend George O'Kill Stuart, Robert Simpson Jameson, Levius Peter Sherwood, James B. Macaulay, Jonas Jones, Christopher Alexander Hagerman, Peter Boyle De Blaquiére, William Henry Draper, John Simcoe Macaulay, James Gordon, John Boulton, John Solomon Cartwright, D'Arcy Boulton, Mahlon Burwell, John B. Askin, Thomas Mercer Jones, Frederick Widder, William B. Jarvis, Henry Ruttan, Joseph Wells, Walter Boswell, Zaccheus Burnham, T. A. Stewart, William Dickson, James Kerby, William Allan, George Crookshank, R. C. Wilkins, Philip Vankoughnet, Gerrard Lloyd, John Macaulay, Sir Allan Napier Macnab, Guy C. Wood, George Salmon, Henry Sherwood, and such other persons as are now members of the said association of the diocese of Toronto, according to the existing constitution, rules and regulations thereof, and their successors to be elected in the manner hereinafter provided, and such other persons as shall from time to time hereafter be elected to be members of the said association in the manner hereinafter provided, shall be and are hereby declared to be a body corporate and politic, in name and in deed, by the name of "The Church Society of the Diocese of Toronto," and that by the same names the said associations shall have each perpetual succession and a common seal, with power to change, alter, break, or make new the same, as often as they shall judge expedient, and that they and their successors by the same names respectively may sue and be sued, implead and be impleaded, answer and be answered unto in any Court of Record, or other place of Judicature within this province; and that they and their successors, by the name aforesaid, shall be able and capable in law, respectively, to purchase, take, have, hold, receive, enjoy, possess, and retain without licence in mortmain or *Lettres d'Amortissement*, all messuages, lands, tenements, and immoveable property, money, goods, chattels, and moveable property, which have been or hereafter shall be paid, given, granted, purchased, appropriated, devised or bequeathed in any manner or way whatsoever to, for, and in favour of the said church societies respectively, to and for the uses and purposes aforesaid, or any of them, and to do, perform and execute all and every lawful act and thing useful and necessary for the purposes aforesaid, in as full and ample a manner to all intents, constructions and purposes as any other body politic or corporate by law may or ought to do.

And be it enacted, that all lands, messuages, tenements, hereditaments, or immoveable property, and all rents, sum and sums of money, charged upon and issuing or payable out of any lands, messuages, tenements, hereditaments, or immoveable property as aforesaid, and all sums of money, goods, chattels, effects, or moveable property which have been or shall hereafter be paid, given, granted, purchased, appropriated, devised or bequeathed in any manner or way whatsoever to, for or in favour of the said corporations respectively, to and for the uses and purposes aforesaid, shall be and the same are hereby vested in the said corporations respectively, to and for the uses and purposes aforesaid, in such manner and form, and subject to such bye-laws, rules and regulations as may be made and passed by the said corporations respectively, concerning the same, in the manner hereinafter provided; and that the said corporations or the central boards thereof, or such other executive or managing committees thereof as shall from time to time be appointed and authorised for this purpose by the bye-laws, rules and regulations, which may be made and passed in the manner hereinafter mentioned, for the government of the said corporations, shall respectively have power and authority to alienate or exchange, and to demise, let, and lease for any term of years, such messuages, lands, tenements, hereditaments and immoveable property as shall be so

as

## IN THE DIOCESES OF QUEBEC AND TORONTO.

as aforesaid given, granted, purchased, appropriated, devised, or bequeathed to the said corporations respectively, for all or any of the purposes aforesaid, and to have, receive and take the purchase-money, consideration or price, rents, issues, or profits thereof; provided always, that the said corporations or central boards thereof, or such other executive or managing committees as aforesaid, shall respectively have, receive, take and hold such purchase-money, consideration or price, rents, issues, or profits for the uses and purposes hereinbefore mentioned and set forth, or some or one of them, and for none other.

And be it enacted, that the said corporations and their successors shall and may respectively, from time to time, hold assemblies and meetings of the said corporations, which shall be called together in such manner and at such times and places as shall be directed and appointed by the bye-laws, rules, and regulations of the same, to transact the business of the said corporations; and shall and may at any such meeting elect such persons to be members of the said corporations respectively, as they or the major part of them then present shall think fit: provided always, that no act done in any such assembly or meeting of the said corporations shall be valid or effectual unless six persons of such corporation at the least shall be present, and the major part of them consenting thereto.

And be it enacted, that the said corporations, or the major part of those who shall be present at any of the meetings of the said corporations, to be held in manner aforesaid, shall and may respectively make and ordain any constitution, bye-laws, rules, and regulations whatsoever, which to them, or the major part of them then present, not being fewer in number than six, as aforesaid, shall seem meet, reasonable, or requisite, touching and concerning the well ordering and governing of the affairs and business of the said corporations; and the due administering and improving the property thereof, and the more effectually promoting the purposes thereof, as aforesaid; and such constitution, bye-laws, rules, and regulations in like manner from time to time to abrogate, repeal, change or alter, as may be found expedient, which constitution, bye-laws, rules, and regulations shall be binding upon, and shall be observed, performed, and kept by the members of the said corporations respectively: provided always, that the same shall not be repugnant or contrary to the aforesaid purposes of such corporations, or to the laws in force in this province.

Provided always, nevertheless, and be it enacted, that no such constitution, bye-law, rule, or regulation of either of the said church societies of the dioceses of Quebec and Toronto, nor any abrogation, repeal, change, or alteration of the same, shall be of any force or effect until it shall have been sanctioned and confirmed by the Bishop of or administering such diocese for the time being, by writing under his hand.

And be it enacted, that nothing herein contained shall effect, or be construed to effect, in any manner or way the rights of Her Majesty, her heirs or successors, or of any person or persons, or of any body politic or corporate, such only excepted as are hereinbefore mentioned and provided for.

And be it enacted, that this Act shall be deemed a public Act, and shall be judicially taken notice of as such by all judges, justices of the peace, and other persons whatsoever, without being specially pleaded.

Passed by the Legislative Assembly, Thursday 30th November 1843.

(signed) *W. B. Lindsay,*  
Clerk of Assembly.

\* The sum of 33,581*l.* 3*s.* was paid in the year 1842-43, for building the “ Sydenham ” steam-vessel in Canada, but as the expense was not incurred upon account of the Canadas, it has been excluded from this Return.

*Memorandum.*—No sums have been specially asked for from Parliament by the Naval Department from 1837 to 1843, inclusive, in consequence of the insurrection in Canada. The increased expenditure of the navy for 1839-40, was defrayed by the Lords of the Treasury out of the special vote for Canada of that year.

(a) The full amount of supplies, purchases of provisions, forage, fuel, and light, paid for in Canada, is included in this Return, for the respective years. The amounts of the stoppages for provisions issued on account of regiments, accounted for to Secretary at War, as regards the year 1835-36, and the sums paid over as the value of provisions, forage, and fuel, for the subsequent years, viz. 1836-37 to 1842-43, have been obtained by the Treasury from the Secretary at War; and the amount of stoppages paid into the Commissariat chest on the spot, together with the amount of regimental stoppages and value of supplies for regimental services (obtained from the War Office), have been deducted in the Abstract from the gross amount of supplies furnished to Canada in the year, whether by purchases on the spot, or shipments from England.

(b) Under this head are included various charges for services not generally considered as connected with Commissariat Expenditure, and there may be a doubt whether they come within the purview of the Order of the House of Commons; it has, however, been deemed best to insert them.

## C A N A D A,

7 VICTORIÆ, cap. XLV.

AN ACT to incorporate *Charles Cunningham, Richard Norman, Samuel Amory,*  
and Others, forming a Joint Stock Company for carrying on the Fishery  
in the *Gaspé* District and Gulf of *Saint Lawrence*, and Coal Mining in the  
said District.

9 December 1843.

**W**HEREAS the improvement and extension of the British Fishery in the Gulf of St. Lawrence and Bay of Chaleurs, and other places on the coast of the Province of Canada, are of great importance, not only to the said Province but to the British Empire: And whereas it is also of great importance to the said Province that its mines and mineral wealth should be properly worked and brought into useful operation; and to accomplish the purposes aforesaid, it is expedient to establish a body politic and corporate, with the powers, rights and privileges hereinafter contained, and more particularly with power to the said body politic and corporate to hold lands, tenements, and hereditaments necessary to the carrying on their business in the said Province of Canada, to them and their successors, either by acquisition from the Crown or by purchase from individuals; and to work any coal mine or coal mines found thereupon, mines and minerals thereupon appurtenant and belonging, and with full power to work the same, and to hold and possess immoveable and moveable property of every description: And whereas Charles Cunningham, of Clarges-street, in the county of Middlesex; Richard Norman, of Bryanstone-square, in the said county; and Samuel Amory, of Throgmorton-street, also in the county aforesaid, in that part of the United Kingdom of Great Britain and Ireland called England, esquires, in order to carry the aforesaid purpose into effect, have, by their petition in this behalf, represented that they are, on behalf of themselves and other persons, prepared to raise by subscription a capital of one hundred and fifty thousand pounds sterling, when they shall be duly authorized and protected in so doing, by an Act of Incorporation passed by the Provincial Legislature of Canada, and by a charter from the Crown; BE it therefore enacted, by The Queen's most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the Province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, intituled, “An Act to reunite the Provinces of Upper and Lower Canada, and for the Government of Canada;” and it is hereby enacted by the authority of the same,

Preamble.

THAT

388.

Certain persons incorporated for the purposes mentioned in the preamble.

THAT the said Charles Cunningham, Richard Norman, Samuel Amory, and such and so many other person or persons, bodies politic or corporate, as have become, or shall at anytime hereafter become subscribers or shareholders of or for the capital stock hereinafter mentioned, in manner hereinafter provided, and their respective successors, executors, administrators, and assigns, or such other person or persons, bodies politic or corporate, as shall from time to time be possessed of or entitled to such shares as hereinafter provided, shall be a body politic or corporate in the Province of Canada, in deed and in name, by the name of "The Gaspé Fishery and Coal Mining Company," and by that name shall and may sue and be sued, implead and be impleaded, in all courts of law and equity in the said Province of Canada; and shall, during the continuance of this Act, have uninterrupted succession, with a common seal, which may by them be changed or varied at their pleasure.

Corporate name and powers.

2. And be it enacted, that it shall be lawful for the said Company to engage in and follow the occupation of carrying on the fisheries, and such trade as may be necessary to the carrying on of the said fisheries in the Gulf of St. Lawrence, the Bay of Chaleurs, and elsewhere on the sea coast of Canada: it shall be further lawful for the said Company, their agents and servants, to land (saving always the rights of others) on any part of the said sea coast of Canada, and on the banks or shores of the bays, harbours, creeks, and rivers of the said Gulf, within the said Province (except where the same are private property, or are occupied), to salt, cure, and dry the fish which they may catch or purchase, and to do all such other lawful and needful acts as may be necessary effectually to prepare and export the same for sale to the several markets for which the said fish may be intended.

The Company may carry on fisheries in certain parts of the province.

3. And be it enacted, that it shall be lawful for the said Company to hold to them and their successors, such lands, tenements, hereditaments and immoveable property of every description, as may be necessary to the carrying on the business of the said Company, the value thereof not to exceed at any one time fifty thousand pounds sterling, within the district of Gaspé, in the said province; and that it shall be lawful for the said Company to dig, sink, work, or make mines, pits, and shafts, and to drive drifts, waterfalls, or watercourses, upon and under the surface of the lands, tenements, and hereditaments so acquired by them (without prejudice always to the rights and property of Her Majesty and of any others) by grant or purchase, for the winning and getting of coal, in, upon, or out of any part of the said lands, tenements, and hereditaments; and it is hereby enacted and declared, that if the said Company shall at any time hold such lands, tenements, and hereditaments, and immoveable property as aforesaid, exceeding the aforesaid sum in value, then this Act shall cease and determine, and the said Company shall forfeit all, each, and every the rights and privileges thereby conferred.

They may hold lands to a certain annual value, and may carry on the mining business.

Capital stock to be applied to certain purposes; to be personal property.

4. And be it enacted, that the capital or joint stock of the said Company shall be used and applied in establishing and carrying on the said undertakings, and for the purposes aforesaid; and that the shares in the said advantages, and in the profits and undertakings thereof, shall be and be deemed personal estate and moveable property in the province of Canada, and as such personal estate and moveable property shall be transmissible accordingly.

Subscribers of sums not less than 100 £. to be deemed stockholders, and entitled to a share of profits.

5. And be it enacted, that all and every person and persons, bodies politic or corporate, by or from whom any subscription shall be made or accepted, or any payment made pursuant to the provisions herein contained for that purpose, for or towards the raising of the said capital of one hundred and fifty thousand pounds sterling as aforesaid, his, her or their successors, or executors or administrations and assigns respectively (no such subscription being less than one hundred pounds sterling), shall have and be entitled to a share of and in the said capital or joint stock of the said Company, in proportion to the monies which he, she, or they shall have so contributed towards making up the same, and shall have and be entitled to a proportionable share of the profits and advantages attending the capital of the said Company, and shall be admitted to be a proprietor or proprietors of and in the same.

The Company shall cause the names of all shareholders to be entered in proper books.

6. And be it enacted, that the said Company, or the directors to be appointed by virtue of this Act, shall cause the names and designations of the several persons, bodies politic and corporate, who shall subscribe for, or at any time hereafter be entitled to a share or shares in the said Company, with the number of such share or shares, and also the proper number by which every share shall be distinguished,

distinguished, to be fairly and distinctly entered in a book or books to be kept by their clerk or secretary.

7. And be it enacted, that the several persons, bodies politic or corporate, who shall subscribe for and towards the said capital, or shall at any time hereafter have or hold any share or shares in the same, shall and they are hereby required to pay the sum or sums of money by them respectively subscribed, or such part or portions thereof as shall from time to time be called for pursuant to or by virtue of the provisions of this Act, at such times and places, to such person or persons, and in such manner as shall be ordered and directed by the directors for the time being of the said Company, or such of them as shall be present and constitute a Board of Directors, or the majority of them; and in case any person or persons, bodies politic or corporate, shall neglect or refuse to pay any such sums of money, at such times and in such manner as shall be so ordered and directed as aforesaid, it shall be lawful for the said Company to sue for and recover the same, together with lawful interest from such appointed time of payment, from such person or persons, bodies politic or corporate; or in cases where two or more persons, bodies politic or corporate, shall have jointly subscribed for, or be jointly possessed of any one or more share or shares in the said Company, then from all, or any or either of such persons, bodies politic or corporate.

Stock subscribed for to be paid up by instalments; and if not paid, the amount may be recovered by the Company.

8. And be it enacted, that whenever two or more persons, bodies politic or corporate, shall be jointly possessed of or entitled to any share or shares in the said Company, the person whose name shall stand first in the book of the said Company as proprietor thereof, shall, for all the purposes of the said Company and of this Act, be deemed and taken to be the owner and proprietor of such share or shares; and all notices required to be given to the owner or proprietor of any share or shares in the said Company, shall and may be given to or served upon such person or body whose name shall so stand first in the books of the said Company; and such service upon such person or body shall be deemed and taken to be a service upon all the owners or proprietors of such share or shares, for all the purposes for which such service is intended to be made upon the owners or proprietors of such share or shares; and all such owners or proprietors shall be entitled to give their vote or votes in respect thereof, by the person or body whose name shall stand first in the books of the Company as such proprietor of such share or shares; and his vote shall on all occasions be deemed and allowed to be the vote in respect of the whole property in such share or shares, without proof of the concurrence of the other proprietor or proprietors of such share or shares.

Which of the joint owners of any share or shares shall vote in respect thereof, &c.

9. And be it enacted, that it shall be lawful for the several proprietors of the said Company, their executors, administrators, successors and assigns, to sell and transfer any of their share or shares, and every transfer thereof may be in the form and to the effect given in the Appendix to this Act, or in any other convenient form to be devised by the said Company; and every such transfer shall not only be under the hand or hands of the member or members transferring such share or shares, but of the person or persons, bodies politic or corporate, to whom the same shall be transferred, or some person by such transferer or transferers, and transferee or transferees lawfully authorized, and which said transfer shall be made and entered in a book to be kept by the said Company for that purpose, for which a fee shall be paid to and for the use of the Company not exceeding ten shillings for each share transferred, to be from time to time fixed by the directors, or a majority of them; and that such transfer shall effectually transfer the whole estate and interest in such share or shares of the person or persons so making or authorizing the same, to the person or persons, bodies politic or corporate, so taking or accepting such transfer; which person or persons, bodies politic or corporate, shall henceforth become in all respects members of the said Company, in respect of such share or shares, in the place of such person or persons so transferring the same, or authorizing the same to be transferred; and that until such transfer shall be made and entered in such book in manner aforesaid, no person or persons claiming an interest in any such share or shares by purchase or otherwise, shall be deemed the proprietor or proprietors thereof, or shall be entitled to any dividend or beneficial interest in the said capital stock in respect thereof, nor until six calendar months after such transfer shall have been made, be entitled to vote at any meeting or meetings in respect of such share or shares; and a copy of such transfer, extracted from the said book, and signed by the clerk, secretary, or other officer of the said Company

Stock may be transferred by assignment in a certain form.

Votes on transferred stock.

duly authorized thereto, shall be sufficient evidence of every such transfer, and be admitted and received as such in all courts of law.

Certain powers  
vested in the Board  
of Directors.

on which instal-  
ments duly called  
for shall not be  
paid in.

Sale of such stock.

Directors, auditors,  
and secretary, how  
appointed.

Board.

Meetings of the  
shareholders, how  
called and held.

10. And be it enacted, that the directors hereinafter mentioned, or the directors for the time being, or such of them as shall be present at and constitute a Board of Directors, or the majority of them, shall have full power to make such call or calls for money from the several subscribers and proprietors for the time being of the said Company, their respective executors, administrators, successors, and assigns, not exceeding in the whole the sum of one hundred pounds sterling on each of the shares held by him, her, or them respectively, as the said Board of Directors shall from time to time find wanting and necessary for the purposes of the said Company, so that no one call do exceed the sum of ten pounds sterling for or in respect of any one share of one hundred pounds, and so that no call or calls be made for any instalment short of three months public notice; and the sum or the several sums of money so to be called for shall be paid to the bankers of the said Company for the time being, or to such other person or persons, and at such time and place as shall be appointed by the said Board of Directors, of which time and place twenty days previous notice at least shall be given in the London Gazette and in such two or more of the daily London Newspapers, and in the Quebec Gazette published by authority, and in such two or more of the weekly or daily Canada newspapers, as the said Board of Directors shall direct: provided always, that any person or persons may, if he or they think fit, pay down at any one time the full amount of their subscription and stock, who shall in that case be entitled to a proportion of the profits arising thereupon from the day of the payment thereof.

11. And be it enacted, that if any proprietor or proprietors of any share or shares in the said Company, his, her, or their executors, administrators, successors, or assigns, shall neglect or refuse to pay any call or calls which shall be so made as aforesaid, during the space of six calendar months next after the time appointed for payment thereof, together with lawful interest from the appointed time of payment, then and in every such case such person or persons, bodies politic or corporate, so neglecting or refusing, shall absolutely forfeit all his, her, or their share or shares in the said Company, and all profits and advantages thereof, and all money theretofore advanced by him, her, or them on account thereof, to and for the use and benefit of the said Company; and all shares which shall or may be so forfeited, shall or may, at any time or times thereafter, be sold at a public sale for the most money that can be gotten for the same, and the produce thereof shall go to and make part of the capital stock of the said Company, and such share or shares so forfeited and sold shall be assigned and transferred to the purchaser by an instrument under the common seal of the said Company, in the manner required upon other transfers of any share or shares; but no advantage shall be taken of such forfeiture of any share or shares until the same shall be declared to be forfeited at some general or special meeting of the said proprietors which shall be held not earlier than six calendar months next after the said forfeiture shall happen, and that every such forfeiture so to be declared shall be an absolute indemnification and discharge to and for the proprietor or proprietors, or his, her, or their executors, administrators, successors, and assigns so forfeiting, against all actions, suits and prosecutions, and from all liability in respect thereof, and for any breach of contract or other agreement between such proprietor or proprietors, his, her, or their executors, administrators, successors, and assigns, and the said Company, in respect of such share or shares, with regard to the future carrying on and management of the said Company.

12. And be it enacted, that for the better ordering, managing, and governing the affairs of the said Company, and for making and establishing a continual succession of persons to be directors and auditors of the said Company, there shall be from time to time constituted in manner hereinafter mentioned, out of the members of the said Company, a chairman, who shall also be a director, and five other directors, as hereinafter mentioned, and two auditors of the said Company, and a secretary; which chairman and other directors, or any three of them, shall constitute and be called a Board of Directors, for the ordering, managing, and directing, in the manner and under the provisions hereinafter contained, the affairs of the said Company.

13. And be it enacted, that it shall and may be lawful for all and every the members or shareholders of the said Company, from time to time to assemble and

and meet together at any convenient place or places in London, for the choice of a chairman and other directors and auditors, and for the making of bye-laws, rules, orders, and regulations for the government of the said Company, and for other affairs or business concerning the same, six weeks previous notice thereof being given by advertisement in the London Gazette and in two or more of the daily London newspapers, and in the Quebec Gazette and two or more of the Canada newspapers, and that such meeting being so duly assembled, shall, with the assent of the majority of proprietors so assembled, have power to adjourn from time to time as shall be convenient; and that on some day or days within two years from and after the passing of this Act, and in every succeeding year, there shall be yearly and successively chosen all succeeding chairmen, directors, and auditors of the said Company, out of the members of the said Company, by a majority of the votes of all and every such members of the said Company in general meeting assembled, as shall be personally present, and of all bodies politic and corporate who may vote by deputation under their common seal at such meeting, who shall be entitled to vote in respect of their share in the said capital stock of the said Company, in the proportions following, that is to say: that every holder of five, and not less than ten shares in the said capital stock, shall be entitled to one vote; every holder of ten, and less than twenty shares, to two votes; every holder of twenty, and less than twenty-five shares, to three votes; and every holder of twenty-five shares or upwards, to four votes, and no more: provided always, and it is hereby enacted, that if any member or shareholder of the said Company shall be unable to attend the said general meeting or meetings by reason of his permanent residence in Canada or elsewhere out of the United Kingdom, it shall be lawful for every such member or shareholder to vote by proxy at such general meeting or meetings, and the vote by proxy of such member or shareholder shall be as effectual and valid, and shall be subject to the same rules, regulations, and directions as if the said member or shareholder attended to vote in person; and the election of such chairmen, directors, and auditors, at the annual or other elections, shall take place by ballot, or in such other mode as shall be determined by any bye-law of the Company to be made as herein provided.

Number of votes to which each shareholder shall be entitled.

Proviso.

In certain cases, shareholders may vote by proxy.

14. And be it enacted, that no person shall at any time be capable of being chosen chairman, or other director or auditor of the said Company, unless he shall, at the time of such election, be a natural-born or naturalized subject of the United Kingdom, and shall also have in his own name and in his own right five shares or more of the capital stock of the said Company, and that no director or auditor shall continue in office longer than the continuance of such his interest in such number of shares in his own name and right, and to his own use; and in case any chairman, or other director or auditor, shall be in any manner divested of or part with such of his shares as to reduce the same to any lesser number than as aforesaid, then the Board of Directors for the time being, at their next meeting when such fact shall be made to appear to them, shall proceed to declare the office of such chairman, or director, or auditor, so divested of or parting with his said shares as aforesaid, to be vacant, and the said vacancy or vacancies so declared shall be filled up in the same manner as in the case of other vacancies, at the general meeting of the said Company which shall be duly held next after such declaration; and that in every case where any chairman or other director or auditor shall happen to die or resign his office before the annual election of such officers, the major part of the members of the said Company, qualified as aforesaid, to be assembled in a general meeting, shall and may elect and choose any other member or members of the said Company, qualified as aforesaid, into the office of such chairman, other director, or auditor that shall so die or resign, which person or persons so to be elected shall continue in his or their said office for such and the like period as the chairman, director, or auditor had to serve, in whose place or stead he shall be so elected.

Qualification of chairman, directors, and auditors.

Vacancies in certain cases how to be filled.

15. And be it enacted, that it shall and may be lawful for the said Company, at any general meeting, to grant such salaries and allowances to be paid to the said chairman, and other directors, and auditors, and secretary of the said Company, as may be deemed expedient.

Shareholders at general meetings may fix the remuneration of officers.

16. And be it enacted, that upon the requisition in writing of any ten or more of the members of the said Company, each having not less than five shares in the said capital stock, the Board of Directors shall, within six weeks after such requisition (and of which such notices shall be given as hereinbefore directed),

Special general meetings how called.

Proceeding at such special general meeting.

Proviso.

Shareholders at general meetings may make bye-laws.

Proviso.

Chairman of the Board of Directors to preside at general meetings.  
If not present, a special chairman may be appointed.

What property shall form the capital stock of the Company.

Shareholders not to be liable for more than the amount of their stock.

Additional stock may be raised, if the sum before mentioned shall be insufficient.

summon and call a special general meeting, either for general or special purposes, to be held of the members of the said Company qualified to vote as electors as aforesaid; and in default of the Board of Directors to summon and call such meeting, it shall be lawful for the said ten or more members having such shares as aforesaid, upon six weeks previous notice, by advertisement under their hands in the London Gazette and in two or more of the daily London newspapers, and in the Quebec Gazette and two or more of the Canada newspapers, to summon and hold a special general meeting in London, and there to consider and debate upon any business relating to the government or affairs of the said Company; and in case such special general meeting shall have been convened for any special purpose, then to proceed in such special matter, and to come to any determination or to despatch any business belonging to such special purposes, or otherwise to come to any resolution or resolutions for the further examination into the matters relating to the affairs and government of the said Company; and that it shall and may be lawful, in pursuance of any resolution by the majority of the members composing such special general meeting, to adjourn the same to a day then to be fixed upon, and so from time to time, and that such special general or adjourned general meeting, composed of members qualified as aforesaid, shall be holden finally to determine by the majority of their voices upon all resolutions relating to the affairs and government of the said Company: provided always, that in every such case the requisition and summons for a general meeting shall express the purpose thereof.

17. And be it enacted, that it shall and may be lawful to and for all and every the members of the said Company, qualified to vote as aforesaid, in a general meeting duly assembled, by the majority of votes of those there present, to make and constitute such bye-laws, rules, orders and regulations, for and relating to the affairs and government of the said Company, so that such bye-laws, rules, orders and regulations be not repugnant to the laws and statutes of this province, nor repugnant to any of the enactments herein contained: provided always, that such bye-laws, rules, orders and regulations, be duly recorded in the public book of the said Company, so that the same may be at all seasonable times accessible to the members and officers of the said Company, and others whom it may concern.

18. And be it enacted, that the chairman of the Board of Directors shall preside and act as chairman of the said general meetings; and if it shall so happen that at any meeting of the said directors, or at any general meeting of the said Company, the said chairman shall not attend, it shall be lawful for the majority of the directors then present to appoint a chairman for that occasion; and in case no director shall be present at a general meeting of the said Company, or in case the director or directors present shall not appoint a chairman for such occasion, it shall be lawful for the members of the said Company then present, or a majority of them, to appoint a person to preside at such meeting, and the chairman of the Board of Directors, or other person presiding at any such meeting, shall, in case of an equality of votes, have a second or casting vote.

19. And be it enacted, that all sums of money paid and received in respect of the shares of the said Company, together with all acquisitions or investments whatsoever, whether real or personal, immoveable or moveable, or wheresoever lying, being, and situated, whether vested in the said Company in their own name, or in the names of trustees, or in what manner soever the same shall be vested, shall form and constitute the joint or capital stock of the said Company and their successors, and shall be liable and answerable for the debts, liabilities, and engagements of the said Company; and no shareholder of the Company shall be liable for, or charged with the payment of any debt or demand due from the Company, beyond the extent of his or her shares in the capital of the Company not then paid up.

20. And be it enacted, that in case the said sum of one hundred and fifty thousand pounds sterling shall be found insufficient, in the opinion of the Board of Directors of the said Company, to carry into full effect the beneficial purposes aforesaid; then and in such case it shall be lawful for the members of the said Company for the time being, in pursuance of any resolution adopted at and confirmed at a subsequent general or general special meeting, to raise and contribute amongst themselves, in such shares and proportions as they shall think proper, or by the admission of new subscribers, any further or other sum of money not exceeding the sum of one hundred thousand pounds sterling; and every

## GASPÉ FISHERY AND COAL MINING ACT.

7

every subscriber towards raising such further sum of money shall be a proprietor of and in the capital of the said Company, and shall have a like vote in respect of his or her shares in the said additional sum so to be raised, and be liable to such forfeitures, and stand interested in all the rights, profits, and advantages of the said Company, in proportion to the sum he, she, or they shall subscribe to the said capital so extended, to all intents and purposes as if such further or other sum hereby allowed to be subscribed for or raised had been originally part of the capital of the said Company, anything hereinbefore contained to the contrary in anywise notwithstanding.

Rights of subscribers to such additional stock.

21. And be it enacted, that the said chairman and other directors for the time being, or any three or more of them, shall and may from time to time, and at all convenient times when and as often as they shall think fit, assemble and meet together at any place or places in London, for the direction and management of the affairs of the said Company, and being so assembled, shall in all respects conform themselves to the bye-laws, rules, orders, and regulations of the said Company, and, subject to all such bye-laws, rules, orders, and regulations, shall have the direction and management of the affairs and business of the said Company, and of all traffic, commerce, and dealings relating thereto; and also the disposition and investment of all cash, bills, notes, and other securities belonging to the Company; and also full power and authority to enter into all contracts, whether under seal or otherwise, on behalf of the Company, and to make and execute all assignments, conveyances, and all other acts to which the corporate seal is required to be affixed; and to appoint a counsel, secretary, and solicitor, and all clerks, agents, servants, or other officers which shall from time to time be considered necessary to be employed in the affairs and business of the said Company; and to allow and pay them such reasonable salaries and allowances, and to displace or remove them, or any of them, as they shall see cause; and generally to do and act in all matters and things whatsoever which they shall judge necessary for the well-ordering and managing of the said Company and the affairs thereof; and to do, enforce, perform, and execute all the powers, authorities, provisions, acts and things in relation to the said Company, and to bind the said Company as if the same were done by the whole corporation: provided also, that in no case shall the corporate seal of the said Company be affixed to any instrument whatever, except by order in writing of the Board of Directors, and in the presence of at least two of the directors, who shall attest by their signatures such sealing, and that the same was done by order of the Board of Directors; which attestation shall be evidence of the fact of such order.

Meetings of the directors regulated.

Their power.

22. And be it enacted, that this Act shall not be in force nor have effect until the said Company shall have obtained a charter from Her Majesty, her heirs or successors, in conformity to the provisions thereof, in so far as regards matters to be transacted, or things to be done out of or beyond the limits of this province.

This Act not to be in force till a Royal charter is obtained.

23. And be it enacted, that the said Company shall, when and so soon as the same pursuant to this Act shall be operative in this province, open an office or counting-house in each of the districts of Quebec and Gaspé, for the transaction of their business.

Offices to be opened in Quebec and Gaspé.

24. And be it enacted, that in case of actions, suits or demands against the said corporation in any of the law courts in this province, service of the summons, writs, or process of court issuing in any such action, suit or demand, at the ordinary office or counting-house therein of the said Company, shall suffice to hold the said Company to appear and plead to the action, suit, or demand against such Company.

At what place service of process may be made on the Company in this province.

25. And be it enacted, that before this Act shall have its full effect and the said corporation be operative in this province, evidence satisfactory to the Governor or person administering the government thereof for the time being, shall be laid before him that the requirements of this Act have *bond fide* been complied with, and that one half at least of the said capital sum of one hundred and fifty thousand pounds sterling has actually been paid up by the subscribers or stockholders of the said Company, and at the disposal of the directors thereof for the purposes of the Company, in accordance with this Act, and notice thereof given by proclamation or otherwise, in such manner as his Excellency shall deem advisable; whereupon the said Company and corporation shall be operative in this province.

What amount of stock shall be paid up before the Company shall go into operation.

Proclamation required.

26. And be it enacted, that it shall be the duty of the said corporation, and  
388. of

Certain accounts relative to the affairs of the Company, to be laid annually before the Legislature.

of the person or persons entrusted with the chief gestion of its affairs in this province, to lay annually before the three branches of the Legislature thereof, in the course of the first fifteen days after the opening of the session, a general statement, upon the oath of the manager, agent, or chief clerk of the said Company in this province, before any of the justices of the Court of King's Bench, Queen's Bench, or other superior court of civil jurisdiction, of the affairs of the said Company, showing as well the amount of its liabilities, as the assets or means of meeting the same in this province, in moveable property or effects, and estate real or immoveable; and such manager, agent, or chief clerk, being charged before any competent court of criminal jurisdiction of false swearing in the matter of the said statement, shall be tried, and if found guilty, be punished in like manner as if he had been charged and convicted of the crime of wilful and corrupt perjury.

The Company not to act as bankers.

27. Provided always, and be it enacted, that nothing in this Act contained shall be held to authorize or warrant the said corporation to act as bankers, or to issue or keep in circulation notes in the nature of bank-notes, or to make such notes valid in law, if issued by or in the name of the said corporation.

Public Act.

28. And be it enacted, that this Act shall be deemed a public Act, and as such judicially be noticed by all judges, justices, and others whom it shall concern, without being specially pleaded.

Rights of the Crown reserved.

29. And be it enacted, that nothing in this Act contained shall in any manner derogate from or affect the rights of Her Majesty, her heirs or successors, or of any person or persons, body politic or corporate, except in so far as the same may be specially derogated from or affected by the provisions of this Act; nor shall the same extend or be construed to extend to confer upon the said Company any right of property in the ores or minerals in or upon or under the surface of the said lands and tenements and hereditaments of the said Company, beyond such as may be conferred by the titles of the said Company to the said lands, tenements, or hereditaments, or by the laws in force in that part of the province in which the same shall or may be situate.

Right of the Company to ores and minerals to be governed by their titles.

Duration of this Act.

30. And be it enacted, that this Act shall be and remain in force until the first day of May which will be in the year of our Lord one thousand eight hundred and seventy-three, and no longer.

(No. 199.)

DESPATCH from the Right Hon. Sir *C. T. Metcalfe*, Bart. G.C.B. to Lord *Stanley*.

CANADA.

Government House, Kingston,

20 February 1844.

No. 1.

Sir *C. T. Metcalfe*  
to Lord *Stanley*.

My Lord,

I HAVE the honour to transmit herewith the Report of the Chief Agent of Emigration for the past year, together with the Appendix thereto.

2. The information contained in these documents is so full and satisfactory as to render detailed remarks from me unnecessary; it may, therefore, be sufficient to offer a few observations upon the financial operations of the season.

3. The expenditure of this year, in proportion to the extent of emigration, has been greater than that of the last, arising from causes explained by Mr. Buchanan, and which it was not in his power to control. The accompanying sketch of receipts and expenditure for 1842 and 1843 exhibits the transactions of each year, and shows a balance of 386 *l.* 10 *s.* 6  $\frac{1}{2}$  *d.* currency; from which is to be deducted about 200 *l.* to meet outstanding accounts, leaving 186 *l.* 10 *s.* 6  $\frac{1}{2}$  *d.* available for the service of 1844.

4. I do not possess the means of forming a correct estimate of the probable extent of emigration to this colony in the ensuing season, but I have no reason to expect, from all I can learn, that it will exceed that of the past; and upon this presumption I beg to submit for your Lordship's consideration my opinion that a grant from the Imperial Parliament, equal to the amount voted for 1843, will, with the usual grant of 1,500 *l.* for agency and the produce of the emigrant tax, be sufficient to cover the expenditure of the approaching season.

5. I beg leave to transmit herewith the report of Dr. Douglas, superintendent of the quarantine establishment at Grosse Isle, which bears favourable testimony to the health of last season's emigrants, as well on the passage out as on their landing.

The expense of this establishment has been less by 598 *l.* 6 *s.* 6 *d.* currency than for 1842, leaving a balance of 308 *l.* 18 *s.* 9  $\frac{1}{2}$  *d.* available for 1844. The diminution has been effected chiefly by a less expensive arrangement, which I ordered to be adopted for communicating between the island and Quebec, with the addition of some other reductions; and I hope that for the future the expense of maintaining the establishment at Grosse Isle will not exceed the amount annually voted for that service by the provincial legislature.

6. I propose henceforth to substitute a small constabulary force in lieu of the detachment of troops that has heretofore been employed. The frittering away of military force in small detachments, for any purpose that can be accomplished by a civil establishment, is always objectionable, for it is a loss of strength and effect, and is injurious to the perfect discipline and order of the troops; I have, therefore, from the time when I found that it was customary to post a detachment at Grosse Isle during the season, been desirous of introducing some other arrangement, and the plan now submitted by Dr. Douglas is the result of suggestions from me to the same effect.

7. It is satisfactory to be able to report, that owing to so many of the emigrants of this season coming out on the invitation of their friends, they have generally been provided for or taken care of without that distress which might otherwise have assailed them before they could be absorbed in the steadily employed population of the country.

8. Regarding emigration to Canada as highly beneficial to the colony, and doubly beneficial to the mother country, the only restriction, I conceive, that ought to be imposed on it is, to keep it within the means which may exist in the province of providing for those who seek subsistence here; and nothing is so likely to regulate the supply judiciously as to encourage those to come who may be advised to do so by friends already established in this country.

I have, &c.

(signed) *C. T. Metcalfe*.

CANADA.  
Report of the Agent  
for Emigration.

REPORT of the CHIEF AGENT for EMIGRATION, for the Year 1843; together with  
an APPENDIX.

Sir,  
Office of Her Majesty's Chief Agent for the Superintendence of  
Emigration in Canada, Quebec, 30 December 1843.  
I HAVE the honour to lay before your Excellency, for the information of Her Majesty's  
Government, the following Report of the Emigration to this Province during the season of  
1843.

In Paper No. 1, of the Appendix, it will be seen that the total number of emigrants  
recorded at this office during the season is 20,924 steerage, and 803 cabin passengers,  
which shows a decrease in the aggregate, compared with 1842, of 22,647, equal to 51.03  
per cent. This return also presents a tabular view of the weekly arrivals during the  
season, distinguishing adults, male and female, from children, as also the proportion of  
those who were ascertained to have received parochial or other assistance, to aid their  
emigration.

Paper No. 2 of the Appendix, is an abstract of the records of this office, and shows the  
total number of emigrant vessels arrived, with an average of their passages, the number  
of steerage passengers embarked, the deaths during the voyage, and in quarantine, and the  
number landed, distinguishing males and females, adults and children.

Paper No. 3 furnishes a list of the ports in the United Kingdom whence these emigrants  
sailed, with the particular number from each port and country, during the years 1842 and  
1843. The number arrived during the past year was as follows; viz. :—

From England	-	-	-	-	-	-	-	-	-	-	-	6,499
„ Ireland	-	-	-	-	-	-	-	-	-	-	-	9,728
„ Scotland	-	-	-	-	-	-	-	-	-	-	-	5,006
„ New Brunswick, and ports in the Gulf of the St. Lawrence	-	-	-	-	-	-	-	-	-	-	-	494
TOTAL												21,727

The great decrease will appear in the emigration from Ireland and England, the former  
being by nearly 62, and the latter by nearly 47 per cent. less than that of the previous  
season. The number of arrivals from Scotland has been lessened in smaller proportion,  
the reduction being about 18 per cent.

Paper No. 4 furnishes the usual comparative statement of the immigration into this  
province during the past 15 years, which has amounted in the aggregate to 387,908 souls.

Paper No. 5 gives a return of the admissions and deaths at the quarantine station, and  
at the emigrant hospital in this city; from which it appears, that at these two useful esta-  
blishments, 381 persons, viz. 120 men, 122 women, and 139 children, received medical aid  
during the past season; out of which number occurred the very small proportion of 26  
deaths, viz. five men, nine women, and 12 children.

It is gratifying to perceive the very marked diminution in the mortality among the  
emigrants of the past season, more particularly during their passage. According to the  
reports made to this office, the deaths at sea were 61, viz. 18 adults and 43 children; 42  
of whom were under seven years of age. The per-centage of deaths during the passage, on  
the number embarked from the United Kingdom, was 0.29 per cent., or  $\frac{1}{4}$  per 100 souls;  
and in quarantine, it was 0.9 per cent.

This improved state of health among the emigrants of this season I attribute to two  
causes; firstly, to the less crowded state of the great majority of the vessels: as out of  
279 which arrived with passengers, only 16 had their full complement on board; and of the  
above number, only 132 vessels came under the provisions of the Passenger Act. Of this  
number, 72 vessels had on board from 30 to 100 passengers; 23 above 100 and under 150;  
19 vessels from 150 to 200; eight from 200 to 250; six from 250 to 300; and four above  
300 passengers on board; and of the 147 remaining vessels which had under 30 adults on  
board, 94 had less than 12. The tonnage of the vessels which came within the regulation  
of the Act was 54,750; they were navigated by 2,213 seamen; and brought out 15,434  
full passengers. According to their tonnage, these vessels had accommodations for 30,637  
adults. Secondly, to the beneficial restrictions and regulations of the new Passenger Act,  
which, by enforcing and regulating the issue of provisions, and securing to the poor emi-  
grants an abundant supply of water, has, in my opinion, tended very materially to produce  
this favourable change; and which will, I trust, prevent a recurrence of those scenes of  
distress and suffering, to which I have had in my previous reports too frequent occasion  
to allude.

The

## REPORT OF THE AGENT FOR EMIGRATION.

5

## CANADA.

Report of the Agent  
for Emigration.

The prosecutions which I have found it necessary to institute against masters of vessels for infringement or evasion of the provisions of the law, have been six in number. In five of these cases I have recovered penalties to the extent of 90*l.* sterling; the particulars of each having been specially reported to your Excellency, as also to the Commissioners of Emigration, I do not conceive it necessary to enter more fully into them, than by stating the heads of the charges, and the decision of the magistrates, with the amount of penalties awarded; viz. barque "John Francis," from Cork, for issuing unwholesome provisions; master fined 20*l.* sterling. Brig "Mary Ann," from Bideford, for evasion of the 3d section of the Imperial Act; master fined 15*l.* sterling; the master, however, absconded and the penalty was not recovered. Brig "Coxon," from Cork, for evasion of the 25th clause; master fined 20*s.* sterling. Barque "Florence," from Plymouth, for neglecting to issue the proper allowance of water according to law; master fined 5*l.* Barque "Constitution," from Belfast, for issuing unwholesome bread, and not serving out the proper allowance of water; master fined two penalties of 25*l.* each, 50*l.* The barque "Champlain," from Baltimore, was prosecuted for issuing bad and unwholesome biscuit; the magistrates, however, dismissed the case, as the evidence for the defence satisfied them that the master, who had used every precaution to procure good bread, had been imposed upon by his baker. The collector of customs at this port caused the master of the barque "Jane Duffus," from Glasgow, to be fined in the penalty of 40*l.* for having an excess of eight passengers over his complement. This is the first penalty which has been imposed under the new Act, at this port, for this offence; and I have no doubt that it will have the desired effect of putting a stop to an evil which, under the former law, was of frequent occurrence.

The season of 1843 was the first in which the new Passenger Act has been in operation. It is satisfactory to find that the cases of infringement have been few; and I have every reason to hope, that it being now so generally and extensively known among the masters in this trade that the provisions of this Act will be strictly adhered to in every instance, and the result of all the prosecutions entered during the past season having been in favour of the Crown, that the number of complaints of this kind will be greatly diminished for the future.

The care with which the Act has been framed seems to have secured a provision against all attempts to impose on the emigrant; and there can arise few cases in which the recourse afforded by it will prove insufficient. I cannot, however, refrain from alluding to the case of the "Mary Ann," from Bideford, reported to your Excellency in my letter to the Chief Secretary, of the 28th July last, enclosing the report of the Crown officer who conducted the prosecution, a copy of which will be seen at Paper No. 11, page 22, of the Appendix.

The facility with which the penalty imposed in this case was evaded, by the withdrawal of the master, would appear to require amendment in the Act; for it appears a hardship that an action should hold good only against the master, who, in many instances, is not the guilty party, and which appears to have been the case in this particular instance. The master, acting, in the majority of cases, as the servant of the owner of the vessel, cannot consistently refuse to comply with the orders he may receive. It would seem, therefore, that the penalty should, in the first instance, as in the case now, be recoverable from the master; but, in the event of his withdrawal, the ship should be held responsible.

The number of emigrants who have been aided in their emigration by their landlords or parish authorities is, in proportion to the emigration, greater than that of last year.

In Paper No. 7, page 13, of the Appendix, I have endeavoured to set forth the number assisted from each country. From England, the numbers were 914; Ireland, 360; and Scotland, 1,051. Of those from England, 659 were sent out under the superintendence of the Poor Law Commissioners, and were well and amply provided for; and received the usual landing money, under the superintendence of this department; the remaining 255 received partial assistance from their respective parishes, paid to them previously to their leaving home, to enable them to emigrate. These were generally industrious tradesmen and agriculturists, with large families, who, from want of employment, were induced to emigrate. Their means, however, were barely sufficient to enable them to reach this port; and they all required assistance from this office, to enable them to proceed to their respective destinations.

The few emigrants from Ireland all landed very poor. The assistance given them, so far as I could ascertain, was a free passage, and 5*s.* each, to assist in providing provisions. They, with few exceptions, required relief on their landing here, to enable them to proceed to their friends. They were chiefly from the county of Kilkenny. The Scotch emigrants, with the exception of 36, who were aided in their emigration by his Grace the Duke of Sutherland, were from the ports of Glasgow and Greenock, and were all members of emigration societies. It appears that 28 societies were established during the early part of this year, in Glasgow and its suburbs, comprising in all 3,354 persons; of this number only 1,015 were enabled to emigrate, owing to the limited state of their funds; and a balance of 70*l.* sterling was remitted to this department by the committee in Glasgow, to be applied in aid

## CANADA.

Report of the Agent  
for Emigration.

aid of their transport into the interior of the province, to their friends. This sum, amounting to 84*l.* currency, was applied as the committee requested; but owing to the extreme poverty of these people, and no suitable employment being to be had for them, either in this or the Montreal district, I was under the necessity of forwarding them, at the expense of this office, to the Bathurst, Midland, Home, Gore, and London districts, and some as far westward as Goderich. The expenditure on their account has necessarily been very heavy, and may be stated at between 600*l.* and 700*l.* These parties had all large families, whom it was impossible to provide for otherwise than by enabling them to join their friends and relations. They all appear anxious and willing to work, and were a moral, industrious class, who will no doubt, in a short time, become valuable settlers.

In Paper No. 6 of the Appendix will be found a statement of the distribution of the emigrants during the past season, compiled from the monthly reports received from Mr. Hawke, the chief agent in Canada West, and the other local agents of this department. Six-sevenths of the emigration appear to have settled in Canada West. The number of emigrants arrived from the United States was, at Kingston, 1,146; at Cobourg and Port Hope, 92; and at Hamilton, 248. No return has been received from Toronto, but the number may be estimated at 300; this does not include the number who have come in at different other points for employment on the public works, which Mr. Hawke estimates on the whole at from 3,000 to 4,000.

The number who have proceeded to the United States this season I should state at under 2,000; few have gone there unless with the intention of joining their relations, who have in many instances sent them the means of emigrating; so that I estimate the addition to our colonial population, during this year, at fully 22,000 souls.

The remarkable feature in the immigration of the past year has been the very large proportion which have come out to their relations. I estimate it at full three-fourths of the whole. This is, as I have had occasion to state to your Excellency, a most fortunate circumstance; for had these persons landed here total strangers, without friends, or a destination in view, serious distress must have occurred among them, from the difficulty of procuring work. A return received from the superintendent of the sheds in Montreal, shows that 220 women, with their children, numbering together 854 persons, applied to, and were aided at that agency, to proceed to join their husbands in different sections of the province.

The public works have absorbed but few emigrants this year, and they continue to be more than supplied by the influx of labourers from the neighbouring states, who, as I stated in my Report of last year, owing to their being habituated to this description of work, invariably receive the preference from the contractors. Wages on the different public works have ranged from 2*s.* to 2*s.* 6*d.* per day, without board; but owing to a strike and combination among the workmen, they were, for a short time, raised to 3*s.* per day.

Labourers in this city are at present working for 1*s.* 3*d.*, and handy axe-men in the ship-yards only receive from 1*s.* 8*d.* to 2*s.* per day, without board.

The expenditure of this department, in the direct relief and assistance of destitute immigrants, from the commencement of the past season, up to the 30th November, may be stated at 6,717*l.* 17*s.* 10*d.*, under the following heads: viz. transport, 5,387*l.* 19*s.* 9*d.*; provisions, 636*l.* 19*s.*; medical relief, 692*l.* 19*s.* 1*d.* currency.

In the early part of the season it was found necessary to erect additional buildings at the immigrant establishment of Montreal: this, with sundry repairs to the old buildings, amounted to 226*l.* 1*s.* 11*d.* The charge for agencies in both sections of the province, for the same period, has been 1,330*l.* 2*s.* 7*d.* The entire expenditure of the department, therefore, has amounted to the sum of 8,274*l.* 2*s.* 4*d.*, Halifax currency. The funds received to meet this expenditure have been derived from the emigrant tax collected at the ports of Montreal and Quebec, amounting to 4,251*l.* 19*s.* 2*d.*; the imperial vote, and the balance from last season, 4,492*l.* 16*s.*; total 8,736*l.* 6*s.* 10*d.*, Halifax currency.

Many circumstances during the past season have affected unfavourably the situation of the arriving immigrants; and the claims for relief from this department have been proportionably more numerous than in the preceding year. From my monthly reports, and from those received from the different agencies, copies of which have been from time to time transmitted to your Excellency, it is shown that a number, equal to 4,032 adults, were forwarded from this agency, chiefly to Montreal; 5,469 were provided with passages from Montreal to Bytown and Kingston; 4,275 were assisted in proceeding from Bytown upwards, either by the Rideau navigation or the Ottawa; 5,093 were forwarded from Kingston to different ports on Lakes Ontario and Erie; 1,684 have been assisted at Toronto, and 730 at the Hamilton agency, making a total of 21,283 adults who were aided by this department with the means of progress towards their respective ultimate destinations. Of this number 851 received medical treatment, besides a considerable number relieved with provisions. The number of deaths which occurred at the different agencies throughout the province in the course of the season was 49.

A considerable increase in the rates of inland transport has taken place in the past year, more particularly between Montreal and Kingston, the advance on that route being equal to

## REPORT OF THE AGENT FOR EMIGRATION.

7

to 60 per cent. This has tended materially to increase the expenditure under this head at the Montreal agency; and owing to an agreement among the steam-boat proprietors on the route from hence to Montreal, the rate for the passage by steamers between these places was fixed at 5 s. each adult, while last year the emigrant was conveyed for 1 s. 3 d. This has, in proportion to last season, thrown on this agency a much larger number of claims than would otherwise have been presented, and increased also the proportionate expenditure involved in their relief. Owing to these numerous and heavy demands on the funds at the disposal of the department, it was found necessary to close several of the agencies in the western section of the province at a date much earlier than usual. Mr. Hawke consequently closed the Cobourg and Port-Hope agency on the 15th August, that of Hamilton on the 31st, and Bytown on the 30th September; conceiving that it was better to deprive settlers of supervision and information, than to withhold from newly arrived immigrants food, transport, or medical attendance.

## CANADA.

Report of the Agent  
for Emigration.

Table No. 8, of the Appendix, furnishes the usual tabular statement of the length of passages from the United Kingdom during the past season, the average of which was 44½ days.

Paper No. 9, furnishes a return of the trades and callings of the male adult emigration of the past season. This table I have been enabled to compile, owing to the improvement which has taken place in the manner of making up the passenger lists. From it will be seen that the proportion of mechanics and tradesmen is about one-eighth of the whole.

From a return received of the arrivals at New York, during the past season, it appears that the emigration to that port has decreased as much, in proportion, as that to this colony. Up to the 1st December, the number of arrivals from the United Kingdom was 25,876, against 51,800 who were reported last year; and the emigration, during the same period, is estimated at 15,000 persons, 3,000 of whom are supposed to have returned with the intention of bringing out their families in the spring. The extreme lowness of the charge for a homeward passage from the port of New York, and the facilities which are afforded by the numerous packet ships, sailing regularly at stated periods, encourage the return to Great Britain of a large proportion of the emigrants who meet with disappointment in their removal to the United States. They permit also the return of many heads of families who leave the mother country, in the first instance, as pioneers. The passage from New York to Liverpool has been, and continues, at the low rate of 10 dollars, inclusive of supplies, and seven dollars without them.

In the weekly reports which have been transmitted to your Excellency, throughout the season, I have had occasion to notice the condition and immediate prospects of the immigrants as they arrived in the country. The beneficial operation of the new Passenger Act has been apparent in the diminished proportion of disease and mortality on the passage from Europe, as well as in the total absence of cases of privation. The state of poverty, however, in which so many of the immigrants landed, could not fail to involve them in some difficulties, and perhaps distress, even under the most attentive superintendence and assistance. It has been fortunate that every article of subsistence has borne an extremely low price, and that there has existed everywhere an abundance of all the necessities of life. These circumstances have precluded the possibility of destitution to any considerable extent, among the recent immigration, and may have permitted opportunities of favourable settlement, in the new districts, to many even of the poorest families.

The existence of a surplus of labour, as compared with the demand, has for some time past offered great discouragement to all immigrants depending on immediate employment for their support. The public works have been constantly supplied with experienced labourers, and have consequently offered no openings for the employment of those recently arrived by this route. There has been also a decreasing demand for agricultural servants in the rural districts. The farmers, of all classes, deterred by the low prices borne by their produce, and the doubtful prospects of future markets, have been disposed to diminish the scale of their operations, and avoid liability to be called upon for money payments. In almost every line of employment the amount of labour sought for has been lessened. A progressive reduction of the wages of every class of operatives has been necessarily experienced; and although from the cheapness with which their wants may be supplied, mechanics and labourers of experience and character, who remain in steady employment, may find their resources but little diminished, the result following such a change is much more detrimental to the immigrant, whose employment must be casual, and whose situation necessarily precludes the best economy and management of his means.

Had the number of families depending on early employment, compared with the aggregate immigration of the year, not been very much less than in former seasons, there must have arisen great difficulty in their distribution and maintenance. There has been amongst the labourers on some of the public works occasional distress, arising from interruption in their employment. These persons, as I have already mentioned, however, do not come within the class to which the attention of the department is principally directed. Indeed their knowledge of the country relieves them from many disadvantages to which the entire stranger may be subjected.

The information which I have from the several districts of the province leads me to feel confident that, under every unfavourable circumstance existing, there is no extensive distress

## CANADA.

Report of the Agent  
for Emigration.

---

press amongst the recent immigrants; and the certain, although perhaps slow, approach that the country is making towards the establishment of just relations amongst its various interests, encourages the hope of an early return of favourable prospects for all classes of the population. The general depreciation which affects agricultural produce deters the established settler from extending his "improvements," by means of hired labour; but on the other hand, it permits the labourer to undertake settlement on waste land with smaller resources, and offers him comparative facilities in his subsequent progress. Though the wages of the latter, therefore, remain less in amount than they have been in former years, it will not necessarily follow that he is to be confined for a longer period to his dependent occupation. I venture to anticipate, on the contrary, that the prospects of relief which industrious and frugal immigrants have formerly seen, in their removal to this country, will remain still open to them; and that, if occasional revulsions and temporary difficulties are not to be wholly prevented, the province may yet anticipate continued means to maintain the natural internal movement, by which the labourer of energy and moderate intelligence has always, hitherto, been advanced to the condition of an independent settler.

In this favourable view of the probable future state of the province I am entirely borne out by Mr. Hawke, chief agent for the western section, whose Report on this subject, copy of which will be found in Appendix, Paper No. 12, has been already transmitted to your Excellency.

Mr. Hawke's experience, and his immediate connexion with that portion of the province, enable him to offer an undoubtedly accurate view of its condition and prospects; and his observations are well worthy the attentive consideration of all persons proposing to emigrate to this colony.

In the conduct of the business of the department in my charge, I have constantly kept in view the necessity of a strict economy. This has been practised as well in the arrangement under which immigrants generally receive superintendence and advice, as in the distribution, to those who require it, of the assistance that I am empowered to afford. In performing these duties, also, the chief agent for the western section of the province, and the local agents at the several points, have made every exertion to keep the expenditure as low as possible. The nature of the direct relief afforded, however, and the manner in which the funds raised under the Provincial Act are required to be appropriated, in some measure tend to increase rather than to diminish the proportion which the claims for assistance bear to the annual immigration. I cannot fail to perceive that the aid afforded by the department in the inland transport of persons unpossessed of the means themselves to defray its expense, is, in many instances, counted on by the emigrant previously to his departure from Europe; and particularly, that persons already in the province, and acquainted with the liberality of the Government in this respect, transmit to their families or friends sums sufficient only to defray their passages to this port, instructing them that on arrival they are to practise deception, and through it obtain what may be necessary for their further progress. I trust the experience and assiduity of the officers of the department are sufficient to protect it from extensive injury in this manner; but I may adduce these facts, as discouraging the expectation that the proportionate extent of the claims to which it is subject will be diminished for the future.

A circumstance also connected with this subject may be alluded to as threatening increased proportionate expense of transport. In the course of the season I had occasion to bring to your Excellency's knowledge the enhanced charges made by the forwarding establishments at Montreal. Since that time, the competition has been even further lessened; and the result may be an advance upon the last established rates. If such should take place, a material difference in the amount of expenditure under this head must be found in a future season of equally extensive immigration.

Your Excellency's caution, that the disbursements of the department should be, on no account, permitted to exceed its resources, was strictly attended to. The comparative early closing of some of the inland agencies, and some other measures of restriction on the outlay, succeeded in confining it to the legal amount; and the financial statements which are furnished in the former part of this Report, show that a balance will remain unappropriated, on the discharge of all the liabilities incurred to the close of the year. The smallness of the amount unexpended, however, will suggest to your Excellency, that had the season presented an immigration at all correspondent to that of the previous year, the appropriation of the Imperial Parliament, in aid of the Provincial Emigrant Fund, must have proved insufficient completely to effect the object to which it is directed; and that a want of funds at the disposal of the Emigrant department would have permitted much distress.

The circumstances under which the province is now placed, in reference to its means of advantageously employing a large immigration of the poorer classes, are certainly far from favourable; and it may be expected that the contraction of the field for labour has become well known in Great Britain and Ireland. I am aware, also, that the remittances made through the banks and other channels of communication, by settlers in this country, to their connexions at home, to enable them to emigrate, are diminished greatly in their amount. On the other hand, the causes which tend to produce in the classes of mechanics, manufacturing operatives, and labourers, of Great Britain and Ireland, the disposition to emigrate

## REPORT OF THE AGENT FOR EMIGRATION.

9

emigrate continue to a great extent unremoved ; and there is no appearance of a reduction in the facilities which a large commercial fleet in want of outward freight always offers for their removal to this country. Unless, therefore, peculiar temporary circumstances should occur at the season when the bulk of the emigration leaves the British ports, there would not appear to be proper ground for anticipating that the province will fail to receive its generally large proportion, or that the condition of the immigrants will be such as to relieve the funds of the Emigrant department from numerous and expensive claims.

CANADA.

Report of the Agent  
for Emigration.

The facilities which the province offers to persons possessing the capital requisite for their establishment as settlers, independently of all casual resources, are very ample in every district. Waste land is obtainable from the Crown, the land companies, and private individuals, for moderate prices. In the case of purchase from the Crown the amount is required to be paid in hand ; but in all other instances very easy terms of payment are permitted. The Canada, and the British American land companies, indeed, have extended their openings to settlers so far as to afford lands without the receipt in hand of any part of their price. The former grants leases of lots in the Huron tract, for the term of 12 years, the rent being 5*d.* per acre for the first year, and increasing in the ratio of about two-fifths per annum for the subsequent period, at the expiration of which a deed in fee-simple is granted to the purchaser without further payment. The latter disposes of waste land at the price of about 8*s.* sterling per acre, payable by four annual instalments ; the first being due only at the end of 10 years from the date of purchase, and the interest simply being in the meantime required of the purchaser. These terms appear likely to facilitate, very materially, the settlement of the poorest families who seek this object. Indeed, the great numbers who have taken advantage of the terms offered by the land companies, in both parts of the province, show that there exist no longer material obstacles to the acquisition of land ; and that if this had been the only point of difficulty hitherto encountered, the attainment of independent circumstances, by every class of our immigrants who possess industry, energy, and thrift, must be henceforth fully permitted.

In concluding this Report, in which I have endeavoured to comprehend a review of every point of interest connected with the department that is intrusted to my superintendence, I have to trust that it may receive your Excellency's favourable consideration.

I have, &c.

(signed) A. C. Buchanan, Chief Agent.

APPENDIX.

## No. 10.

EXTRACTS from the several WEEKLY REPORTS made to the Governor-General by the  
Chief Agent for Emigrants at *Quebec*.

WEEK ending 13th May 1843.

THE emigrants arrived to this date, have all landed in excellent health. They consist of farmers, mechanics, and a few labourers, and with the exception of a few poor families in the "Borneo," from Limerick, and "Aberdeen," from Liverpool, are in good circumstances. Over three-fourths have emigrated for the purpose of joining their friends, settled in the different sections of the province, the others are principally mechanics in search of employment.

The above vessels have all had very favourable passages, the average length being only 29 days.

WEEK ending 20th May.

THE emigrants arrived during the past week, have all landed in excellent health. They are chiefly English, and with the exception of a few families in the "Bell," from Padstow, and "Ireland," from Gloucester, all were able to pay their way. They consist of farmers and mechanics, and nearly all have their friends settled in different sections of the province. Among the passengers per the "Bell," from Padstow, were eight families, amounting to 60 persons, who were aided to emigrate by the parishes of St. Columb Major, St. Evil, and St. Mervin; two families received 20*l.* sterling, one 15*l.*, one 8*l.*, three 6*l.*, and one 5*l.*, to aid them in preparing for their voyage, and towards paying their passage and providing food. One other family was assisted out of charitable funds to the extent of 4*l.* They are going to join their friends in the township of Whitby. These families had expended their means, and landed here destitute, not one of them being able to pay their passage even as far as Montreal. The heads of three of the families were stone masons, and one a joiner; but no immediate employment for them offering here, and all having large families, I furnished them with a free passage to Montreal.

It is much to be regretted, that in thus enabling these poor families to emigrate, the system now so generally in use among the English parishes, who send out their poor to this country, was not adopted, viz., providing them, on landing here, with the means of a few days' support, or enabling them to prosecute their journey into the interior, and thus relieving them from a state of immediate dependence on charity on their first landing.

All

## THE AGENT FOR EMIGRATION.

15

All the Irish emigrants have relations settled in the province, a considerable number remain in this district, and a few are going to the eastern townships.

WEEK ending 27th May.

Four thousand eight hundred steerage, and 106 cabin passengers landed at this port, during the past week, all in good health. The vessels have all made remarkably fine passages, the average being only 38 days. They have also been well supplied with provisions; and not a single complaint has been made to this office. The emigrants consist of the usual proportion of farmers, labourers, and mechanics. Many of the former class are in comfortable circumstances, and intend settling in the western section of the province.

The emigrants from the ports of Bristol, Plymouth, Hull, and Aberdeen, are generally of the better class, and all are able to defray their own expenses. The greater part of them have friends and relations settled in the western section of the Province, where they intend to settle. The passengers from the ports of Cork, Limerick, Newry, and Dublin are principally of the labouring class, and many of them very poor. Twenty families, numbering 131 persons, were aided by their landlords to emigrate, and came out in the "Perseverance" from Dublin. They were furnished with a free passage and 5s. each, to aid them in procuring provisions. They all landed here penniless, and were forwarded by this department to their friends, who chiefly reside at St. Catharine's, Upper Canada.

In the "Resource" and "Sisters," from London and Portsmouth, were 359 passengers, 252 of whom were sent out under the sanction of the Poor Law Commissioners. They were well provided for during the voyage, and were forwarded to Montreal at ship's expense, and received the usual landing money, 20s. sterling each adult, to enable them to proceed to their respective destinations.

In the barque "Elutheria," from Glasgow, were a number of poor Scotch families, members of the Emigration Society. They had all secured their passage to Montreal in the vessel, and have friends in the Bathurst, Huron, and Gore districts. There are also a few farmers among them, with good means.

Employment has been very abundant in this neighbourhood during this last 10 days, and will likely continue so for a few weeks longer. Labourers readily obtain from 3s. 6d. to 4s. per day about the coves, and on board ships; but this will only last during the present busy period, caused by the arrival of so many vessels. The demand for labour in the rural districts is by no means abundant, and the rates of wages among the farmers range from 2s. to 2s. 6d., without board. Among the cabin passengers arrived during the past week, are several highly respectable families, who intend to settle in the eastern townships. The total number of persons forwarded this season to Montreal from this agency, at Government expense, is 120 men, 187 women, and 254 children under 12 years, at a cost of about 50l. currency.

WEEK ending 10th June.

THE emigrants who have arrived here since the 28th instant, consist chiefly of labourers and farmers, more than three-fourths of whom are coming out to join their friends. All these vessels have had fine passages, the average being 37 days; and the passengers have landed in good health.

One hundred and seventy-one passengers were brought up in the schooner "President," from the wreck of the ship "Tom Moore," of Belfast. This vessel was lost on the 24th May, on White Island Reef; the passengers were saved, but lost the greater part of their luggage. Captain Milligan was fortunately able to engage this schooner to bring them up to Quebec; and, owing to the distressed condition in which many of these poor people landed, I had to extend assistance to 92, to enable them to join their friends.

The passengers per "Gazelle," from Donegal, consist of labourers, and a few tradesmen. A large number of her passengers are very poor; and assistance was given to 97, to enable them to proceed to their friends in Canada West.

The passengers per "Amazon," from Hull, are respectable agricultural labourers; the chief part are proceeding to Canada West, and a few to the neighbourhood of Montreal; only one family of six persons require assistance.

One hundred and twenty-three passengers in the "John Francis," from Cork, are labourers, and were able to pay their way, with the exception of 17, who were provided with a free passage to Montreal. The emigrants by the Lavinia, from Stockton, are all in good circumstances, and intend settling in Canada West. Two hundred and five passengers in the "Envoy," from Londonderry, are farmers and labourers; among them are some respectable families who have capital, and intend settling in the western part of the province; but many of the others are poor; 48 souls from this vessel were assisted to proceed up the country to their friends. The passengers per "Ann," from New Ross, are poor; they have friends settled in the Ottawa and Bathurst district. In the "Brilliant," from Glasgow are 10 families, 47 souls, who were aided to emigrate by their landlords, from Johnson Village, near Glasgow. They were all supplied during the voyage, and proceeded to Montreal in the vessel. They intend settling in the Gore and Wellington districts, and have been strongly recommended to this department as moral and industrious people. The remaining passengers by this vessel are also hardworking labourers, but all very poor, and depending on immediate employment for their support. They are desirous of proceeding to Canada West.

CANADA.

Appendix to  
Report of the Agent  
for Emigration.

## CANADA.

Appendix to  
Report of the Agent  
for Emigration.

In the "St. Ann," from Bideford, are some respectable farmers and farm labourers, who, with the exception of four families, were all able to pay their way; they are going to the Huron and Newcastle districts to friends. A few go to Ohio and Illinois. The passengers from Dublin and Galway are labourers, with a few tradesmen. Those in the "Naparima" are generally in good circumstances. About 30 of those from Galway required assistance to enable them to proceed up the country.

## WEEK ending 17th June.

THE emigrants arrived during the past week have all landed in good health. Those by the "Jennie Deans" and "Mahaica" consist of farmers and mechanics, the greater part of whom have friends in the country. They proceeded to Montreal in the vessel.

In the "Jane Duffis," from Glasgow, were 254 passengers, members of the four emigration societies, viz. Parkhead, Cumlachie, Hamilton, and Gavan, all from the city and neighbourhood of Glasgow. They have been enabled to emigrate by the assistance received from private individuals, and from funds raised by public subscription. They consist of 50 families and six single men, all weavers; and as far as I have been able to learn, there is not a family among them with means sufficient to take them as far as Montreal. Over two-thirds are women and children; and as no possible chance of procuring them employment in this section of the province at present exists, I have forwarded the whole party to Montreal, and instructed the agent there to give them every assistance to reach their respective destinations, more particularly those who have friends in the country. Their destination is as follows: two families, 12 in number, to the neighbourhood of Montreal; 11 ditto, 52 persons, to Toronto; 18 ditto, 91 persons, to Hamilton; and four families, 25 persons, wish to go as far as Goderich.

This vessel was fined by the collector of customs 40*l.* for having an excess of eight passengers over her complement, according to her superficial measurement.

In the brig "Mary Ann," from Bideford, were 22 passengers, chiefly farmers. This vessel landed 60 of her passengers at Charlotte Town, Prince Edward's Island. The master has incurred the penalties of the Imperial Act, in not having her deck or platform constructed according to law; and I have lodged the necessary information in the hands of the Crown officer for prosecution, of which, when closed, a separate report will be forwarded for the information of his Excellency.

I regret to have to report that, from the accounts I have received from the western section of the province, the demand for labourers is very scarce, and mechanics also find great difficulty in obtaining employment. Numbers of labourers, and the higher description of mechanics, have returned here (after having proceeded as high as Toronto), in hopes of procuring employment, or, if their means admit of it, of returning home. There is no means of ascertaining the numbers who return, with any degree of correctness; but I should estimate them, to this date, at from 75 to 100; and many more would go, but they have not the funds.

The following is an extract from a report received from Mr. Hawke, a few days since:—"We have succeeded in distributing the emigrants so far without any difficulty; fortunately three-fourths of them have friends in the section of the province to which they are bound. This section of the province never held out less encouragement to labouring emigrants than at present."

## WEEK ending 24th June.

Two thousand one hundred and fourteen emigrants arrived here during the past week, (all Irish and Scotch), and landed in good health. The average passage of the week was 43 days.

In the brig "Pomonia," from Dublin, were a few respectable families, who are proceeding to join their friends in Canada West. The passengers per "Oberon" and "Creole," from Londonderry, 525 in number, are chiefly farmers and labourers; and nearly all have friends settled in different sections of the province, principally in the Bathurst, Midland, Newcastle, and Home districts. Sixty-two passengers from these two vessels required assistance to proceed upwards, the remainder went on at their own expense.

On board the barque "Blonde," from Glasgow, and "R. Stewart," from Greenock, were some respectable Scotch farmers and mechanics, in good circumstances. They are proceeding to join their friends in Dalhousie and Bathurst districts; and others go to the Newcastle, Home, and London districts; about 20 disembarked at this port, bound to their friends in Leeds and Inverness.

One hundred and fourteen passengers per the "Nerio," from Limerick, are principally labourers, and a few mechanics. One family is going to Albany, the remainder to the neighbourhood of Bytown, Kingston, Toronto, and the London district. One hundred and forty-six passengers per the "Warrior," from Killala, are labourers, and many of them very poor; from 10 to 12 intend to go to the United States, the remainder to different parts of the upper province. Forty persons by this vessel were provided with a free passage to their friends.

The passengers per "Dromahair" from Sligo, 144 in number, landed in good health; they are all labourers, and, with the exception of a few families who are desirous of going to St. John's, New Brunswick, are going to Canada West. Thirty-eight of the passengers were forwarded on their route by this department. In the "Bona Dea" and "Romulus" were 596 passengers from Glasgow, part of 18 emigration societies founded in that city during

## THE AGENT FOR EMIGRATION.

17

during the past winter. They are in connexion with a party of emigrants who arrived here this spring in the "Jane Duffis," "Brilliant," and "Elutheria," numbering in all about 900 passengers. The surplus fund, after defraying their expense to this port, amounting to 70 *l.* sterling, was remitted to this office to aid their transport into the interior. These people are represented to me (which is fully confirmed by their appearance) as intelligent and industrious, although all very poor. A large number of them have friends settled in different sections of the province; viz. in the Bathurst, Gore, and London districts. As no employment exists in this section of the province, I forwarded all those with families, at the expense of this department, to their friends. The draft for 70 *l.* sterling, equal to 84 *l.* currency, has been applied towards this purpose.

The passengers per "Industry," from Dublin, are all labourers; 15 families, 83 souls, were sent out by their landlord. He paid their passage and gave them 5 *s.* each to procure clothes and necessaries for the voyage. Many of these poor families were in the lowest state of poverty, without money or provisions; and a large portion of them consisted of old women and children, unable to earn a livelihood, even if employment were offered to them. They stated that they had friends residing in the neighbourhood of St. Catherine's, Niagara district. These people were all forwarded at the expense of this office.

## WEEK ending 1st July.

THE emigrants arrived during the past week are chiefly from Ireland. Of 1,008 male adults, 390 are farmers, 463 labourers, 139 mechanics and tradesmen, and the remainder, 16, are servants. They all landed in good health; and the average passage for the week was 49 days. The emigrants from the port of Sligo, 492 in number, are chiefly labourers, many very poor. They nearly all have friends settled in different sections of the province. Over two-thirds of the passengers by this vessel are women, and children under 12 years. I was under the necessity of assisting 170 of them with a passage up the country to reach their friends.

The passengers per "Elizabeth," from Londonderry, 173 in number, consist of farmers and labourers who, with few exceptions, appear to have friends settled in different sections of the province. A number of them are very poor; 38 persons, chiefly women and children, were assisted from this office.

In the "Independence" and "Leitia Heyn" were 726 passengers; among whom were some respectable farmers and farm-labourers. The greater portion have their friends in the country, to whom they are about to proceed. There are also a considerable number of poor on board these two ships; and I found on examination, that 160 on board the former, and 90 in the latter vessel, stood in need of relief. These were all persons with families, who were going to join their husbands.

In the "Margaret Bogle," from Leith, and "Lady Kennard," from Dundee, were a small number of rather respectable and intelligent emigrants; they consist of farmers and mechanics, and all appear to have sufficient means to pay their way to their respective destinations in Canada West. One hundred and twenty-eight passengers per the brig "Symmetry," from Thurso, are in good circumstances; four families, 18 persons, are going to Prince Edward's Island and Pictou, the remainder to different sections of Canada West, principally to the Newcastle and Home districts. There were some very respectable farmers on board the barque "Fergus," from Hull; these people were all abundantly supplied, and a few of them possessed considerable capital; they all proceeded up the country. Some are going to the London and Western districts to join their relations.

The passengers per the "Ann," from Donegal, the "Constitution," and "Hannah," from Killala, 347 in number, are principally labourers, and a few farmers; they are all proceeding to the Upper Province, to friends. About 106 passengers from these three vessels required assistance to enable them to proceed.

The passengers from Liverpool, 256 in number, consist of English, Scotch, Welsh, and a few Irish; they are principally agricultural labourers, and are proceeding to different sections of the province. A few are going to friends in the United States.

Employment, I regret to state, is very scarce in this section of the province; and the emigrants who have not a destination in view, or friends in the country before them, find great difficulty in procuring subsistence. Wages for labourers in this quarter may be stated at 2 *s.*, although, if employment offered, plenty of hands could be got at from 20 *d.* to 22 *d.* per day. The farmers throughout this district and the eastern townships are not employing any hands. The prices of all farm stock and produce are so low that they cannot afford to pay hired labourers; it therefore may be considered a fortunate circumstance that such a decrease in our emigration has taken place this season, more particularly of the poor classes, who are depending on immediate employment for their support. Mechanics, such as blacksmiths, carpenters, tailors, and shoemakers, find it equally difficult with the labourer to procure employment.

## WEEK ending 8th July.

THE emigrants arrived during the past week landed in good health, the average passages of the week being over 48 days. Those on board the "Thompson," from Westport, are chiefly labourers, and many of them very poor; out of 140 passengers on board this vessel, 64 required assistance to enable them to proceed to their friends; one family is going to the state of New York. Three hundred and fifty-five passengers in the "Arabian," from Belfast,

CANADA.

Appendix to  
Report of the Agent  
for Emigration.

## CANADA.

Appendix to  
Report of the Agent  
for Emigration.

Belfast, landed in good health, and were well supplied during the voyage. From 20 to 30 families on board this vessel have brought out capital, varying from 30 *l.* to 100 *l.* each; they intend settling on lands in Canada West. Many of the other families being very poor, and unable to proceed to their friends, 127 were aided to reach Montreal, and seven to Port St. Francis.

One hundred and seventy-three of the passengers in the "Toronto," from London, were sent out under the sanction of the Poor Law Commissioners. They were well supplied during the voyage, and received their landing-money, 20s. sterling each adult, and a free passage to Montreal, at ship's expense; their route is to the western section of the province.

The emigrants on board the "Albion," also from London, are agricultural labourers and farmers; they appear in good circumstances, and are all proceeding to different sections of Canada West.

In the brig "Hero," from Tralee, were 121 passengers, all healthy, but in appearance they are the poorest party of emigrants landed here this season. They all have friends in different sections of the province, but were without the means of proceeding from this port. I was consequently under the necessity of forwarding upwards of 100 of them to their friends.

## WEEK ending 15th July.

THE emigrants arrived during the past week are about two-thirds labourers; the remainder are farmers and mechanics. Their health has in general been very good, and the average length of passage 49 days.

The passengers per "John and Robert," from Belfast, 266 in number, are nearly all of the labouring class, and, with few exceptions, have friends in the country; they are proceeding principally to Canada West. A large number of these people were very poor, and 107 persons were assisted with a free passage to enable them to join their friends.

The passengers per "Coolock," from Dublin, 128 in number, consist of 10 farmers and 36 labourers, and are all proceeding up the country; 27 persons by this vessel were forwarded to Montreal. The passengers per "Carricks," from Sligo, are all labourers, and have emigrated to join friends. Three families, 15 in number, are going to New York, the remainder to different parts of Upper Canada. They are very poor, and 60 persons required assistance to enable them to proceed from this place.

One hundred and twenty-four passengers per "Chieftain," from Liverpool, are mostly farmers, all landing in good health. They are proceeding to Canada West.

The emigrants per "California and Hamilton," from Glasgow, 557 in number, consist of farmers and labourers; 32 of the passengers by the former vessel were detained at Grosse Isle from the effects of measles. Three deaths occurred on the passage, one adult and two children. They are all apparently in good circumstances, and able to pay their way to their respective destinations.

The passengers per "Champlain," from Baltimore, had a long and tedious passage of 67 days; they all, however, landed in good health. A large number of her passengers being very poor, about 40 were assisted with a passage to Montreal.

Employment in this neighbourhood and Montreal continues scarce, and the newly-arrived emigrants have great difficulty in procuring work.

## WEEK ending 29th July.

THE emigrants arrived since the 16th instant have all landed in good health. These vessels have all had long passages, the average being 50 days. The passengers generally are in good circumstances, with the exception of some families in the "Mary Campbell and Dauntless," from Liverpool. In the former vessel were 12 families, numbering 66 persons, who were assisted to emigrate. They were provided with a passage and a small sum of money to assist in procuring provisions; and all required assistance on landing here to enable them to reach their friends. The passengers per "Dauntless" were 58 days on their passage; about 80 of them landed here very poor, and were forwarded to their friends in different sections of the province.

The passengers per "Menapia," from Glasgow, are labourers, farmers, and about 12 mechanics. They all proceeded to Montreal in the vessel, on their route to different sections of Canada West.

Employment of all kinds continues scarce; the hay harvest, which has now commenced, has caused labourers to be a little more in demand than during the past week.

## WEEK ending 5th August.

THE emigrants arrived during the past week have all landed in excellent health, notwithstanding the length of passage, the average being 53 days. Those by the "Ellergill," from Hull, were 65 days out; all however, landed in good health, and proceeded to Montreal in the vessel, on their route to join their friends in Canada West.

The "Huron," from Belfast, with 226 passengers, arrived here after a passage of 57 days. One death occurred at sea, a child of seven years. The majority of the passengers by this vessel consist of the better class of agricultural labourers, and all appear to have friends in different sections of the province. Two young men are going to New Brunswick, and a few othersto the United States; and were all able to pay their way, with the exception of seven families, numbering 37 persons, who were assisted from this office.

The

## THE AGENT FOR EMIGRATION.

19

The emigrants per "Tay," Captain Langwell, 327 in number, all landed in excellent health, after a passage of 48 days. The cleanliness, good order, and excellent arrangements on board this vessel, entitle the master to great praise; and his passengers, all speak of his attention to their wants in the highest terms. There were a number of respectable families with capital among the passengers, who are proceeding to settle in Canada West. Sixteen families were assisted to emigrate by Neill Malcolm, esq., and were amply provided for during the voyage; they were all forwarded to Montreal at the ship's expense, on their route to the western part of the province.

In the barque "Florence," Richard Croaker, master, from Plymouth, were 119 passengers, all in good health and circumstances, with the exception of three families, 21 persons, who were assisted to emigrate by their parish. The passengers by this vessel complained that they were only allowed two quarts of water during the greater part of the passage, and that on several occasions the water issued to them was very unfit for use. On inquiry, I found this statement fully confirmed by the whole of the passengers, and consequently instructed the Crown officer to enter proceedings against the master for the infringement of the Passenger Act, which being fully proved he was fined in the penalty of 5 l. sterling, with costs, for neglecting to issue the proper allowance of water according to law. The evidence as to the quality of the water was not considered by the magistrates sufficient. I have also to state, that no issue of provisions whatever took place to the passengers on board this vessel during the voyage; and that many of them having run short were obliged to purchase from their fellow passengers and from the captain.

They having, however, stated in evidence that their contract was to find their own provisions, and that they did not apply to the master for any issue, the magistrates refused to entertain this charge. This vessel was 59 days on her passage; and it appeared in the evidence taken, which was also admitted by the master, that no inspection of the passengers' provisions whatever took place at Plymouth, and that they understood that five weeks' supply would be sufficient. On inquiry, I found that not an individual among them appeared to be aware that such a law as the Passenger Act existed.

## WEEK ending 12th August.

THE average passage of the emigrant vessels arrived during the past week is 58 days. The passengers have landed in good health, over four-fifths of whom are emigrating to join friends.

In the barque "Burrell" were 120 passengers, and in the Baltic from Yarmouth 56, who were sent out under the superintendence of the Poor Law Commissioners. They were well supplied, and each adult received 20 s. sterling on landing here.

In the "Clyde," from Liverpool, were three families, assisted to emigrate by their landlord, Mr. Charles Ffrench, from his estate in Ireland.

The passengers per the "Acadia," from Liverpool, and "Victory," from Hull, are generally in good circumstances. A number of young men in the latter vessel are proceeding to the United States to their friends. Number of persons assisted this week to proceed to their friends, 58.

## WEEK ending 19th August.

THE average length of passage of the vessels arrived during the past week has been 43 days; and the passengers have landed in good health. Over four-fifths of them have come out to join their friends in different sections of the province, and about 50 are going to their relations in the United States. There are a few families in the "Borneo" and "Lady of the Lake" who have brought out considerable capital with them: they intend settling in the Home district. The "Borneo," Captain O'Donnell, has made her second voyage this season from Limerick. A large portion of her passengers are very poor, and many of them will require assistance to enable them to reach their friends.

Employment in this neighbourhood and about Montreal continues very scarce, the supply of resident labour being fully equal to the demand; and the day labourer's wages range from 2 s. to 2 s. 6 d. without board. Owing to the opposition among the steam-boat proprietors, the steerage passage to Montreal has been reduced from 5 s. to 2 s. 6 d. during the past week, and will most likely continue so for the remainder of the season. This has enabled a considerable number to proceed at their own expense, who could not otherwise have done so. I have only found it necessary to grant free passages to 46 persons.

## WEEK ending 2d September.

THE emigrants arrived during the past week are chiefly persons emigrating to join their friends already settled in different sections of the province.

In the "Victoria," from Belfast, are a few respectable farmers, who have brought out capital with them; but the great majority of them are very poor, and require assistance to enable them to reach their friends. From 15 to 20 are going to the United States, a few will remain in this district, and the remainder to Canada West.

Passengers per "Royal Adelaide," are proceeding to friends in Whitby and Darlington, and three young men to New York. Three families, 12 in number, were assisted to emigrate by their landlord, Mr. Rosly, from his estate in Cornwall. Owing to the agreement that they should furnish their own provisions, no issue was made to them by the master, according to 6th clause of the Imperial Act; and as an unfavourable decision has already been

## CANADA.

Appendix to  
Report of the Agent  
for Emigration.

## CANADA.

---

Appendix to  
Report of the Agent  
for Emigration.

---

given by the magistrates on the construction of this clause, proceedings were not entered against him, more particularly as no complaints were made, and they having a surplus stock on landing.

The "John Bell," from New Ross, and "China," from Limerick, have made their second voyage this season. The passengers by them, 45 in number, are all able to pay their way. They are going to the neighbourhood of Bytown and Toronto.

Passengers, per "Favourite," from Greenock are respectable farmers, and a few labourers, coming out to join their friends. They all proceeded to Montreal in the vessel, on their route to Canada West.

## WEEK ending 16th September.

THE emigrants arrived since the 2d instant are chiefly farmers and labourers, and all have emigrated to join their friends. They have landed generally in good health, notwithstanding their long passages, the average of which is 52 days.

The ship "George," from Dundee, sailed from that port on the 11th June, and called at Cromarty, Thurso, and Locklaxford, for passengers. She afterwards put into Pictou, and there landed 95. Some of these people were from 12 to 13 weeks on board, and complained much of the detention they experienced, owing to the vessel calling at so many ports, which they state they were not aware of when they engaged their passage. They were also detained some days at Pictou, owing to the sickness among the passengers, and arrived here the 88th day from Dundee. The greater portion of them are poor, and notwithstanding the low rate of passage from this to Montreal (2s. 6d. each adult), 43 required to be forwarded at the expense of this department. Six families, 36 persons, were assisted to emigrate; they are proceeding to Zorra, London district, to their friends, but are destitute of means, and unable to reach their destination without assistance.

The passengers per the "Hebe," from Liverpool, 117 in number, were 43 days on their passage; they are principally labourers, and a few mechanics who are proceeding to their friends in Canada West. Thirty-eight passengers per this vessel were forwarded to Montreal by this office. The emigrants per "Hector" and "Caledonia," from Glasgow, are respectable people. In the latter vessel they are chiefly women with families coming out to join their husbands. They are all proceeding to Canada West. Twenty-one passengers per "Medina," from Waterford, are proceeding to their friends in the neighbourhood of Montreal and Kingston, one poor woman going to Halifax to her husband.

The demand for labour has improved during the last fortnight; and it is gratifying to report that there are no emigrants, either at this or the Montreal agency, at present out of employment. The agent at Bytown reports, that from 100 to 150 labourers will obtain employment on the public works on the Ottawa river.

## WEEK ending 23d September.

THE emigrants arrived during the past week have all landed in good health. They consist of farmers and agricultural labourers. There are also among them a large number of women and children, who are coming out to join their husbands. These latter descriptions of persons are all very poor, and in almost every instance require assistance to enable them to reach their friends. These vessels have all made long passages, varying from 40 to 68 days, the average being 50 days.

In consequence of the complaints made by the passengers on board the "Constitution," from Belfast, that they did not receive the proper allowance of water, and that the bread issued by the ship was so bad that they could not eat it, I, on inquiry, finding these complaints fully confirmed by the whole of the passengers, took the necessary proceedings against the master, and the sitting magistrates fined him in two penalties of 25 l. sterling, with costs, which was duly paid. They also complained that the broker with whom they engaged their passage, Messrs. Shaw & Co., promised, and in fact it was stated on their tickets, that the ship's allowance would be 3½ lbs. of biscuit and 3½ lbs. of flour or oatmeal per week; and that consequently many of them only furnished a few other necessaries for their voyage, depending on the ship supplying these articles to the extent stated in their tickets. They, however, found after they had sailed, that neither flour nor oatmeal was on board; and that the biscuit issued to them was unfit to eat, being blue-mouldy and rotten. This vessel was 50 days on her passage, and during the latter part of her voyage many of the passengers were reduced to eating the biscuit issued, and a few who had means, were under the necessity of purchasing from the captain, pork and other ship's stores.

The passengers from Aberdeen, in the "Brilliant," are highly respectable farmers, and bring out considerable capital with them; they are proceeding to settle in Canada West. The passengers per "Belle" and "Clio," from Padstow, are agricultural labourers, and are proceeding to join their friends in the Newcastle and Home districts.

One hundred and eighty passengers in the "Sophia," from Liverpool, have had a long passage of 68 days. They all landed in good health. They are principally Scotch and Irish, many of them very poor. They are all proceeding to different sections of Canada West, to their friends. Fourteen families require assistance to enable them to proceed from this. They are mostly women and children, coming out to join their friends.

## THE AGENT FOR EMIGRATION.

21

WEEK ending 30 September.

THE emigrants arrived during the past week have all landed in good health, notwithstanding their long passages, the average of which is over 51 days. They are also emigrating to join their friends in different sections of the province.

In the "Amazon," from London, there are 83 steerage and 19 cabin passengers. Of the former, 58 were sent out under the sanction of the Poor Law Commissioners. They received their landing-money here, and were forwarded to Montreal at the ship's expense. Several of the cabin passengers have brought out capital with them, and intend settling in the Eastern Townships.

The passengers per "Henry," from Dublin, 116 in number, are principally women and children. They are all extremely poor, and have been provided with a free passage by their landlord, Butler Clarke, Esq., to this port. They are proceeding to the Home, Gore, and Niagara districts, to friends. Sixteen passengers per "Unicorn," from Cork, all require assistance to enable them to proceed. They consist of four families, women and children, coming out to join their husbands. The remainder of the passengers arrived this week are of the better class, and all appear to have sufficient means to enable them to reach their respective destinations. The emigration during the remainder of the season will be very limited. All the vessels reported to this office have arrived, with the exception of one, the "John and Robert," with 41 passengers, from Belfast.

WEEK ending 14 October.

THE emigration for the present season may now be considered closed. Those who have arrived since the 1st instant consist of farmers, labourers, and a few mechanics; and all have emigrated to join their relations and friends, settled in different sections of the province. They have all landed in good health. Average length of passage has been 47 days.

The passengers in the "John and Robert" are a part of the unfortunate emigrants who embarked from the Western Isles in the ship "Catherine," in the month of May, and after being five weeks at sea, put into Belfast in distress. They were there transhipped on board this vessel. Captain M'Kechney landed 200 at Ship Harbour, in the Gut of Canso, and brought the remainder, 22, on to this port. These people are all destitute, and were forwarded to their friends at the expense of this department. Total number of persons assisted this month is 63.

## No. 11.

EXTRACT of a COMMUNICATION on the subject of the Prosecution of the Brig "Mary Ann," from Bideford, dated Government Emigration Office, Quebec, 28 July 1843.

Sir,

I HAVE the honour to report, for the information of his Excellency the Governor-general, the particulars and result of the proceedings adopted by me against the master of the brig "Mary Ann," from Bideford, in consequence of information received from the Colonial Land and Emigration Commissioners, a copy of which I enclose for your information.

Having ascertained, on my boarding this vessel, that the facts reported to the Emigration Commissioners by the officer of customs at Bideford were correct, I immediately placed the necessary information in the hands of A. W. Cochran, Esq. for prosecution.

The case was fully proved to the satisfaction of the sitting magistrates, and a penalty of 15*l.* sterling, with costs, was awarded against the master. He, it would appear, fearing the result of the trial, withdrew himself, and is supposed to have left the province. I herewith enclose you a copy of the report on this case, received from Mr. Cochran, and I trust the suggestions therein contained may meet with the approval of his Excellency, in order to prevent a recurrence of so flagrant a violation of the Act.

I beg to state that Mr. Thomas Curry, the consignee of this vessel, stated to me a few days previous to the trial, that in the event of judgment being given against the master, I might take him for the amount, as he would place another person in charge, and send the vessel home. This, I have no doubt, the master got a hint of, which may have induced him to withdraw, and thus defeat the law.

I have also to report the proceedings adopted by me against Captain Nicholas, of the barque "Champlain," from Baltimore, Ireland. On boarding this vessel, the passengers complained of the quality of the biscuit issued to them by the ship, as being so bad, from blue mould, that they could not eat it. A sample of the bread was produced and examined in presence of the master and owner, and appeared to be of a mixed and inferior quality, and all more or less mouldy and rotten, and unfit for food. Mr. C. Marmion, the owner of the vessel, stated that he bought the bread in Cork, from Mr. G. O'Neile, baker, for 11*s.* per cwt., and when it was brought on board it was free from mould, and was considered good wholesome bread, and as such was inspected and passed by the officer of customs, and that the same bread was used by the master and crew. I, however, considered it my duty to bring the case before the magistrates, who, on hearing the witness for the defence, dismissed the action, as they did not consider that the blame lay with the captain or owner, who it appears used every precaution to procure good bread, but that they were imposed upon by the baker.

No. 11 b.

## CANADA.

Appendix to  
Report of the Agent  
for Emigration.

This vessel was 67 days on her passage; and the passengers all stated that the bread was good for a month after they sailed. I feel satisfied that had the regular sitting magistrate presided, I should have obtained a heavy penalty against the master, as the bread, in my opinion, was of an inferior quality to that on board the "John Francis," when the master was fined 20 *l*. I have had the bread examined, and it appears to have been made from old bread or damaged biscuit, ground up and rebaked.

I have also to report that I procured the master of the brig "Coxon," from Cork, to be fined in the mitigated penalty, for having knocked down all his passengers' berthing on the morning of his arrival in port, which compelled them all to land previous to the time they are entitled to remain on board according to law, as all the passengers, with the exception of 12, proceeded on the same day to Montreal. The court awarded a fine of 20 *s*. with costs, and 1 *s*. a head for each of the 12 passengers detained until next day, for subsistence money.

Notwithstanding the decision of the magistrates in the case of the "Champlain," I shall conceive it my duty to take proceedings in every similar case of infringement of the Act which may come under my notice. Trusting that the proceedings which I have considered it my duty to adopt will meet with the approval of his Excellency,

To Rawson W. Rawson, Esq.

## No. 11 a.

EXTRACT of a COMMUNICATION from the Colonial Land and Emigration Commissioners, dated 3d May 1843.

I AM directed by the Colonial Land and Emigration Commissioners to inform you that they have received intelligence from the officers of the customs at Bideford that the ship "Mary Ann," 179 tons, Saunders, master, has not cleared out from that port, although she had 82 passengers on board. Her destination is, first, Prince Edward's Island, and thence Quebec; and she sailed under an ordinary clearance on the 19th April last. The parties connected with her have effected this invasion of the Passenger Act by alleging that they had only 27 steerage passengers, and giving to the remaining 55 the name of cabin passengers, who, as you are aware, are exempt from the Act.

This vessel would not have been allowed to clear out under the Act, not being of sufficient height between decks; and the following is an extract from the report of the officers of customs on the proceedings of the owner, in regard to this and another vessel, which he has dispatched with passengers:—"A few days ago, however, we found that he had divided the space between decks in two of his vessels by a bulkhead about midships, and that the after half of each was intended for cabin passengers, the only difference being that a few strips of cheap paper were pasted up thereon, and, as we are informed, a small increase of passage-money exacted."

## No. 11 b.

Sir,

Quebec, 14 July 1843.

I HAND you herewith the memoranda furnished from the office of the clerk of the peace of the costs incurred on the prosecution instituted by you against Captain Saunders, of the brig Mary Ann, amounting to 2 *l*. 11 *s*. 4 *d*. currency.

It is much to be regretted that in the case of this vessel the master was enabled to withdraw himself from the effects of the conviction obtained against him, by the improper course (as I view it) adopted by the consignee, Mr. Curry, in forthwith relieving him from the charge of the ship when he heard that the prosecution was about being commenced, and thus enabling him to leave the country and evade justice; the consequence of which has been, that not only has it been impossible to levy the penalty of 15 *l*. sterling, in the whole award against him, but the costs, if paid at all, must be paid from public monies. With respect to the facts of the case, as you were yourself a principal witness in it, and were present at the trial, I need only state briefly that there never was a more clear or flagrant case made out of an attempt to evade the provisions of the Passenger Act, with respect to the manner of laying the floor of passengers' deck or platform, and the height between it and the upper deck, by contrivance of calling 60 out of 82 passengers, cabin-passengers, or second cabin-passengers, merely because the rough and temporary berths amidships, where they were placed, were separated from the steerage, and the seams lined with paper.

The facility with which the law has been defeated by the removal of the captain beyond its reach, appears to suggest the expediency of some amendment of its provisions whenever a revision of the Act may be under consideration. In this the owners of the vessel cannot be reached any more than the captain; for by not clearing out the vessel as having steerage passengers, they evaded giving the bond required by one of the clauses of the Act, to abide any penalties to which the captain might be subjected for infringing the provisions; and yet the owners were the real guilty parties, for it came out in evidence at last, by the captain's statement to you, that he had warned them against the contrivance by which they sought to evade the law. I conceive it would be desirable that the owners or agents of all vessels carrying passengers of any description should be required to give such a bond; and also

## THE AGENT FOR EMIGRATION.

23

also that the process for bringing up the captain to answer for the violation of the law should be by warrant, in the first instance, instead of summons as at present, with power to the magistrates to require security (as would have been the case if the proceedings had been, as under the former Act, in the Admiralty) to answer the condemnations; and that when a condemnation takes place, it should not be allowed to withdraw the captain from its effects by getting another name put upon the register in his room.

## No. 12.

EXTRACT from my Remarks on the Second Edition of a Pamphlet, published by the Commissioners of Emigration for the Information of Emigrants proceeding to British North America.

IN 1842, 33,234 immigrants entered Canada West by the St. Lawrence and Rideau, and upwards of 6,000 from the neighbouring States; and I estimate the addition to our population during the current year at 19,000. We shall probably receive a further addition of 500 or 600 more before the navigation closes, making the total number for the two years nearly 60,000. But as a large proportion of them, who came from the United States, were canal labourers, who will probably quit the colony as soon as the public works are completed, I am inclined to estimate the actual number of settlers at 55,000. As I have recently visited all the ports at which emigrant agents are established, as well as different ports of Western Canada, I feel it my duty to submit for his Excellency's information a few remarks as to the present condition of the new settlers, as well as point out the prospects of success, which in my opinion may be fairly held out to such of their fellow-subjects as may contemplate settling in this part of Canada.

I beg also most respectfully to suggest the propriety of submitting my observations to the Emigration Commissioners, for publication.

The 55,000 may be fairly classed as follows; viz.

- 1st. Settlers having capital.
- 2d. Skilled labourers, such as mechanics and farm-servants.
- 3d. Unskilled labourers.

There has been a material decrease in the number of the first class of settlers to Canada of late years. From 1832 to 1837, persons having from 500*l.* to 2,500*l.* sterling were comparatively numerous; but their habits too frequently unfitted them for becoming successful farmers. They had also been accustomed to a mode of living which the products of their farms could not sustain, and many either left the province or went into other and more congenial employments. They of course discouraged others of their own class from entering into similar undertakings. But I will venture to say, that there is scarcely an instance, during the same period, of a prudent farmer with an industrious family, and with just sufficient capital to give him a fair start, say from 300*l.* to 500*l.*, who has not succeeded, and who does not feel that he has greatly benefited himself and family by his removal to Canada. We have had hundreds of settlers so circumstanced. The prospects of the Canadian farmer are now much better than they were during the period adverted to. Then there was no regular market for agricultural produce; but the recent concessions made by the Imperial Government will no doubt create a steady demand, at remunerating prices, and persons of capital who are practically acquainted with farming can scarcely fail of success. But I should earnestly advise persons of this description who may emigrate to this colony to purchase or rent improved farms. They know how to cultivate land, but they are totally unfitted for clearing it of the forest, and for cultivating it afterwards amidst the stumps and roots of the trees, which continue to encumber it for many years after the land has been what is called cleared. By remaining in the older settlements, they will also place themselves and families within a reasonable distance of places of worship, schools, post-offices, mills, and markets. Farms can be obtained in every district, and upon terms so very reasonable, as to place them within the reach of small capitalists. They principally consist of from 100 to 200 acres each, with from 50 to 75 cleared, and a tolerable good dwelling-house, barn, and shed, and may be purchased at from 250*l.* to 500*l.* sterling. An unimpeachable title can be always obtained, as all titles are registered. The owner of such a farm in Canada pays neither tithes nor poor-rates, and his taxes are exceedingly small. The annual assessment on a farm of 150 acres, with from 50 to 75 cleared, dwelling, and out-offices, does not exceed 15*s.* sterling per annum; and I can add, without fear of contradiction, that he enjoys as much civil and religious liberty, and is as well protected in person and property, as the inhabitant of England or Scotland. Our social condition will, undoubtedly, even to a settler of this description, leave him something to regret; he may, and probably will, miss many things that he has been accustomed to; but if he is satisfied with a plentiful supply of the substantial necessities of life, and the means of bringing up a family, and of afterwards educating them for trades or professions,—in which with common industry they can scarcely fail of success,—he is almost sure to become a prosperous and respectable member of society. Such a man will find his condition substantially ameliorated by his removal to Canada, and much of that care and anxiety as to the future provision of his family, which press so heavily on persons of his class in more densely peopled countries, dispelled.

CANADA.

Appendix to  
Report of the Agent  
for Emigration.

The second class, viz. mechanics and farm-servants, also generally do well. Of late years we have had a considerable number of emigrants of this class, both from the United States and the United Kingdom; and wages have been considerably reduced. The rate given in the accompanying sheet, marked Appendix (D.), is substantially correct; but I do not think that the rates would be sustained if an unusual influx of such persons took place. But there are new towns and villages constantly springing up in the less densely settled parts of the province, where they will be sure of profitable employment, if they are sober and industrious. Good farm servants have been always in demand, and the reason why they have been comparatively scarce is, that they generally, after a few years' residence, either save sufficient to purchase land, or to enable them to rent or work farms on shares. Persons belonging to the following trades or callings should bear in mind that, owing to the length and severity of our winters, there is little or no demand for their services from the middle of September to the 1st of April; viz. brickmakers, bricklayers, gardeners, painters, plasterers, quarrymen, and stonemasons. During the winter months they may, if disposed to make themselves generally useful, find employment; but they must not calculate on obtaining a livelihood by their ordinary callings.

I now come to the last class, and I am sorry that I cannot hold out any inducement for them to emigrate to Canada at present. It is generally known, that owing to the almost universal monetary difficulties which have prevailed in the United States, the labourers employed on the public works have been discharged, and that thousands of them have found their way into Canada. The competition has been so great that labourers have been hired as low as 1 s. 9 d. per day, without board or lodgings, and even this spring hundreds were hired to work on the canals at 2 s. Much discontent resulted from so sudden a reduction of wages, and in June last the rate was raised to 2 s. 6 d. per day, which continues to be the current rate on the public works. Although the rate is somewhat higher in the towns, yet the loss of time, arising from the irregularity of the demand, and the higher price which he pays for board, leaves the labourers who rely upon casual employment in a worse condition than those who obtain constant work at the low rate. In a year or two most of our public works will be completed, and the thousands now employed upon them will be obliged to seek subsistence elsewhere; consequently there is no immediate prospect of improvement. But a glut in the labour market cannot long continue in a country of such boundless fertility and extent, and whose settlements are extending in every direction. It may do so for short periods in the older settlements, but the facility with which able-bodied labourers can get into the interior soon relieves the pressure.

THE AGENT FOR EMIGRATION.

25

No. 14.

REPORT of the MEDICAL SUPERINTENDENT.

Sir,

Quebec, 8 January 1844.

CANADA.

I have the honour to submit, for the information of his Excellency the Governor-general, the accompanying tabular Return (A.) of emigrants admitted and discharged during the past season, and from the Quarantine Hospital, Grosse Isle, to which is appended a nominal Return (B.) of those who died.

Appendix to  
Report of the Agent  
for Emigration.

Upon a comparison of this return with those of preceding years, (C.) it will be seen that the average number of sick has not been so great as usual. The two chief causes of disease and death in passenger vessels are overcrowding and a deficiency of wholesome food. From the operation of these two causes the emigrants of this season have to a certain extent been free. It was expected by the parties engaged in the passenger trade that the emigration of this year would have equalled, if not exceeded, that of the year previous; vessels were fitted up accordingly with berthing and water casks for the whole complement of passengers allowed by the Act. Most of these vessels (from Ireland particularly) were obliged to come away with one-half, and some less than one-third of the number for whom preparation had been made. Those who embarked were not, in consequence, exposed to over-crowding, and its attendant evil, imperfect ventilation.

The regulations of the amended passenger law making it imperative upon the owners of passenger vessels to furnish to every emigrant during 70 days an allowance of bread, oatmeal, or potatoes, has been found of the greatest practical benefit. None of those distressing cases of starvation mentioned by me in the former reports, and which proved so fertile a cause of disease and death, have this season come under my observation.

The total number of passenger vessels inspected by me at the quarantine station this season was 203, on board of which were 20,714 passengers. Of this number, 75 died on the voyage, being 0.36 per cent. of the whole. I have added a Return (D.) of the vessels on board of which these deaths took place. Fifteen children were born on the passage out, and one woman died in childbirth.

Fever broke out and prevailed more or less on board of 31 vessels, small-pox on board of seven, measles in three, and scarlatina in one. The emigrants appeared generally of a class similar in circumstances to those of preceding years; the great majority being labourers and servants, of the poorest description, with a few respectable farmers of capital from Yorkshire and Cornwall.

I remarked that the number of passengers from England and Scotland was much greater, in proportion to the total amount, than any previous year; the reason assigned by shipmasters for this falling off in the emigration from Ireland was, not the want of inclination to emigrate, but the impossibility which intending emigrants experienced in raising the small sum required to pay for their passage.

Many of those who did emigrate came out on the credit of friends at home, who made themselves responsible for the repayment of the passage money within 12 months after the arrival of the emigrants in this country. On board of one vessel, the barque "Anne," of New Ross, out of 64 passengers, I was assured by the master that only one family had paid their passage money before leaving, all the others having come out in the manner just described.

With reference to the expenditure incurred this year in the hospital and quarantine establishment generally, I have much pleasure in submitting that, in consequence of the comparative small number of sick treated in hospital, the expense has been less by nearly 600*l.* (or one third), than the year previous.

										Currency.		
										£.	s.	d.
The total Expenditure in 1842, was	-	-	-	-	-	-	-	-	-	2,284	15	4
Do. do. in 1843	-	-	-	-	-	-	-	-	-	1,686	8	10
Less this year	-	-	-	-	-	-	-	-	£.	598	6	6
										Sterling.		
										£.	s.	d.
The sum voted by the Legislature for the expenses of the past year was	-	-	-	-	-	-	-	-	-	1,800	-	-
The actual expenditure has been	-	-	-	-	-	-	-	-	-	1,499	1	2½
Less than the Appropriation	-	-	-	-	-	-	-	-	£.	300	18	9½

From the expenditure of this season must be deducted a further sum of about 25*l.*, being the value of various hospital stores, and about 30 cords of firewood, which remained at the end of the season, available for next year.

One great item of diminished expenditure has been in the hire of the steam-boat, upon which a saving of 200*l.* alone has been effected by engaging the boat to make but one trip

APPENDIX TO THE REPORT OF

CANADA.  
Appendix to  
Report of the Agent  
for Emigration.

trip to the island each week, in place of two, as in former years, and by keeping a small sailing vessel at the station, to communicate with the town when requisite for provisions and supplies, &c. This arrangement has been found to work well, and I have reason to anticipate, from increased competition, that the service of a steamer can be obtained next year for even a less sum than paid this. In the expenditure of this season is included the sum of 118*l.* 2*s.* 6*d.*, being the cost of 50 new iron beds, imported from England this spring; these, with a like number imported the year previous, render the hospital establishment complete in this respect.

I take this occasion to revert to the subject of employing a constabulary or police force for that of the military, as proposed by his Excellency in May last.

With reference to this proposed alteration, I beg respectfully to submit, that after the experience of another season, I am of opinion that the duties hitherto performed by a detachment of troops of the line may be as efficiently performed, in all seasons when the emigration does not exceed that of the past year, by two chief and four ordinary constables; the two first to have charge of, and reside in the passenger sheds (as the sergeants have hitherto done), the others to act under their orders in preventing communication between the sheds in which emigrants infected with different diseases are washing and purifying; the whole force to be subject to the control of the medical superintendent. The expense of this force would not exceed 20*s.* a day; say,

	£.	s.	d.
Two head constables, at 3 <i>s.</i> 6 <i>d.</i> per day	-	-	7
Four ordinary do., at 2 <i>s.</i> 6 <i>d.</i> per day	-	-	10
A ration of 1 lb. of bread and 1 lb. of meat each, at 6 <i>d.</i>	-	-	3
	£.	1	-

The expense hitherto incurred by the military force has, until this season, been 9*s.* per diem; viz. an allowance of 5*s.* to the officer commanding, and 2*s.* a day to two sergeants respectively. Should the proposed change take place, the actual increase of expense will be 11*s.* a day. There will also be an annual saving of expense in repairs of the barracks, and different buildings occupied by the troops, as well as in the firewood cut by them on the island. I am induced to believe that this comparatively small force will be found sufficient to preserve order, and to keep up the necessary separation of the emigrants when on shore. From the present great sobriety of the Roman-catholic Irish (formerly the most turbulent of the emigrants), few of this class have left their country these last two years without taking the temperance pledge before leaving; many have done so from the best of motives, but a great number from a superstitious idea that the medal which they obtain, and wear suspended from their necks, will serve as a charm to avert shipwreck and other dangers of the sea. Another reason why I anticipate no difficulty in carrying on the duty with this reduced force is, my knowledge of the fact, that in all well-ordered passenger vessels it is customary for the emigrants to select from among themselves a committee of 10 or 12 of the most influential of their number, whose orders they obey implicitly. I would propose, should a constabulary force be employed, to request these committees to continue this supervision of their fellow-emigrants when on shore, and to assist the constables when required. With this co-operation I anticipate no difficulty in carrying on the duty efficiently.

I beg respectfully again to bring under the notice of his Excellency the Governor-general the great need that exists for a wharf near the passenger sheds, as I have on former occasions had the honour to submit that it is the only work now required to render this quarantine establishment the most complete of any in North America.

R. W. Rawson, Esq.  
&c. &c. &c.

No. 2.  
Lord Stanley to  
Sir C. T. Metcalfe,  
29 March 1844.

COPY of a DESPATCH from Lord Stanley to the Right honourable  
Sir C. T. Metcalfe, Bart. G. C. B.

Sir, Downling-street, 29 March 1844.

I HAVE to acknowledge the receipt of your Despatch (No. 199) of the 20th ultimo, transmitting the Report of the Chief Agent of Emigration for the past year.

I confine myself on this occasion to the question regarding the pecuniary assistance which it will be proper to give to Canada from the funds of this country towards the relief of sick and destitute emigrants arriving in the province, and shall reserve for another opportunity such remarks as I may find it necessary to offer upon the report made by Mr. Buchanan of the emigration of the past season.

It appears that the emigration to Canada during the last year was less, by 51 per cent., than in the preceding year, while the estimate having been framed on the assumption that it would continue the same, was intended to provide against the demands for assistance of double the number of emigrants that actually arrived.

On examining the return of the expenditure in assistance during the past year, I perceive that, although the number of emigrants for whom provision was made has

## THE AGENT FOR EMIGRATION.

29

has diminished one-half, the sum expended has been equal to the vote, the balance being only 27 *l.*, and that the number of cases in which assistance has been afforded, amounted to 21,283, being larger than the whole number of emigrants that arrived in the colony.

For this increased expenditure in proportion to the number of emigrants, the agent-general assigns two reasons; first, an increased demand for assistance in consequence of the representations of settlers to their friends, that on their arrival they should practice deception, and thus be conveyed west at the expense of the Government; and secondly, the additional charges now made by the forwarding establishments at Montreal. But it seems to me by no means improbable that this increased expense may be explained by supposing that the same emigrants who were relieved at Quebec received assistance at Montreal and Kingston, and were thus assisted two or three times on their journey up the country.

The observations made by the agent-general as to the ill effects of the pecuniary assistance given to persons representing themselves to be without the means of defraying the expense of their inland journey are very important, and show the tendency of such assistance to prevent proper provision being made by individuals for the wants of the emigrants on their arrival.

I do not on that account consider it necessary to withdraw the proportionate contribution which has hitherto been made from Imperial funds towards this object; adverting, however, to the great probable decrease upon the number of emigrants which was estimated for last year, the vote for that assistance may, I consider, with propriety be reduced this year to 2,000 *l.* I have therefore given directions for placing upon the estimate for the service of emigration for the year 1844-5, the sum of 2,000 *l.* in aid of the provincial tax upon emigrants, and 1,500 *l.* for agency.

I have, &c.

COPY of a DESPATCH from the Right honourable Sir *C. T. Metcalfe*,  
Bart. G. C. B. to Lord *Stanley*.

No. 3.

Sir C. T. Metcalfe  
to Lord Stanley,  
12 March 1844.

My Lord,

Government House, Kingston,  
12 March 1844.

I HAVE the honour to submit copy of the Annual Report for December 1843, received on the 4th instant from Mr. Allison, Agent of Emigration at Montreal, which does not appear to require any remarks from me, in addition to those offered in transmitting the Report of the Chief Agent on the 20th ultimo.

I have, &c.

(signed) *C. T. Metcalfe.*

TO His Excellency the Right honourable Sir *Charles Theophilus Metcalfe*,  
Baronet, G. C. B. &c. &c. &c.

Government Emigration Office, Montreal,  
31 January 1844.

I HAVE now the honour of submitting to your Excellency my Annual Report, as Government Emigration Agent at Montreal, for the year 1843.

The first arrival of immigrants at this port was on the 7th May; and the first barge having immigrant passengers on board for the western part of the province, left here on the 15th of May.

Shortly after the commencement of the season I removed to the small office at the emigrant sheds on St. Ann's Common, in compliance with the commands of your Excellency, as communicated to me through the chief agent for emigration at Quebec.

181.

The

30 APPENDIX TO THE REPORT OF

No. 3.  
Sir C. T. Metcalfe  
to Lord Stanley,  
12 March 1844.

The number of arrivals at this port by the St. Lawrence during the past season was 20,892, which have been disposed of as stated in Appendix (A.)

The immigration at this port the two last seasons stands thus :

In 1842, gross arrivals	-	-	42,355	-	-	13,060 paupers.
In 1843 - ditto	-	-	20,892	-	-	7,191
In 1842, the total expenditure was	-	-	-	-	-	£. s. d. 4,283 4 2
Deduct for erecting a new shed and a new hospital, together with repairs to old buildings	-	-	-	-	-	518 10 6
Expense incurred in assisting Immigrants with free passages, provisions, &c. &c.	-	-	-	-	-	3,764 13 8
In 1843, the total expenditure was	-	-	-	-	-	£. s. d. 2,973 4 1
Deduct for building a new shed	-	-	-	-	-	£. s. d. 170 - -
Ditto for coal-tarring and whitewashing ditto	-	-	-	-	-	14 - -
Ditto repairs done to old sheds	-	-	-	-	-	17 - -
Ditto board footpaths, opening drains, and nails for the fences	-	-	-	-	-	10 7 4
Insurance on hospital, sheds, and cook-house, until 30th November 1844	-	-	-	-	-	6 9 9
Expense incurred in assisting Immigrants with free passages, provisions, &c. &c.	-	-	-	-	-	2,755 7 -

From the above statement it will appear that in 1842 about 30½ per cent. of the gross arrivals at this port were utterly destitute, and were forwarded at the expense of Government. In 1843 about 33½ per cent. were in a similar condition, and have also been forwarded to their respective destinations at the expense of Government, giving an increase of pauper immigration in 1843 of 2½ per cent. over the immigration of 1842. This increase was caused, in part, by a greater number of destitute females; most of them were mothers, with families, proceeding to join their husbands or relatives; and, in part, by the diminished demand for labour in Montreal and vicinity, there being scarcely any public works in progress, which often left me no other means of disposing of paupers than forwarding them to the interior.

I feel confident that had I occupied an office in the city (the office at the sheds being sustained), as in former seasons, I could have saved a considerable portion of the expenditure under notice, by finding employment for destitute females as domestic servants; but my office having been about a mile from the centre of the city, I could do little in disposing of female paupers, by employing them among the citizens.

In 1842, I found employment in Montreal and vicinity for	-	-	2,084
In 1843, for	-	-	258

The immigration of 1842 is a little over 50 per cent. greater than that of 1843, but the outlay of 1842 exceeds that of 1843 only about 27 per cent., while the pauper immigration of the two seasons differ only 2½ per cent. It may be necessary to explain from what cause this increase of expenditure has arisen.

Besides the causes already alluded to arising from the diminished demand for labour in this vicinity, and the consequent necessity of forwarding indigent immigrants westward, and my being unable to settle many females as domestic servants, owing to the remoteness of my office, there is one arising out of circumstances over which I had no control, namely, a combination among the forwarding merchants to exact 60 per cent. higher rates of passage the past season; this combination the chief agent, A. C. Buchanan, esq., found it impossible to break up, and was consequently obliged to submit to the higher rates of passage.

When due allowance is made for the advance of prices in forwarding indigent immigrants, and for the other inconveniences to which I was subjected, the ratio of last year's expenditure will be lower than that of 1842.

For the last three years there has been a progressive improvement in the health and cleanliness of immigrants. The amount of disease in 1843 has been less than in former seasons, and the attention of Dr. Bowie, the emigrant physician, has been very punctual and satisfactory. The return for the last season will be found in the Appendix marked (B.).

My

## THE 'AGENT FOR EMIGRATION.

31

My correspondence with the different emigrant agents has been marked by a desire, on their part, to promote to the utmost of their efforts the advantages of the service in which they are engaged.

Early in the season about 900 persons from different emigration societies in Glasgow, arrived by the "Elutherid," "Jane Duffies," "Brilliant," "Bona Dea," and "Romulus." £.70 sterling were remitted by Alexander Gilkinson, esq., secretary to certain emigration societies, to be applied to the use and benefit of these immigrants on their journey westward. All of those persons that were destitute were forwarded to the interior at an expense to Government exceeding the sum remitted; and the 70 l. sterling were, in compliance with instructions from A. C. Buchanan, esq., put to the credit of the Government.

On the 23d of May the steamer "Queen," on her passage from Quebec to Montreal, came in collision with the steamer "Lord Sydenham," and received so much injury as to sink the former. This disaster happened in the night, and most of the immigrants on board suffered severely, some being compelled to make their escape half dressed. Three individuals were drowned, one of them an immigrant. I felt it my duty to assist the unfortunate strangers by furnishing them with food for a few days, and forwarding them to their destinations at the expense of Government; I also relieved a number who were nearly destitute of clothing with garments at my individual cost.

According to orders received from A. C. Buchanan, esq., chief agent for emigration, Canada East, a new shed was erected early in the spring at the emigrant establishment, at an expense of 170 l. currency, which, with the sum of 41 l. 7 s. 4 d. currency for coal-tarring, repairs, cleansing sheds, &c., constitutes the whole cost of keeping the emigrant establishment in good condition during the season, being in all 211 l. 7 s. 4 d. Halifax currency.

In former reports I have deemed it as a duty incumbent upon me to suggest the propriety of opening new settlements in Canada East, on the north shore of the St. Lawrence, and also in the Eastern Townships, and would most respectfully refer to those suggestions.

Eastern Canada participates but sparingly of the enriching current of immigration; only about three per cent. of the gross arrivals at this port the last season have settled in this part of the province. Perhaps no part of Canada offers more inducements to new settlers than the Eastern Townships.

If the Government would assist in opening up that territory with plank roads and a railroad, and lay a moderate tax on the lands left in a state of nature by absentee proprietors and speculators to cover such outlay on roads as might be incurred, most essential benefits might accrue to the country at large, and immigration would be very considerably promoted.

Complaints of ill-treatment by shipping agents and captains of vessels have not been numerous or of a very aggravated character the past season; several immigrants, however, stated that delays occurred at the port of embarkation; these delays consumed a considerable portion of their sea stock provided for the voyage, and passengers have been under the necessity of purchasing provisions from the captains at exorbitant prices, and consequently were deprived of all their funds by this process. This evil has been frequently noticed in previous years, and nevertheless it still continues, though very perceptibly diminished. It is much to be regretted that it has not been wholly remedied, as it casts on our shores large numbers of truly indigent immigrants, many of whom become a charge to the Government.

From numerous disclosures made by investigating into the destination and circumstances of immigrants, I am inclined to think that many forwarded to Kingston and the head of Lake Ontario pass over to the United States. I would therefore most respectfully recommend that the attention of the different emigration agents west of Montreal be called to this circumstance, and that as many be settled eastward of Lake Ontario as may be found practicable. The Ottawa country presents an inviting field for immigration.

A detailed statement of the number of adults, children, and infants forwarded to sundry parts of the province at the expense of Government, together with the names of the forwarding merchants, and the amount paid to each, may be seen in Appendix (C.)

All which is most humbly submitted.

(signed) *Jas. Allison,*

Emigration Agent, Montreal.

COPY of a DESPATCH from the Right Hon. Sir *Charles Metcalfe*, Bart. G.C.B. to Lord *Stanley*.

No. 1.  
Governor Sir C.  
Metcalfe to Lord  
Stanley.  
28 October 1844.

Government House, Montreal,  
28 October 1844.

My Lord,

I HAVE the honour to submit for your Lordship's information the copy of a Report from Captain *Wetherall*, stipendiary magistrate, detailing the proceedings that took place during the two days of polling for members to represent the city of *Montreal* in the new Parliament.

I consider that the preservation of the peace, and of the lives and property of the inhabitants, is in no small degree to be attributed to the admirable arrangements of Mr. *Young*, the returning officer, and to the efficient services of Captain *Wetherall*, a most valuable public servant.

The polling proceeded throughout without interruption, notwithstanding the repeated attempts made to disturb it; and I feel that it will be as gratifying to your Lordship to learn, as it is to me to state, that no life has been sacrificed.

Great credit is due to the troops employed, both officers and men, for their temperate and judicious conduct; and I am of opinion that without their assistance, neither the peace of the city could have been maintained, nor the free exercise of their franchise secured to the voters, in consequence of the inroads made by the labourers, non-voters, who are congregated upon the public works in this vicinity.

I have, &c.

(signed) *C. T. Metcalfe*.

Enclosure in No. 1.

EXTRACT of a REPORT from Captain *Wetherall*, Stipendiary Magistrate at MONTREAL, addressed to the Provincial Secretary; dated Lachine Police Office, 26 October 1844.

Encl. in No. 1.

Sir,

I HAVE the honour to state for the information of the Governor-general, that a few days previous to the nomination of candidates to represent the city of *Montreal*, I was called on by the returning officer to assist him in making arrangements for the preservation of the peace of that city.

I felt it my duty to comply with this request, and I beg now to report the occurrences which took place under my observation, as well as the general arrangements during the two days of polling.

103.

The

## 2 PAPERS RELATIVE TO THE LATE ELECTION, MONTREAL.

The polling booths were fixed in the centre of streets running at right angles with two great thoroughfares. Strong barriers were erected at the polling booths to prevent the collision of the contending parties, there being an understanding between the candidates, made at the suggestion of the returning officer, that their respective voters should approach the polling booths at the opposite ends of the street.

At each booth two magistrates and a strong body of special constables were posted, to assist the deputy returning officer in maintaining peace.

In this order all the polls were opened.

I was occupied throughout the two days in continually visiting the several polling places, and in no instance except that hereinafter mentioned, did I perceive any difficulty whatever to the free and peaceable access of voters to the polls.

Two days previous to the polling, information reached the returning officer that bodies of strangers were expected from the Gore of Chatham and Quebec to endeavour to carry the election by violence, and arrangements were made to prevent them, if possible, from entering the city.

I can confidently assert that no bodies of men came from the former place, as I had placed police on the road and at the landing-places to ascertain the fact. Two hundred men, however, apparently Irish labourers, arrived in Montreal in the steam-boat "Charleroi," from Quebec.

\* \* \* \* \*

On the morning of the first day of polling an unusually large body of strangers, evidently Irish labourers, congregated in M'Gill-street, one of the largest thoroughfares, and flanking the streets leading to the polling-booths in the Queen's Ward, one of the principal wards in the city.

Amongst these people I recognized a large number of labourers from the Lachine Canal, non-voters; and it was very evident from their manner and local disposition that they meditated an attack on the booth, with a view of taking and keeping forcible possession of it,—a plan which they had successfully practised at the last election for Montreal.

Shortly after the poll was opened an attack was made by these people on the voters of Mr. Moffatt, who had assembled near the poll, at the Queen's Ward, in the street assigned to them, and the deputy returning-officer found it necessary to call in the troops.

The riot was speedily repressed, and the troops were retained in the vicinity of the poll to allow free access to it, and prevent further rioting.

Polling continued throughout the day uninterruptedly.

On the close of the poll on the first day an attempt was again made by the labourers to create a disturbance by attacking the voters of the opposite party, which was again checked.

The labourers finding their object defeated, returned to the canal, and in passing through Griffn Town demolished the windows of a Wesleyan chapel, besides committing various other depredations.

During the night it was thought necessary to place detachments of troops in different parts of the town, to protect the property of individuals of both parties who had taken prominent parts in the election.

On the second day the polling commenced at the usual hour, and continued without interruption.

Early on that day I received information from the police stationed on the line of canal that agents for Mr. Drummond had proceeded along the line of canal, stating to the labourers (many of whom had returned to their work), among other inflammatory matter, that "the Tories had burned the Recollet (an Irish Roman-catholic church), and that their comrades had been abused and were bleeding in the streets, and urging them to proceed to Montreal immediately.

A party amounting to between 300 and 400, many of whom were armed, marched in military array, with scouts and flankers, on Montreal, augmenting their numbers as they proceeded; this body made their appearance at the foot of M'Gill-street, and continued their march in the direction of the polling-place in the Queen's Ward; and refusing, on the commands of the magistrates, to halt, the Riot Act was read, and the cavalry directed to disperse the crowd, and assist the civil power in the capture of as many as possible. Thirty men were arrested and committed to gaol.

Although I believe that the several deputy returning-officers found it necessary to require the presence of troops in the vicinity of their respective polling-places, yet they were not called upon to act offensively except in this instance, and then, I am happy to say, without any loss of life or serious injuries being inflicted.

The same military protection of property was afforded during the night on the requisition of the returning officer, and was continued until the final close of the election, and the city now remains in a state of apparent tranquillity.

There can be no doubt that riot and bloodshed to a frightful extent would have ensued, and the election could not have been proceeded in, but for the admirable and humane arrangements of the returning officer, and the timely and temperate interference of the troops.

In proof of the necessity for military assistance in this contest, I would remark that Mr. Drummond spoke to me a few days previous to the election on the propriety of commencing polling under military protection, a measure to which the returning officer would not consent until all ordinary means had failed, and in no case was military aid resorted to until then.

## PAPERS RELATIVE TO THE LATE ELECTION, MONTREAL. 3

In conclusion, I would remark that every effort and arrangement was made by Mr. Young, the returning officer, to ensure the preservation of order and the free access of voters to the polls, which he succeeded in effecting without the loss of a single life.

COPY of a DESPATCH from Lord *Stanley* to the Right Honourable  
Sir *Charles Metcalfe*, Bart. G. C. B.

No. 2.

Lord Stanley to  
Governor Sir C.  
Metcalfe.  
16 November 1844.

Sir,

Downing-street, 16 November 1844.

I HAVE to acknowledge the receipt of your Despatch (No. 162), of the 28th October, enclosing the copy of a Report from Captain Wetherall, stipendiary magistrate, detailing the proceedings which took place at the recent election of Members to represent the city of Montreal in the new Parliament.

You will signify to the returning officer, Mr. Young, and Captain Wetherall, my approbation of the efforts so successfully made by them for the preservation of the peace of the city on that occasion.

I have, &c.

(signed) *Stanley*.

(No. 255.)

— No. 1. —

COPY of a DESPATCH from Lord *Metcalf*, G.C.B., to Lord *Stanley*.

Government House, Montreal,  
22 April 1845.

My Lord,

AT the request of the Boards of Trade of Toronto, Quebec and Montreal, I beg leave to transmit herewith petitions from those bodies to Her Majesty, praying that a uniform low rate of postage should be substituted for the rates now levied in the British North American Provinces; and I venture to recommend the subject to your Lordship's favourable consideration.

No. 1.

Lord Metcalfe to  
Lord Stanley,  
22 April 1845.

I have, &c.  
(signed) *Metcalf*.

Enclosure 1, in No. 1.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please Your Majesty,

The Petition of the Board of Trade of the City of Toronto,

Most humbly sheweth,

THAT Your Petitioners, as well as Your Majesty's other Canadian subjects, have long felt that our provincial rates of letter postage are injuriously high; so much so as to cause a large proportion of the letter correspondence of the province to be carried on by other means than that of the post-office, to the prejudice of the post-office revenue, and inconvenience of trade. Encl. 1, in No. 1.

That experience has shown Your Petitioners, that the lower the rate of postage is in any country, commerce, agriculture and the social relations of life will be proportionally benefited by it.

That Your Petitioners have watched with heartfelt pleasure the successful working out of that greatest and most benevolent of modern reforms, the uniform penny rate of letter postage, as carried into effect by Your Majesty within the United Kingdom of Great Britain and Ireland; and observe that the neighbouring republic, benefiting by the wisdom of Your Majesty, has recently passed a law regulating the rate of postage within the United States, and approximating it to that given by Your Majesty to Great Britain and Ireland.

That Your Petitioners respectfully beg Your Majesty's attention to the following anomaly in rating Canadian postage.

The postage of a single letter—

From Amherstburgh to Montreal, 645 miles, is 1s. 8d., Halifax currency.  
From Amherstburgh to Quebec, 825 miles, is 1s. 10½d., Halifax currency.  
From Toronto to Halifax, 1,256 miles, is 2s. 9d., Halifax currency.  
From Amherstburgh to Halifax, 1,525 miles, is 3s. 4d., Halifax currency.  
From Amherstburgh *via* Quebec and Halifax to England, 4,525 miles, is 1s. 4d., Halifax currency.

That Your Petitioners, therefore, pray that Your Majesty will be graciously pleased to extend to Your faithful Canadian subjects a participation in the benefits of a uniform low rate of letter postage.

263.

For

4 CORRESPONDENCE *relative to* POSTAGE AT TORONTO,

For which purpose Your Petitioners humbly beg that Your Majesty will be graciously pleased to direct the Postmaster-General to issue instructions to the Deputy Postmaster-General in this province, to the purport that instead of the several rates of letter postage now charged in Canada, under authority of Treasury warrant, dated Whitehall, Treasury Chambers, 11th October 1843,—

There shall be charged and taken a uniform rate of Two-pence halfpenny sterling, or Three-pence, Halifax currency, postage, on every letter not exceeding half an ounce weight, sent by mail within the province.

On every letter exceeding half an ounce and not exceeding one ounce in weight, two such single rates of Two-pence halfpenny sterling, or Three-pence, Halifax currency.

And for every half-ounce in weight above the weight of one ounce, there shall be charged and taken progressively an additional single rate of Two-pence halfpenny sterling, or Three-pence, Halifax currency.

And on every letter dropped in the post-office for delivery only, and not intended to be sent by mail, there shall be charged and taken a rate of One penny, Halifax currency.

In the general benefits of this measure to commerce, to agriculture and to civilization, Your Petitioners entertain the utmost confidence.

And Your Petitioners, as in duty bound, will ever pray.

(signed) G. P. Ridout, President,  
and 44 others.

Office of the Board of Trade,  
of the City of Toronto,  
18 March 1845.

---

Enclosure 2, in No. 1.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please Your Majesty,

The Petition of the Council of the Board of Trade of Quebec,

Humbly sheweth,

Encl. 2, in No. 1.

THAT Your Petitioners, in common with Your Majesty's other Canadian people, have long been and are now subjected to very high provincial rates of postage, which in the opinion of Your Petitioners are injurious to trade, and prejudicial rather than advantageous to the post-office revenue.

That Your Petitioners would most respectfully call Your Majesty's attention to the fact, that whilst the postage on a single letter from Quebec to Montreal, a distance of 180 miles, is Nine-pence currency; from Quebec to Kingston, a distance of 379 miles, is One shilling and one penny halfpenny currency; from Quebec to Toronto, a distance of 570 miles, is One shilling and sixpence currency; from Quebec to Amherstburgh, a distance of 825 miles, is Two shillings and one halfpenny currency; that on a single letter from England to Amherstburgh, a distance of 4,525 miles, *viâ* Halifax and Quebec, is only One shilling and four-pence currency.

That Your Petitioners conceive that the introduction of a moderate rate of postage into the province would be advantageous to its commerce and agriculture, advance its civilization, and increase the revenue of the post-office.

Wherefore Your Petitioners humbly pray that Your Majesty will be graciously pleased to extend to this province a reduced rate of postage, and to direct that instead of the several rates of letter postage now charged in Canada, the following scale be substituted:—

On every letter not exceeding half an ounce in weight, sent by mail within the province, a distance of not more than 300 miles, Three-pence currency.

On every letter not exceeding half an ounce in weight, sent by mail within the province, a distance exceeding 300 miles, and not more than 600 miles, Sixpence currency.

And so to increase according to distance.

On every letter exceeding half an ounce and not more than an ounce in weight, two single rates.

On every letter exceeding an ounce and not more than an ounce and a half in weight, three single rates.

And so to increase according to weight.

On every letter posted for delivery, not having been carried by mail, One penny currency.

And Your Petitioners will ever pray.

(By order.)

Quebec, 4 April 1845.

(signed) W. Walker,  
President of the Council.

(signed) W. Stevenson,  
Honorary Secretary.

---

Enclosure

Enclosure 3, in No. 1.

TO HER MOST EXCELLENT MAJESTY THE QUEEN.

May it please Your Majesty,

The Petition of the Montreal Board of Trade,

Humbly sheweth,

THAT, owing to the high rate charged for postage on letters in Canada, the payment thereof is evaded in every possible way. Encl. 3, in No. 1.

That were the postage reduced, the increase in the number of letters mailed would, in the opinion of your Petitioners, shortly compensate for the reduction on each letter.

That the Government of the United States of America, profiting by the experience of the working of the Postage Law of the United Kingdom, has recently passed a similar Act, with the exception, owing to the greater extent of the country compared to population, that the uniform rates charged are five cents or three-pence currency per half ounce in weight for the first 300 miles, and ten cents for any greater distance.

That an uniform rate, say three-pence currency per half ounce if prepaid, or double that rate if to be collected on delivery, would in the opinion of Your Petitioners be perfectly applicable to Canada, and by diminishing the temptation to evade the law so augment the number of letters sent by mail as not to impair the revenue.

Wherefore Your Petitioners humbly pray Your Majesty, in consideration of the aforesaid premises, graciously to accord to Your Petitioners such a measure of relief as to Your wisdom may seem meet.

And Your Petitioners as in duty bound will ever pray.

(signed) *G. Moffatt,*

President of the Montreal Board of Trade.

Montreal, 21 April 1845.

(signed) *F. A. Willson,*  
Secretary.

—No. 2.—

COPY of a DESPATCH from Lord Stanley to Lord Metcalfe, G.C.B.

My Lord,

Downing-street, 31 July 1845.

No. 2.

I HAVE to acknowledge the receipt of your Lordship's despatch, No. 255, of the 22d April, enclosing petitions to The Queen from the Boards of Trade of Quebec, Toronto and Montreal, praying that an uniform low rate of postage may be substituted for the rates now levied in the British North American Provinces. Lord Stanley to Lord Metcalfe, 31 July 1845.

Having referred these petitions for the consideration of the Lords Commissioners of the Treasury, their Lordships directed the Postmaster-general to make a report to them upon the subject. I now transmit to your Lordship a copy of that report, and have to state that Her Majesty's Government see no reason to dissent from the opinion of the Postmaster-general, that it would be unadvisable to sanction at present any diminution in the rates of postage in the British North American Provinces.

Your Lordship will return an answer to this effect to the petitioners who have addressed Her Majesty on the subject.

I have, &amp;c.

(signed) *Stanley.*

Enclosures in No. 2.

Sir,

Treasury Chambers, 26 July 1845.

Encl. in No. 2.

WITH reference to your letter of the 7th ultimo, enclosing copy of a despatch from the Governor-general of Canada, with petitions from the Boards of Trade of Quebec, Toronto and Montreal, praying that an uniform low rate of postage may be substituted for the rates now levied in the British North American Provinces, I am commanded by the Lords Commissioners of Her Majesty's Treasury to transmit to you copy of a report from the Postmaster-general, dated the 5th instant, on the subject, in order that it may be submitted for the consideration of Lord Stanley, and I am to request that you will acquaint his Lordship that my Lords have not seen any reason to dissent from the opinion submitted by the Postmaster-general in regard to the alterations in the rates of postage suggested in the petitions.

I am, &amp;c.

(signed) *Edward Cardwell.*

6 CORRESPONDENCE *relative to* POSTAGE AT TORONTO,

To the Right honourable the Lords Commissioners of Her Majesty's Treasury.

My Lords,

I HAVE the honour to return the accompanying papers, received from the Colonial Office through your Lordships, containing petitions to Her Majesty in favour of a reduction of postage, from the Boards of Trade of Toronto, Quebec and Montreal.

The first recommends an uniform rate on letters sent by mail within the province, of  $2\frac{1}{2}d.$  sterling, or  $3d.$  currency when not exceeding half an ounce; two such rates when exceeding half an ounce and not exceeding an ounce; and an additional rate for every half ounce over and above an ounce. It also proposes a rate of  $1d.$  currency for every letter dropped into a post-office for delivery only.

The second petition recommends that the rate shall be for a letter not exceeding half an ounce, when conveyed by mail within the province, a distance of not more than 300 miles,  $3d.$  currency; above 300 and not exceeding 600 miles,  $6d.$  currency, and so on; to increase according to distance. The rates to increase by the half ounce, as proposed by the Board of Trade of Toronto. A local rate of  $1d.$  currency per letter is also suggested in this petition.

The Board of Trade of Montreal pray for an uniform rate throughout Canada, of  $3d.$  currency per half ounce, if prepaid; but letters to be charged double that rate if posted unpaid.

Your Lordships will see that each proposal differs materially from the others, and that each contemplates an immense reduction in the present rate of postage.

I have given the subject much consideration, and I am not prepared at the present moment to recommend a compliance with the prayer of any one of these parties. I consider it highly desirable that one uniform scale of rates should prevail throughout the provinces of British North America, as it would be most inconvenient that the postage upon a letter, say from a town in Nova Scotia to a town in Canada, should require to be calculated according to three different scales and modes of charge; and, while I am in hopes that there will shortly be a surplus in the postage revenue, both of Nova Scotia and New Brunswick, I feel satisfied it would be a most hazardous experiment to reduce the postage at present to any great extent in these two provinces. I beg further to point out to your Lordships, that according to the last accounts of the post-office in Canada received from Montreal, there was only a surplus on the quarter of  $110l. 17s. 8d.$  sterling; while at this moment I have before me a proposal from the Governor-general of Canada to reduce to a mere nominal charge the postage on all printed forms and accounts sent and received by the public departments at Montreal,—a measure which, if carried out, I fear would immediately convert this surplus into a very large deficiency; and under all these circumstances, however I may wish to see a diminution in the rates of postage in the North American provinces, I cannot recommend your Lordships at present to give your sanction to the resolutions proposed.

I have, &c.

General Post Office,  
5 July 1845.

—No. 3.—

(No. 257.)

EXTRACT of a DESPATCH from Lord *Metcalf*, G. C. B., to Lord *Stanley*,  
dated Government House, Montreal, 25 April 1845.

No. 3.

Lord Metcalfe to  
Lord Stanley,  
25 April 1845.

AT the request of the Board of Trade of Toronto, I beg leave to transmit herewith a petition from that body to Her Majesty, relating to the Act passed in the last Session, intituled, "An Act for granting Provincial Duties of Customs."

---

Enclosure in No. 3.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MOST GRACIOUS SOVEREIGN,

The Petition of the Board of Trade of the City of Toronto,

Most humbly sheweth,

Encl. in No. 3.

THAT in the late Session of the Parliament of Canada, an Act, intituled, "An Act for granting Provincial Duties of Customs," was passed by the two Chambers of the Legislature, and has since received the sanction of his Excellency the Governor-general, on behalf of Your Majesty.

That

That the said Act contains provisions by which discriminative or differential duties of Customs are authorized to be levied on certain goods, in reference to the course of transportation by which they may be brought into this province; a rate of five per centum, ad valorem, being declared payable if "imported by sea," but rates much higher "if imported otherwise than by sea."

That your Petitioners view with serious apprehensions the assumption on the part of a Colonial Legislature, of the privilege of legislating on subjects involving the commercial relations of any part of Your Majesty's dominions with Foreign States; and they consider that the power of enacting laws affecting the external trade of Your Majesty's Colonies, cannot be exercised by any other authority than Your Majesty's Imperial Parliament, without endangering the general interests of the commerce of the empire, and disturbing that harmony of action and feeling between the Imperial and the Colonial authorities, which every loyal and reflecting subject of Your Majesty must desire to see perpetuated.

That your Petitioners have the most unbounded confidence in the wisdom and justice of Your Majesty's Government, and have hailed, with the most heartfelt satisfaction, the recent declarations of Your Majesty's Ministers, in reference to the propriety and expediency of liberating commerce from all artificial restraints; whilst in the happy allusion made by his Excellency the Governor-general of this province, in his speech at the close of the Session of our Provincial Parliament, on the 29th ultimo, to "the prosperity, contentment and happiness which are naturally derived from *unfettered industry* and prudent enterprise," they rejoice to perceive a manifestation of the same sentiments and principles which direct the counsels of Your Majesty's Government at home.

That your Petitioners have in all times past found Your Majesty, as well as Your Royal predecessors, ready and anxious to promote and foster the trade and prosperity of this colony, and that the many valuable boons conferred upon the people of Canada have not only strengthened that bond of union by which they are joined to Your Majesty's empire, but have also clearly demonstrated, that in the hands of Your Majesty's beneficent Government, the interests of Your Majesty's colonial subjects will be at all times wisely and parentally cared for.

That your Petitioners are apprehensive that much unsteadiness in the commercial legislation of this colony would ensue, were the power of regulating its external trade to be delegated to the provincial legislature, as it is not to be concealed that the commercial interests of the colony are very inadequately represented in the popular branch; nor under any circumstances could it be expected that a legislative body placed at so great a distance from the centre of commercial intelligence, and necessarily ignorant of all those important facts which immediately bear upon the commercial relations existing, or likely to exist, between Your Majesty and foreign powers, would be able to direct the course of external trade so as not to involve Your Majesty in serious and continual misunderstandings with such foreign powers; much less, indeed, could it be expected that these misunderstandings would not arise, should every distinct colonial legislature of Your Majesty assume a similar power; for, in this case, there would be as many distinct tariffs of imposts on foreign importations, as there would be distinct legislative bodies; changing too with every change of party ascendancy, or graduated to meet, not the real and sound interests of the people, so much as to appease the clamour of ill-informed or misguided sections of them.

That your Petitioners appreciate too strongly the great importance of steadiness in commercial legislation, and especially in its fiscal department, to warrant their desiring to see the interests of commerce perilled by a change in Your Majesty's colonial policy, which would unhinge the portals within which the commerce of Your Majesty's colonies have so long found security, and have enjoyed an unbroken prosperity to which they would otherwise have been utter strangers.

That the despatches of Your Majesty's Secretary of State for the colonies, addressed to his Excellency the Governor-general of Canada, under dates, "Downing-street, 28th June 1843," and 26th September 1844," are conceived in terms which must fully accord with the views and wishes of your Petitioners, who consider the principles of colonial commercial legislation therein prescribed to be not only strictly compatible with the best interests of the colony, but also the most vital safeguard of colonial dependency.

That, apart from the objections entertained by your Petitioners towards the exercise of the power of enacting laws relating to the external trade of this colony by the provincial legislature, there is involved in the Act of the Parliament of Canada, herein referred to, a principle of distinctive and unjust class legislation, against which your Petitioners most respectfully beg leave to protest. In the discussion which took place in the Legislative Assembly on the provisions of this Act, it was freely announced by the supporters of the measure, that the final object of the introduction of differential duties on imports, in reference to their course of transportation, was, the forcing of the carrying trade between the United States, Atlantic markets and Western Canada from its present course into the navigation of the waters of the River St. Lawrence, in order to secure for the canals on these waters the tolls derivable from this trade. Your Petitioners believe that were there not another argument left to them, by which to prove the unsafety of entrusting the regulation of our foreign colonial trade to a provincial legislature, this one fact would, in the eyes of so enlightened and liberal a Government as that of Your Majesty, be abundantly sufficient.

That if the benefits derived from the existence of public works, which have cost the people of this colony so large an amount of money, are to be accompanied by restrictions upon their commerce, which cannot fail to prove ruinous to the trade of Western Canada,

then

8 CORRESPONDENCE *relative to* POSTAGE AT TORONTO,

then would your Petitioners most humbly state that it had been well for the country if no such works had ever been originated. To open up lines of traffic and thoroughfare for the purpose of facilitating the operations of trade, and then to destroy all collateral facilities under the pretext of maintaining one grand line, your Petitioners consider a most unjust course of policy.

That the cities of Montreal and Toronto are each situate about 400 miles from the port of New York, the general mart in which all goods from the United States are purchased by Canada merchants; the present line of conveyance from New York to Toronto being by inland navigation, *viâ* the Hudson River, the Erie and Oswego Canals and Lake Ontario; the rate of freight about 55 cents per cwt., and the time required varying from four to ten days. That the distance from Montreal to Toronto is about the same as from New York to Toronto, and the rates of freight on these two lines are generally nearly equal; and consequently were the merchants of Western Canada to be obliged to "import by sea," the distance, time and charges would be all increased proportionally; the voyage from New York to Montreal would be little short of that from Liverpool. The coasting navigation along the shores of New England, New Brunswick, Nova Scotia, and through the Gulf and River St. Lawrence, is not surpassed in danger by any in the world; one of Your Majesty's mail steam packets not long since, in fine weather, ran ashore on an island between Boston and Halifax, and, notwithstanding every exertion to save her, became a total wreck. The insurance at certain periods through the Gulf is as high as six and even ten per cent. The period of open waters is at least one month, and often six weeks in our half seasons, less than by the present line. It is of importance to state that the charge of insurance is never incurred on goods imported from New York by the present line of transportation.

That, contending against all these disadvantages, Your Petitioners most respectfully submit, that the present traders of Western Canada, who purchase limited assortments in the United States market for cash, or on short credits, would not be able to continue to compete in this trade if forced to bring their goods into the province by the tedious, perilous and expensive course of navigation by sea, referred to; and that the consumers of Western Canada, who are an agricultural population, and may be said to be the sole products of this colony, must be the ultimate sufferers from all these disadvantages.

That the operation of the proposed system of differential duties would be, if in the nature of human affairs it were practicable, to render the whole trade between the United States and Western Canada tributary to the heavy capitalists of Eastern Canada, and thus, for the benefit of a very small number, to inflict a most serious injury on the great industrial mass of the population. But Your Petitioners most respectfully submit, that no such fiscal enactment as would be adequate to the proposed results could ever be carried into effectual operation in this colony. The difference in the rates of duties requisite to cover such serious disadvantages on the part of the importer by sea, would merely become the profit margin of the smuggler, who is never slow to benefit by the existence of unwise fiscal legislation. For every shilling that our canals would profit by the change, the public revenue would lose twenty by the evasions of the illicit trader. Nor would the pecuniary injury thus sustained by the province be the greatest evil entailed upon it; the demoralization of thousands of the population would result; and though the repeal of the law might remove the temptation to crime, it could not, at the same time, eradicate its propensities to it which it had generated.

That Your Petitioners would not consider the trivial items placed under differential duties, in the Act referred to, as calling upon them to trespass on the forbearance of Your Majesty, by petitioning for a repeal of the Act. Your Petitioners are happy that as yet they have to complain against an impending rather than an existing evil; for though some of the articles enumerated under differential duties are placed under very high rates, if brought by inland navigation, in comparison with the rate to be levied "when imported by sea," yet the trifling amount of these goods imported from the United States into Canada would prevent the operation of the law being ever seriously felt. But as the supporters of the principle of differential duties could never have conceived their purpose to be much advanced by this partial developement of the system, Your Petitioners conceive that a due regard to their duty as faithful subjects of Your Majesty, and a becoming respect to the commercial and agricultural interests of Western Canada, imperatively call upon them to place before Your Majesty their views upon this important subject.

Your Petitioners therefore pray that Your Majesty will be graciously pleased to employ such means as to Your Majesty may seem proper for the prevention of any enactment by the Legislature of this colony, which may institute differential rates of duties on the imports of the colony; and that Your Majesty will issue such instructions to the Executive of this province as may tend to the prevention of all fiscal or other regulations calculated to favour the interests of any particular class of Your Majesty's subjects, to the disadvantage of the remainder.

And Your Petitioners, as in duty bound, will ever pray, &c.

For and by order of the Board, at the city of Toronto, this 7th day of April in the year of our Lord 1845.

(signed)      *Geo. Perc' Ridout*, President.  
                      *Jos. Workman*, Vice-President,  
    and 38 others.

Anno

Anno Octavo VICTORIÆ REGINÆ.—Cap. III.

AN ACT for granting Provincial Duties of Customs.—[17th March 1845.]

WHEREAS it is expedient, from and after the time hereinafter mentioned, to repeal so much of the Acts hereinafter mentioned as imposes any duties of customs, to the end that other duties may be imposed in lieu thereof: Be it therefore Enacted, by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and of the Legislative Assembly of the province of Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of the United Kingdom of Great Britain and Ireland, and intituled, "An Act to re-unite the Provinces of Upper and Lower Canada and for the Government of Canada," and it is hereby enacted, by the authority of the same, That upon, from and after the 6th day of April 1845, so much of the Act passed in the session held in the 4th and 5th years of Her Majesty's reign, and intituled, "An Act to repeal certain Acts therein mentioned, and to consolidate the Laws relating to the Provincial Duties to be levied on Goods, Wares and Merchandize imported into this Province," or of an Act passed in the 7th year of Her Majesty's reign, and intituled, "An Act to continue for a limited time the Duties imposed on Agricultural Produce and Live Stock imported into this Province," as imposes any duty of customs on any goods, wares and merchandize or agricultural produce imported into this province, shall be, and so much of the said Acts is hereby repealed; any thing in the Act passed during the present session to continue that last above cited, to the contrary notwithstanding.

Preamble.

So much of the Act 4 & 5 Vict. c. 14, or 7 Vict. c. 2, as imposes any Duties of Customs, repealed from and after the 6th day of April next.

II. And be it enacted, that upon, from and after the said day, in lieu and instead of all other duties of customs imposed by any Provincial Act (except the duty upon foreign wheat imposed by the Act passed in the 6th year of Her Majesty's reign, and intituled, "An Act to impose a Duty upon Foreign Wheat imported into this Province"), there shall be raised, levied, collected and paid unto Her Majesty, Her heirs and successors, upon goods, wares and merchandize imported into this province, except on foreign wheat and such articles and commodities as are mentioned in the table of exemptions annexed to this Act, the several duties of customs respectively inserted, described and set forth in the Table to this Act annexed, and intituled, "Table of Duties of Customs inwards:" Provided always, That nothing herein contained shall be construed to repeal any tonnage duty, or any duty except such as is imposed on goods, wares or merchandize imported into this province: And provided also, that if any timber, sawed lumber, or other article enumerated in the Schedule to this Act under the head "Wood," shall be imported into this province on or before the 5th day of July next, in fulfilment or execution of any contract for the delivery thereof within this province, *bonâ fide* made and entered into before the 1st day of February last past, it shall be lawful for the Governor in Council, on due proof thereof, to remit the amount of duties imposed by this Act, and to order and appoint that no other or higher duty than that which was by law in force immediately before the passing of this Act, shall be levied and collected on the timber, sawed lumber or other article aforesaid to be imported in manner and by the day in that behalf above set forth.

The duties set forth in the Schedule to be instead of all others, except that on foreign wheat.

Proviso.

Proviso as to timber, sawed lumber, &c. contracted for before the 1st February, and imported on or before the 5th July next.

III. And be it Enacted, That the duties by this Act imposed shall be deemed to be duties within the meaning of the Act passed during the present Session of the Provincial Legislature, and intituled, "An Act to provide for the Management of the Customs, and of Matters relative to the Collection of the Provincial Revenue;" subject to the provisions of which Act, and of this Act, the said duties shall be ascertained, raised levied, collected, paid and recovered, under the provisions under which duties on like articles were ascertained, raised, levied, collected, paid and recovered immediately before the 6th day of April aforesaid (or if no duties were then imposed on like articles, then under the provisions of the Act first cited), and other laws applicable to the provincial customs generally, unless some Act be passed during the present Session for the general regulation of the customs, in which case all the duties hereby imposed shall be ascertained, raised, levied, collected, paid and recovered under the provisions of such Act.

Duties to be subject to the Management Act of this Session.

IV. And be it Enacted, That all sums of money which shall arise from the duties hereby imposed, shall be paid to the Receiver-general, by the collectors and other officers and persons by whom the same shall have been received, and shall form part of the Consolidated Revenue Fund of this province, and shall be accounted for to Her Majesty, Her heirs and successors, through the Lords Commissioners of Her Majesty's Treasury for the time being, in such manner and form as Her Majesty, Her heirs and successors, shall be pleased to direct.

Duties to form part of the Consolidated Revenue Fund.

Accounting clause.

V. Provided always, and be it Enacted, That the provincial duty payable on any goods, wares or merchandise (except foreign wheat), which having been warehoused in bond before this Act shall come into force, shall be taken out of the warehouse after that time (except for exportation) shall be the duty imposed on such goods, wares and merchandize by this Act, and no other, as if the same had been imported into this province at the time when they shall be so taken out of the warehouse.

What Duties shall be paid on goods warehoused before this Act was in force.

VI. And be it Enacted, That all sums of money which shall arise from the duties hereby imposed, and set forth in words and figures in the said "Table of Duties of Customs Inwards," shall be sterling money, and payable in such coins as may by law be current in this province, and equivalent to the amount of sterling money to which such duties may amount in any case; and the weights and measures in the said Table mentioned and set

Currency, weights and measures by which the Duties shall be calculated.

10 CORRESPONDENCE *relative to* POSTAGE AT TORONTO,

Proportion to be observed.

Act may be altered during this Session.

forth, shall be the imperial weights and measures now by law established in the United Kingdom of Great Britain and Ireland; and in all cases where the said duties are imposed according to any specific quantity or any specific value, the same shall be deemed to apply in the same proportion to any greater or less quantity or value.

VII. And be it Enacted, That this Act may be amended or repealed by any Act to be passed in this present session of the Provincial Legislature.

SCHEDULE.

Oysters, lobsters and turtles, ditto - - - - -			

Exemptions.

EXEMPTIONS.

- Anatomical preparations.
- Copies of the Holy Scriptures printed in the United Kingdom of Great Britain and Ireland.
- Coin and bullion.
- Donations of books or clothing specially imported for the use of, or to be distributed gratuitously by any charitable society in the province.
- Fish, fresh, not described.
- Horses and carriages of travellers, and horses, cattle and carriages and other vehicles when employed in carrying merchandize, together with the necessary harness and tackle, so long as the same are *bonâ fide* in use for that purpose.
- Hides and tallow, and offal of cattle and swine slaughtered in bond.
- Manures of all kinds.
- Models of machinery, and of other inventions and improvements in the arts.

Old junk or oakum.

Packages containing dutiable articles.

Philosophical apparatus, instruments, books, maps, statuary, busts and casts of marble, bronze, alabaster or plaster of Paris, paintings, drawings, engravings, etchings, specimens of sculptures, cabinets of coins, medals, gems and all other collections of antiquities, provided the same be specially imported in good faith for the use of any society incorporated or established for philosophical or literary purposes, or for the encouragement of the fine arts, or for the use or by the order of any university, college, academy, school or seminary of learning within this province.

Arms or clothing, which any contractor or contractors, commissary or commissaries, shall import or bring into the province for the use of Her Majesty's army or navy, or for the use of the Indian nations in this province, provided the duty otherwise payable would be defrayed or borne by the Treasury of the United Kingdom or of this province.

Specimens in natural history, mineralogy and botany.

Seeds of all kinds, farming utensils and implements of husbandry, animals for the improvement of stock, when specially imported in good faith by any society incorporated or established for the encouragement of agriculture.

Trees, shrubs, plants, bulbs or roots.

Wearing apparel in actual use, and other personal effects not merchandize, implements and tools of trade of handicraftsmen in the occupation or employment of persons coming into the province for the purpose of actually settling therein.

Also, cordage, pitch, tar, turpentine, leather, leatherware, fishermen's clothing and hosiery, fishing craft, utensils and instruments imported into the district of Gaspé from the United Kingdom or the Channel Islands for the use of the fisheries carried on therein, subject to such regulations as the principal officer of Customs at the Port of Quebec shall make, and which he is hereby empowered to establish, for the purpose of ascertaining that such articles are *bonâ fide* intended to be applied for the use of such fisheries.

(No. 17.)

-- No. 4 --

EXTRACT of a DESPATCH from the Right honourable *W. E. Gladstone* to  
Lord *Cathcart*, K. C. B., dated Downing-street, 3 February 1846.

AN important question was brought under the notice of my predecessor, with respect to the imposition of differential duties upon goods brought into Canada otherwise than by sea. The purpose of such duties would avowedly be, to offer a premium upon traffic by way of the St. Lawrence, as compared with traffic by way of New York and other parts of the United States.

In respect to any proposal having this object, Her Majesty's Government have to consider, in the first place, whether they shall adopt such a policy, make it their own, and introduce measures into the Imperial Parliament for the purpose of giving effect to it; in the second, whether, if they are not inclined to such a course, they shall still leave it open to the Provincial Legislature to deal with the question as one of internal rather than of imperial concern.

Upon the first of these points, I have to acquaint you that Her Majesty's Government do not intend to propose to Parliament any measure for the imposition of new differential duties upon goods brought into Canada by land carriage and inland navigation. Their opinion is, that both the St. Lawrence and the route of the United States have their own commercial advantages. The Imperial Statutes already throw an additional weight, which I hold to be not inconsiderable, into the scale of the former route; and I do not think it would either be advisable in the particular case, or befit the commercial policy of the British Legislature, that it should undertake further to affect the competition between them.

As a consequence of what I have already stated you will readily infer, that I cannot authorize your Lordship to recommend the introduction of any measure of the kind with the authority which you possess as the representative of Her Majesty.

But, on the other hand, I must give a different reply to the question, whether you are to intimate disapproval of such a measure, if you should find it to be unequivocally demanded by the general sentiment of the community, and should be presented to you for legislative sanction.

You are aware that it is a rule of imperial policy generally to reserve to Parliament the consideration of any question of differential or protective duty which

No. 4.

Right Hon. W. E.  
Gladstone to Lord  
Cathcart,  
3 February 1846.

may arise in the colonies. Not refusing to make due allowance for subsisting irregularities of practice in this respect, I am desirous, in prospective legislation, to adhere to this maxim. But I grant that it is more strictly applicable to maritime commerce than to the case of a colony having direct and extended relations along a frontier of many hundred miles with a foreign country. Your Lordship is therefore authorized to view the question as one to be determined according to the convictions of the people of Canada, whatever they may be, when constitutionally brought before you in the form of a legislative measure.

With regard, however, to the form of any such enactment, supposing it to be introduced into discussion, I would suggest what appears to Her Majesty's Government a decided improvement upon that which is employed in the Act of the last Session "For granting Provincial Duties of Customs." The lower rate of duty, when a distinction is made, should be extended to "goods imported otherwise than by sea from a British possession," as well as to goods imported by sea. The practical or commercial effect of the change might be trivial; but it would obviate an objection of general principle to an arrangement, under which importation from a British possession is, under given circumstances, made subject to a heavier burden than direct maritime importation from a foreign country.

Right hon.  
W. E. Gladstone  
to Earl Cathcart,  
3 February 1846.

(No. 18.)

EXTRACT of a DESPATCH from the Right honourable *W. E. Gladstone* to Earl *Cathcart*, K.C.B., dated Downing-street, 3 February 1846.

No. 257, 25 April 1845.  
No. 258, 25 April 1845.  
No. 268, 6 May 1845.  
No. 271, 9 May 1845.  
No. 281, 23 May 1845.

THE several despatches enumerated in the margin I acknowledge, and propose to answer together, because they are all referable to the same common subject of the Act of the Canadian Legislature of the 17th of last March, ch. 3 (No. 210), for granting Provincial Duties of Customs. This Act stands for the signification of Her Majesty's pleasure; and I am not able, until an amendment shall have been introduced into it, to advise Her Majesty to allow it.

It involves two principles of great importance, the first directly, and the second virtually.

*Vide page 13.*

The first is the distinction between goods sea-borne and goods otherwise imported. Upon this subject I need simply refer you to what I have stated in regard to the proposal to levy inland countervailing duties upon goods generally. I am not, your Lordship will perceive, precluded by a difficulty arising upon this part of the measure from advising its allowance; but I also find, that for the duty of 5%, which has heretofore been payable upon leather and leather manufactures imported into Canada, rated imposts have been substituted, which appear to range generally from 10% up to 25% or 30%, *ad valorem*. In some cases a distinction is taken in favour of sea-borne articles; in others the application of the duty is uniform.

Her Majesty's Government are not prepared to assent to the imposition on such British goods as are ordinarily sent to Canada from the United Kingdom, or from a British possession, of rates of duty substantially higher than those which were levied under the previous Provincial Customs Act, although they take no objection to the substitution for duties *ad valorem*, of such fixed amounts as may be considered on the average equivalent to them. Your Lordship will consider this as their fixed decision, and will make it known accordingly. An amendment of the Act, to bring it into conformity with this decision, is indispensable.

Her Majesty's Government would very reluctantly consent to an increase of the duties upon foreign goods when imported by sea into the British colonies, as they stood before the passing of the Act now under consideration.

If it be possible to consider the inland carriage as a matter rather for adjustment in the province than as raising an imperial question, in which the particular colony can only be regarded as a portion of an empire animated by a central and single principle of action, it is not possible, in the judgment of Her Majesty's Government, to extend this view to maritime commerce, without the risk of great inconvenience.

Any

Any increase, however, of the kind to which I refer, must not only be specifically and avowedly laid upon foreign goods, and upon foreign goods alone, when the article is one likewise produced in the United Kingdom or in the British Possessions, and entering into the trade between them and the province of Canada, but must likewise be supported by strong and special considerations to be stated for the information of the Government. Whatever influence of persuasion your Lordship can exercise, you will employ for the purpose of recommending an adherence to the commercial principles of the circular of my predecessor, dated June 28, 1843, or at the least, of moderating the disposition to call for augmentations of differential duties upon foreign productions.

Page 15.

—No. 6.—

CIRCULAR DESPATCH from Lord *Stanley*.

Sir,

Downing-street, 28 June 1843.

I HAVE to desire that you would call the attention of the Legislature of the colony under your Government, to the following statement and suggestions.

No. 6.  
Circular Despatch  
from Lord Stanley,  
28 June 1843.

The imposition of discriminating duties on goods imported into the British colonies, when the discrimination is made for the protection of some branch of British or colonial industry, is an office of great difficulty. To the right discharge of it, an intimate acquaintance with the commercial treaties and political relations between this kingdom and foreign states is indispensable. To legislate on such a subject in ignorance of those treaties and relations, would be to render inevitable much serious practical error.

But in the nature of the case it is impossible that this knowledge should be possessed in the requisite degree by the various local Legislatures of the colonies of this kingdom. They have no means of knowing the state or the objects of pending negotiations, nor even of ascertaining, with absolute precision, the terms of treaties actually concluded. If they legislate at all on these subjects, they must do so in ignorance of some facts which cannot be safely excluded from consideration.

Neither is it possible that forty distinct legislatures, having no means of mutual communication and concert, should act consistently with each other on such subjects. The local opinions or interests of each colony must dictate the laws of each, and the general code of the empire, compiled from so many different sources, must be at the utmost variance with itself on a subject on which unanimity and consistency is indispensable. In such a state of the law, Her Majesty's Government could not negotiate or treat with confidence, with any foreign state for commercial purposes; nor could they fulfil such treaties as might be made. Painful and injurious discussions with those states must arise, and perhaps indemnities and compensations must have to be paid.

For these reasons, Her Majesty's Government decidedly object in principle to the assumption by the local Legislatures of the office of imposing differential duties on goods imported into the respective colonies, Parliament having already prescribed the rules by which such duties are to be discriminated, with reference to the place of origin or of export; to Parliament alone the power of altering those rules must be reserved. The single exception to this general rule will occur in any cases in which Her Majesty's Government may have suggested to any local Legislature the enactment of any such discriminating duties. If such cases should arise, the ministers of the Crown would be able to take the necessary measures for obtaining the subsequent sanction of Parliament for any such innovation.

You will therefore exercise all the legitimate influence of your office to prevent the introduction into the Legislature of the colony under your government, of any law by which duties may be imposed on goods, in reference to their place of production, or to the place from which they may be exported. In the same way, you will exert yourself to prevent the introduction of any law imposing on refined sugar imported into the colony, higher duties, in the case of sugar refined in this country in bond from foreign sugar, than in the case of sugar refined here from British colonial sugar.

263.

If

If unfortunately your efforts should be unsuccessful, and if any such law should be presented for your acceptance, your duty will be to withhold your assent to it. From the discharge of that duty, however unpopular it may be, you will not shrink; for by declining to undertake it, you would only subject Her Majesty's Government, and the colony itself, to a still more serious inconvenience.

Her Majesty could not be advised to sanction any colonial law imposing discriminating duties which Her Majesty's Government had not previously recommended, or which Parliament has not expressly established, or enacting such duties on any terms which Parliament has not prescribed. The disallowance of any such enactments would therefore be inevitable, and that measure would be attended with far more serious inconveniences than any which could result from your own refusal to accept them. I trust, however, that there is no good reason to anticipate, or to provide against such a contingency.

I have, &c.

— No. 1. —

COPY of Governor the Earl *Cathcart's* SPEECH to the Legislature of the  
Province of Canada, 20 March 1846.

*Honourable Gentlemen of the Legislative Council, and  
Gentlemen of the Legislative Assembly,*

The duty of opening this Session of Parliament has necessarily devolved upon me, as Administrator of the Government, in consequence of the lamented departure of the late Governor-general. But I am commanded at the same time to make known to you that the Queen has been graciously pleased permanently to designate me as Her Majesty's future Representative in this province.

No. 1.  
Governor the Earl  
Cathcart's  
Speech to the  
Legislature of  
Canada,  
20 March 1846.

In announcing to you the fact of my having thus become the successor of Lord Metcalfe, you will, I feel assured, concur with me in the expression of sincere regret at the painful cause which has removed this distinguished nobleman from a station, the duties of which he discharged with a zeal and ability, that on every occasion won for him the highest approbation of his Sovereign, and the respect and gratitude of the people over whom he presided as Her Representative.

The several addresses to the Queen which were adopted during the last Session of the Legislature, have been laid at the foot of the Throne. It will be my pleasing duty to announce to you Her Majesty's gracious replies.

I should, under any circumstances, have directed your early attention to the condition of the Militia Law. But the unsettled state of the negotiations which have been for some time past carried on between the Imperial Government and that of the United States of America, renders it imperative upon me to press more immediately on your consideration the necessity of a reorganization of this arm of the public defence. I feel the most unbounded confidence that the loyalty and patriotism of every class of Her Majesty's subjects in Canada will be conspicuous, as they have been heretofore, should occasion call for their services to aid in the protection of their country; but a well digested and uniform system is indispensable to give a fitting direction to the most zealous efforts. At the same time I feel warranted in assuring you that, while our gracious Sovereign will ever rely on the free and loyal attachment of Her Canadian people for the defence of this province, and the maintenance of British connexion, Her Majesty will be prepared, as Her predecessors have always been, to provide with promptitude and energy, corresponding with the power and resources of the empire, for the security of Her North American dominions.

The subject of the Civil List, which was brought under your consideration by my predecessor, will doubtless engage your attention, when I trust to your wisdom to make such a provision as will enable Her Majesty to give effect to your wishes, by recommending to the Imperial Parliament the requisite changes in the Act of Re-union.

*Gentlemen of the Legislative Assembly,*

The Financial Accounts of the Province for the past year will be immediately laid before you. The Estimates for the service of the current year will be likewise submitted for your early consideration.

The

## 4 CORRESPONDENCE WITH CANADA RELATIVE TO

The necessity of providing for the prosecution and completion of the public improvements undertaken with the sanction of Parliament, will form a subject for your deliberation.

It affords me pleasure to be able to inform you, that the revenue of the past year has not fallen short of the expectations which were entertained of its amount, and I rely on your willingness to make such provision for the public service, as a due regard to the interests of the people may require.

*Honourable Gentlemen, and Gentlemen of the Legislative Assembly,*

Since your last meeting, the ancient city of Quebec has been subjected to unexampled calamity in the successive fires which laid waste its buildings. Measures, rendered indispensable by the exigency, were adopted by my predecessor, which will be sent down for your approval.

The sympathy and benevolence of different portions of the British empire, were roused into active exercise by the knowledge of the severe infliction with which it had pleased Divine Providence to permit the citizens of Quebec to be visited, and we have the strongest reasons for appreciating the noble generosity which has been exhibited, and which has proved how truly the inhabitants of Canada are felt by the people of Great Britain, to be brethren and fellow-subjects of the same mighty nation. It will be for your wisdom to consider what further measures it may be proper to adopt, for the restoration of what has been thus destroyed.

The last intelligence from the mother country indicates a most important change in the commercial policy of the empire. I had previously taken occasion to press upon Her Majesty's Government a due consideration of the effect that any contemplated alteration might have on the interests of Canada. But until we have a fuller exposition of the projected scheme, which a few days will probably bring to us, it would be premature to anticipate that the claims of this province to a just measure of protection had been overlooked.

In these and the various other subjects affecting the prosperity of Canada which may occupy you, I offer my hearty co-operation; and I earnestly trust, that under the direction of an all-wise Providence, we shall be enabled to pursue a course calculated to promote the best interests, and to foster the rising growth of this rapidly advancing colony.

---

— No. 2. —

(No. 7.)

COPY of a DESPATCH from Governor the Earl *Cathcart*, K.C.B., to the Right Honourable *W. E. Gladstone*.

No. 2.

Governor Earl  
Cathcart to  
Mr. Secretary  
Gladstone,  
28 January 1846.

Sir,

Government House, Montreal, 28 January 1846.

MY attention having been very earnestly called by the members of the Executive Council of this province, to the apprehensions they have been led to entertain, by discussions which have recently appeared in the English newspapers, pointing strongly to a change in the Corn Laws; I am induced at their earnest desire, even with no better foundation, to bring the subject under your consideration by the mail which leaves this night, as the opportunities for communication at this season are so infrequent, as to produce inconvenient delays.

The province of Canada is so vitally interested in the question, that it is a duty of the Executive of the province to urge on the consideration of Her Majesty's Ministers, a full statement of the necessity of continuing a protection to the colonial trade in wheat and flour, and of the effect of any changes by which the protection hitherto given would be taken away.

The improvement of the internal communications by water, in Canada, was undertaken on the strength of the advantage of exporting to England our surplus wheat and flour by Quebec. Should no such advantage exist, the revenue of the province to be derived from the tolls would fail. The means of the province to pay principal and interest on the debt guaranteed by  
England,

## PRESUMED CHANGES IN THE COMMERCIAL POLICY. 5.

England, would be diminished, and the general prosperity of the province would be so materially affected, as to reduce its revenue derived from commerce, thus rendering it a possible case, that the guarantee given to the public creditors, would have to be resorted to by them, for the satisfaction of their claims.

The larger portion, nearly all of the surplus produce of Canada, is grown in the western part of it, and if an enactment similar in principle to the Duties Drawback Law, should pass Congress, permitting Canadian produce to pass through the United States for shipment, and the English market was open to produce shipped from American ports on as favourable terms as if shipped from Canadian ports, the larger portion of the exports of Upper Canada would find its way through the canals of the state of New York, instead of those of Canada, rendering the St. Lawrence canals comparatively valueless. The effect of the Duties Drawback Law, has been to transfer the purchase of sugar, tea and many other goods to New York, from whence nearly all of these articles for the supply of Upper Canada are now imported.

Should such a change in the export of Canadian produce take place, it will not only injure the Canadian canals, and forwarding trade, but also the shipping interest engaged in carrying these articles from Montreal.

A change in the Corn Laws, which would diminish the price Canadian farmers can now obtain, would greatly affect the consumption of British manufactures in the province, which must depend on the means of the farmers to pay for them. An increased demand and consumption has been very perceptible for the last two years, and is mainly attributable to the flourishing condition of the agricultural population of Upper Canada.

Even if a relaxation of the system of protection to the colonies is to be adopted, it is of infinite consequence that it should not be sudden. The ruin that such a proceeding would cause, is incalculable.

The political consequences as to the Government of the colony involved in the foregoing suggestions are sufficiently obvious, as also must be those arising from the trade of Upper Canada, being as it were transferred from Montreal to New York. This latter consideration belongs, however, less to the operation of the Corn Laws, though partially connected with that branch of the subject.

I trust the importance of these observations will form a sufficient apology for my intruding them upon you at this time, but as the subject to which they refer, will in all probability engage the early attention of the British Parliament, I have thought it right that you should have some previous knowledge of the bearing any such measure would have on the interests of this colony.

I have, &c.  
(signed) Cathcart.

## — No. 3. —

(No. 32.)

COPY of a DESPATCH from the Right Honourable *W. E. Gladstone* to Governor the Earl *Cathcart*, K.C.B.

My Lord,

Downing-street, 3 March 1846.

I HAVE to acknowledge the receipt of your Despatch of the 28th of January (No. 7), relating to the expected changes in the British Corn Law, deprecating such changes generally in the interest of Canada, and, at the same time urging, that if there be a determination on the part of Parliament to adopt them, it is much to be desired that they should not take immediate effect.

The interests of Canada have occupied the place to which they are justly entitled in the deliberations of Her Majesty's Government upon this important subject, and upon others which are akin to it. At the same time, I need hardly point out to your Lordship that there are matters in which considerations, immediately connected with the supply of food for the people of this country, and with the employment of its population, must be paramount.

Both in respect to corn and in respect to timber, Her Majesty's Government have determined to propose and to use whatever influence they may possess for the purpose of carrying through Parliament the proposal that the alterations

about

No. 3.  
Mr. Secretary  
Gladstone to  
Governor Earl  
Cathcart,  
3 March 1846.

## 6 CORRESPONDENCE WITH CANADA RELATIVE TO

about to be made should be gradual; and among the motives which have led them to this determination, has been the belief that this delay would be acceptable, and would also be advantageous to the people of Canada.

In order to supply you with some further evidence of their desire to consult colonial wishes and interests in discharging their public duties, I have to direct your attention to a Schedule hereto annexed, which exhibits the duties now chargeable upon articles of agricultural produce when imported from the British dominions abroad, and the changes which it is intended to make in favour of the colonial trade, by the immediate abolition or reduction of those duties.

I trust that Canada may largely avail herself of the advantages which are thus (for I venture to anticipate the favourable judgment of Parliament upon these propositions about to be submitted to it on the part of the Crown) about to be placed within her reach. The desire of Her Majesty's Government is, that the trade of Canada may, in all respects, approach as nearly to perfect freedom as the dispositions of its inhabitants and the exigencies of the public revenue there may permit. And in evidence of that desire, I may advert to my Despatch (No. 19) of the 3d February, relating to the provincial duty on the importation of wheat, and may again apprise you, that it is not the intention of Her Majesty's Government to check any disposition which Canada may manifest, should such be the case, for the repeal of that duty by the interposition of the prerogative.

Page 9.

Further, with regard to corn, I have much satisfaction in reflecting, that if Canada will have to enter into competition with the western states of America, and to engage in this rivalry when no longer covered by any protective duty, at least she will not be called to make the effort without some advantages on her side. Among them I reckon her light taxation; the assistance she has received from British credit and funds, in the construction and improvement of her internal communications; her more regular and steady course of trade with this country; her low Tariff, so favourable to importation, and, on that account, powerfully tending to encourage her reciprocal commerce outwards; some advantage in the point of proximity, as compared with the most westerly states of the Union, which are also her most formidable rivals in cheapness of production; and, lastly, the means of carriage without transshipments by the St. Lawrence, which cannot be had by the way of the Erie canal. She will likewise have this in her favour, that her corn trade will have become a settled one of some standing, with all its arrangements made and in full operation, while any regular commerce in that article from the United States must be a new creation, and must go through the processes attending its self-adjustment to circumstances as yet untried.

And if it be true that New York offers some advantages, as compared with Montreal, particularly in regard to the rate of insurance; on the other hand, I consider that the shipping of British North America has many advantages over that of the United States in the competition for freights, as it is constructed at far less expense, and is, I must assume, navigated with equal vigour and equal economy.

It is beyond doubt that Canada has felt a very invigorating influence from the augmented facility of access to the British market, which she has enjoyed since the Act of 1843, and that it has perceptibly stimulated the extension of her agriculture. But the average prices of wheat during the years 1843, 1844, 1845, have been only 50/10, 51/3, and 50/1 respectively. Not presuming to anticipate, within any very close limits, what are likely to be the ruling prices of this grain after a perfect freedom of trade shall have been established, I yet venture to think, that the most competent persons are not generally of opinion that they will exhibit any reduction which shall place them greatly below the rates I have just cited; and as I trust we may look forward to some diminution in the cost of conveyance between the place of growth or grinding and Montreal, I cannot participate in the apprehensions of those who conceive that the measure now under consideration will involve ruin, or anything approaching to it, to the trade in Canadian corn and flour.

I trust, therefore, that the agricultural population of Canada will look forward without fear to a change, of which it is probable that the effects will be far less violent, either for good or for the partial evils which may accompany such good, than many, prompted either by their hopes or their fears, have been forward to anticipate.

I now

## PRESUMED CHANGES IN THE COMMERCIAL POLICY. 7

I now pass to the question of timber, which is of great moment with reference to the trade of Canada, although it has not the same interest as the subject of corn for the mass of the population.

I have much satisfaction in drawing your Lordship's attention to the fact, that the colonial timber trade prospers under the operation of those changes in the law, which were enacted in 1842, and which had taken full effect before the end of 1843. I subjoin a statement of the number of loads of timber brought to England from the colonies in each of the last ten years, and of the number of loads of deals brought hither in each of the last three years, during which period alone that mode of computation has been pursued, so far as relates to this branch of the wood trade.

The increased facilities of internal transit in this country, independently of the very great temporary demand connected with the construction of the railways that are to effect this great improvement, promise a considerable and permanent extension of the market for foreign wood, an extension likely to be accelerated, unless it be as to Scotland, by the progressive diminution of the home growth of timber through the United Kingdom.

The description of wood which is supplied by the British North American colonies, the yellow pine, is not chiefly to be regarded as competing with the wood of the Baltic, but rather as available for different though concurrent uses. For example, the increase of Baltic timber tending to encourage the construction of new buildings, by supplying the best materials for particular portions of them, has an effect not in limiting, but in extending the demand for Canadian timber, as furnishing the cheapest and most convenient material for other portions, namely, the inward fittings of the very same fabrics.

Her Majesty's Government are not indeed prepared to assert that the question of the relation between the duty on foreign timber and the colonial wood trade, ought to be adjusted with reference to this consideration alone; and you will perceive, that they propose to retain a duty of 15*s.* per load upon foreign timber, which I apprehend may be considered as upon the average nearly covering the difference between freights from the Baltic and those from British North America to the United Kingdom.

Not only are they free from the apprehension that the proposed remission of 10*s.* per load on foreign timber, and 12*s.* on foreign deals, will cause a contraction of the trade from British North America; but they are sanguine in the anticipation that that trade will continue, notwithstanding the proposed change, to extend itself.

The reduction of the duty on colonial timber and deals, to a nominal amount, which took place in 1842, involved the sacrifice of a considerable revenue, and that sacrifice may, I trust, have tended, and may still serve to convince the inhabitants of Canada that it has been the earnest desire of Her Majesty, in affording relief to Her people at home, by the changes effected in the commercial laws of the empire, to obviate, as far as possible, the inconveniences, and to extend the benefits which those changes might tend to produce for other portions of her subjects.

This country has taken upon itself the serious task of reforming its own commercial system, in opposition to what appears to be the prevailing disposition among other nations, and to bear testimony to the world, and to put in action the powerful influence of example in favour of sound principles of trade. Her Majesty's Government trust that the efforts of the British Legislature in this respect may be seconded, their range extended, and the example rendered yet more impressive, not only by the acquiescence, but by the approval and the active co-operation of the Legislatures and the inhabitants of the colonies.

I have, &c.

(No. 19.)

EXTRACT of a DESPATCH from the Right Honourable *W. E. Gladstone* to Governor the Earl *Cathcart*, K.C.B., dated Downing-street, 3 February 1846.

YOU will not invite any discussion upon the subject of the law recently passed in Canada for the imposition of a duty of 3s. per quarter upon wheat imported from the United States. If it should be agitated by others, I do not consider it probable that you can be urged to take any decisive measure in respect to it during the approaching Session; but I advert to it lest your Lordship should feel any embarrassment in determining whether this should be considered as a measure appertaining properly to provincial interests, which it is the policy of this country to commit to the guidance of the provincial legislature, or whether it is to be viewed as a matter of imperial concern.

Although your Lordship will not invite or promote the reconsideration of that law, there is no British interest so involved in it as to require you to insist upon the sort of compact on which it may be thought, from the circumstances of its origin, to rest, as an objection to the revival of the question.

If the public sentiment of Canada should appear to be decidedly unfavourable to its continuance, although I do not think such a contingency highly probable, that sentiment will probably find some mode of formal approach to your Lordship, and in such case, though in such case only, you are at full liberty to express your willingness to enter into communication with Her Majesty's Government on the subject, avoiding, so far as is possible, any more specific intimation, inasmuch as it cannot be adequately considered, either by your Lordship or by me, without some reference to the course which domestic policy may take during the current year.

No. 5.

Governor Earl Cathcart to Mr. Secretary Gladstone, 27 March 1846.

SIR,

Government House, Montreal,  
27 March 1846.

I SUBMIT herewith an Address from the Legislative Assembly of Canada to the Queen, praying that the just claims of this province may not be overlooked in the contemplated changes about to take place in the commercial policy of the Empire, and that all grain, wheat and flour imported into the United Kingdom from Canada may be admitted on payment of the smallest possible specific duty, and I beg leave to recommend that the same may be brought under the favourable consideration of Her Majesty.

Lest the omission in this address of any acknowledgment for the measure of protection proposed by Her Majesty's Ministers to be extended to Canada, as announced in your despatch of the 3d instant may attract observation or appear ungracious, it seems proper to state, that this despatch was not communicated to the Assembly in time to have been considered by them previously to the adoption of this address, which was supported by an unanimous vote. The usual forms of the House were dispensed with, in order that it might be presented to me in time for transmission by this mail for England, which closes this evening.

(signed) *Cathcart*.

## 10 CORRESPONDENCE WITH CANADA RELATIVE TO

Enclosure in No. 5.

TO THE QUEEN'S MOST EXCELLENT MAJESTY,

Most Gracious Sovereign,

Enclosure in No. 5. WE, your Majesty's most dutiful and loyal subjects, the Commons of Canada, in Provincial Parliament assembled, humbly approach Your Majesty for the purpose of expressing our earnest hope, that in the great changes in commercial policy now contemplated by Your Majesty's Government, the just claims of this Province, as an integral portion of the British Empire, will not be overlooked, and that your Majesty will be graciously pleased to recommend to Parliament, that wheat flour, and wheat and peas, and all grain and meal from all descriptions of grain and pulse, imported into the United Kingdom from Canada, may be admitted on the payment of the smallest possible specific duty, not exceeding a penny the quarter.

Governor the Earl *Cathcart*, K. C. B.

No. 6.

Mr. Secretary  
*Gladstone* to  
Governor Earl  
*Cathcart*,  
18 April 1846.

My Lord,

Downing-street, 18 April 1846.

I HAVE received and have laid before the Queen, the Address to Her Majesty from the "Commons of Canada, in Provincial Parliament assembled," dated the 26th of March 1846, and enclosed in your Lordship's despatch of the 27th of the same month (No. 30.)

I have received the Queen's commands to instruct your Lordship to convey to the House of General Assembly the assurance of Her Majesty's gracious desire and intention to pay every regard to the commercial interests of Canada, even in the consideration of measures which must be regarded as mainly and properly appertaining to the internal condition of this country, which may be compatible with justice to other classes of Her subjects.

I am further commanded by the Queen to state, that having consulted Her confidential advisers on the questions brought under Her notice in this Address, and having been pleased to approve and adopt the opinions submitted to Her by them on that subject, Her Majesty has directed me to explain to your Lordship those opinions, as comprising the substance of the answer, which Her Majesty has to return to the Address of the House of Assembly.

As respects the question immediately affected by the Address, Her Majesty's Government are of opinion, that the reduction of the duty on Canadian wheat, from 1*s.* to 1*d.*, would fail to have the effect which the Assembly have, it is probable, anticipated and desired.

Use and convention, rather than any abstract principle, have established the rule, that in the Customs Law of this country, 1*s.* per quarter shall be regarded as the standard of a nominal or register duty upon corn. To reduce the charge upon foreign corn to a rate corresponding with this description, Her Majesty's Government stands pledged to Parliament; and if Her Majesty's Government were to concede the request which is preferred, the effect would not be the establishment of a minute preference, amounting to 11*d.* per quarter in favour of Canadian grain as against the foreign article; but it would without doubt be this, that the same reduction would be applied by Parliament to foreign grain also, and an entire equality between the two would thus be still maintained.

For this reason, Her Majesty's Government are of opinion, that it would not be expedient to propose to Parliament the alteration which it is the object of the Address to recommend.

I am, &amp;c.

(No. 19.)

COPY of a DESPATCH from Governor the Earl *Cathcart*, K. C. B. to the Right Honourable *W. E. Gladstone*.

Sir,

Government House, Montreal, 25 February 1846.

At the request of the Montreal Board of Trade, I have the honour to transmit the accompanying petition addressed to you by that body.

I have, &c.  
(signed) *Cathcart*.

No. 7.

Governor Earl  
*Cathcart* to Mr.  
Secretary Glad-  
stone.  
25 February 1846.

## Enclosure in No. 7.

To the Right Honourable William Gladstone, M.P. Her Majesty's Principal Secretary of State for the Colonies.

The Petition of the Montreal Board of Trade,

Humbly sheweth,

THAT your petitioners have observed Her Majesty's Government have proposed to Parliament a material alteration in the duties on foreign bread-stuffs imported into the United Kingdom, preparatory to an ultimate reduction of the same to a duty of 1s. per quarter.

That hitherto Her Majesty's Government have acted on the principle of affording favour to the produce of Canada, and in accordance therewith, passed a law in the year 1843, admitting into Great Britain Canadian wheat at a duty of 1s. per quarter, and flour at a relative rate, conditionally upon the maintenance of the Provincial law imposing a local duty of 3s. per quarter on foreign wheat imported into the province.

That as the proposed Imperial law departs from the principle upon which the Provincial law above referred to was founded, and neutralizes the favour accorded to Canadian bread-stuffs, your petitioners humbly hope Her Majesty's Government will be pleased to recommend the repeal of the said Provincial Act.

That by the alterations lately proposed in the Imperial Parliament, the protection on Canada wheat and flour will be so much diminished, that they cannot compete with like articles from the United States.

That a protection of even 1s. a quarter, small as it may appear, will aid in securing to Canada a share of the North-western American trade, to the encouragement of British shipping.

That unless some protection be given to produce imported by way of the St. Lawrence, the public works, constructed at a vast expense, and for the completion of which a loan was raised in England guaranteed by Her Majesty's Government, instead of being a source of revenue will become a charge to the province.

Wherefore your petitioners humbly pray, that so much of the Imperial Act 5 & 6 Vict., c. 49, as imposes a duty of 2s. per barrel on foreign flour imported into Canada be repealed; and that grain, flour and meal from Canada, of whatever origin, be allowed to be imported into the United Kingdom duty free.

And your petitioners, as in duty bound, will ever pray.

(signed) *G. Moffatt*,  
President of the Montreal Board of Trade.

Montreal, 25 February 1846.

*Frederick N. Willson*, Secretary.

Enclosure in No. 7.

— No. 8. —

(No. 48.)

COPY of a DESPATCH from the Right Honourable *W. E. Gladstone* to Governor the Earl *Cathcart*, K.C.B.

My Lord,

Downing-street, 1 April 1846.

I HAVE received your Lordship's despatch, No. 19, of the 25th February last, in which you enclose a memorial from the Board of Trade at Montreal, praying, that in consideration of the injury which the memorialists apprehended from the anticipated change in the Corn Law of this country, Her Majesty's Government would recommend the repeal of the Provincial Act, imposing a local duty of 3s. per quarter on foreign wheat imported into Canada; that the Imperial duty of 2s. per barrel on foreign flour brought into the province may be repealed, and that grain, flour and meal, of whatever origin, may be introduced from Canada into the United Kingdom free of duty.

The despatches noted in the margin, which I have had occasion to address to your Lordship on the subject of the trade of Canada, will have already explained the views which, in common with my colleagues, I entertain with respect to the apprehensions

apprehensions of the Board of Trade of Montreal, or of other parties similarly situated, as to the effect in Canada of the alteration of the English Corn Law, if it be passed in conformity with the views of Her Majesty's Government. But as it is necessary that I should return a distinct answer to the memorial which is now before me, I have to instruct your Lordship to acquaint the memorialists, that if Parliament shall adopt the changes in the Corn Law of this country which have been submitted to their deliberation, Her Majesty's Government will regard the local duty of 3s. on corn as an exclusively provincial question, and if the Legislature of Canada shall think it expedient to pass an Act for the repeal of that duty, Her Majesty will not be advised to disallow the measure.

2. You will state to the memorialists that, according to the view of Her Majesty's Government, any proposal to alter the imperial duty on flour imported into Canada should follow, and be dependent on, but should not precede the abrogation of the 3s. duty on wheat.

3. That with respect to their application for the free introduction into this country of grain, flour and meal of whatever origin, Her Majesty's Government regret that they do not think it entirely compatible with the spirit of the commercial treaties between this country and other powers, to revive the system which once prevailed, of allowing the introduction of goods from colonies at colonial duties, with reference, not to their origin, but solely to their place of export.

Sir,  
Government House, Montreal, 25 March 1846.  
AT the request of the Quebec Board of Trade, I have the honour to forward the accompanying petition, addressed to you by that body.

I have, &c.  
(signed) *Cathcart.*

Enclosure in No. 9.

To the Right Honourable *W. E. Gladstone*, Her Majesty's Minister of State for the Colonies, &c. &c. &c.

The Quebec Board of Trade, by this their Petition,

Respectfully represent,

Encl. in No. 9.

THAT your petitioners observe with deep anxiety the contemplated adoption by Her Majesty's Government of a new system of commercial policy, at variance with those maxims of protection and old established principles which have hitherto been acted upon in regulating the trade of Great Britain and her possessions abroad.

That the introduction into the Imperial Parliament of measures, the operation of which will immediately deprive the province of Canada of a great portion, and at no distant period of all the protection her produce now enjoys in the markets of the United Kingdom, should be received by your petitioners with anxiety and alarm, cannot be a matter of surprise.

Convinced as your petitioners are of the desire of Her Majesty's Government to encourage the commerce of the colonial possessions in North America, and promote the welfare of Her Majesty's subjects therein; and convinced, also, that any legislative measures, prejudicial to the North American colonies, must be prejudicial to the shipping and other great interests of Great Britain, they beg respectfully to bring under your consideration certain suggestions, which it appears to them would, if carried out, be beneficial to the colonies and the parent state, whose interests are inseparable.

That in Session of last year, the Congress of the United States of America enacted a law (called the Drawback Law), allowing a remission of the duties on British and other foreign manufactures and produce imported into the United States, on the same being exported inland into Canada; and a Bill is now in contemplation to allow the transportation of Canadian produce through the territory of the United States to an Atlantic shipping port, for exportation to Great Britain and other foreign countries, free.

That the question will no doubt suggest itself to you, whether the natural effect of this seductive law will not gradually, silently and imperceptibly, even to themselves, wean the inclinations of the subjects of Great Britain from their true allegiance to the parent state, and bias their minds in favour of a closer connexion with a foreign country, through which the transport of their merchandize and produce is encouraged, and a consequent more frequent intercourse with its inhabitants produced.

That

## PRESUMED CHANGES IN THE COMMERCIAL POLICY. 13

That the operation of this law has been greatly to increase the inland importation into Canada of various articles, the produce of foreign countries, such as teas, wine, fruit, sugar, coffee, molassas and others, so much as to cause a sensible diminution of the import of these articles by the St. Lawrence, and your petitioners, in corroboration of the statement, solicit your attention to the fact, that in the article of sugar alone, the importation into Canada from the port of Oswego, in the United States, amounted in 1845 to 1,600 hogsheads, and previous to the enactment of the Drawback Bill, the exportation from that port did not amount to 50 hogsheads, and further, that the importation of Muscovado sugar, by the river St. Lawrence, in 1844 was 8,177,581 pounds, and in 1845, 2,853,240, being a diminution of 5,324,341 pounds.

That the cause of the increased inland importations into Canada of these articles through the United States, and the diminution of the imports by the channel of the river St. Lawrence, is, in the opinion of your petitioners, to be attributed to the American Drawback Bill. The existence of the imperial duties on imports by the St. Lawrence, and the higher tolls on our canals, as compared with the tolls in the United States.

That the effect of the existence of the imperial duties on imports by sea, in conjunction with the Drawback Bill, is to erect a barrier to the passage through our canals, of the produce of foreign countries and British manufactures, and to neutralize the benefit to be derived by Her Majesty's subjects in Canada, in constructing those magnificent works at an enormous expense, and, in fact, to enact a penalty on their being used, a state of things that never could have been contemplated when these works were commenced.

Your petitioners, therefore, respectfully suggest, that the imperial duties under the Act of 8 & 9 Vict., c. 93, on all flour and provisions imported into this province by inland navigation, be repealed, and that such articles so imported and conveyed through the channel of the river St. Lawrence, to a shipping port, should acquire a colonial character, and be admitted into the United Kingdom on the same terms as the produce of the province, and that the imperial duties on all importations by sea only be also repealed.

Your petitioners presume to suppose that these measures would not directly or indirectly be prejudicial to British interests, while they would secure to this province a large inland carrying-trade, employ British capital, create an extra demand for labour, increase the consumption of British manufactures, augment the revenue of our splendid canals, and above all, give further employment to British shipping, especially in the conveyance of flour and provisions imported inland for exportation to British ports, which is made manifest by consideration of the fact, that upwards of one-third of their cost consists in the incidental charges of inland transportation and Atlantic freights; and your petitioners further presume to suppose, that an extensive inland trade once established through the channel of the St. Lawrence, would continue to flow in that direction after the cause that diverted it from other outlets to the ocean had ceased to exist.

Your petitioners perceive that the article of timber is one of those which it is intended by Her Majesty's Ministers to protect to a certain extent, by reducing the present differential duty from 25s. to 15s. per load; but they beg to observe, that the present is an apparent, not a real protection, inasmuch as the average rate of freight between timber imported from the Baltic and North America, is fully 20s. per load in favour of the Baltic, from the greater distance from America to Great Britain, reducing thereby the real protection to about 5s. per load; and if the apparent protection is reduced to 15s. per load as contemplated, it will in effect be equivalent to a premium in favour of Baltic timber of 5s. per load; and it is important also to observe, that that very distance which thus places colonial timber in so disadvantageous a position, makes the North American colonial trade the great nursery for British seamen, and promotes the shipping interests of the United Kingdom.

Your petitioners, therefore, respectfully suggest, that the proposed reduction of duty on Baltic timber of 5s. per load, 5th April 1847; 5s., 5th April 1848, be reduced to 2s. 6d. per load at those respective dates; and that the contemplated reduction in the duty on sawn timber be reduced proportionately.

By order of the Council of the Board of Trade,

Quebec, 16 March 1846.

(signed) *W. Walker*, (L. s.), President.

No. 10,  
Governor Earl  
*Cathcart* to Mr.  
Secretary Glad-  
stone,  
27 March 1846.

## Enclosure in No. 10.

Encl. in No. 10.

To the Right Honourable *William Gladstone*, M.P., Her Majesty's Principal Secretary of State for the Colonies.

The MEMORIAL of the Montreal Board of Trade,

Humbly sheweth,

THAT your memorialists observe Her Majesty's Government have proposed to Parliament certain changes in the customs' duties of Great Britain, under which salted provisions and various other articles are to be at once admitted into the United Kingdom duty free.

That by the Imperial Act 5 & 6 Vict., c. 49, salted provisions, and many of the articles above referred to, are liable to heavy duties when imported into Canada from foreign states; and it appears to your memorialists, that to maintain such duties in Canada, while they are abandoned in the United Kingdom, will have a most injurious effect on the trade of this colony, and will prevent it realizing any advantages which may be derived from becoming the channel through which a portion of the provisions of the United States may reach the British market.

Wherefore, your memorialists humbly pray Her Majesty's Government will recommend to Parliament the repeal of the Imperial duties on all such articles imported into Canada, as by the proposed Customs' Duties Bill may be admitted duty free into the United Kingdom.

And your memorialists, as in duty bound, will ever pray.

(signed) *G. Moffatt*,

President of the Montreal Board of Trade.

Montreal, 26 March 1846.

*Frederick N. Willson*, Secretary.

## — No. 11. —

(No. 62.)

COPY of a DESPATCH from the Right Honourable *W. E. Gladstone* to Governor the Earl *Cathcart*, K. C. B.

No. 11.

Mr. Secretary  
*Gladstone* to Earl  
*Cathcart*,  
4 May 1846.

My Lord,

Downing-street, 4 May 1846.

I HAVE to acknowledge the receipt of your despatches, Nos. 27 and 31, in which you enclose addresses to myself from the Boards of Trade at Quebec and Montreal, praying for the repeal of certain provisions in the Imperial Enactments, 5 & 6 Vict., c. 49, and 8 & 9 Vict., c. 93, the continuance of which, it is represented, will seriously affect the trade of Canada, if the proposed alterations in the commercial policy of this country should be sanctioned by Parliament.

I have to instruct your Lordship to acquaint the memorialists, in answer, that the interests of Canada continue to engage the lively solicitude of Her Majesty's Government; but that they have felt it their duty to decline acceding to the request that the system denominated "naturalization" of goods may be introduced into the pending law, upon grounds which they conceive to be of such force as to leave them no option. Her Majesty's Government, are, however, by no means similarly pledged or disposed to refuse consideration to the question, how far the Imperial duties chargeable in Canada may be susceptible of alteration with advantage, though they entertain the opinion that it would be premature to enter upon that subject without further knowledge than we now possess of the sentiments of the various parties interested in it. With respect to the article of timber, adverted to in the memorial of the Board of Trade of Montreal, your Lordship will observe to the Memorialists, that Parliament has already declared itself on that question in unison with the views of Her Majesty's Government; but your Lordship will be pleased likewise to add, that Her Majesty's Government are firmly persuaded, that the British North American timber, from its own useful properties, and with the aid of the reduced protection which it is proposed to retain, as well as from the energy and intelligence of those who trade in it, and their command of capital, will continue to hold its place in the British market.

I have, &c.

(signed) *W. E. Gladstone*.

## PRESUMED CHANGES IN THE COMMERCIAL POLICY. 15

— No. 12. —

(No. 42.)

COPY of a DESPATCH from Governor the Earl *Cathcart*, K. C. B., to the  
Right Honourable *W. E. Gladstone*.

Sir,

Government House, Montreal, 28 April, 1846.

No. 12.

IN order that you may be made acquainted at an early period with the views entertained by the Legislative Assembly of Canada in regard to the measures which it appears expedient for them to adopt, consequent on the contemplated abolition of the duty on corn, and other important changes in the commercial policy of the empire, which have been submitted to the deliberation of the Imperial Parliament, I have the honour to enclose for your information a copy of seven Resolutions that have passed in a committee of the whole House.

Governor Earl  
Cathcart to Mr.  
Secretary Glad-  
stone,  
28 April 1846.

These Resolutions were introduced by the Inspector-general, and carried, under the supposition that Her Majesty's Ministers would succeed in carrying through the measures submitted by them to Parliament, and it is understood that the enacting of the provisions which they contain is to be contingent on that event.

I have, &c.  
*Cathcart*.

## Enclosure in No. 12.

SEVEN RESOLUTIONS reported from a Committee of the whole House.

1. *Resolved*,—That, in the opinion of this Committee, it is expedient that so much of the Act 6 Vict., c. 31, as relates to the imposition of a duty of 3s. sterling per quarter on foreign wheat imported into this province, be repealed.—Yeas 42; Nays 28. Enclosure in No. 12.

2. *Resolved*,—That a duty of 3s. sterling per quarter be imposed upon all foreign wheat imported into this province, except for the purpose of exportation, or to be ground in bond, for exportation.

3. *Resolved*,—That, in the opinion of this Committee, it is expedient that so much of the Schedule of duties imposed by the Act 8 Vict., c. 3, as relates to the imposition of a duty of 3s. sterling per quarter on maize, or Indian corn, imported into this province from a foreign country, be repealed.—Yeas 43; Nays 23.

4. *Resolved*,—That a duty of 3s. sterling per quarter be imposed upon all foreign maize, or Indian corn, introduced into this province except for the purpose of exportation.

5. *Resolved*,—That, in the opinion of this Committee, it is expedient that so much of the Schedule of duties imposed by the Act 8 Vict., c. 3, as relates to the imposition of a duty upon Muscovado, clayed, bastard and other sugars not refined, imported into this province, be repealed.

6. *Resolved*,—That a duty of 7s. 6d. sterling per cwt. be imposed upon Muscovado, clayed, bastard and all other sugars not refined, imported into this province. (*Present duty* 9s. 4d. sterling).—Yeas 41; Nays 29.

7. *Resolved*,—That, in addition to the articles enumerated in the Schedule to the said Act 8 Vict., c. 3, on which duties are imposed, all descriptions of dye-woods be subject to and charged with an *ad valorem* duty of one per cent.

*Resolved*,—That, in the opinion of this Committee, it is expedient that so much of the Schedule of duties imposed by the Act 8 Vict., c. 3, as relates to the imposition of duties upon leather or leather manufactures imported into this province, be repealed.

*Resolved*,—That an *ad valorem* duty of five per cent. be imposed upon all kinds of manufactured or unmanufactured leather, the production of Great Britain, or of the British Colonies, imported by sea, or direct from any British Colony; and that on leather or leather manufactures otherwise imported, the following duties be imposed; that is to say,

Present Duties.

Gladstone,  
28 April 1846.

(No. 40.)  
COPY of a DESPATCH from Governor the Earl *Cathcart*, K.C.B., to the Right Honourable *W. E. Gladstone*.

Government House, Montreal,  
28 April 1846.

Sir,  
I HAVE the honour to transmit to you the enclosed Petition from certain merchants and other citizens of Quebec to the Queen, praying that Her Majesty will not sanction the contemplated modification in the Tariff on wood goods.

I have, &c.  
(signed) *Cathcart*.

Enclosure in No. 13.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The Petition of the undersigned Merchants and others, Citizens of Quebec,  
Humbly sheweth,

Enclosure in No. 13.

THAT your petitioners view with serious alarm the measures introduced by Your Majesty's Ministers in the Imperial Parliament, affecting as they do the principal exports of Your Majesty's possessions in British North America, by encouraging other nations more favourably situated to enter into successful competition with them.

That the long and tedious navigation of the St. Lawrence, the shortness of the shipping season, and the danger of the coast, especially in the months of October and November, add materially to freights and insurances, and render successful competition with the foreigner either in corn or timber a matter of great difficulty, if not of utter impossibility.

That although a protection of 24 s. is now granted on the timber of these provinces, the freights from the Baltic average 17s. 6 d. per load, while those from Canada average 38s. 9 d., making a difference in favour of the producer in the north of Europe of 21 s. 3 d. per load, and when insurance is considered, making the protection now given a mere equivalent to the difference of freight; moreover, should the contemplated reduction of 5 s. in 1847 and 5 s. in 1848 take place, giving a direct boon to this extent to the foreign producer, who in comparison to the colonist gives little encouragement to the British manufacturer.

That the effect of the changes in the Tariff in the port of Liverpool has been to increase the foreign tonnage employed in carrying deals and timber upwards of 200 per cent. since 1842, while the British shipping employed in the same trade with these colonies has only increased to the same port about 30 per cent.; and that if such are the effects of the modifications in 1842, the inevitable result of further relaxation will be ruin to both the British shipowner and colonist.

That independently of the encouragement given to the north of Europe to compete with Your Majesty's colonial possessions in North America, the effect of the changes now referred to will be to add another competitor, namely, the United States of America, especially in the articles of pitch pine (resembling the red pine of the colonies, but superior to it), staves and oak timber, the produce mostly, if not entirely, of slave labour.

Your petitioners most humbly pray, that Your Majesty will consider favourably their petition, and allow the duties to remain as they now are, viz., 25 s. on foreign timber and 1s. on colonial; that your Majesty will cause to be levied a duty on staves, as this article affords constant employment to colonial shipping on the inland lakes, and further, that no alteration be made in the duties on sawed timber, which, if altered as contemplated, will ruinously affect many who have embarked large capital in the erection of saw-mills, under the impression that in any change of duties the situation of these provinces, their distance from the mother country, the immense employment they give to British shipping and their being such large consumers of British manufactures, would be duly considered, and that protection

## PRESUMED CHANGES IN THE COMMERCIAL POLICY. 17

protection equivalent to the difference of freight would at least be guaranteed to them, as even then they only meet the foreign producer in the home markets on equal terms.

That to a system of wise and judicious protection Your Majesty's empire is indebted for its proud attitude among the nations of the earth, and the present happy position of Your Majesty's colonial possessions is attributable mainly to the same source.

Wherefore your petitioners most humbly pray, that Your Majesty will not sanction the contemplated modifications in the Tariff on wood goods, and Your Majesty's petitioners, as in duty bound, will ever pray.

(144 Signatures.)

—No. 14.—

(No. 66.)

COPY of a DESPATCH from the Right Honourable *W. E. Gladstone* to  
Governor the Earl *Cathcart*, K.C.B.

My Lord,

Downing-street, 18 May 1846.

No. 14.

I HAVE to acknowledge the receipt of your Lordship's despatch, No. 40, of the 28th of April, transmitting to me a petition to Her Majesty from certain merchants and others, citizens of Quebec, praying that Her Majesty will not sanction the contemplated modification in the Tariff on wood goods.

Mr. Secretary  
Gladstone to  
Governor Earl  
Cathcart,  
18 May 1846.

I have laid this petition before Her Majesty, who has been pleased to receive it graciously, but it has not been in my power to advise Her Majesty to assent to its prayer, for the reasons which I shall proceed to state.

Her Majesty has invited the Parliament to adopt the proposal to which the petition refers.

The House of Commons will enter to-night on the consideration of the Customs Duties Bill, in which this proposal is included, at the advanced stage when the Bill is reported to the House from the Committee of the whole House, immediately before the engrossment and third reading. At such a stage it would, I believe, be most unusual for the House of Commons to reverse the decision which it has given on the occasions afforded by the various earlier stages of the Bill, and by the preliminary Committee, which is required, with respect to all questions of trade, and in which they ordinarily undergo the most searching examination. Thus, Her Majesty having recommended to Parliament a particular course, has had no reason, in the reception which Parliament has given to the recommendation, to adopt any alteration of it.

But I must not be understood as implying that this is the principal difficulty which obstructs a compliance with the prayer of the petitioners; there are others, including some of a higher order:—First, Her Majesty's Government do not doubt the very high respectability of the petitioners, and would be disposed, on general grounds, to attach great weight to their opinions; but Her Majesty's Government have found themselves obliged, on a great variety of occasions, to adopt and to adhere to proposals unacceptable to many of the parties immediately affected by them, notwithstanding their belief in the high integrity of those parties, and their perfect freedom from any consciousness of an interest that could warp the judgment; and Her Majesty's Government cannot but observe on the present occasion, that they do not find any reason to suppose, from the evidence before them, that the opinion of the petitioners with respect to the impending change in the timber duties, is shared by the people of Canada at large, or by their representatives, who, on the contrary appear to have evinced their intention to abandon reliance upon the artificial advantages which protective laws may confer, and to place it upon the natural and permanent guarantees afforded by the resources of the province and the energy of its inhabitants.

Her Majesty's Government must seriously doubt whether, if the allegations of the petition were made good in their whole extent, with respect to the disadvantages entailed upon Canada by her distance from this country, by the dangers of the St. Lawrence, the suspension of its navigation during a portion of the year, and by the inferior quality of Canadian timber, that circumstance would have the effect of producing the conviction in this country that the measure now under discussion should be either qualified or abandoned, inasmuch as it would certainly show that the present system could only be continued at a very heavy cost to the nation.

But Her Majesty's Government do not share the belief of the petitioners in the existence and in the force of these disadvantages. They cannot forget the predictions,

predictions, the confident, and, without doubt, sincere predictions of ruin which attended the progress of the measure of 1842, nor can they fail to contrast with those predictions the great subsequent extension, and the apparently flourishing condition of the trade at the present moment.

With respect, indeed, to the disadvantage of distance, which undoubtedly affects the competition of Canadian timber with that of the Baltic, Her Majesty's Government have not failed to make what they deem to be a sufficient provision, all things considered, for the charge which it entails, by proposing to retain a protective duty of 15*s.* per load on foreign wood; and inasmuch as they can by no means admit that it is the proper office of commercial laws to attempt in general to secure to places which are remote all the advantages of proximity, they trust the petitioners will recognize in the plan as it actually stands, a proof of their great anxiety to give every just consideration to the claims of the parties engaged in the trade, and to those of the colony, so far as its interests may be conceived to be affected by the question.

Her Majesty's Government look forward to an active competition, under the law as it is proposed that it should stand, and a competition by no means unfavourable to the timber and deals of Canada. Nor is it competition alone which Her Majesty's Government anticipate; on the contrary, they conceive, as I have already had occasion to state to your Lordship, that to no inconsiderable extent, the consumption of Baltic timber is actually auxiliary to the demand for that of Canada, and therefore, that to this extent a measure which cheapens the first, is likely to cause positive improvement in the market for the last.

For these reasons, which I need not pursue into further detail, and for others to which I have thought it unnecessary on this occasion to refer, Her Majesty's Government have been unable to advise Her Majesty to assent to the prayer of the petition transmitted to me by your Lordship.

I have, &c.

No. 1.  
Governor Earl  
Cathcart to  
Mr. Secretary  
Gladstone,  
13 May 1846.

Sir,

Government House, Montreal, 13 May 1846.

I HAVE the honour to transmit herewith, in order that it may be laid at the foot of the Throne, an Address to Her Majesty from the Legislative Assembly of this Province, praying that, in the event of a change being made in the law regulating the admission of Foreign Corn into the British markets, due regard may be had to the interests of Canada.

I have, &c.  
(signed) *Cathcart*.

## TO THE QUEEN'S MOST EXCELLENT MAJESTY.

Most Gracious Sovereign,

WE, your Majesty's dutiful and loyal subjects, the Commons of Canada in Parliament assembled, respectfully beg leave to address your Majesty on a subject of the highest importance to the inhabitants of this Province.

We assure your Majesty, that while we have seen with unmingled satisfaction the happiness and prosperity of the people of this colony advancing in steady and successful progression under that moderate system of protection of her staple productions, grain and lumber, which your Majesty and your Imperial Parliament have hitherto graciously secured to them, we feel that we should be wanting in our duty, as well to your Majesty as to our constituents, did we fail earnestly to represent to your Majesty that we view with serious apprehension and alarm, as detrimental to the best interests of this colony, the adoption of the proposed principle of commercial intercourse now under the consideration of the Imperial Parliament.

We cannot but fear that the abandonment of this protective principle, the very basis of the colonial commercial system, is not only calculated materially to retard the agricultural improvement of the country, and check its hitherto rising prosperity, but seriously to impair our ability to purchase the manufactured goods of Great Britain; a result alike prejudicial to this colony and the Parent State.

We feel truly grateful to your Majesty for enabling us, by guaranteeing the payment of 1,500,000*l.*, to undertake many valuable public improvements, which are now approaching to completion, and which under the existing laws would ultimately prove productive. But should the duties on foreign and colonial produce entering the United Kingdom be assimilated, as at present proposed by your Majesty's Imperial Government, it is much to be apprehended that the agriculturists of this Province will be deprived of a fair and remunerative price for their surplus produce; and that, consequently, the increase of our staple products, which was reasonably anticipated, will be checked to such an extent as materially to lessen the prospect of our canals and other public works proving as productive as we had reason to expect.

We respectfully represent to your Majesty, that, situated as Canada is, and with a climate so severe as to leave barely one-half the year open for intercourse by the St. Lawrence with the mother country, the cost of transporting her products to market

## 2 CORRESPONDENCE WITH CANADA RELATIVE TO

is much greater than is paid by the inhabitants of the United States; and that without a measure of protection, or some equivalent advantage, we cannot successfully compete with that country.

It therefore becomes our duty, as faithful subjects of your Majesty, to point out what we sincerely believe must be the result of measures which have for their object the repeal of the laws affording protection to the Canadian export trade. First, it will discourage those at present engaged in agricultural pursuits from extending their operations; secondly, it will prevent the influx of respectable emigrants from the mother country, who have for many years past settled in large numbers on the waste lands of the Province, and who by their industry and capital have materially contributed to that rapid advancement of the country which we have before noticed; and, lastly, it is much to be feared that, should the inhabitants of Canada, from the withdrawal of all protection to their staple products, find that they cannot successfully compete with their neighbours of the United States in the only market open to them, they will naturally and of necessity begin to doubt whether remaining a portion of the British Empire will be of that paramount advantage which they have hitherto found it to be. These, we humbly submit, are considerations of grave importance both to your Majesty and the people of this Province; and we trust we need not assure your Majesty that any change which would tend in the remotest degree to weaken the ties that have for so many years, and under trying circumstances, bound the people of Canada to that land which they are proud to call their mother country, would be viewed as the greatest misfortune which could befall them.

We would further remind your Majesty that while, in compliance with the recommendation of the Imperial Government, we have passed a law repealing all duty on American produce coming through our country for exportation, no similar advantage is accorded by the American Government to the people of this Province; but that duties, amounting in most cases to prohibition, are rigorously maintained by that Government on every article of ours entering into their ports. The disadvantage we must labour under in this respect is so apparent that we respectfully request your Majesty will be pleased to cause the necessary steps to be taken for opening a negotiation with the Government of the United States for the admission of our products into their ports on the same terms that theirs are admitted into those of Great Britain and this colony.

We also humbly request that your Majesty will favourably consider the justice of admitting the products of this Province generally into the Imperial ports free of duty, as the expense of transportation is in itself all the protection which our fellow-subjects in the United Kingdom can reasonably expect as respects the imports from a colony situated at such a distance from the mother country, and with ports closed to commerce for so large a portion of the year. And we the more confidently appeal to your Majesty's justice upon this point as the relief that we seek in this particular is in strict accordance with the very principles upon which the changes that we deprecate are based, as well as to the assurance received through your Majesty's Secretary of State, that it is the desire of your Majesty's Government that the trade of Canada should in all respects approach as nearly to perfect freedom as the wishes of its inhabitants and the exigencies of the public revenue may permit.

While the subject that we have thus brought under the notice of your Majesty embraces other points requiring the gravest deliberation, and calling for the most favourable consideration on the part of the Imperial authorities, your Majesty's faithful Commons have felt it to be their duty to your Majesty, to the Imperial Parliament and the mother country, and to their own constituents, to lose no time in at once approaching your Majesty with the declaration of their views upon that part of it embraced in their present address, and to which, renewing their assurance of devoted attachment to your Majesty's person and Government, they earnestly entreat your Majesty's most gracious and favourable consideration.

Legislative Assembly,  
Tuesday, 12th May 1846.

(signed) A. N. Morin,  
Speaker.

— No. 2. —

(No. 83.)

COPY of a DESPATCH from the Right Honourable *W. E. Gladstone*, to Governor the Earl *Cathcart*, K. C. B.

No. 2.

Mr. Secretary  
Gladstone to  
Governor Earl  
Cathcart,  
3 June 1846.

My Lord,

Downing-street, 3 June 1846.

I HAVE to acknowledge the receipt of your Lordship's despatch, No. 54, of the 13th of May, transmitting to me, for presentation to Her Majesty, an address which has been voted by Her Majesty's loyal subjects the Commons of Canada. In this address it is set forth, that the Assembly of Canada regard the adoption of the principle of commercial intercourse now under the consideration of the Imperial Parliament with serious apprehension and alarm, and various grounds are stated for entertaining such impressions. Her Majesty has been pleased to receive this address with the fullest confidence in the loyalty and intelligence of Her faithful Commons of Canada; but it is with sincere concern that

## PRESUMED CHANGES IN THE COMMERCIAL POLICY. 3

that Her Majesty has learned the existence, in such a quarter, of anticipations of such a character.

I have it in command from Her Majesty to address to your Lordship the following observations in regard to the matter of the address, which have been submitted by Her Majesty's advisers for Her gracious approval, and to which She has been pleased to give Her sanction.

Her Majesty's Government conceive that the protective principle cannot with justice be described as the universal basis, either of the general connexion between the United Kingdom and its colonies, or even of their commercial connexion. There is a large and important group of the colonies of this country, having a very extended commerce, and one of a peculiarly British character, in relation to which the protective system has at no time exercised a powerful influence, and in relation to which at present it has little more than a nominal existence. I speak of the Australian colonies: and it cannot fail to be remarked, that while these are the most distant, and therefore, according to the suppositions of many, the most in need of commercial preference, they have also made the most rapid progress, and have thus most effectually belied that necessity. It is true, indeed, that a part of their material prosperity may be ascribable to the supply of penal labour; but this is far from affording an explanation of the case, since perhaps the most remarkable instances of vigorous and rapid growth among the Australian possessions of Her Majesty have been instances in which penal labour has been altogether unknown. The energy of the colonists has, without doubt, under Divine Providence, been the main cause of their singular advancement; stimulated, but not overborne by distance, and aided, not repressed, by the enjoyment of commercial freedom. The same energies, with less disadvantage of distance to contend against, will, it may be confidently predicted, have a similar effect in developing the resources of British North America, and not with less, but rather with the more signal success, when capital, industry and skill shall be left to take their own spontaneous direction, and to turn to account, as individual prudence shall suggest, the abundant materials and instruments of wealth which the bounty of Heaven has bestowed.

Her Majesty's Government have been glad to find that the Assembly has viewed with an unmingled satisfaction the prosperity of Canada under the moderate system of protection which has hitherto prevailed; but the Assembly cannot fail to recollect, that all the progressive relaxations of that system, which for a series of years past have been introduced into the law, have been met and resisted by predictions of the ruin that it was honestly but erroneously conceived would follow them, and that those predictions have, with a remarkable uniformity, been disappointed. Experience cannot but suggest that a similar insecurity attaches to the renewal of the same expectations founded on the same arguments.

It is not for the sake of controversial or purely argumentative advantage that Her Majesty's Government refer to former apprehensions, and to the manner in which they have been dissipated by the event. A retrospect of this kind is calculated to throw clear and abundant light upon the real merits of the question. The fears which are now entertained have reference to the circumstance that it is proposed to remove all differential duty between Canadian and foreign corn. Is it then to be shown that the Canadian corn trade has prospered heretofore in proportion to the amount of such differential duty? Far otherwise. The law of 1828 diminished the difference in favour of Canada; the law of 1842 further and greatly diminished the difference in favour of Canada; the Law of 1843, which reduced the duty on Canadian wheat to one shilling per quarter, still left a much smaller difference in its favour, as against foreign wheat, than existed under either of the former Corn Laws. And yet the corn trade of Canada has grown and prospered; and its extension has, doubtless, contributed in no small degree to the happiness and prosperity of the people of the colony, which the Assembly, sharing in the unmingled satisfaction of Her Majesty and the British Parliament, has seen advancing in steady and successful progression. But this extension has taken place, not under protection secured from change, nor under protection fortified by successive increments, but contemporaneously with a series of changes involving its great diminution.

It appears to be the impression of the Assembly that some great revolution of prices is likely to occur, as the consequence of the pending changes in the law, which will deprive the Canadian farmer of all hope of remuneration

for

for his surplus produce. But the Canadian farmer is advancing from year to year in capital and in science; and, to say nothing of the great advantages he cannot fail to derive from improved communications, it would surely be rash to assert, nor probably do the Assembly in their address intend to imply, that his industry must be paralysed unless he shall continue to receive the precise amount of average payment for his grain that he has hitherto received for it. Doubtless the alarm which has been excited has reference to the idea of some sudden, great and permanent reduction of price, to follow the repeal of the British Corn Law. Without pretending to estimate too nicely the momentary or the occasional effects of that measure, Her Majesty's Government cannot but admit that they could better appreciate at least certain presumptive, though far from demonstrative, grounds for the alarm of the Canadian agriculturist in regard to the future fortunes of the colony if they shared in such an anticipation. To some reduction of average and usual price, from the removal of artificial restraints, they are disposed to look forward; but when they consider the steady and rapid growth of population in the corn-producing countries of the globe, they cannot but be persuaded that it would be unwise, whether in the friends or the opponents of commercial relaxation, to recommend or dissuade it on the ground of any great revolution in permanent prices to be operated by it; and their expectations of advantage, sanguine as these anticipations are, have reference in a greater degree to the increased steadiness of the market, and to the vigour which general trade will derive from the removal of restraints upon the exchange of commodities, and agriculture, from the cessation of all artificial influence disturbing the balance of its several pursuits, and from the wholesome stimulus that competition, which in farming pursuits can scarcely become overwrought, rarely fails to impart to industry.

For Mr. Secretary  
Gladstone's Despatch,  
18 May, No. 66,  
vide Papers, ordered by  
the House of Commons  
to be printed, 18 May  
1846, No. 321, p. 17.

I am unwilling to repeat at length the arguments which I have addressed to your Lordship in my despatch, No. 66, of the 18th May, with respect to the other great subject of the alarm of the Assembly, namely, the trade in lumber. When, however, we revert to the year 1842, it cannot but be acknowledged that this was the case of a trade peculiarly artificial as it stood under the former law. The reduction, though graduated, was decisive; perhaps in no case has it been more so; and certainly in no case have more uniform, confident or sincere prophecies of ruin been hazarded by the opponents of the change. The result is, that the export of timber from British North America to this country attained, during the last year, to a height which it had never reached under the more protective law. I do not mean that the withdrawal of protection was either the exclusive or even the principal direct cause of this prosperity; although there cannot be a doubt that many trades have to refer their vigour to the fact that the absence of artificial support has in their case given free operation to the stimulus necessary for the development of natural and permanent resources. Increased demand in the United Kingdom has, without doubt, been the main and the immediate cause of the increased export of wood from British North America; but it is the conviction of Her Majesty's Government that such increased demand was itself referable in no small degree to the relaxations of our commercial law; and therefore, in its due proportion, the growth of the timber trade is truly and justly, even if circuitously, to be ascribed to that very diminution of protection from which its ruin had been anticipated. We are now to look forward with hope to a further increase of the consuming power of this country; a further encouragement to the use of timber as compared with competing articles capable of being applied to the same purposes; a further encouragement to the use of Canadian timber, in combination with the wood of the Baltic, for those objects in regard to which the consumption of the one directly stimulates the consumption of the other. Is it too much to hope that causes so similar may produce like effects; and that the caution with which Parliament has proceeded in the gradual reduction of the timber duties to a moderate standard may be again rewarded by the satisfaction with which it will witness a further growth in the wood trade of Canada?

Her Majesty's Government, therefore, cannot, on the part of the Imperial Exchequer, share in the fear that increased freedom of trade will have the effect of crippling the revenues of those important public works which are designed to facilitate the transit of the produce of Canada by the St. Lawrence to the sea. They can by no means subscribe to the opinion that the comparative  
dearness

## PRESUMED CHANGES IN THE COMMERCIAL POLICY. 5

dearness of this route is an established fact; and they likewise feel, that if they did subscribe to that opinion, although it might corroborate the propriety of the course they have pursued in suggesting to Parliament the interposition of an interval before entire freedom shall be given to the corn trade, it could do no more; it could not induce them to ask, nor Parliament to grant, nor, they are certain, could it induce the people of Canada to desire, that the market of their farm produce should be maintained by means of a perpetual tax upon the people of England. In referring to the unchecked competition which, so far as British law is concerned, will be established between colonial and foreign corn by the repeal of the Corn Law, it perhaps may not have occurred to the Assembly, that British law alone cannot suffice to establish this competition. The price which the colonial and foreign exporters of corn respectively will obtain for their grain in Great Britain, must always be materially affected by the comparative degrees of facility which may be afforded in the country of the one and of the other for the introduction of those British goods by which payment for the corn must substantially be made. British goods are admitted into Canada at very low, into the American Union at very high, import duties. The effect of this is not merely to give to the British exporter a better position in the Canadian market than in that of the United States, but to enable him to give a better price for the commodity he purchases in return, and therefore to give to the corn trade of Canada a corresponding advantage, so long as the present tariffs continue, over that of the United States.

With respect to that portion of the address which prays Her Majesty to invite the Government of the United States to establish an equality of trade between the dominions of the Republic and the British North American colonies, I am commanded to instruct your Lordship to assure the Assembly that Her Majesty will readily cause directions to be given to Her Minister at Washington to avail himself of the earliest suitable opportunity to press this important subject on the notice of that Government, and that it will afford Her Majesty the most sincere satisfaction if any communication which may hereafter be held for this purpose shall have the effect which is desired by Her faithful Commons of Canada.

Her Majesty's Government have, as may be known to the Assembly, on several occasions endeavoured to make arrangements with foreign powers for the mutual relaxation of tariffs; and similar attempts have taken place among foreign powers, one with the other, but almost uniformly with ill success. Whatever arguments may be used to show the great increase of benefit that would accrue on both sides if states could have been induced to act simultaneously for this purpose, experience has sufficiently shown the difficulty of effecting these combined operations upon matters which are properly of domestic concern, and has suggested the wisdom of securing the incomplete advantage which depends upon our own free agency alone, rather than of foregoing it in the vain endeavour to realize benefits larger indeed, but not within our reach. Should the Government of the United States continue to maintain the scale of import duties now in force upon its frontier, Her Majesty's Government will view with regret a policy injurious to Canada; but they will reflect with satisfaction on the prevalence of laws more favourable to commerce on the Canadian side, and will anticipate from those laws both a direct benefit to the people and trade of the Province, and the further advantage which a consistent example given by this country and by its colonies will, as they believe, not fail to realize in disposing foreign states towards the removal of restrictions on trade.

With respect to that part of the address which relates to the duty of 1 s. per quarter, which it is proposed to charge on all wheat imported into England after the repeal of the Corn Law, I am to refer your Lordship to my despatch, No. 56, of the 18th April, on the same subject. From the purport of that despatch it would of course be even more difficult to recede at a period when the Bill introduced into the House of Commons by the advisers of the Crown has passed through all its stages in that House, and has been affirmed, as to its principle, on the second reading, by the House of Lords.

It is necessary for me here to offer an explanation with regard to an expression of mine, which appears to have given rise to misapprehension. I have stated to your Lordship, in a previous despatch, that Her Majesty's Government desire that the trade of Canada should in all respects approach as near to perfect freedom as the dispositions of its inhabitants and the exigencies of the public revenue there may permit; and from this it is inferred that the amount of 1 s. per quarter,

page 10.*

## 6 CORRESPONDENCE WITH CANADA RELATIVE TO

which has been adopted for a long period in this country as the standard of a nominal duty upon corn, ought to be removed. But the language which I employed had reference to the trade of Canada as affected by laws applicable in her own markets and on her own waters. Indeed, if the allusion had been to a rigid and perfect equality of trade in the ports and markets of this country, its first and most important bearing would, I apprehend, have been, not upon the nominal duty of 1*s.*, which it is proposed to retain upon colonial in common with foreign corn, but rather upon the very considerable duties of 15*s.* and 18*s.* respectively, which, as against nominal duties of 1*s.* and 2*s.* on Canadian timber and deals, it is proposed to continue to charge on the corresponding foreign articles.

Her Majesty's Government, in the discharge of their duty to the Crown and to the people of this country, and likewise to the empire at large, have not felt themselves to be at liberty to advise Her Majesty to pass by the address of Her Canadian Assembly with a brief or merely formal answer, although the advanced stage at which the deliberations of Parliament have now arrived might have afforded at least a technical justification for such a course. They have thought a more frank and full exposition of their views of this great question in its bearings upon Canada was due to the important body from which the address proceeds, and from which they are well assured may be anticipated the most candid consideration even of arguments opposed to their own. It is due especially on account of the importance of that body and of the province of Canada; but, even in the case of the smallest portion of Her subjects, I have it in command to say that it would equally have been the desire of Her Majesty that such a frank exposition of the policy of Her Government should be made. Her Majesty does not recognize the distinction between Her nearer and Her more remote subjects with reference to a matter so nearly touching Her relation towards them, and the duties and the sentiments of consideration and affection which it involves. Nor can she recognize in this view any distinction between the more and the less powerful, particularly at a time when Her Parliament is engaged in the discussion of measures which are recommended to its notice especially upon the ground that they tend to improve the condition of the most numerous and the least opulent classes of Her people.

It would indeed be a source of the greatest pain to Her Majesty's Government if they could share in the impression that the connexion between this country and Canada derived its vitality from no other source than from the exchange of commercial preferences. If it were so, it might appear to be a relation consisting in the exchange not of benefits but of burdens; if it were so, it would suggest the idea that the connexion itself had reached or was about to reach the legitimate term of its existence. But Her Majesty's Government still augur for it a longer duration, founded upon a larger and firmer basis,—upon protection rendered from the one side, and allegiance freely and loyally returned from the other,—upon common traditions of the past, and hopes of the future,—upon resemblances in origin, in laws, and in manners,—in what inwardly binds men and communities of men together, as well as in the close association of those material interests which, as Her Majesty's Government are convinced, are destined not to recede but to advance, not to be severed, but to be more closely and healthfully combined under the quickening influences of increased commercial freedom.

I have, &c.

LETTER

## PRESUMED CHANGES IN THE COMMERCIAL POLICY. 7

LETTER from *J. Young, Esq.* to the Hon. *Dominick Daly*, Civil Secretary, Montreal.

Sir,

Hamilton, 7 May 1846.

I HAVE the honour to transmit through you to his Excellency the Governor-general, the enclosed Petition to Her most gracious Majesty, from the Board of Trade of this town, against the measures now before the British Parliament relative to corn and timber, and to request that his Excellency would be pleased to forward the same at the earliest possible period, to be laid at the foot of the Throne.

I have, &c.

(signed) *John Young*,  
President Hamilton Board of Trade.

## TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The Petition of the Board of Trade of the Town of Hamilton.

Most humbly sheweth,

THAT great alarm has been occasioned in your Majesty's province of Canada, as well as in your Majesty's other possessions in North America, by the measures recently brought before the British Parliament by your Majesty's Government, proposing the reduction and abandonment within a short period of the protection now afforded us on our staple articles of export.

That these provinces are the nearest colonies that can supply the mother country with corn and timber, and in return take British manufactured goods to an extent greater, according to our population, than any other colony, and four times greater than any foreign country.

That, should free trade in corn supersede the protection now afforded to this great staple of our export, we shall be no longer in a situation to continue as importers of British manufactured goods to an extent worthy of consideration, and the attention of the colonists must unavoidably be directed to the encouragement and extension of domestic manufactures.

That, encouraged by the protection afforded us in the British market, and the benevolent intentions of Your Majesty towards the colony, as expressed in the determination to regard Canada as an integral portion of the empire, and in her intercourse with the mother country to place her in the position of an English county, we have been induced to borrow on the credit of Great Britain a loan of one million and a half sterling to improve and complete our internal communications, which, should this protection be withdrawn, will be comparatively valueless, the means by which we hoped to liquidate the principal and interest being diverted into other channels.

That, in addition to the above, your petitioners would beg to present to your Majesty's notice the following facts.

That the trade to these colonies employs a most numerous and important portion of the British mercantile marine.

That British shipping is subject to additional expense by Imperial Acts in its intercourse with these colonies.

That we suffer considerable natural disadvantages, owing to our distance from the mother country, and to our ports being from their northerly situation closed to an export and import trade for nearly six months of the year.

Your Petitioners therefore humbly pray your Majesty to continue to this colony the protection now afforded, or at least such a modification thereof as may still enable us to compete with European growers of corn in the British markets and thereby enable us to import and consume British manufactured goods.

Or that, should the measures lately introduced by your Majesty's ministers become law, your Majesty will be graciously pleased to extend to this colony such relief as may enable us to sustain the disastrous consequences which we apprehend will follow the adoption of the policy now advocated by your Majesty's Government.

And your petitioners, as in duty bound, will ever pray.

(signed) *John Young*, President.  
*William Atkinson*, Secretary.

COPY of a DESPATCH from the Right Honourable *W. E. Gladstone* to Governor the Earl *Cathcart*, K. C. B.

My Lord,

Downing street, 1 June 1846.

I HAVE laid before the Queen the Petition to Her Majesty from the Board of Trade of the town of Hamilton in Western Canada, which accompanies your Lordship's despatch of the 13th May (No. 53). Her Majesty was pleased to receive it very graciously; but, much as I regret my inability to advise the Queen

No. 4.  
Mr. Secretary  
Gladstone to  
Governor Earl  
Cathcart,  
1 June 1846.

to assent to a request preferred by a body of Her Majesty's subjects possessing such and so many claims on the favourable regards of their Sovereign, I have been precluded from advising Her Majesty to assent to the prayer of this petition, that the measures now before the Imperial Parliament, relating to corn and timber, may not become law. To assent to it would be (as the petitioners will not fail to perceive) not merely to retract the recommendations addressed by Her Majesty to Parliament at the commencement of the present Session, but would be to contravene all the votes hitherto passed in pursuance of that recommendation by both Houses of Parliament.

I have &c.

[illegible]

COPY of REPORT of COMMISSION appointed by the GOVERNOR-GENERAL  
of CANADA, since the Union of the Two Provinces, to inquire into the  
State of the CANADIAN POST OFFICE.

Government House, Montreal,

26 October 1840.

Gentlemen,

I AM commanded by the Governor-general to inform you that his Excellency has been pleased to appoint you to be Commissioners to inquire into the present administration of the Post-office within the Provinces of British North America.

It is not his Excellency's intention, in notifying to you this appointment, to embarrass your discretion as to the extent of your inquiry, or the means of conducting it, by instructions pointing out minutely the course you are to pursue. You will understand that the object of Her Majesty's Government is to ascertain whether any and what alterations can be made to promote the efficiency of the Post-office establishment, and to advance the convenience of the public. The reduction of postage lately effected upon all letters from and to the United Kingdom seems already to have provided for that branch of the subject; but the end to be obtained in the Post-office arrangement for these provinces, as regards the transmission of letters within them, should be to afford such a reduction of charges, together with such augmentation of convenience, as may be found possible, consistently with security, that the revenue raised shall suffice to defray all expenses incurred. Much also may remain to be done even with respect to the communication with the United Kingdom, apart from the mere charges for letters, and you will therefore embrace in your inquiry every matter connected with the Post-office communication in these provinces which appears of importance; the number and situation of existing offices, and the necessity for new establishments; the improvement of internal communications, whether by land or water; the rates of inland postage; the expense of the different lines as compared with the revenue; and the manner in which that expense is defrayed; the emoluments of the different officers of the department, whether arising from fixed salary, from agency or from perquisites, and the means of facilitating communication between the respective provinces and the United States. To all these, and to any other points which may appear to you of importance, your attention will of course be directed.

To assist you in the conduct of your inquiry, the Governor-general has been pleased to appoint Mr. C. Dunkin to be your secretary, and you will consider yourselves authorized to require from all officers of the Government, and more especially from all postmasters or other individuals engaged in the several post-offices, such information or documents as may appear to you necessary. You will also be at liberty, should you think it expedient, to summon before you any of the servants of the Post-office, whose evidence you may desire to receive *vivâ voce*; but in using this authority you will of course endeavour to interfere as little as possible with the conduct of the public business.

In respect to the other provinces of British North America, you will probably be able to obtain, by correspondence with the postmasters and other officers of the Government, all the particulars necessary for your inquiry. The Lieutenant-governors have already received from the Secretary of State instructions to transmit to the Governor-general such information on this subject as they may be able to afford, and the despatches which have in consequence been received from them will be laid before you at once. Should it appear to you at

## 4 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

any time necessary to invoke the interference of the Governor-general to obtain any additional information from public officers, whether in this or the neighbouring provinces, his Excellency will be ready to attend to any representation which you may make to him.

You will probably find it expedient to apply to some of those engaged most extensively in commerce for particulars relating to your inquiry; in that case his Excellency feels confident that you will receive from them all the attention which the importance of the subject demands.

When you shall have completed your inquiry, you will proceed to report the result to his Excellency, for the consideration of Her Majesty's Government, accompanying your Report with a scheme of the measures necessary for carrying out the alterations which you may suggest.

I have the honour to be,

Gentlemen,

Your obedient Servant,

E. Dowling, Esq.

T. A. Stayner, Esq.

J. Davidson, Esq.

(signed) T. W. C. Murdoch,  
Chief Secretary.

May it please Your Excellency,

WE who have hereunto subscribed our names and affixed our seals, having been appointed Commissioners to inquire into the administration of the Post-office within the provinces of British North America, have the honour to certify that we have entered upon the performance of our duties with a deep sense of the importance of the trust reposed in us, and an earnest desire to be instrumental in furthering the wishes of Her Majesty's Government for the improvement of the Post-office establishment in this part of Her Majesty's dominions.

For collecting information and making ourselves acquainted with the opinions of the people as to the present, and their wishes as to the future administration of the department, almost the only course open to us was that of taking evidence by means of written correspondence. To have procured the attendance of witnesses from all parts of a country which, in a straight line drawn from one extremity to the other, extends over more than 1,600 miles, was obviously impossible. We therefore prepared circular letters and a series of written questions, which we addressed, without distinction of classes, to all persons from whom they were likely to draw forth useful information. We addressed a second series of questions to the proprietors, editors and publishers of newspapers; a third to the heads of the civil and military departments; a fourth to the postmasters touching their emoluments; and a fifth was subsequently despatched to the postmasters for information as to the value of their franking privilege. We also requested from Mr. Stayner, the Deputy Postmaster-general for Canada; from Mr. Howe, the Deputy Postmaster-general for the Lower Provinces, and from some of the postmasters, a variety of returns, showing the general state of the department under their charge.

These circulars and queries, together with the principal returns and copious extracts from the correspondence, will be found in the Appendix to this Report.

The number of written communications (exclusive of returns) received by us is upwards of 1,500, a fact which not only shows that the inhabitants of these colonies take much interest in the subject, but also enables us to report with some degree of confidence on the state of public opinion in regard to most of the points within the scope of our inquiry.

Sketch of history of  
department in Bri-  
tish North America.

We shall presently have to submit a detailed statement of the actual condition of the department, to which a short account of the rise and progress of the Post-office establishment in these provinces may, we hope, be advantageously prefixed. That account must necessarily be a short one, for we have to regret the absence of such documents as would enable us to furnish a more detailed history of the department; and it will be seen that the absence of more authentic records has compelled us to copy from the Quebec Almanac of remote years, lists of the post-offices then in existence, and that we have derived from

INTO THE STATE OF THE CANADIAN POST OFFICE. 5

from the same source some scraps of information respecting the number of mails then transmitted between different places, and their gradual increase.\*

A general post-office was first established in North America by the 9 Anne, c. 10, s. 4, where, amongst other things, the inland rates on letters sent by post through certain towns in the provinces of New England, Connecticut, New York and Pennsylvania were prescribed. The rates thus fixed continued till the passing of the 5 Geo. 3, c. 25, by which Act the rates now collected in these provinces and in such of the West India Islands as are provided with inland post accommodation, were established.

First established by  
9 Anne, c. 10.

Present rates fixed  
by 5th Geo. 3d, c. 25.

We have not been able to discover any record of the manner in which the administration of the post-office in North America was conducted before the reign of Geo. 3. In 1759, the year of the conquest of Canada, Benjamin Franklin was Deputy Postmaster-general of North America. By his excellent management he appears to have extended post accommodation in the provinces, and to have greatly increased the revenue of the department. It is stated in his memoirs that when he was appointed to the office, the revenue collected was not enough to defray his salary of 300*l.* a year, but ere long he was enabled to remit to the British Treasury 3,000*l.* the profit for one year.

Dr. Franklin, Deputy  
Postmaster-general  
in 1759.

In the year 1766, Dr. Franklin was examined at the bar of the House of Commons touching the contemplated repeal of the Stamp Act passed the year before. Being questioned as to the extent of post-office accommodation in America, he gave the following evidence:—

*Question.* Are you not concerned in the management of the post-office in America?—

*Answer.* Yes; I am Deputy Postmaster-general of North America.

*Question.* Do you not think the distribution of stamps by post to all the inhabitants very practicable if there was no opposition?—*Answer.* The posts only go along the sea-coasts; they do not, except in a few cases, go back into the country, and if they did, sending for stamps by post would occasion an expense of postage amounting, in many cases, to much more than the stamps themselves.

*Question.* Can you disperse the stamps by post in Canada?—*Answer.* There is only a post between Quebec and Montreal; the inhabitants live so scattered and remote from each other in that vast country, that the posts cannot be supported among them, and therefore they cannot get stamps per post; the English colonies, too, along the frontiers are very thinly settled.

In the year 1774, Franklin was dismissed from office.

The first Deputy Postmaster-general resident in Canada was Mr. Hugh Finlay.

We find by an advertisement in the Quebec Gazette, published 23d July 1767, that in that year he was performing, under Franklin, the duties of postmaster at Quebec. The commission by which he was appointed Deputy Postmaster-general is dated 7th July 1784, one year after the peace with America; and as it is known that the British Government did not during the war which broke out a few months after his dismissal, appoint any successor to Franklin, it is certain that Mr. Finlay was the first Deputy Postmaster-general in Canada. He is designated in the commission as Deputy Postmaster-general of his Majesty's "*Province of Canada*," from which it would appear that the Lower Provinces were not included in his charge. An almanac, published at Quebec in the year 1791, represents the condition of the department in that year as follows:—

Mr. Finlay, the first  
Deputy Postmaster-  
general after the  
American Revolution,  
appointed 1767.

State of department  
in 1791.

*Hugh Finlay, Esq., Deputy Postmaster-general.*

There

\* Previous to the appointment of the present Deputy Postmaster-general, no records were kept in the post-office. The documents belonging to the department were treated as private property by each successive holder of the office, and removed by him or his representatives on his resignation or death.

## 6 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

There was a monthly mail despatched from Falmouth for Quebec, and once a month an English mail was despatched from Quebec, sometimes *viâ* Halifax, sometimes *viâ* New York. Between Quebec and Halifax there was in summer a mail every 15 days, and in winter once a month. There was a monthly mail for the "new establishments above Montreal," and for the establishments of Gaspé, the Baie des Chaleurs, &c. a mail was despatched as occasion offered. The couriers left Québec and Montreal every Monday and Thursday at four o'clock in the afternoon, and reached their destination, unless prevented by the state of the roads, on Wednesdays and Saturdays.

In 1796 and 1798.

In the years 1796 and 1798 we find precisely the same number of post-offices, and generally the same amount of post accommodation as in 1791.

Mr. Heriot appointed Deputy Postmaster-general in 1800. State of department in 1803 and 1804.

Mr. Finlay was succeeded in 1800 by Mr. George Heriot. In 1803 Upper Canada had eight post-offices, but the mails were not more frequent than in 1791. In 1804 there were in Lower Canada five post-offices, in Upper Canada nine, in Nova Scotia six, in Cape Breton one, in Prince Edward's Island one, and in New Brunswick four.

In 1807.

Mr. Wood, the postmaster at Cornwall, in Upper Canada, and the oldest *employé* in the post-office, thus describes the condition of the establishment in the Upper Province in the year 1807:—"When I first took charge of the office at this place in 1807, I believe the mail was only carried four times in the year from Quebec to Amherstburg, and that on the back of an old Canadian pedestrian, who performed his trip once in three months. The arrival of this despatch was hailed with joy amongst the then contented and loyal inhabitants throughout the country."

Extent of Mr. Heriot's charge.

We have before us several commissions issued by Mr. Heriot to postmasters in Nova Scotia, in which he styles himself "Deputy Postmaster-general for the Provinces of Upper and Lower Canada, Nova Scotia and New Brunswick, in North America, and their Dependencies." The absence of his own commission deprives us of the power of stating by what authority he made those appointments, and adopted that designation. If under that commission the Lower Provinces belonged to his charge, as well as Canada, it would appear that the connexion did not last very long. We are of opinion, that on Mr. Daniel Sutherland's appointment to succeed Mr. Heriot in the year 1816, he found Nova Scotia and Prince Edward's Island wholly withdrawn from the Canada charge, but New Brunswick still continued to form part of it, the postmasters for that province being commissioned at Quebec, and accounting directly with the Deputy Postmaster-general there.

Mr. Sutherland appointed Deputy Postmaster-general in 1816.

In the year 1816 had charge only of Canada and New Brunswick.

State of department in 1817.

In the year 1817, Lower Canada had 13 post-offices; Upper Canada, 12; Nova Scotia, six; New Brunswick, three; and Prince Edward's Island, one. In this year, the mails were running between Quebec and Montreal every day in the week except Sundays and Fridays; between Quebec and Halifax, once a fortnight all the year round; between Quebec and Kingston, once a week; between Kingston and Toronto, once a week; between Toronto and Niagara, once a week; and between Toronto and Amherstburg, once a fortnight.

In 1820.

In the year 1820, there were in Lower Canada, 20 offices; in Upper Canada, 19; in Nova Scotia, six; in New Brunswick, three; and in Prince Edward's Island, one.

Detailed Return for Canadas and New Brunswick in 1824.

Documents were fortunately discovered in the post-office at Quebec, which formed the basis of a very complete return of the state of the department in the Canadas and New Brunswick in the year 1824.

From this it appears, that there were then in the Canadas, 69 post-offices; 1,992 miles of established mail road; the weekly travel of the mail was 7,108 miles; the gross revenue was 14,504 *l.* 6 *s.* 11  $\frac{1}{2}$  *d.*, and the revenue remitted to England, after deducting 300 *l.* the supposed surplus for New Brunswick, 5,386 *l.* 2 *s.* 2 *d.* At that time the population of the Canadas amounted to nearly 600,000 souls; Lower Canada containing about 440,000, and Upper Canada, 150,000.

In the year 1826 or 1827, a correspondence took place between Mr. Rowe and Mr. Sutherland, on an application, as we are informed, made by the former gentleman to relieve Mr. Sutherland from the superintendence of the New Brunswick branch of the department. This arrangement, acquiesced in at the time by Mr. Sutherland, and approved by the Postmaster-general, was subsequently carried into effect, but not until after the present Deputy Postmaster-general

# INTO THE STATE OF THE CANADIAN POST OFFICE.

7

general had been appointed, on the resignation of Mr. Sutherland. By a letter from Sir Francis Freeling, dated 12 December 1827, Mr. Stayner was informed of his appointment as "Deputy Postmaster-general of British North America." His commission and instructions, dated respectively the 5th April and 10th May 1828, designate him as "Deputy Postmaster-general of the Provinces of Canada and New Brunswick and their Dependencies." In the autumn of 1828, the separation of nearly the whole of New Brunswick from the Canada charge was effected, and since that time, Mr. Rowe has continued to superintend the New Brunswick branch.

Mr. Stayner was appointed Deputy Postmaster-general in 1827-8.

In 1828 most of New Brunswick detached from Quebec charge.

Returns received from the department at Quebec have enabled us to prepare a table by which the condition of the post-office in Canada in every year (except 1829 and 1830), from the year 1828 to 1840, is accurately shewn. On reference to this table, it will be found to present a detailed account of the gradual progress of the department in all its more important branches, the gross revenue, the cost of transport, the increase of post accommodation; to these we have thought it might be useful to add a statement of the increase of population in the provinces during the corresponding periods.

Increase of department in Canada from 1828 to 1840.

In 1831, the number of post-offices within the Quebec charge was 151; the number of miles of established mail road, 2,896; the number of miles travelled weekly, 13,213; the expense of carrying the mails, 6,720*l.* 18*s.* 5*d.*; the gross revenue, 21,180*l.* 10*s.*; and the net revenue, 9,524*l.* 17*s.* 6*d.* currency.

Its state in 1831.

The population of Lower Canada was about 512,000, and that of Upper Canada 235,000, making, with the portion of New Brunswick under the Quebec establishment, rather less than 760,000 souls.

In 1840, the number of post-offices had increased to 398; the number of miles of established road was 5,736; the number of miles travelled weekly was 28,332; the expense of mail conveyance, 21,973*l.* 8*s.* 5*d.*; the gross revenue, 52,752*l.* 8*s.* 5½*d.*; and the net revenue, 19,499*l.* 13*s.* 1*d.* currency.

In 1840.

The population of Lower Canada is now estimated at 662,000, and that of the Upper Province at 420,000 inhabitants; so that the entire population within that charge is about 1,100,000.

It will thus be perceived that between the years 1831 and 1840, the amount of revenue of the department, and the extent of post-office accommodation, have increased more rapidly than the population of the country. The number of post-offices has increased 163 per cent.; the number of miles of established mail road nearly 100 per cent.; the number of miles travelled weekly upwards of 106 per cent.; the yearly cost of mail conveyance nearly 227 per cent.; the gross revenue more than 150 per cent.; and the net revenue nearly 105 per cent.; while the population has increased in the ratio of not quite 45 per cent.

Increase considerably more rapid than that of population.

In the year 1832, the Duke of Richmond, then Postmaster-general, required the presence of Mr. Stayner in England, to assist in the preparation of measures for the improvement of the post-office in British North America. Many and considerable evils were found to exist in the institution. The mode of accounting was defective; the complaints of printers as to the charges for the transmission of newspapers, and the appropriations of the money so raised, were loud and general; both branches of the legislature in each of the Canadas had in successive years appointed committees to inquire into the abuses and defects of the system. It was felt, in short, that the time had arrived when a general and extensive reform could no longer be denied or delayed. The first project entertained by his Grace was to regulate, by an Act of the Imperial Parliament, the whole of the department throughout British North America. But the improvement contemplated involved new rates of postage; and it was doubted whether an alteration of the existing rates by imperial legislation would not be an infringement of the rights of the colonists, as declared by the Act of the 18 Geo. 3.\* The intention was abandoned; and it was resolved that the

Changes projected in 1832.

Post-office Bill prepared in England for action of Colonial Legislatures.

\* We may observe that the Imperial Parliament has since, by the 3d & 4th Vict., c. 96, s. 33, conferred on the Lords of the Treasury a power far more extensive than the alteration in question. It is difficult to understand in what way the *reduction* of rates could be considered a violation of the principles of the Declaratory Act. But the Act of the 3d & 4th Vict. confers on the Lords of the Treasury the power to charge such rates of postage as they "by warrant under their hands, shall from time to time direct;" a power which clearly enables them to increase at their pleasure the rates now charged. It may be doubted, also, whether postage ought to be considered a tax within the meaning of the Act 18th Geo. 3d.

## 8 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

Imperial Act passed  
to authorize its  
enactment by them.

the draft of a Bill should be prepared in England, for the purpose of being presented to the legislature of each of the five provinces, in the hope that it would be adopted by them, without alteration either in principle or any material detail. It was expected, also, that the Act, when passed, would be brought into simultaneous operation in each of the provinces. It having been found, however, that imperial authority was required to enable the provincial legislatures to pass this Bill, a short Act was passed on the 26th March 1834, conditionally repealing the 5th Geo. 3d.

The condition, that of the passing of the Bill, prepared as above stated by each of the colonial legislatures, not having been performed, the repeal did not take effect; the Bill is important, nevertheless, on account of the principles which it recognizes; and we have, therefore, thought it right to subjoin a short abstract of some of its chief provisions. They are as follows:—

Leading features of  
the Bill prepared  
in England.

The Postmaster-general to have the entire control and management of the post-office within all the provinces, and to appoint a Deputy Postmaster-general under him, and other deputies and agents.

New rates of letter postage fixed, eight in number.

No distinct or separate rates to be charged on letters sent from one province to another.

Provincial newspapers to be sent within the British North American provinces for a halfpenny each; newspapers printed out of the provinces to be charged a penny each:

Except newspapers printed in Great Britain or Ireland, and sent thence by post; and also provincial newspapers sent to Great Britain or Ireland by post, which were to be free of postage.

Rates of postage fixed for pamphlets and other printed matter. No provincial charge made on such matter coming from Great Britain or Ireland.

Net proceeds of provincial rates to be divided between the provinces, in the proportion of the gross amounts of postage collected in each. All British and packet postage to be remitted to London.

A power conferred upon the Governor to grant warrants for sums varying in amount; but in no province exceeding 2,000*l.* for one year, to cover any possible deficiency in the post-office revenue.

Members of the legislative councils and assemblies to be allowed, during the sitting of the legislature, to frank ten letters a day, such letters not exceeding one ounce in weight, and to receive as many more free of postage. The Governor for the time being in each province, the Deputy Postmaster-general, and the post-office surveyors, to frank and receive letters without restriction, and certain of the civil departments in each province to have the same privilege for letters on the public service.

The Postmaster-general to be authorized to allow any of the officers of the department the franking privilege, under such restrictions as he might think fit.\*

Letters or packets franked by certain civil or military departments in Great Britain to pass free throughout the provinces.

Entire failure of  
project.

The attempt to induce the several legislatures of British North America to pass this Bill failed signally. In each of the legislatures it was crushed in one or other of the earlier stages, and in no instance was it carried beyond a reference to a select committee. Indeed it is difficult to understand how a different fate could have been expected. The failure of the Bill in any one of the provinces, or even an alteration made by any one of the legislatures in any of its more important details, would be fatal to the whole measure.

The time, too, was unfortunate; the Canadian assemblies, being upon a variety of subjects deeply embroiled with the Government, were not likely to take a favourable notice of the project.

In

---

\* This provision appears to be intended to sanction the franking privilege as now enjoyed by the postmasters.

In Lower Canada this Bill appears to have led to the appointment of the select committee, of which Dr. O'Callaghan was chairman. That committee sat for nearly four months during the session 1835-6, and on the 8th March 1836 produced a report, the concluding paragraph of which recommends the re-appointment of the committee in the following session, "with a view to the application of an efficient remedy to the defects in its (the post-office) management and organization," but the Parliament of Lower Canada never again proceeded to business: the first rebellion broke out, the constitution of 1791 was suspended, and the recommendation of the committee was never carried into effect.

Legislative proceedings in Lower Canada in 1835-6.

But not very consistently with their own recommendation, the committee had already prepared a Bill, the object of which was to remodel the post-office in Lower Canada. This Bill, after having passed through the House of Assembly, was rejected by the Legislative Council. It proposed the establishment of a *local* post-office, under the management of an officer, to be appointed by the Governor of Lower Canada; the effect of which would necessarily have been to confine the operation of its provisions, and the authority of the person in charge of the department, to the geographical limits of the province; thus leaving the intercourse with the neighbouring provinces and other countries altogether unprovided for. The course pursued by the Legislative Council in rejecting this Bill, and their opinions on that sent out from England, will be explained by the address to his late Majesty adopted by that body on the 15th March 1836, which we have inserted in the Appendix.

Of all the projects for the improvement of the colonial post-office, which, during that year, had been entertained by his Grace the Postmaster-general, only two were carried into effect—the establishment of the accountant's and surveyor's branches; the operation of each of which will be described hereafter.

The attention of the legislative bodies in Upper Canada was, during these years, frequently turned to the Post-office establishment; several committees were appointed from time to time.

Legislative proceedings in Upper Canada.

The grievance committee of 1835, of which Wm. Lyon M'Kenzie was chairman, and the financial committee of 1836, over which Dr. Charles Duncomb presided, both noticed the matter.

The report of the former characterized the Bill sent out from England in the following terms:—"The form of a law, such as Government would approve, is before the House, but *its provisions are so inapplicable and absurd*, that no benefit could be derived from their enactment. A change for the better must be that which will give the colonists the entire control of this department in Upper Canada."

Of the general state of the department, it observes, "The Post-office department, with about 100 Deputy Postmasters, is under the sole control of the Crown; contracts are made, and all appointments held during its pleasure; the surplus revenue is transmitted to England.

"No detailed accounts of receipts and expenditure have ever been laid before the colonial legislature. The rates of letter postage between the different places in the colony, between this colony and the others, and between Upper Canada and England, are very extravagant. The correspondence with Europe is chiefly carried on *via* New York, which is at once the cheapest and most expeditious route." The report of the latter committee recommends the establishment of a local post-office, differing in no less than 31 particulars (which are all specified in the report) from the Bill which had passed the House of Assembly in Lower Canada, but exposed nevertheless to every objection to which the latter measure was liable, and to some that are not to be found in the Lower Canada Bill. In the year 1837 a joint address from the Legislative Council and Assembly was presented to his Excellency the Lieutenant-governor. In the year 1838 another joint address was adopted, praying that the revenue produced by the post-offices in the colonies should no longer be remitted to England. The latter was referred to the Lords of Her Majesty's Treasury, and by them referred to Lord Durham, on the ground that some general measure was required to carry into effect the prayer of the address.

We regret to state that we are destitute of the means of providing any account, however succinct, of the rise and progress of the Post-office establishment in the lower provinces. We have received from Sir Rupert George, the provincial

Early history of department in lower provinces still less known than in Canada.

10 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

secretary of Nova Scotia, a return of certain legislative proceedings in that province, commencing with the report of a committee of the House of Assembly, dated January the 30th, 1835, and ending with the report of another committee, together with an extract from the Journals of the House of Assembly, both dated March 1840. But we have no documents to enable us to prepare a statement of the rise and progress of the department in the lower provinces, except the occasional mention of the number of post-offices from time to time existing there in the documents already quoted relative to the condition of the department in Canada.

Provincial grants in aid of Post-office early resorted to in Nova Scotia and New Brunswick.

Abandoned in Nova Scotia in 1839.

Legislative proceedings in Nova Scotia from 1838 to 1840.

In the lower provinces a practice has long existed of aiding the Post-office establishment by provincial grants; the money so granted being, in Nova Scotia, paid to the head of the department to be expended in specified services; and, in New Brunswick, being paid directly to the individuals, such as couriers and others, by whom the services are performed. This practice led to frequent complaints by the House of Assembly of Nova Scotia, in consequence of which it was abandoned, as will be presently stated, in the year 1839; and the services to which the grants were applied are now borne upon the regular establishment, and defrayed out of the revenue theretofore remitted to England as surplus. Our information as to the state of the department in New Brunswick is very limited, but we are enabled to state that a surplus (the amount of which we cannot ascertain) was annually remitted to England, notwithstanding that the legislature was called upon to vote yearly grants for the maintenance of the post-office. Those grants still continue, and we observe that the amount of the sums voted annually seems to be increasing rather than diminishing.

In 1838 an Act was passed by the legislature of Nova Scotia, the object of which was to assume, on behalf of the province, the whole of the internal postage and the control of the department within its limits, a measure which, for obvious reasons, was disallowed by Her Majesty's Government.

In the year 1839, Messrs. Young & Huntington having been sent as delegates from the House of Assembly of Nova Scotia, represented to the Imperial Government the views of that body on the questions under discussion between the legislature and the Post-office department in England. In reply to the representations of those gentlemen, the Lords of the Treasury expressed themselves of opinion, that "so long as the revenue derived from the internal postage should be sufficient to meet the expenditure for the internal communications, no demand for this object should be made upon provincial funds;" and, in conformity with those views, suggested to Lord Normanby, "that the Lieutenant-governor of Nova Scotia may be instructed to inform the legislature that no vote will be required for maintaining the present lines of post-office communication, so long as the post-office receipts continue, as they would now appear to be, adequate to meet the expenditure; but that, should the legislature deem it advisable that the lines of communication should be increased, my Lords will in that case rely upon provision being made by the House of Assembly for defraying any expense of such additional communication that may not be covered by increased postage." The despatch of Lord John Russell, covering the letter from which the above extract is taken, expresses a hope that some joint action of the provinces might, ere long, be obtained, so as to enable the Government to place the post-office in those colonies on a new and satisfactory footing, and adds, that this subject had been pressed by his Lordship on the attention of his Excellency the late Governor-general.

A committee appointed in 1840 reported three resolutions, which were adopted by the House, approving unreservedly of the proposals and suggestions contained in the Treasury letter and his Lordship's despatch.

Present condition of the department within Quebec charge.

The charge of the Deputy Postmaster-general at Quebec extends, as already stated, over the united province of Canada, and a small portion of New Brunswick; the post-offices at Campbellton on the Ristigouche, and Grand Falls and Woodstock on the St. John, falling under his control, and the mail service on the line of the St. John, as far as Fredericton, being contracted for by him.\* He holds his appointment direct from the head of the department in England. His powers

\* The first of these three offices is merely a link in the chain of communication between Quebec and the remote district of Gaspé. The other two being the only offices in the county of Carleton, the whole of that county may be taken as comprised within the Quebec charge.

# INTO THE STATE OF THE CANADIAN POST OFFICE. 11

powers within the limits of his charge are almost unbounded, and his patronage extends, subject however in most cases to the approval of the Postmaster-general, over every office in the department, with the exception of the accountant branch recently established at Quebec. He appoints all the postmasters, of whom there were on 5th July 1840, no less than 405 under his charge, a number which has reached its present amount by a very rapid increase, and is likely to increase still more rapidly hereafter.

Deputy Postmaster-general's tenure of office and powers.

He appoints the surveyors, of whom there are at present two, but the number must necessarily be increased.

He appoints all the clerks in his own office, the clerks and letter-carriers in the post-offices at Quebec and Montreal, and the office-keeper at Quebec. The names of all clerks and assistants in the other offices must be reported to him; and he has the power, in the words of his commission, "to discharge or suspend such deputy or deputies employed or to be employed in the management of any post-office, &c., who shall, in the opinion of the said T. A. Stayner, be found guilty of neglect, mismanagement, or breach of duty in the office or offices committed to his or their care or charge, from the further execution of his or their respective trusts, as also to nominate and appoint such other person or persons in his or their stead as he shall think proper, until the Postmaster-general's pleasure be made known." The power to erect new post-offices, subject to his reporting to the Postmaster-general, is conferred upon him by his instructions, and, by implication, the correlative power of closing offices at his discretion. All contracts and agreements are made by him, and these, according to the form of the instrument in common use, may be varied or annulled at his pleasure. Under those contracts he also levies fines and penalties on the contractors for any breach of duty or agreement, of which he is the sole judge. All general rules and orders for the government of persons employed in the department are issued by him.

His chief duties, as detailed in the instructions, are to report to the general post-office by every opportunity, all important transactions and remarkable occurrences; implicitly to obey all orders emanating from the head of his department; to see that within his charge the post-office laws are carried into full effect; to collect the revenues of the department, and remit, at least once a quarter, through the Commissariat, all balances as they accrue: for the collection, safe custody, and faithful remittance of the revenue he is held personally liable in a bond to the Crown, with sureties, who are jointly and severally liable with him for the sum of 4,000 *l.*, under an agreement originally made many years ago between Mr. Heriot, then Deputy Postmaster-general of Canada, on the one hand, and the general post-office at Washington on the other; he is also the agent of that department, and collector of United States' postage.

His duties.

The emoluments of the Deputy Postmaster-general of Canada are as follows: he receives a salary of 500 *l.* sterling per annum; an allowance of 30 *l.* sterling a year for stationery; the sum derived from the postage of newspapers, which is his perquisite, was for the year ending 5th July 1840, 2,635 *l.* 8 *s.* currency (about 2,196 *l.* 3 *s.* 4 *d.* sterling); and that derived from his agency for the post-office establishment of the United States amounted in the same year to 603 *l.* 10 *s.* 10 *d.* currency (about 502 *l.* 19 *s.* sterling). Another source of emolument which existed during the greater part of the years 1839 and 1840, was the allowance of five per cent. on the freight money, or ship postage, collected by him on behalf of the proprietors of the New York steam and sailing packets; the amount of which for the year ending in July 1840, was 125 *l.* 6 *s.* 10 *d.* currency (104 *l.* 9 *s.* sterling); but the collection of this money having been since prohibited by the Postmaster-general, this per centage no longer forms a part of Mr. Stayner's emoluments. The circumstances under which the Deputy Postmaster-general has enjoyed these large perquisites, the manner in which his newspaper postage is collected, and the nature of his employment as agent for the United States' post-office, will be more appropriately described hereafter. The total amount of his official income from all sources, for the three years ended in July 1840, was 11,358 *l.* 18 *s.* 1 *d.* currency. For the last year of the three it reached the sum of 3,994 *l.* 3 *s.* 4 *d.* currency.

His emoluments.

The general establishment of the department in Canada is divided into three branches: the Deputy Postmaster-general's immediate office, and those of the surveyors and accountant.

General establishment.

In the first of these the correspondence is conducted, the revenue received, and

Deputy Postmaster-general's office.

12 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

and the general superintendence of the department carried on. The establishment consists of—

A chief clerk	- - - -	at 200 l. sterling a year.
First clerk	- - - -	at 150 l.     "     "
Second clerk	- - - -	at 100 l.     "     "
Office-keeper and messenger		at 52 l.     "     "

Surveyors;  
their duties,

The duties of the surveyors are nearly the same with those of the post-office surveyors in England; these gentlemen are employed as travelling inspectors, to superintend, examine and report upon the manner in which the postmasters, contractors and mail-carriers execute their tasks, and to assist those persons with advice and instruction in the performance of their respective duties; to ascertain by personal inspection the merits of applications for new post routes and offices, and to make the necessary preparations for such establishments, in all cases where the application shall have been acceded to; to report upon and carry into effect improvements in established lines; to investigate complaints of misconduct; to search for missing letters; to investigate the circumstances attending mail and post-office robberies, and to aid the Deputy Postmaster-general in any manner he may require in the general administration of the department.

The surveyors were first appointed in the year 1835. The charge of the one extends over all the country east of Kingston (Kingston included), and that of the other over the rest of what was formerly the province of Upper Canada. The eastern charge stretches westward over a line of 886 miles, and, including the lateral routes, over 3,400 miles of mail road.

and emoluments.

The western reaches from east to west over 446 miles, and, including lateral routes, over 2,250 miles. The surveyors receive a fixed salary of 150 l. sterling, with an allowance of a guinea a day while engaged in the duties of their situation, and mileage at the rate of 6 d. a mile.

Their gross receipts for the three years ending 5th July 1840, amounted to somewhat less than 500 l. currency each a year.

The Upper Canada surveyor was last year provisionally allowed a clerk at 100 l. currency a year, but subject to our report on the necessity for this assistance,—a question which has been referred to us by his Lordship the late Postmaster-general.

Account branch;  
emoluments of  
Accountant, &c.

His duties.

The Account-office is composed of an accountant and two clerks, appointed directly by the Postmaster-general in the year 1834. The salary of the accountant is 300 l. sterling, and those of the clerks 150 l. and 100 l. sterling respectively. There are no fees, perquisites or privileges of any kind attached to these appointments. The duty consists in examining, checking and compiling the accounts of the department. The accountant makes up the general abstracts, which, after being signed by himself and the Deputy Postmaster-general, are transmitted to London. He is required to take upon himself the charge of the accounts for all the provinces, including Nova Scotia, New Brunswick and Prince Edward's Island, and he is particularly directed to establish an efficient check upon the Deputy Postmaster-general. But although the head of the department in England has very properly retained as his own patronage the appointment of an officer charged with these peculiar functions, it appears, nevertheless, from his instructions that the accountant is bound generally to receive orders from and obey the directions of the Deputy Postmaster-general at Quebec.

Postmasters.

The appointment of postmasters rests with the Deputy Postmaster-general, and that officer, however he may call for the advice of the surveyors, or rely upon the recommendation of other parties, acts always upon his own responsibility.

Postmaster's oath,  
&c.

Assistants.

Every postmaster on his appointment is required to take the post-office oath, and to enter into a bond, with such sureties and under such penalty as the Deputy Postmaster-general may direct. He may delegate (except in the case of the two offices where the Deputy Postmaster-general names the assistants) any portion of the ordinary duty of the office to assistants, reporting their names to the head of the department, and causing them to take the post-office oath.

It is generally required, however, that the accounts rendered by the postmaster should bear his own signature.

Any

# INTO THE STATE OF THE CANADIAN POST OFFICE. 13

Any postmaster, if he pleases, can establish sub-offices for the convenience of his neighbourhood; the persons in charge acting as his agents, and receiving such remuneration as may be agreed upon.

Sub-post offices.

The department is not a party to these arrangements, and therefore we cannot say how many sub-offices are at present in operation, but the number is small.

The detail of a Canadian post-office may be learnt by a perusal of the standing instructions and circular orders of the Deputy Postmaster-general, and the several returns and tables bearing on the subject inserted in the Appendix. A general outline, showing simply the points in regard to which these duties differ more or less from those of a postmaster at home, is all that need be attempted here.

Postmaster's duties.

There is, unfortunately, in Canada nothing like the regularity in the arrival and despatch of the mails which distinguishes the English system. And without intending to deny that the system is susceptible of great improvement, we think it must be admitted that the wretched state of the roads in almost all parts of the country; the extreme vicissitudes of the climate, demanding as they do an entire change in the mode of transporting the mails at different seasons; the long distances to be travelled, and the necessity, from the small amount of correspondence carried through the post, for practising severe economy in making contracts, render a near approach to the regularity of the English post-office, for the present, at least, unattainable. As the case now stands, mails which, when the travelling is good, may arrive at an office at noon or earlier, are, not unfrequently, when the roads are bad, waited for till midnight or beyond it. Offices are, of course, variously affected by this irregularity; but the duties at all are increased by it more or less.

Wherein materially different from those of a postmaster in England. Irregular arrival of mails in Canada.

A second disadvantage arises from the want of guards\* to take charge of the mails on the leading lines of communication; in consequence of which the postmaster has himself, in all cases, to take charge of the bags on their arrival, to pick out from their contents the packages for his office, to enclose his own packages, and, when time-bills are sent with the mail, to note upon them the hour of its arrival and departure.

Want of guards.

Another defect, and one which causes great delay, arises from the fact that the forward post system has never been introduced in Canada. Every postmaster, when making up a mail, is therefore obliged, upon rating and post-marking the letters he may have to send, to put them up in as many different parcels as there may happen to be post-offices addressed.†

Want of forward system.

A letter, for example, posted anywhere on the western frontier for a place east of Montreal, instead of being simply enclosed to the forwarding office in that direction, along with all the other letters addressed to the eastward of such office, must be at once made up in a special mail for the distant place, though it be perhaps the only letter so addressed. Thus, the despatch of what is called a single mail (as in England it would almost be, in fact,) is really the despatch of several mails, and at the larger offices often of a formidable number. Within each of these parcels or mails‡ there is sent a letter-bill, stating the amount of postage paid and due thereon; and the items of every letter-bill must be twice entered by the sending postmaster; first, upon the books which he is required to keep in a specified form as an office record, and afterwards upon the monthly sheets, which he has to transmit every quarter to the Deputy Postmaster-general.

The routine of duty is the same on the receipt of a mail. The packets addressed to any given place are loose in the mail-bag, and its whole contents (100 or more packages in many cases) must be examined at each office. The letter-bill in each packet, which the postmaster takes out, must be compared with the letters, its correctness verified by his initials, and any errors he may find particularly noted; a double entry of its items must then be made, first on his

\* A "conductor" or guard is sent with the steam-boat mail between Quebec and Montreal, but this is the only mail for which this precaution is taken.

† The only exception to this rule occurs in the case of letters passing from an office eastward to one westward of Quebec, or *vice versa*. All such letters are first mailed on Quebec as a forward office, and there remailed.

‡ When the letters in a package are few, they are merely enclosed in a sealed paper wrapper; where the number ordinarily sent is considerable, canvas bags, furnished by the department, are in use. They are also used at all the small offices east of Quebec, in their exchange of mails with that office.

## 14 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

his books, and then on his monthly sheets, to be sent to the Deputy Postmaster-general; and the bills themselves must be numbered and filed for transmission with the monthly sheets.

To a limited extent, the labour thus imposed on postmasters is lessened, on the leading routes, by a more or less complete separation of the mail into two portions, only one of which the majority of postmasters have occasion to overhaul. On the main route from east to west, this has been effected by breaking up the line into the seven following divisions:—

1. Eastward of Quebec to Fredericton, New Brunswick.
2. From Quebec to Montreal.
3. From Montreal to Kingston.
4. From Kingston to Toronto.
5. From Toronto to Hamilton.
6. From Hamilton to London.
7. From London to Amherstburg.

The mails on each section are carried in two portmanteaus; those for or from the intermediate offices (all offices on the lateral routes included) being placed in one, which is called the way-bag, and all others in the other or grand mail bag. The latter is secured by a lock, for which none but the postmasters at the chief offices have a key. A similar arrangement is made in the transport of the American mail between Toronto and Queenston, and between Montreal and St. John's or Highgate, on the American border.

In a modified form, the system is acted upon in a few other cases.

Two other practices remain to be mentioned, which contribute further to the complexity of the duties of a postmaster in Canada: that of allowing newspapers and other printed matter to pass in the mail for the pecuniary benefit of the Deputy Postmaster-general; and the mode in which American postage on letters and papers for or from the United States is collected and accounted for. These require some explanation.

Collection of newspaper money separate from letter postage.

Prepayment having always been required by the Deputy Postmaster-general for printed matter, and by far the greater part of it being necessarily mailed at the principal towns, in which alone newspapers are published, most postmasters collect for him only on the few occasional papers which may happen to be posted at their offices, and upon the somewhat larger number which come in from the United States, charged always with the American, and generally with the provincial postage.

The great majority, however, collect some amount, larger or smaller, of newspaper money, and all who do, have to account for the same to the Deputy Postmaster-general separately from letter postage, in such manner as he may prescribe. All newspapers, &c. sent by mail are enclosed in the same general mail-bag with the letters, but not in the same packages; they are generally thrown loose into the bag in packages or single, as they happen to be posted. No mail-bills accompany them, and no entry is made of their receipt.

Collection of United States' postage.

The collection and remittance of American postage on letters, &c., for or from the United States is effected under a private agreement, in pursuance of which certain provincial post-offices, appointed by mutual agreement between the two departments, exchange mails direct with the United States, and are charged with the collection of American postage. There are at present 11 of these offices,\* viz., Sandwich, Queenston, Niagara, Toronto (in summer only), Kingston, Brockville, Prescott, Montreal, Stanstead, Quebec and Woodstock, New Brunswick; of these, the offices at Niagara, Toronto and Brockville receive mails only for their own towns respectively, the others for distribution and transmission into the interior. The Kingston office is the only one that accounts directly to the general post-office at Washington; the rest account through the Deputy Postmaster-general.

\* There are also some two or three other frontier postmasters, who collect American postage on letters for their own immediate neighbourhood, under a private agreement with the nearest American postmaster, and as his agents.

Postmaster-general. The offices in the interior have to keep separate accounts for American postage with every exchanging office which may happen to have forwarded to them any thing with such postage due upon it, or to have received from them any thing on which the American charge is prepaid.

These accounts must be kept, and the remittances made in the manner from time to time prescribed by the Deputy Postmaster-general or the exchanging postmasters. The great majority of postmasters have of course to keep such accounts, and most of them with more than one exchanging office. The accounts kept by the exchanging postmasters are of course numerous, though generally for very trifling sums.

On the other hand, the number of mails exchanged at most offices in Canada is much less than in England. Of the whole number of offices in the Quebec charge, nearly one-fourth (96 out of 412) receive and despatch the mail but once a week; four have a mail once a fortnight, and 96 have two mails a week. Branch mails for offices on side routes are made up at 107 offices, but few of these again have that duty to perform more than once a week. There is in these respects a marked difference between offices on the main and side routes. Of 91 offices\* on the main route there are 51 at which mails are received and despatched more than six times a week; 28 at which they are received and despatched six times a week, and 12 where they are less frequent.

Small number of mails exchanged at most offices;

Forty of the 91 make up branch mails. But on the 321 offices on other routes there are only 15 which have more than six mails a week, and 19 more that have so many as six; 67 of the 321 have to make up branch mails. The proportion also of offices at which mails are usually exchanged at night is much greater on the main route than elsewhere, there being of the former class 40, and of the latter only 12.

The number of letters and newspapers delivered at most offices is trifling. In 142 offices out of the 405, which in the year ending in July 1840 remitted to Quebec, the amount of the year's postage fell short of 30 *l.*; 69 of these collected less than 10 *l.*, and 99 between 10 *l.* and 20 *l.*; only 47 offices collected more than 100 *l.* A return now before us shows the average rate of postage on a single letter to be a small fraction over 8½ *d.* currency. Supposing, then, the number of paid letters received at an office to be about equal, as it generally is, to the number of paid letters sent from it, the collection of 100 *l.* in a year indicates the delivery of letters and packets charged with about 2,800 single rates of postage, or not quite 54 rates a week. The number of free letters addressed to other parties than the postmaster is not great, and perhaps hardly balances the number of letters on which more than one rate is charged.† Another return shows that the number of newspapers sent yearly by post is less than that of the letters, so that it may be asserted that in the year ending in July 1840, there were not in Canada 50 post-offices where the average weekly delivery amounted to 54 letters, and as many newspapers, while at no less than 242 it fell short of 16 letters and 16 newspapers; at nearly 70 of these it was not a third of that number.

And few letters, &c. delivered.

Except at a few of the chief post towns, there is no delivery of letters or papers away from the office; and as the 24th article of their instructions relieves postmasters at "country offices" from the obligation of keeping regular office hours, it is to be presumed that they keep just such hours as they find most convenient to themselves. At the "principal offices" fixed hours are laid down in the instructions, subject, however, to modification by the head of the department. By the 25th and 26th articles it is required that "whenever it can be done, the office be kept in a separate room, and that no bar or public room in a tavern be so used." In a very large proportion of cases the former of these regulations is inoperative, and the latter, there is reason to believe, is frequently evaded. A partial system of registering money-letters has been for some time in operation in Canada. Postmasters are directed to enter specially in the letter-bill, at the time of mailing, all letters said or supposed to contain money; and it

In country no delivery except at office.

Often no fixed hours.

Often no separate room used as an office.

Registry of money letters.

\* This number includes the line of offices from Hamilton to Queenston and Niagara, as well as that from Hamilton to Amherstburg.

† From data, which will be more fully explained hereafter, it appears that the whole number of free letters (those on the service of the department not included) is about one-thirteenth of the number of charged letters. The majority of these are addressed to postmasters. The delivery of free letters is, of course, less troublesome to the postmasters than that of charged letters.

## 16 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

it is the duty of the receiving postmaster to separate the letters so entered from the other contents of the mail-bag, and to take a receipt for them on delivery.

Unclaimed and  
dead letters.

All unclaimed letters in the hands of a postmaster which may have lain in his office three months, and been advertised by means of a list posted on the office door or some other public place for six weeks of that time, he is to consider dead-letters, and is to forward them to Quebec quarterly along with his accounts: if originally mailed in Great Britain, they are sent from Quebec to the dead-letter office, London, to be there opened: if mailed in any of the North American provinces, they are opened in the accountant's office at Quebec by a sworn clerk, and returned (where practicable) to the writers for payment of postage: if mailed in the United States, they are also opened in the same way, and should they contain money or other valuables, they are then transmitted to the general post-office at Washington.

Refused letters.

Refused letters are forwarded to Quebec monthly, and there dealt with in like manner.

Letters for United  
States not paid to  
line.

Letters addressed to persons in the United States are also sent to Quebec, if mailed without payment of the postage chargeable on them to the lines; for the American post-office, under the existing arrangement, does not collect British postage. All postmasters are required to forward such letters to the Deputy Postmaster-general by the first mail, that he may, if possible, return them to the writers.

Postmaster's ac-  
counts and remit-  
tances.

Of the form in which a postmaster is required to keep his accounts with the general post-office at Quebec, and the manner of making remittances, it is for the present enough to say, that all postmasters are bound to forward their accounts, and to remit whatever balances may be due, within 25 days after the close of each quarter; and that the accounts and remittances of newspaper money are sent in at the same period. Postmasters in the interior are required to remit their United States' postage to the several exchanging offices within 10 days after the close of each American quarter.\* In practice, however, a large proportion of postmasters usually take more than this time. The exchanging postmasters are allowed by the American department a somewhat indefinite term, within which to have their accounts prepared and transmitted to Washington.

Tenor of post-  
master's bond.

The postmaster's bond is conditioned for the faithful discharge of all his duties, and binds him and his sureties to indemnify the Deputy Postmaster-general for all loss that may occur through his means; to give him three months' notice, commencing from a quarter-day, of his intention to resign; and upon his removal from office or resignation, quietly to surrender up the office, and all papers, instruments, &c. &c., belonging to it. It should be added, that his bond to the Crown is held to be sufficient to enforce the payment, as well of the United States' postage and the newspaper money, as of the British and provincial postage he may collect. United States' postage is not, strictly speaking, paid to the Deputy Postmaster-general; but by an order issued by Mr. Stayner the 28th December 1839, postmasters are informed that its payment will be enforced under the same penalties as that of other monies.

General rule as to  
emoluments of  
postmasters.

The general rule as regards the emoluments of postmasters and their expenses of office, may be thus stated: from the revenue of the department, they receive quarterly an allowance of 20 per cent. on the amount of letter postage (British and provincial) collected by them, and in most cases a further allowance for stationery, amounting usually to about 6*d.* in the pound, or two and a half per cent. more on such collections: from the Deputy Postmaster-general they receive (the postmasters at Quebec, Montreal, Kingston and Toronto excepted)† 20 per cent. on the newspaper money they collect for him, which in most instances, however, is but a trifling sum. For the collection of United States' postage, those in the interior are allowed to charge 10 per cent. commission in their

\* The American quarters end on the 31st March, 30th June, 30th September and 31st December. The provincial, on the 5th April, July, October and January.

† The greater part of the income which the Deputy Postmaster-general derives from this source is collected at these four offices. At Quebec, it is collected by the Deputy Postmaster-general himself; at Montreal, by a clerk, in part paid by him; and at Kingston and Toronto, by the postmasters, for a commission of 10 per cent.

INTO THE STATE OF THE CANADIAN POST OFFICE. 17

their accounts with the exchanging offices, and the Deputy Postmaster-general and postmasters at the exchanging offices share between them, as will be explained presently, the remainder of the commission allowed for its collection by the United States. Postmasters derive some further emolument (the amount of which does not appear from the returns except in one or two cases, but which we believe to be generally very trifling), from a charge of varying amount on letters taken by them after the hour for closing a mail, and another of 1*d.* currency on letters posted at their own office for delivery there.\* They enjoy the privilege of franking letters or packets under half an ounce, and of receiving letters and newspapers free of postage without stint as to number. The books and blank forms required for office use are furnished by the department; and postmasters are allowed to advertise unclaimed letters in any newspaper published in their neighbourhood at 1*d.* currency for three insertions of each name, sending in their accounts for payment to the department. For clerk hire, office rent, fuel and other contingent expenses, they have no allowance except at the four principal offices.

The establishments at the four principal towns are as follows :

Quebec.—The postmaster is styled First Clerk in the Sorting Office, and for the year ending 5th July 1840 his emoluments were—

Establishments at Quebec.

	£.	s.	d.	
A fixed salary from department - - -	360	-	-	currency.
Rent of boxes in post-office - - -	46	2	6	„

Fees on late letters - - - - -	1	5	-	„
TOTAL - - -	£. 527	18	-	„

besides the franking privilege, which he values however at only 4*l.* 2*s.* currency per annum. The removal of the seat of government from Quebec has materially reduced the amount of his commission for keeping public accounts. No part of the expenses of the office is borne by the postmaster. The rent of his office, which is in the same building with those of the Deputy Postmaster-general and the accountant, and all the contingent expenses, are paid by the department; the postmaster is allowed three clerks and two letter-carriers, who are appointed by the Deputy Postmaster-general, and paid as follows :

NAMES, &c.	Fixed Salary paid by Department.	Emoluments from Fees on late Letters.	Emoluments from Fee of 1 <i>d.</i> each on delivery of Letters.	TOTAL.

Montreal.

\* We are not aware that these letters are sent out for delivery except at the four principal offices, where alone salaried letter-carriers are provided by the department, and at Three Rivers. At Quebec, Montreal and Kingston, the postmaster derives no pecuniary advantage from them. At Kingston, they are delivered at the office window without charge. They are charged, on account of the department, at Quebec, 2*d.* each; and at Montreal, 1*d.* At Toronto the 1*d.* is a perquisite of the postmaster, as at the minor offices. The letter-carriers at Quebec are not allowed to charge the penny perquisite on this class of letters when sent out by them; at the other offices they are.

† To be advanced after five years' service to 132*l.* currency.

18 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

*Montreal.*

*Montreal.*—The postmaster's emoluments are—

	£.	s.	d.	
Fixed salary from department - - -	360	-	-	currency.
Rent of boxes in office in year 1839-40 - -	75	-	-	"
Commission on public and private accounts (in 1839-40) - - - - -	230	-	-	"
TOTAL - - -	665	-	-	"

together with the franking privilege, the actual value of which he estimates at 10 *l.* currency, but which he would be unwilling to surrender for 25 *l.* currency a year. The removal of the seat of government from Montreal will considerably reduce his commission for keeping public accounts.

The present arrangement of the Montreal establishment dates only from last spring. Before that time the postmaster appointed his own clerks, and paid the greater part of their salaries himself. He had then several other sources of emolument, but his net income was perhaps never greater than it is now. It is only since the year 1838-39 that his commission on public accounts has been considerable.

The rent of the office, 50*l.*, is paid by the department, as are also the contingent expenses to an amount not exceeding 110 *l.* currency a year, the postmaster being required to produce vouchers for every item, and to defray any excess himself.

There are at present on the establishment four clerks and two letter-carriers, appointed by the Deputy Postmaster-general, and an office-keeper, appointed by the postmaster; they are paid as follows :

NAMES.	Fixed Salary paid by Department.			Fixed Salary paid by Deputy Postmaster-general.			Fixed Salary paid by Postmaster from his Contingency Allowance.			Emolument from Fee of 1 <i>d.</i> each on delivery of Letters.			TOTAL.		
	Currency.			Currency.			Currency.			Currency.			Currency.

Stationery	-	-	-	-	-	-	30	-	- "
Light and fuel	-	-	-	-	-	-	19	-	- "
Miscellaneous	-	-	-	-	-	-	11	11	6 "
TOTAL				-	-	- £.	345	11	6 "

Leaving him a net income of 747*l.* 13*s.* 6½*d.*, besides his franking privilege, which he values at 30*l.* a year.

A material increase (from circumstances which will be presently stated) has recently taken place in the amount of his commission on United States' postage, which he now values at not less than 250*l.* a year. But on the other hand, he has been obliged to raise the salary of his first assistant to 100*l.*; and the removal of the seat of government for the Upper Province will greatly reduce the amount of his commission on public accounts.

The establishment at Toronto consists of the three clerks above-mentioned, and one letter-carrier, who receives 30*l.* currency a year from the department, and the usual perquisite of 1*d.* on each letter he delivers, the value of which the postmaster states at about 45*l.* currency a year. They are all appointed by the postmaster.

Since the above statement was made to us, the postmaster at Toronto has been appointed post-office surveyor to fill the vacancy occasioned by the removal of Mr. Porteous on the 6th January in the present year to the postmastership of Montreal. We shall hereafter be called upon to express an opinion on this appointment, and shall, therefore, content ourselves for the present with stating that the income derived from it by Mr. Berczy is limited to the salary of 150*l.* sterling a year. It is manifestly impossible that a person filling the important situation of postmaster at Toronto, whose presence is continually required there, and who is amply remunerated for his services, can discharge any of those travelling duties from which the greater part of the income of a surveyor is derived in mileage and other travelling allowances. The proper time for discussing the peculiar circumstances of this case will be when we come to treat of the amount of patronage confided to the hands of the Deputy Postmaster-general, and the propriety of its being so vested; but we cannot, in noticing this addition of 150*l.* sterling a year to the income of Mr. Berczy, omit, even for the present, to express our conviction that he cannot possibly, in the capacity of surveyor, afford any services to the public sufficient to justify the bestowal upon him of an office, the duties of which are so obviously incompatible with those of the postmastership of Toronto.\*

Besides the four principal offices, there are 14 others at which a fixed salary (exceeding the amount they would receive were they paid as other post-masters are) is paid to the postmasters in lieu of commission on provincial letter postage; these salaries are as follows :—

Three Rivers	-	-	-	-	-	£. 90	currency.
Queenston	-	-	-	-	-	50	"
Berthier	-	-	-	-	-	40	"
Laprairie	-	-	-	-	-	40	"
Stanstead	-	-	-	-	-	40	"
Woodstock, N. B.	-	-	-	-	-	40	"
Carleton	-	-	-	-	-	30	"
Lachine	-	-	-	-	-	25	"
Chatham, L. C.	-	-	-	-	-	16	"
L'Assomption	-	-	-	-	-	15	"

St. Ours	-	-	-	-	-	8	"
Repentigny	-	-	-	-	-	5	"

These

Other exception to rule in regard to commission on letter postage.

\* This appointment has since been cancelled.

INTO THE STATE OF THE CANADIAN POST OFFICE. 21.

These salaries are in lieu of commission on letter postage; but the postmasters receive their commission on United States' postage and newspaper money in addition to the above amounts.

The postmasters at the following offices receive an extra allowance, in consideration of their having a more than usual amount of duty to perform.

Brighton	-	-	-	-	-	-	£. 25	currency.
Cobourg	-	-	-	-	-	-	25	"
Cornwall	-	-	-	-	-	-	25	"
Hamilton	-	-	-	-	-	-	20	"
Prescott	-	-	-	-	-	-	20	"
William Henry	-	-	-	-	-	-	20	"
Franktown	-	-	-	-	-	-	12	"

The postmaster at Kamowraska is allowed, on similar grounds, a commission on his postage of 30 instead of 20 per cent.

The department at Washington makes to all postmasters who exchange mails with the United States the same allowance as to its own postmasters; viz.—

30	per cent.	on the first \$ 100	of letter postage in the quarter,
25	"	next 300	
20	"	next 1,600	
8	"	all above 2,000	in any quarter,

Payment for collection of United States' postage, how made and divided between the Deputy Postmaster-general and other officers of the department.

and 50 per cent. on all newspaper postage; out of which they allow 10 per cent. to the postmasters in the interior, who account to them. The Kingston office enjoys a special privilege, being allowed "three cents on each letter sent into the United States."

The Deputy Postmaster-general is responsible to the American post-office for the punctual remittance of all American postage, except that collected through the Kingston office. The balance of commission accruing at the Quebec and Montreal offices forms his share of remuneration; and each of the other eight postmasters, who account through him, keeps the net allowance of his own office for himself. In the year ending 5th July 1840 the division of the monies allowed by the American post-office was as follows:—

The Deputy Postmaster-general received from the post-office at Montreal (Quebec was made an exchanging office in July 1840, and he now receives consequently from both places)	£.	s.	d.	£.	s.	d.
			Currency.			
	0	10	9*			
The postmasters at the other exchanging offices received the following sums:						
Sandwich	13	17	6			
Queenston	493	7	2½			
Niagara	67	12	—			
(Toronto was made an exchanging office in July 1840, and the postmaster, as above stated, values his commission at about 250 l.)						
Kingston	304	3	10			
Brockville	36	11	4			
Prescott	56	5	9			
Stanstead	65	—	—			
Woodstock, N. B., about	65	—	—			
				1,101	17	7½
Other postmasters, in all				610	9	1
TOTAL	2,315	17	6½			

The

\* Till the new arrangement came into operation for the Montreal office, the postmaster was allowed at the rate of 75 l. currency a year for his services in the collection of the United States' postage, amounting for the year in question to 65 l. 12 s. 6 d. currency. Since the re-organization of the establishment this deduction has ceased to be made.

## 22 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

Value of postmasters' franking privilege.

The value of the franking privilege enjoyed by postmasters is extremely variable; depending altogether on the occupation or trade of the postmaster, and bearing no proportion either to the extent of his duties or the amount of his other emoluments. From the answers to the circular addressed to them on this subject, it appears that it is valued at amounts varying from a few shillings to 100 *l.* a year. At the Gananogue post-office (the postmaster there being the proprietor of the most extensive mills in Canada), it is worth 100 *l.* currency a year or more, and is so estimated by the postmaster; while at the Coteau du Lac office, which collects nearly half as much again, and has an equal number of mails to make up, it is valued at only 2 *l.* 10 *s.* currency. The postmaster at St. Hilaire, the proprietor of a large seignory, values the privilege at from 30 *l.* to 50 *l.*; at Dunham, with an equal number of mails to make up, and a slightly larger collection of postage, it is estimated at 1 *l.* From calculations made upon the data which these answers furnish, it would appear that the aggregate value set upon this privilege by the postmasters themselves is about 4,000 *l.* currency a year, or nearly 1-13th of the entire revenue of the post-office for the year 1839-40; and that the number of letters and packets sent and received under it (exclusive of correspondence on post-office business) is more than 1-13th of the whole number of charged letters and packets passing through the post yearly.

Net income of postmaster not easily ascertainable.

It is impossible to state with any approach to accuracy the net income of any considerable number of postmasters. They were all called upon to present a statement of their expenses as well as of their emoluments, and nearly all have answered the circular; but their answers are founded on such varying data that no dependence can be placed on any table compiled from them. One postmaster, for example, whose collection of postage for the last three years has averaged less than 60 *l.* currency a year, and whose emoluments last year were less than 15 *l.*, returns his yearly expenses at 70 *l.*, a result which he produces by charging 50 *l.* for clerk hire, 10 *l.* for office rent, and 10 *l.* for fuel and incidentals. Many others, by a similar process, have arrived at similar results; while some again, in much the same circumstances, have returned no expenses at all. A considerable number are unable to state even the precise amount of their emoluments. In the Appendix will be found a table, showing as nearly as possible the receipts and expenses of 41 of the more considerable offices. For the rest, it has been found impossible to do more than take account of their gross emoluments, as returned by the Deputy Postmaster-general, with the addition of the value set by themselves on their franking privilege.

Summary of their gross emoluments.

It appears from these data, that of 393 postmasters of whose emoluments and franking privileges we have returns (and inclusive in all cases of the asserted value of the latter), there are 145 whose gross emoluments are less than 10 *l.* a year; 166 who receive from 10 *l.* to 30 *l.*; 59 from 30 *l.* to 100 *l.*; and 23 more than 100 *l.*. It happens, however, in many cases, that the situation of postmaster is prized by those who hold it much beyond its mere value in money. A postmaster in the country is in a position generally of considerable influence, from the many opportunities he has of obliging his neighbours. He gets his letters earlier, and can write later than any one else; and this to a man in business, as country postmasters generally are, is of itself a considerable advantage; to say nothing of that rather unfair one, of knowing when and with whom the correspondence of other men in business near him is carried on.

The office is generally prized above its money value.

It further appears, that the patronage of all the post-office appointments in Canada under his own (except those of the accountant and his two clerks, the aggregate amount of whose salaries, drawn wholly from the post-office revenue, is 660 *l.* currency), is vested in the Deputy Postmaster-general. The appointments made by the Deputy Postmaster-general, or subject to his approval, are as follows:—

Aggregate of gross emoluments of employés of department under Deputy Postmaster-general.

1. On the general establishment, two surveyors, three clerks and an office-keeper, named by the Deputy Postmaster-general, and one clerk,\* named by a surveyor; receiving from the post-office revenue for the last year (inclusive of the

\* His salary, 100 *l.* currency, is not included in the 1,607 *l.* 11 *s.* 6  $\frac{1}{2}$  *d.*, that amount being for the year 1839-40, before his appointment.

# INTO THE STATE OF THE CANADIAN POST OFFICE. 23

the surveyors' travelling charges), an aggregate of 1,607 *l.* 11 *s.* 6  $\frac{1}{2}$  *d.* currency,\* which, with the franking privilege enjoyed by the surveyors, and a perquisite of about 12 *l.* a year enjoyed by the office-keeper, constitute their whole emolument.

2. Two conductors or guards appointed this year to take charge of the steam-boat mails between Quebec and Montreal, who are paid 50 *l.* currency for the season, and live on board the steamers.

3. On the establishments of the Quebec and Montreal post-offices, two postmasters, seven clerks, and four letter-carriers named by the Deputy Postmaster general, and one office-keeper named by the postmaster at Montreal, who for the same year received in the aggregate from the post-office revenue, 1,394 *l.* 14 *s.* currency; and from other sources about 1,065 *l.* 2 *s.* 1 *d.* currency, besides the franking privilege of the two postmasters, valued by them at from 14 *l.* to 29 *l.* a year, making thus a gross sum total of about 2,480 *l.* currency.†

4. At the other post-offices upwards of 400 postmasters, and an unknown and varying number of clerks and other assistants appointed by them, receiving in all for the year in question, from the post-office revenue, 5,761 *l.* 19 *s.* 8  $\frac{1}{2}$  *d.* currency, as salary or commission, and 541 *l.* 17 *s.* 11  $\frac{1}{2}$  *d.* as stationery allowance, and from other sources about 2,550 *l.*, besides some trifling emoluments, the value of which is not ascertained, and their franking privilege, which they value at nearly 4,000 *l.*, making thus a gross sum total of about 12,850 *l.* currency.

The above sums do not include the expenditure incurred from the post-office revenue for the incidental expenses of the general establishment, and of the Quebec and Montreal post-offices, the supply of books and blank forms for the offices, the advertising of dead letters, &c. These expenses amounted for the year ending 5 July 1840, to 1,844 *l.* 9 *s.* 9 *d.* currency.

And its incidental expenses.

There were in force in July 1840, according to the returns in the Appendix, 136 contracts and eight informal agreements for the conveyance of the mail within the Canada charge. The number has since increased to about 150, and is continually increasing. Two of the contracts entered into since July are of great importance, and mention is accordingly made of them in the returns. Of the 145 engagements, the particulars of which are thus before the Commission, 95 are of secondary consequence, the stipulated yearly payments under each of them being less than 100 *l.* currency; of the remainder, 22 are for sums ranging between 100 *l.* and 200 *l.*; 15 between 200 *l.* and 500 *l.*; six between 500 *l.* and 1,000 *l.*; and seven for more than 1,000 *l.* The total amount paid for this branch of the service during the year ended 5th July 1840, was 22,342 *l.* 11 *s.* 8 *d.* currency. The amount at the present time is about 27,500 *l.* currency.

Conveyance of the mail.  
Number and value of contracts and other agreements.

Contracts for the more important routes are to some extent submitted to public competition, by advertisements describing the services required, and inviting tenders for its performance for a term of three, four or five years; and the lowest tender is then accepted, provided the security offered be considered sufficient, and no apparent evidence exist of the incompetency of the party for the undertaking. Upon the minor routes contracts are made by private arrangement, at the discretion of the Deputy Postmaster-general. This mode is also occasionally followed in the case of larger contracts, and more especially in the renewal of existing agreements.

Contracts, how entered into.

The form of contract in common use is given in the Appendix. It has been materially departed from in two cases only—the contracts made this year for the conveyance of the mail by steam-boat between Montreal and Quebec, and between Toronto and Dickenson's Landing.

Their form

The terms of the contracts vary, however, as much as the amounts to be paid under them, and can be learnt in detail only by a reference to the returns. The number of the sureties required to join the contractor in the execution of his bond is sometimes one, more frequently two, and occasionally three. The penalty

And terms.  
Number, &c. of sureties.

\* Exclusive in both cases of some incidental charges not distinguishable from the other incidentals of the department.

† The re-organization of the Montreal establishment has probably had the effect of increasing this amount. Making the required changes for the new salaries allowed, and for the emoluments of other kinds abolished by it, the gross receipts from the revenue would be about 1,807 *l.*, and from other sources about 819 *l.*, besides the franking privilege; the sum total about 2,648 *l.*

24 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

Scale of forfeitures. penalty of the bond is in two cases (those of the steam-boat contracts just mentioned) as high as 5,000*l.*, and in another (that of the land mail between Toronto and Kingston) 3,000*l.*; on several trifling routes it is as low as 19*l.* or 20*l.* The scale of forfeitures which can be levied by the Deputy Postmaster-general at discretion, varies as follows:

For leaving a mail-bag behind, if accidentally, between 10*s.* and 12*l.* 10*s.*; if wilfully, between 1*l.* and 30*l.*

For passing a post-office without stopping, or for not stopping as long as the postmaster may require, if a first offence, between 5*s.* and 5*l.*; if not a first offence, between 10*s.* and 10*l.*

For any other breach of contract, or for any violation or neglect of the rules of the department, between 1*l.* 5*s.* and 50*l.*

Such fines to be deducted by the Deputy Postmaster-general from his quarterly payments; with the option, however, if he please, of suing upon the contractor's bond, or summarily annulling the contract, instead of fining him. The scale of forfeiture on the two new contracts differs considerably from this, being as follows:

For neglect to serve any office, 20*l.* currency.

For delivery of the mail later than the stipulated time, at Toronto, Kingston or Dickenson's Landing, 5*l.* per hour.

At Quebec or Montreal, 10*l.* per half-hour, unless satisfactory cause be shewn.

Duration, &c.

The majority of contracts are for terms of three and four years, but some are for one, two and five years, and two (the steam-boat contracts just spoken of) are for six years. Except in these last, however, it is always stipulated that the Deputy Postmaster-general may at any time annul the contract "if in his opinion the public interest shall require it," giving three months' previous notice; and that unless the Deputy Postmaster-general should announce to the contractor his intention of closing the engagement at the end of the years above mentioned as the probable limit of the term, the said engagement is not then to cease, but is to continue in force thereafter in all its provisions, with the consent of the Deputy Postmaster-general for an indefinite time; the contractor binding himself to give at least four months' notice in writing to the Deputy Postmaster-general of his wish to relinquish his engagement. There is also a proviso in the common form of contract, that the Deputy Postmaster-general may alter at pleasure the days of travel and line of route, either adding to or diminishing the distance to be travelled, on condition only of continuing to pay at the mile-rate originally agreed upon.

Power of Deputy Postmaster-general to alter terms, &c.

Prohibition of conveyance of unmailed letters.

In what cases waived.

The forms of contract strictly forbid the conveyance by the courier of any letters or parcels containing letters, but there has always been a tacit understanding between the department and the contractors on routes served by steam-boats, or partly by land and partly by steam-boat conveyance, that their own letters, on the business of the line, may be carried out of the mail-bag. In two cases of agreements now expired, this stipulation was made in writing; at present the privilege rests only on a verbal or tacit arrangement.

Mode, rate, frequency and cost of mail conveyance.

The mails are carried in different parts of the country and at different seasons of the year, in a great variety of ways and under necessarily various stipulations. as to the number of trips, the speed of travel and the rate of payment.

On the main route from Fredericton, New Brunswick, westward to Niagara, and Amherstburg, their transport is provided for as follows, under fourteen contracts and two informal agreements:

East of Quebec the mail travels twice a week each way as far as Woodstock, New Brunswick, and thence three times a week to Fredericton, under four contracts:

1. Between Fredericton and Woodstock, by waggon or sleigh, 64 miles; the distance to be performed within 18 hours, and the rate while travelling to be 5½ miles to the hour.

2. Between Woodstock and Grand Falls, also by waggon or sleigh, but with two horses, 74 miles within 24 hours, travelling at the rate of four miles an hour.

3. Between

3. Between Grand Falls and the head of Lake Temiscouata, 81 miles, to be performed by canoe in summer, within 24 hours downwards and 36 upwards, and by sleigh in winter, within 24 hours each way.

4. Between Lake Temiscouata and Quebec, 150 miles, in a light cart or sleigh, within 40 hours, travelling 4 miles an hour in summer and winter.

All stoppages included, the ordinary travel of the mail between Fredericton and Quebec, 369 miles, occupies, when the roads are good, about 113 hours each way; when the roads are at their worst, the time is longer, though seldom much longer, as the stoppages on the road are then considerably shortened. The contracts allow an extra 24 hours in the spring and autumn, but this year the allowance has not been claimed. Under the contracts which expired in 1838, 196 hours were allowed at all seasons; the stipulated price for the service as now rendered is 2,180*l.* currency for the year.

Besides the regular mail, there is also despatched in winter, as often as occasions may require,\* an extra mail for the conveyance of letters from the Halifax steam-ships. This service is performed by the contractors for the ordinary mail, on condition simply of using all possible despatch, and these mails are commonly brought through from Fredericton in 12 hours less time than the ordinary mail. During the winter of 1840-41, six such trips were made at an expense of about 200*l.* currency.

Between Quebec and Montreal the mail was exchanged till the beginning of last May seven times a week throughout the year on the road by the north bank of the St. Lawrence; the department providing mail carts of an improved construction for the contractor's use, the entire distance (177 miles) to be travelled in summer within 34 hours, and in winter within 36; the rate while travelling to be six miles an hour, and the remuneration (after deducting 179*l.* 9*s.* 2*d.* for the use of the mail carts) about 2,675*l.*† currency per annum. Under the present arrangement, the route is travelled in summer only, three times a week, for the service of the country offices, and the mails for Quebec, Port St. Francis, Sorel and Montreal, are exchanged six days in the week by steam-boat.

For the downward passage of the boat 14 hours are allowed, and for the upward, 19. Except for a short period, while the ice is forming or breaking up upon the large streams which the land mail has to cross by ferries, the time allowed is seldom much exceeded. The cost of the present arrangement (after deducting about 680*l.* currency for the partial discontinuance of the land mail) will be about 4,600*l.* currency a year.

From Montreal to Toronto, 376 miles, the service is performed six times a week,—in summer by steam-boat and stage, and in winter by stage, waggon or sleigh.

In summer 56½ hours are allowed for the upward trip, inclusive of some six hours' delay at Kingston and Dickenson's Landing, and 52 hours for the downward, inclusive of delays at Kingston and Cornwall of about seven hours. In winter, with a delay of four hours at Kingston, 92 hours are allowed each way.

The summer conveyance is sufficiently regular; the trips seldom taking much more or much less time than the contracts allow. For the rest of the year they are more variable, 86 hours very commonly suffice when the travelling is good; but the contract time is often exceeded by 24, or even 36 hours, when the roads are breaking up.

This portion of the main route will cost for the current year about 5,110 *l.* currency.

West of Toronto the mail is conveyed by land through Hamilton to Niagara and Amherstburg six times a week throughout the year, and in summer by steam-boats direct to Hamilton and Queenston, also six times a week. On the western

\* At the beginning of last winter this extra mail was sent only when the steam-ships arrived on a day that did not allow of the use of the regular Quebec post. In consideration, however, of the great bulk of the English mails, it has been since ordered that the letter-bags should always come through by an extra mail, and the newspaper bags only (or rather so many of them as the extra mail could not bring) be brought up with the regular mails. The bags for England are all sent by the regular conveyances to Halifax.

† This sum is rather larger than would appear from the return in the Appendix; about 430*l.* currency having been allowed last winter to the contractor for the use of a second horse, rendered necessary by the sleigh ordinance.

26 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

western section of the land-route from Sandwich to Amherstburg, a distance of 16 miles, it is carried on horseback, two and a half hours being allowed ; between Hamilton and Sandwich, 205 miles, by stage coach or sleigh, within 60 hours ; and from Toronto through Hamilton to Niagara, 106 miles, in a two horse waggon or sleigh, within 20 hours. When the travelling is at its worst, however, even these allowances of time (liberal as they necessarily are, on account of the wretched state of these roads in bad weather) are often considerably exceeded. At such times the mail between Toronto and Amherstburg (269 miles), instead of the 76 hours allowed, is not unfrequently more than four days, stoppages included. When the roads are good the prescribed time is seldom much exceeded, but from the fact that the contractor's arrangements are not made with a view to speedier travel, when it can be attained, the time allowed seldom fails to be consumed in stoppages, even when the roads are at their best. The Hamilton and Queenston steam-boats commonly make their trips (the one of 36, the other of 48 miles) in from four to five hours. The total cost of the land mail on these routes is about 2,574 l. currency per annum, and of the steam-boat mails not quite 200 l. currency.

A letter may pass, when the travelling is good, from Fredericton, New Brunswick, to Amherstburg, a distance of about 1,200 miles, in fourteen and a half days, some 60 hours of which are, however, lost in stoppages at the principal places on the way, owing to the impossibility of so timing the arrival and departure of the mail as to make this extensive route an unbroken one.

When the travelling is bad, it will take 19 or possibly 20 days, not more than 24 hours of which will at that season be lost at the principal offices.

Mode of mail conveyance on other routes.

The contracts on a few of the branch and side routes allow the conveyance of the mail by a foot-post, but the number of these is diminishing. A much larger number require that it be carried at least on horseback, and on nearly all the more considerable lines of communication the use of some kind of wheeled carriage or sleigh is prescribed. In summer the conveyance from Montreal to the United States' line is by steam-boat and railroad ; and from Toronto to Rochester in the State of New York, and also from Bytown\* to Fitzroy Harbour (33 miles) on the Ottawa by steam-boat.

Its frequency.

There is one route only on which the mail is conveyed less than once a week, the route between Port Daniel and Gaspé Basin, in the district of Gaspé, served by a foot-post once a fortnight. Daily mails to the United States' frontier are established from Stanstead, Montreal, Kingston, Prescott and Queenston : and from Toronto to Rochester in summer, a mail is sent as often as a steam-boat leaves. On all the other side routes the mails travel once, twice or three times a week.

The number of miles of established mail road is returned for the 5th July 1840 at 5,736, and of this number it appears that 909 were travelled by the mail as often or more than six times a week, 43 miles four times, 1,340 three times, 1,293 twice, 2,078 once, and 85 only once a fortnight.

Comparison between Canada and the United States.

The travel of the mail for the year ended 5th July 1840, was 1,521,416 miles, and the cost 22,342 l. 11 s. 8 d. currency ; being at the average rate per mile of rather more than 3½ d. currency. From the last report of the Postmaster-general of the United States it appears, that for the year ended 30 June 1840, the mail travelled in that country 36,370,776 miles, or nearly 24 times as far, to accommodate a population almost 16 times as numerous as that of Canada, and at an expense of 813,248 l. 15 s. 9 d. currency ; averaging more than 5½ d. currency per mile.

The number of post-offices in the United States on the 30th June 1840, is stated in the same document at 13,468, being on the average one post-office to 1,250 souls. Within the Canada charge the average is only one post-office to about 2,670 souls. If we limit the comparison to the western division of the province, the disproportion is less striking, for in the country west of Montreal there is on the average a post-office to every 1,800 inhabitants.

Rates of provincial postage.

The rates of letter postage levied in the Canada charge, except on correspondence

\* The steam-boat conveyance of the mail on the Ottawa between Bytown and Grenville, mentioned in the return, has since ceased, and the mails are now carried the whole way to and from Montreal by land.

# INTO THE STATE OF THE CANADIAN POST OFFICE. 27

spendence by the Halifax packets, are as follows, being those authorized by the 5 Geo. 3, c. 25.

For a single letter to any distance, not exceeding 60 miles, 4 *d.* sterling.  
(Converted in practice into 4  $\frac{1}{2}$  *d.* currency.)

On other than Halifax packet letters.

For a single letter from 60 to 100 miles	-	6 <i>d.</i> sterling	-	7 <i>d.</i> currency.
Ditto	-	100 to 200 miles	-	8 <i>d.</i> „ - 9 <i>d.</i> „
Ditto	-	200 to 300 miles	-	10 <i>d.</i> „ - 11 <i>d.</i> „
Ditto	-	300 to 400 miles	-	1 <i>s.</i> „ 1 <i>s.</i> 2 <i>d.</i> „

and so on, adding 2 *d.* sterling for every additional 100 miles. The distance is computed along the route over which, according to the department regulations, the mail actually travels, and not along the shortest route that could be found. One charge is made for the whole distance a letter has to travel, and it is only when requiring to be redirected that it can be taxed with a further rate. For double and treble letters and packages exceeding an ounce in weight, the rule is the same as that which existed in England before the late changes.

Soldiers' and sailors' letters not exceeding half an ounce in weight are charged 1 *d.* each, without regard to distance, whether sent by the Halifax packets, or only passing within the provinces. Pensioners' papers sent in covers open at the end pass free.

Rate on soldiers' and sailors' letters.

With the exception of the Deputy Postmaster-general, the surveyors and postmasters, no public officers in Canada possess the privilege of franking. Those departments in Great Britain which formerly enjoyed that privilege in the United Kingdom, have always had the same right within the colonies; but as it has never been construed to extend to any of the departments established in subordination to them within the provinces, it follows that so much of their correspondence as is carried on with England passes free, but no more, and by far the greater part is within the provinces.

What letters free.

Letters or packages for or from the United States are charged according to the distance they are carried within the provinces at the rates established by law for provincial postage, and this distance is always reckoned upon the route to the exchanging office through which the letter passes, and thence to the frontier. Upon American letters mailed or delivered at any of the exchanging offices west of Montreal there is a charge made for what is called "ferriage postage," amounting at Kingston to 3 *d.* currency, and elsewhere to 2 *d.* currency, without distinction, however, between single and double letters.

Letters for or from the United States.

As the department at Washington does not collect our provincial postage, letters for the United States mailed in Canada must be prepaid to the frontier, but letters from the United States to Canada cannot be prepaid beyond it. The collection of American postage by the Canadian department leaves it optional in all cases with the sender of a letter to prepay the American charge or not, as he pleases. Both charges must be prepaid upon letters mailed in Canada for transmission to Europe by ship or packet\* from any port in the United States.

Halifax packet letters are charged under authority of the 3 & 4 Vict., c. 96, and of a Treasury Minute of the 6th July 1840, at an uniform rate of 1 *s.* 2 *d.* sterling (1 *s.* 4 *d.* currency) per half ounce, between any place in the United Kingdom and any place in Canada; 1 *s.* sterling (1 *s.* 1  $\frac{1}{2}$  *d.* currency) of that sum is considered the packet postage to Halifax, and the remaining 2  $\frac{1}{2}$  *d.* currency the colonial charge for inland transport.

Halifax packet letters.

This rate may be prepaid either way, or not, at the option of the sender. Letters for any place in France may be sent to London by these packets on the same terms; or if the party sending prefer to do so, the French postage may be prepaid. Letters by the same for the West Indies, Bermuda, Malta and Gibraltar are charged 2 *s.* 2 *d.* sterling (2 *s.* 5 *d.* currency) the half ounce, and may be prepaid or not, as the sender pleases.

For any other British possessions the charge to the port of arrival from England must be prepaid, amounting, if the letter be forwarded by the ordinary

\* The New York steam-ships charge 25 cents freight money on every letter for Europe, and this also must be in some way or other prepaid, and it cannot now be paid through the post-office in Canada. The sailing packets from that port at one time made a charge of 12  $\frac{1}{2}$  cents freight money, but have since abandoned it.

## 28 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

nary packets from England, to the sum above named; if by private ship, to 2s. 0½*d.* currency per half ounce; or if for the East Indies, *vid* Marseilles, to 4s. 3½*d.* currency per quarter ounce, &c. On letters for other parts of the world, it is necessary to prepay the rates to London, and thence to the port to which they are to be conveyed by packet or private ship from England. The scale of these rates is given in the Appendix.

Ship letters.

During the summer months letters may be sent by private ship from Quebec or Montreal, between any place in the United Kingdom, and any place in Canada under the same authority, at a uniform rate of 8*d.* sterling (9*d.* currency) per half ounce, if mailed or delivered at the port of arrival in Canada, or of 10*d.* sterling (11½*d.* currency), if mailed or delivered any where else in the province; prepayment is, however, required.

Ship letters may also be sent from Montreal or Quebec for any port not within the United Kingdom, on prepayment of a ship letter rate of 4½*d.* currency per half ounce, but on such letters, if mailed at an inland office, the ordinary inland rate must be also prepaid.

Letters for Newfoundland, Bermuda and the West Indies.

For Newfoundland, Bermuda and the West India Islands, the practice has been to require prepayment of the inland rate, chargeable under the 5 Geo. 3, to Halifax, the post-office at that place forwarding the letters direct by the first opportunity.

Newspapers, &c. mailed in Canada.

The Act 5 Geo. 3, c. 25, subjected "all letters, packets and other things" to the rates of inland postage above described; but as these rates would have been altogether prohibitory of the circulation by post of newspapers, pamphlets and other printed matter, they were in practice waived. The precise time when this arrangement took place does not appear, but it must have been at a very early period, and was probably on the first publication of a Canadian newspaper.

Under this arrangement payment for the transmission of newspapers was made to the Deputy Postmaster-general at a much lower rate, and always, if mailed in the provinces, by the party mailing them. The proceeds, which were at first a mere trifle, have continued a perquisite of that officer. The rate itself has been more than once raised, but not by the present incumbent.

Rates charged to proprietors by the year.

Proprietors of newspapers in Canada are required\* to pay as follows:—

For a weekly paper, 4*s.* currency a year on each copy mailed.

For a paper published twice a week, 5*s.* currency.

For one published three times a week, 5*s.* currency.

And for a daily paper, 9*s.* currency.

Rate on occasional papers when allowed to pass free.

Transient papers, as they are termed, or papers mailed by other parties than publishers, are charged 1*d.* currency each; pamphlets and other printed matter, 1*d.* currency per sheet,† whether mailed by a publisher or by any other person.

Proprietors of periodicals are allowed to exchange single copies of their respective publications free of charge, and the franking privilege allows postmasters to receive, free of charge, one copy of any provincial periodical.

Rate how enforced.

In case of the neglect or refusal of the party mailing to prepay at the above rates, the receiver is charged with letter postage, and the newspaper or pamphlet so sent is treated in every respect as a letter of equal weight would be.

Newspapers, &c. mailed in the United States.

Newspapers and pamphlets brought in by mail from the United States are rated at 1*d.* currency a sheet, in addition to the American postage (if any) charged upon them. It is, of course, impossible in their case to obtain payment from the party mailing, or to compound in any way with their publishers, and the charge is therefore made upon the receiver.

Upon such as are mailed in Canada for the United States, prepayment is required on the same terms as though they were to be delivered in the provinces; but no charge is made either on exchange copies or on copies addressed to provincial postmasters.

Stamped

\* It rests, however, with the proprietor to state the number of copies he mails, and a statement once made is seldom afterwards questioned, so that the sums really paid fall considerably short of what they would be were these terms more rigorously insisted upon. In many cases, indeed, it appears that a fixed sum is paid under an old agreement, without any reference to the number of papers now mailed. Payment is always required at the close of each quarter for the quarter's services; in case of refusal or failure to do this, a proprietor is charged by the Deputy Postmaster-general for his papers, as any other person mailing them would be.

† Sixteen pages, whatever their size, are rated as a sheet.

Stamped newspapers coming by the Halifax packets, and colonial newspapers mailed for Europe to go by them, have passed free of charge since 1834, in which year an order to that effect was first issued from the general post-office, London. The right has been since sanctioned by the 3 & 4 Vict. c. 96, and under the same Act printed votes and proceedings of the Imperial Parliament, or any provincial legislature\* sent by them, are entitled to pass at a uniform rate of 1*d.* sterling per four ounces. Every other description of printed matter† is rated with the letter postage, 2*s.* 8*d.* currency per ounce. Prepayment of these rates is not required.

Newspapers, &c. mailed for and from Great Britain by Halifax packets.

The accounts of the department relate exclusively to British and provincial letter postage: for the year ended 5th July 1840, they show a gross receipt of 53,023*l.* 16*s.* 6*d.* currency, about 2,820*l.* of which was derived from the Halifax packet letters‡, rather more than half being British, and the remainder provincial postage.

Resources of the department.

Letter revenue.

The provincial rates on other letters yielded about 50,200*l.* currency: for the transmission of newspapers, &c. under the Deputy Postmaster-general's privilege, the gross payment during the same year appears to have been about 3,062*l.* currency; and the American postage collected by the department amounted for the year to not less than 11,315*l.* § currency. Of this, however, 9,000*l.* currency was remitted to Washington, and cannot be said to have in any way formed part of the revenue of the department: the 2,315*l.* currency which was paid during the year to officers of the department for the collection of United States' postage may, on the other hand, be said to have formed part of the resources of the department in Canada, though not precisely in the same degree as monies otherwise collected by it, since the duties for which that sum was payment do not properly belong to the Canadian department.

Newspaper money allowance from department at Washington.

The franking privilege should also be regarded as one of the resources of the department, since it forms a part, and often the greater part, of the recompense of the postmasters.

Franking privilege.

The pecuniary value of this privilege may be looked upon as so much received by the department, and then paid away to its servants. The value at which the postmasters themselves have estimated their right of free postage is, in the aggregate, about 4,000*l.* currency; and though it be true that its abolition might not cause the actual revenue of the post-office to increase to that amount, still the result at present is, in effect, nearly the same as if that sum were collected and spent in salaries. The total resources of the department of every description are thus raised for the year in question to about 62,400*l.* currency.

Its net revenue for the year amounted to 18,885*l.* 8*s.* 10*d.* currency; the whole, of course, derived from the 53,023*l.* 16*s.* 6*d.* currency, received as British and provincial letter postage. The expenses, as stated in the accounts of the department, were as follows:

Comparative cost of mail conveyance and administration.

	£.	s.	d.	
For mail conveyances - - - -	22,342	11	8	currency.
For administration of department:				
Salaries - - - £. 9,409	8	3	½	
Incidentals - - - 2,386	7	8	½	
	11,795	16	8	„
TOTAL - - - £.	34,138	7	8	„

To

\* Except by the Halifax packets, they are charged by the sheet, as other printed papers are, under the Deputy Postmaster-general's privilege.

† Under the old regulations of the department, a packet charge of 1*s.* an ounce was made in England, and none either on mailing or delivery in Canada. The Treasury warrant of the 28th December 1839 abolished this, with most other reduced rates, and letter-postage is now charged under the 3 & 4 Vict. In several instances last winter, pamphlet parcels were sent as freight by the steam-packets to Halifax, and thence forwarded overland to Canada in the mail bags. The Deputy Postmaster-general, in these cases, rated them with inland letter-postage from Halifax, per ounce, instead of charging them as ordinary pamphlets would have been charged under his or Mr. Howe's privilege.

‡ The reduction of the Halifax packet rates had not then taken place. The amount derived from this source, as will presently be seen, is now much larger.

§ This amount is for the year ended on the 31st December 1840; the Deputy Postmaster-general not having preserved duplicates of his accounts with the United States till 1840.

The collection for the year ending on the 30th June previous was certainly not less than for the year given.

30 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

To this amount, however, on the principles above laid down, some further additions require to be made; as a large portion of the payment, in fact, made for administrative services is made from other sources than the letter revenue. Omitting for the moment the value of the franking privilege, the expenditure of the year should rather be stated thus:

	£.	s.	d.	
For mail conveyance, the whole paid from letter revenue - - - - -	22,342	11	8	currency.
For administration: incidentals paid from letter revenue - - - - -	2,386	7	8½	„
Salaries paid from letter revenue - - - - -	9,409	8	3½	„
Newspaper postage, about - - - - -	3,062	-	-	„
Per centage on United States' postage - - - - -	2,315	17	6½	„
In all about - - - - -	£. 17,173	13	6½	„

or if the per centage on United States' postage be not included in the estimate, about 14,857*l.* 16*s.*

The proportion between the two branches of expenditure in the post-office of the United States was as follows:

	£.	s.	d.	
Cost of mail conveyance - - - - -	813,248	15	9	currency.
Cost of administration - - - - -	367,676	5	-	„

showing a decidedly larger proportional outlay for mail conveyance in that country than in Canada.

Our reason for omitting the value of the franking privilege in the above calculation is, that it is not included in that of the department at Washington; but the proportion which really exists in either country between the two items of expenditure cannot be accurately stated without including it. We have no means of judging to what it may amount in the United States. In Canada, as just stated, we are led to estimate it at 4,000*l.* currency; and this sum, added to the 14,857*l.* 16*s.* currency, raises the cost of administration to nearly 19,000*l.* currency; or if the per centage allowed by the United States be included also, to more than 21,000*l.* currency, a sum very little less than that paid for mail conveyance.

Total amount of postage paid in Canada.  
Charge in 1839-40.

Comparison with the United States.

The total amount of postage, British, provincial and American, actually paid on letters and newspapers during the year ended 5th July 1840, appears from the statements just made to have been about 67,400*l.* currency. Of this sum the civil departments paid about 5,609*l.*, and the military about 17,825*l.*; so that the post correspondence of the country (exclusive of the public departments) yielded not quite 44,000*l.* In the United States, where the public departments enjoy the franking privilege, a population about 16 times as numerous paid in postage during the same year, 1,134,751*l.* currency, or nearly 26 times as much.

Comparative amount of post correspondence in the different parts of Canada.

It would be more correct, however, with a view to a comparison between the two populations, to contrast simply the amount of British and provincial letter postage paid in Canada (exclusive of the public departments, about 29,590*l.* currency), with the amount of letter postage (1,000,944*l.* currency, or more than 33 times as much) paid in the United States. As the rates of postage are rather lower there than here, the necessary inference is that more than twice as much correspondence is circulated by post, in proportion to the population.

This great inequality may be accounted for in part by a further examination of the returns of the department in Canada, which shew a still greater inequality between certain sections of the province itself. A table in the Appendix\* shews that in the populous counties inhabited by French Canadians (the cities of Quebec and Montreal excepted), the average contribution of each adult inhabitant to the post-office revenue for the year 1839-40, was about 3½*d.* currency; and in the six township counties of what was lately Lower Canada, inhabited by a population of British and American extraction, about 10*d.* In the counties west of Montreal (exclusive still of the towns of Kingston and Toronto), it was nearly 1*s.* 9*d.*, or about six times that of the first-mentioned class of counties, and

\* This table, with the notes appended to it, sufficiently explains the principle of calculation adopted in its preparation.

and more than double that of the second. For the whole eastern section of the country, bounded west by the St. Lawrence, and a line drawn north-west from and including Montreal, the average is not quite  $10\frac{1}{2}d.$ ; while for the western division it is almost  $2s.$  This table exhibits the curious fact, that as we proceed westward the average increases progressively. For Kingston and the country beyond, it exceeds  $2s. 3d.$  for each adult; and for Toronto and the western districts,  $2s. 4d.$  The eastern districts, however, having a much larger population than the western, the average for the whole country is only about  $1s. 4d.$  Calculated upon the same principle, the average contribution of each adult resident of the United States to the letter revenue of the post-office of that country, was for the same year about  $2s. 11d.$ , so that if the eastern portion of Canada contributed in the ratio of the western, the difference in favour of the United States would be reduced to  $7d.$ , instead of  $1s. 7d.$  per head.

Another cause of the greater productiveness of the United States post-office is to be found in the different proportions subsisting in the two countries between the town and country populations. The average for the four towns of Quebec, Montreal, Kingston and Toronto, is more than five times the average for the rural districts of the province; but the population of the latter is not far from 12 times that of the former. The number of towns in the United States exceeding Kingston in size and importance is so considerable, that their urban population must certainly bear a much larger proportion than ours does to the rural; and there is no reason to doubt that the ratio observable in Canada between the relative amounts of correspondence belonging to town and country fully holds in the United States.

Comparative amount of post-office correspondence in town and country.

The rapid increase of the revenue in Canada of late years must be taken into the calculation when we seek to ascertain its probable future resources. During the 12 years ended on the 5th April 1840, the gross yearly revenue from letter postage has increased from  $15,344\text{ l. }13\text{ s. }7d.$  currency, to  $52,752\text{ l. }8\text{ s. }5\frac{1}{2}d.$  currency, or about 245 per cent. A part of this increase has been owing to the very large sums paid since 1837 for military postage; but making every allowance for this, it would still appear that the unofficial correspondence of the country must have nearly trebled in amount within those 12 years. A similar, but a somewhat more rapid rate of increase has obtained during the same period in the United States.\* The table in the Appendix to which we have referred, shews that for the last 16 years the improvement has been far from regular; that it has on the whole very much exceeded in rapidity the increase of the population of the province; and that it has much more nearly kept pace with that of the amount of post-office accommodations; but for the influence of two or three disturbing causes, it would doubtless have been more regular, more rapid, and a more immediate consequence of the increased facilities afforded by the department.

Tendency of revenue to increase.

A small portion only of the increase of accommodation which took place between 1824 and 1831 was before the year 1827-8, and we observe accordingly that the more rapid increase of revenue was from 1828 to 1831. During the three years and three-quarters ended in April 1828, it rose only 11 per cent.; for the three years next following, 38; for the next two years (ending in April 1833), the extension of the department continued at much the same rate as before, and the increase of its gross revenue was more rapid than ever, being, for the first year more than 15, and for the second almost 20 per cent. The revenue in 1833-4 was somewhat affected by the check which the cholera of 1832 had given to emigration and business, and fell off a fraction of one per cent. from that of the preceding year. During this year and part of the next, the absence of the Deputy Postmaster-general in England put a stop for the time to the extension of mail communication; but the year ending 5th April 1835, shews, with the returning prosperity of the country, an increase of revenue of nearly nine per cent. since 1833. The next two years exhibit a second extensive increase of the department in all its branches, and with it a rise in the revenue of nearly 20 per cent. The commercial embarrassments, however, of the summer of 1837, and the political disturbances of the winter following, not only checked this

\* From \$1,598,134, the revenue for 1827-8, to \$4,539,265 for 1839-40. That the increase of gross revenue should have been rather more rapid in the United States than in Canada was naturally to be expected, from the fact that the department in Canada has been conducted on the principle of endeavouring always to realize some amount of net revenue, while that at Washington has constantly augmented its expenses to the full measure of its means, and for the last few years, indeed, beyond them.

## 32 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

this increase, but reduced the post-office revenue more than nine per cent. For the years 1838-9, and 1839-40, the returns exhibit a great increase of revenue (amounting, if the years be reckoned to the 5th of April, to nearly 33 per cent. the first, and 17 per cent. the second year), with little addition to the post accommodation of the country. The advance of 1838-9 is attributable altogether to the great amount of official postage paid in that year on account of the large military force then newly arrived in Canada. Allowing for this, the revenue from the domestic correspondence of the country, is found to have been as nearly as possible the same for the two years ending on the 5th of July 1838 and 1839. Since the spring of 1839 the amount of postage paid by the public departments has been decreasing so much, that with a rise, as just stated, of only nine per cent. on the total gross revenue of the department, from the 5th July 1839 to the 5th July 1840, we find (from the best calculations in our power) that the amount of postage paid on the unofficial correspondence of the province increased no less than  $20\frac{1}{2}$  per cent. This cheering improvement, the most marked, so far as we can ascertain, that has ever taken place in a single year in Canada,\* is not the least conclusive among the many evidences of the fast improving condition of the province. It shows clearly that the influence of those causes has ceased to be felt, which in 1837 prevented that continued increase of revenue which might have been looked for from the great extension of the department in 1835 and 1836; and it creates a strong presumption on financial no less than on general grounds, in favour of a return to the policy of post-office extension.

At what precise rate the revenue is at the present moment improving, it is impossible to say. There is still a constant, though not very rapid diminution going on in the item of military postage, with probably a slight increase (though to a less amount) in that of the civil departments of the Government. The accounts for the quarter ending on the 5th of October 1840 shew some advance upon the corresponding quarter of the previous year. The improvements in the service since that date must have done much to augment the gross receipts of the post-office, as the account for the current year will doubtless shew; though it is probable, also, that they will exhibit some falling off in the net receipts.

The revenue derived from the transmission of newspapers has not increased in the proportion of the letter revenue. For 1832 it was returned at about 2,074 *l.* currency; for 1840, at about 3,062 *l.* currency; showing an increase in eight years of not quite 48 per cent. Within the same period the letter revenue rose 116 per cent. The loose way in which this revenue is collected, and particularly the practice of letting proprietors continue for indefinite periods to pay the same price for a constantly varying number of papers, is no doubt the chief cause of the slower increase. There is reason to suppose that the number of newspapers actually sent by post has augmented for the last 8 or 10 years as fast as that of letters, and that the two revenues, if collected with equal care, would have shewn that result.

The American postage collected in Canada has rather more than doubled, and the per centage allowed for its collection has nearly doubled within the same period† of eight years. At the present moment it is questionable whether they are not in process of diminution, as the establishment of the New Halifax packets has had the effect of diverting a large proportion of the European correspondence which formerly passed through the United States. The accounts shew a considerable diminution from this cause upon the quarter ending 31st December 1840, but as the commercial relations of the province with the United States cannot fail to give rise to a constantly increasing correspondence, it is safe to presume that before long the falling off will be more than made up, and that this branch of revenue will be restored to its former elasticity.

The value of the franking privilege, as indeed of most other indirect emoluments enjoyed by officers of the department, is, of course, continually increasing, and at a rate, it is presumable, not widely differing from that at which

---

\* Indeed, except between the years 1835-6 and 1836-7, we are not aware that there has ever been so large an increase of domestic post correspondence in the United States for any one year. The increase of the revenue of the Washington post-office for the year alluded to just exceeded 20 per cent.; generally it has been less than 10 per cent., and not unfrequently almost nominal.

† In 1832 the collection amounted to 5,248 *l.* 12 *s.* currency, and the per centage to 1,207 *l.* 4 *s.* 3 *d.* currency.

INTO THE STATE OF THE CANADIAN POST OFFICE. 33

which the other resources of the department have been ascertained to increase.

A return made by the Deputy Postmaster-general estimates the average rate of postage on a single letter in Canada at  $8\frac{2}{3}$  d. currency, and the number of chargeable letters circulated by post in Canada (exclusive of Halifax packet letters, and reducing all double and treble letters and packages to single rates) during the year ending 5th July 1840, at about 1,400,000, and from the explanation we have received, we see no reason to doubt the accuracy of the calculations on which it is based.\* Judging from the relative amounts of the official and unofficial postage of the year, about half of the 1,400,000 † must have been official. The number to be set down for the twelvemonth ending in July 1841 must be a matter of conjecture. Supposing the diminution on official and the increase on unofficial postage to have continued at the rate we find to have obtained from July 1838 to July 1839, it would considerably exceed 1,500,000.

Average rate of a single letter and number of single letters yearly at each rate.

But as one effect of the late changes has been to convert into Halifax packet letters a very great number of letters before sent through the United States, it would be hardly safe to make such a calculation, or to state confidently that the number is now much beyond the estimate for the year 1838-9.

Expressed in single rates, the number of free letters at present passing through the post in Canada in a year, under the franking privilege enjoyed by officers of the department cannot, from the returns before us, be far from 115,000, exclusive of the correspondence they carry on upon the business of the department itself, of the amount of which we have no satisfactory means of judging.

Number of free letters yearly.

Of the number of Halifax packet letters for the year 1838-9 we have no estimate.

With the exception of official letters (mostly duplicates) which passed free of charge, very little correspondence was carried on by this route till the establishment of the Cunard line of steam-ships, assisted by the reduction of the packet-rate of postage, which shortly after followed.

From calculations we have made upon a return furnished by the Deputy Postmaster-general as to the contents of the steam-ships' mails, since despatched from and received at Quebec, it would appear that, taking the average of the last nine or ten months, the number of letters they contain in a year is as follows:—

Ordinary correspondence charged 1 s. 4 d.			
currency per half ounce, nearly	-	-	192,000 single rates.
Soldiers' and sailors' letters	-	-	59,000 „
Official correspondence passing free of colonial charge, between 13,000 and 14,000 packets, amounting probably to			
			39,000 or more single rates.
TOTAL about			290,000

But from the rapid apparent increase of these mails this estimate is now, we believe, considerably below the truth.

The number of letters of every description passing yearly through the post in Canada is thus seen to amount to 1,805,000 single rates (exclusive of the correspondence on the business of the post-office), and of this number some 213,000, or about  $\frac{2}{17}$ ths of the whole (including soldiers' and sailors' letters), pass free.

We have not been able to ascertain precisely how many newspapers and other printed sheets are mailed yearly. An estimate of the Deputy Postmaster-general (of which we can only say from the data before us, that it by no means appears to be an extravagant one) gives the number of printed sheets on which postage is paid at 860,000 a year; 600,000 paid for by printers at the reduced rates,

Number of newspapers mailed yearly.

\* Every post-office, as we have already observed, sends a letter-bill, stating the amount of postage, with every package of letters mailed upon any other office. We are informed that all the bills thus sent for a quarter of a year were carefully examined, and the number of single letter charges made at each of the rates established by law, thus ascertained.

† Not, of course, that there are anything like as many official letters mailed as there are unofficial. The former, as a general rule, are so much more bulky, that by the post-office rule of charging, they count for about an equal number of single rates.

## 34 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

rates, and the remaining 260,000 by other parties at 1 *d.* a sheet; 50,000 of them mailed in the province, and 210,000 brought in from the United States. The same estimate fixes the number of printed sheets, which pass free through the post-office, at 596,000; 156,000 allowed to pass free to postmasters and editors; 120,000 sent by printers over and above the number they return and pay for; and 320,000 passing between the colony and the United Kingdom by the Halifax packets. The whole number of printed sheets is thus fixed at 1,456,000, a very large proportion of which are newspapers.

Average cost and  
profit on each single  
letter.

In his estimate of the number of charged single letters sent by post, exclusive of Halifax packet letters, the Deputy Postmaster-general states the average cost of transport on each at  $3\frac{20}{48}$  *d.* currency, and that of management,  $1\frac{16}{48}$  *d.*; leaving, therefore, a net profit upon each of  $3\frac{11}{48}$  *d.* To this portion of the estimate the objection occurs, that, being based altogether on the accounts of the department, it, in the first place, throws the whole cost of transport on the letter revenue, though part of it is incurred for the carriage of other mailed matter; and in the next place, it leaves out of view the large sums paid towards the management of the department from other sources, such as perquisites, the franking privilege, and American agency. The total amount of the expenses of transport and management incurred on account of this class of letters, and not the sum total that happens to be charged against the revenue drawn from them, is the amount from which alone the true averages can be drawn.

It is perhaps impossible to determine it with precision, but it appears to us that a nearer approach to it than the above estimate can be made by first putting together all the expenses incurred for letters and newspapers, and then striking off, as the share of expense incurred upon packet letters and newspapers, and the collection of United States' postage, the amount received from these sources, or in other words, supposing neither profit or loss to arise from these branches of the service. This course may throw upon the letters some portion (how much, it is impossible to say) of the cost incurred for newspapers, &c., since the rate imposed upon the latter is clearly not a remunerating one; but that is precisely what a differential rate of this kind must in fact always do; and a calculation proceeding upon this basis merely shows what is the fact.

Thus calculated, the year's profit on the 1,400,000 letters exceeded by a very trifling sum the cost of transport incurred upon them; and (irrespective of the franking privilege and the 115,000 free letters supposed to be mailed under it) the average cost of transport on each was nearly  $3\frac{11}{48}$  *d.* currency; that of management, over  $\frac{7}{48}$  *d.* currency; and the average profit on each,  $3\frac{11}{48}$  *d.* currency. Taking the 115,000 free letters into account, and adding the value of the franking privilege to the other expenses of management, the averages are, for transport, very nearly 3 *d.* currency; for management,  $2\frac{20}{48}$  *d.* currency; and for profit, 3 *d.* currency.

State of depart-  
ments in the lower  
provinces.

The returns which we have received from Mr. Howe are not such as would enable us to present a detailed account of the state of the post-office in the provinces of Nova Scotia, Prince Edward's Island and New Brunswick. But from his returns and from those received from some of his postmasters, together with the information we have derived from other quarters, we can supply, we trust, a tolerably correct account of the chief points of difference between his department and that of the Deputy Postmaster-general of Canada.

Mr. Howe's com-  
mission,

Mr. Howe's commission, constituting him "agent, deputy, manager and director of his Majesty's packet-boats between Great Britain and Halifax," bears date the 28th April 1818. We are not informed at what time he was first styled Deputy Postmaster-general, but that title has been long since used as well in the correspondence of the department in England, as by the public generally.

Powers, duties,

The powers and duties of his office, as it is now constituted, do not at all appear from the terms of his commission, and as we have no copy of any instructions addressed to him by the Postmaster-general, we cannot speak confidently on the subject; we are not aware that they differ materially from those of the Deputy Postmaster-general at Quebec, except in certain particulars, which we shall presently notice.

And emoluments.

His emoluments are a fixed salary of 400*l.* sterling,\* an allowance of 50*l.* sterling

\* Raised to this amount in 1836, before which time it was only 200*l.* sterling, the sum originally stated in his commission.

sterling a year for rent, and the newspaper privilege, the net proceeds of which for the three years ended 5th July 1840, he returns at 856*l.* currency. For the last year of the three, it amounted to 330*l.*

There is no general post-office establishment, properly so called, in the lower provinces. The account branch at Quebec is charged, as we have had occasion to state, with the compilation of the accounts for the whole of British North America; and we find that Mr. Howe has never been allowed the assistance of surveyors or clerks for the general business or correspondence of the department. In a letter dated March 20th of the present year, Mr. Howe states, that "in this office, until very recently,\* but one clerk was employed, whose salary is 100*l.* sterling; a second is now employed at a salary of 100*l.* sterling. This assistance, which is not more than sufficient for the proper discharge of his duties as postmaster at Halifax, appears manifestly too little, when to these are added the functions of Deputy Postmaster-general for the lower provinces.

No general post-office for the colonies.

The number of regularly established post-offices within Mr. Howe's charge is very limited; in New Brunswick, east of Woodstock, there are only 14; in Nova Scotia, exclusive of the Island of Cape Breton, 15; in Cape Breton, two; and in Prince Edward's Island, one. Of these, one only (that of Newcastle, New Brunswick), has been established within the last three years; most of the others were created long ago. To make up in part for the want of regular offices, way-offices or places of deposit for letters have been established, the number of which we find has been much greater than that of the regular offices.

Small number of regular post-offices.

Number of way-offices.

Mr. Howe's post-office map and returns furnish a list of 86 such offices; seven in New Brunswick, 36 on the main land of Nova Scotia, 15 in Cape Breton, and 28 in Prince Edward's Island. The answers we have received from postmasters on this subject mention by name 46 more; but even with this addition the list is incomplete, as several postmasters have neglected to reply to our inquiries; and one or two of those who have answered, speak of the existence of sub-offices in their neighbourhood without naming them. Of the 132 reported to us, 17 are in New Brunswick, 57 on the main land of Nova Scotia, 30 in Cape Breton, and 28 in Prince Edward's Island.

The characteristic by which the sub-offices are chiefly distinguished from those on the regular establishment, is that their accounts, instead of being forwarded to Halifax, are kept privately with another or with neighbouring post-offices, and their remittances being made through some regular post-office, appear in the accounts of the department as part of its collections. They differ, however, in many respects among themselves; some are only places of call appointed by the courier, where the postage of any letter he leaves is collected, and unpaid letters are left for him to carry on. In some cases, the courier himself keeps the office. The place where it is held is sometimes fixed by a member of parliament or by the magistrates of the county; sometimes by a neighbouring postmaster, and sometimes by the Deputy Postmaster-general. The persons keeping them are variously remunerated; most of them enjoy to a greater or less extent the franking privilege; some are paid the usual postmaster's per centage; others share it with the postmaster or postmasters with whom they are in communication; many are suffered to levy a small extra rate on letters, which is in most cases their own perquisite, but is sometimes shared between them and the other postmaster who has to deal with the letters so charged; and there are some who perform the duty without any remuneration or privilege whatsoever.

Distinction between post and way-office.

The latter, wherein differing from one another.

No general instructions have been issued to the postmasters in the lower provinces, and from this cause, as well as from the want of surveyors, many irregularities of practice have necessarily resulted.

Irregularities of practice.

At some offices the postmaster has the superintendence of a considerable number of way-offices, several of which have other way-offices subordinate to them. In some instances, a way-office on the route between two other offices corresponds only with one of the two, and it often happens that there is no recognized communication between neighbouring way-offices, except through the more distant office on which they depend.

The

\* In a letter dated the 17th December last, Mr. Howe states that he was then only allowed one assistant.

36 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

Mailing system wherein different from the Canadian.

The system of mailing in the lower provinces is essentially different from that which prevails in Canada. No postmaster or keeper of a way-office mails upon or receives mails from any great number of other places. Some exchange mails with only one office, others with two or three, and few with more than half a dozen.

The consequence is, that letters posted for any distance are generally remailed, as in England, at one or more intermediate offices. But the utter want of regularity in the arrangements deprives this plan (which is in some respects the "forward office system") of nearly all the advantages it would otherwise have over the Canadian practice; while from the irregular usage which prevails along with it, of rating letters anew every time they are remailed, instead of charging them at once for the whole distance, it often adds materially to the charges sanctioned by law.

Collection of newspaper money,

The Deputy Postmaster-general's newspaper money is collected in the lower provinces, much in the same manner as in Canada; but we are without information as to the mode in which the charge on papers not mailed by printers is collected and remitted, and as to the per centage allowed by the Deputy Postmaster-general to postmasters in the country for collecting it. In towns where newspapers are published, he allows the postmaster to retain one-half of the money paid by the proprietors.

And of United States postage.

United States' postage is collected by a different process from that which prevails in Canada; there is but one exchanging office, that of St. Andrew's; and the Deputy Postmaster-general leaves the whole of its duties and emoluments to the postmaster there. No separate accounts of American postage are kept by that officer with the postmasters of the interior, and he allows no share of the remuneration he receives on account of it to any other postmaster for his share of the trouble. The information with which we have been furnished as to the practical details of this system, however incomplete in other respects, is sufficient to prove that the arrangement as a whole is unsatisfactory.

Postmasters' accounts and remittances.

The seven post-offices in the western counties of New Brunswick account with Halifax through the postmaster at St. John, who is charged with the duty of auditing the accounts, and with a general surveillance over the department in that part of the country. Few postmasters have large remittances to make; in general they pay over to the couriers in their neighbourhood the whole or the greater part of their net collections, and transmit the courier's receipt instead of money.

Their bonds,

Postmasters at the regular offices give bonds, as in Canada, though not in the same form, and they are required to renew them yearly.

We are not aware of a bond being ever given by a person in charge of a way-office.

And emoluments.

No detailed returns of the emoluments of postmasters, either at the regular or way-offices, or of the establishments they maintain, have been furnished to us; such information as we have collected will be found in the Appendix.

The chief source of income at the regular offices (Halifax only excepted) is an allowance of 20 per cent. on letter postage. The postmasters at St. John and Fredericton receive an allowance for one clerk and for stationery, and the latter for office-rent also. There is mention in the returns of a small amount allowed for incidental expenses at St. Andrew's and Chatham. No allowance is returned for any other offices.

Few regular postmasters, we presume, derive much emolument from the rent of boxes, the keeping of accounts, &c. Indeed at the two principal offices of Halifax and St. John, the plan of accommodating the public with boxes has never been acted upon at all. The great diversities which exist in the mode of remunerating the way-postmasters will be more fully understood by a reference to some details in the Appendix.

Value of, and restrictions on their franking privilege.

We have received information on the franking privilege from nearly all the regular postmasters and from many way-postmasters. Its average value to them, according to their estimate, is a little higher than in Canada. The restrictions are somewhat different, but they are not very strictly enforced in either province. At the regular offices the postmaster is allowed to send and receive by every mail four single or two double letters, or one packet of an ounce weight.

At many of the way-offices the rule is the same, but not at all, some having no privilege of free postage, and others only an exemption from the exceptional rates

rates irregularly levied at their own or neighbouring offices. Newspapers for postmasters appear in most cases to pass free of charge, but not always.

Imperfect, however, as our information is on the subject of the emoluments of postmasters in the lower provinces, we have been enabled to remark that the amount is in most cases extremely trifling, and never excessive. In the lower provinces the mails are not carried, as in Canada, by contractors, properly so called, but by persons employed by the department as couriers,\* who give bond yearly, are paid a yearly salary, and are liable at all times to be dismissed for misconduct. A natural consequence of this system is that the stipulated rate of remuneration and travel on any given route is seldom altered. The same courier is commonly employed for a long course of years, on the terms originally agreed upon, and even when at length the courier is changed, it often happens that the terms of the service are not varied.

Mails carried by couriers without regular contract.

Mr. Howe considers it a great advantage resulting from this system, that "good men are thus secured without any increase of expense;" but of course it operates on the other hand just as much against that reduction of expense and increase of speed, which under a different system might be expected to result from the improvement of roads and the principle of competition. Another consequence of this practice is, that on routes where the mail travels twice a week, the two trips are sometimes performed by different parties, and at very different prices. It is obvious that one contractor could afford to perform the whole service at a much lower rate than two dividing it in this manner possibly can.

Generally speaking, the appointment and dismissal of couriers rests with the Deputy Postmaster-general; but on some of the minor routes we find that postmasters and even keepers of way-offices may appoint. More frequently, however, the nomination on these routes is made by the Deputy Postmaster-general, but upon the recommendation of persons residing on the spot, such as a postmaster, a member of parliament or a magistrate. In Prince Edward's Island it rests with the Lieutenant-governor. The degree of control, also, short of the power of dismissal, which postmasters consider themselves entitled to exercise over the couriers in their neighbourhood, varies greatly, some claiming the right of fixing the hours of arrival and departure, others taking no note whatever of their movements. There is as little uniformity in the mode of paying as in that of appointing and controlling the couriers. On most of the principal routes their salaries are paid from the general funds of the department, and this is also the case on some of the bye-routes leading to way-offices; on other routes, again, the whole or part of this expense is borne by the province; and sometimes (though we believe only in the case of certain way-office routes) it is in part defrayed by allowing the courier to share with the postmaster, or to take for himself an extra rate of postage on the letters he carries.

Appointment and control of couriers.

Different modes of paying couriers,

We are not aware that the last-mentioned mode of payment is to be met with in New Brunswick; the way-office rates, wherever they are levied, so far as our information extends, being there a postmaster's and not a courier's perquisite.

In New Brunswick.

The department is, to a certain extent, assisted by grants of the provincial legislature in aid of stages, packet vessels and couriers, but such grants are not made in concert with or through the post-office authorities, and much of the yearly amount is therefore not available in any way to the service of the department.

Certain sums are paid, either directly or through commissioners, to companies or individuals; and of those who receive this provincial aid, many are not even asked to carry a mail, and some, we believe, *refuse* to do so on reasonable terms; but even when some mail service is rendered, the payments made by the department and those by the province being independent of each other, it is to be presumed that the money is expended much less economically than if the whole were at the disposal of the post-office.

In Prince Edward's Island the province has long been allowed to take the whole of the postage collected, on condition of paying for the conveyance of the

In Prince Edward's Island.

\* Several mails are carried by stage companies and sloop or steam-boat proprietors; but it appears by Mr. Howe's statement, that even with them there is no formal contract. Whether in these instances each stage-driver or captain of a sloop or steam-boat gives bond as a post-office courier, or whether the proprietors or their agents are considered as the courier and give bond, as they would were there a formal contract, is not stated.

## 38 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

the mails to and from Nova Scotia and within the island,—an arrangement by which a yearly grant from the legislature becomes necessary, but which in return surrenders the entire local control of the department to the province.

In Nova Scotia.

The greatest diversity of practice has grown up in Nova Scotia.

Provincial grants were from a very early date made through the Deputy Postmaster-general, but always as an aid towards the establishment of certain specified routes or offices, and with a condition, either express or implied, that the money was granted only to make good any deficiency of the inland postage on such routes. The practice hence became common in Nova Scotia to allow the couriers, over and above the sums granted them by the legislature, sometimes a share on the whole way-postage they might collect, and sometimes even the whole net proceeds of the offices they served; whether or not this mode of payment was resorted to on any routes not originally established by provincial grants, we cannot say; it prevails, however, extensively. Since 1840 the grant system has been in a great measure abandoned, and the general revenue of the department has been charged with the amounts formerly drawn from the provincial chest; but the old practice of allowing the couriers the net local revenues has nevertheless been suffered to continue.

Mails how often and in what manner carried.

The travel of the mail is less frequent, and apparently of a less expensive description,\* than in Canada. On the main route from Halifax through Dorchester to Fredericton, there are only two mails a week, exclusive of the extra mails in winter for the conveyance of the Canada bags from the steam-ships.

The mail travels but twice a week on the three leading branches from this route: from Truro to Pictou, and from Dorchester to St. John and Miramichi; and on the main western route, from Halifax through Windsor to Annapolis, or sometimes to Digby. It is only from Fredericton to St. John, and from St. John through St. Andrew's to St. Stephen's, that the mail passes more frequently. The rule for the country generally is one mail a week, and there are several way-office routes that are served only once a fortnight.

Many of the mails on the routes where there are none but way-offices seem to be carried on foot, and the others on horseback or in carts, at the option of the courier. Between the regular offices, open waggons or sleighs (sometimes carrying passengers and sometimes not) are more frequently used than stages. Steam-boats are employed in summer between Prince Edward's Island and the main land on the Bay of Fundy and on the River St. John. In winter the Prince Edward's Island mails cross the strait in an ice-boat, and the St. John and Digby mails cross the Bay of Fundy in a sloop.

Extent of established mail road and of weekly travel of mail.

Mr. Howe returns the number of miles of established mail route in Nova Scotia and New Brunswick at 1,223, and the weekly travel of the mails at 2,402 miles; but it is not easy to understand by what calculations he has arrived at so low an estimate; we find more than 1,600 miles of mail route laid down on his own post-office map for these provinces, exclusive of all water communications, and of all routes for the mere accommodation of way-offices, and the latter are very extensive in Cape Breton and other parts of Nova Scotia, though less so in New Brunswick. An estimate of our own, which, though based to a certain degree on conjecture, we think comes somewhat nearer the truth, makes the whole number of miles of mail route within Mr. Howe's charge (Prince Edward's Island included) about 2,600, and the number of miles travelled weekly by the mail between 5,000 and 6,000, a calculation which would still indicate a marked disproportion in this respect between Canada and the lower provinces. In the former, to accommodate a population of about 1,100,000, the yearly travel of the mail exceeds 1,500,000 miles; in the latter, with a population of 400,000, it is about 290,000 miles.

Cost of mail conveyance.

Mr. Howe states the amount expended by him for mail conveyance in Nova Scotia and New Brunswick for the three years ended 5th July 1840, at 15,900*l.* currency, and the expenses incurred by the authorities of Prince Edward's Island for the conveyance of their mails during the same period, at 2,603*l.* 16*s.* currency.

The former of these sums includes, we have reason to think, the grants made during the years in question, from the Nova Scotia treasury; but it certainly cannot include either the New Brunswick post-office grants, or the amounts collected

\* Though, as we shall have presently to state, more costly, in fact.

collected for themselves by those couriers in Nova Scotia who are allowed to levy special rates for their own remuneration. Allowing moderately for these, the average cost for the last three years of mail conveyance in the lower provinces can scarcely have been less than 7,000 *l.* currency a year.

According to the estimate just given of the distance the mail travels, it would thus seem to have cost not far from 6 *d.* currency per mile, an expense much heavier than is incurred for that service in Canada.

The rates of postage as established by law are the same for all the provinces of British North America, but great diversities have in practice prevailed. Postmasters in the lower provinces, as we have before observed, do not make up mails for all offices, nor have they any general table of rates and distances, nor any detailed instructions to enable them to charge letters to all parts of the country, as the law directs; \* letters are therefore rated for the whole distance only when they happen to be addressed to some office with which the mailing postmaster is in direct communication; when not so addressed, he rates them to the office upon which he mails them; the postmaster then adds a new rate to the next office, and so on till the letter reaches its destination.

Rates of postage.

Rule as to charges on unmailed letters.

Two or three rates are thus often levied on a letter, and sometimes as many as five or six.

Nor is this the sole cause of the irregularities which we find to prevail throughout the country. The rates themselves sometimes are not those which the law sanctions.

Some that formerly, perhaps, were legal, have ceased to be so, in consequence of shorter roads being opened; others were from the first illegal, for the statute nowhere recognizes them as rates for any distances whatever.

The anomalous rates, also, amounting to 1 *d.*, 2 *d.* or 3 *d.* currency, which couriers and keepers of way-offices charge on many routes as their own perquisite, sometimes in addition to a postage rate from the nearest office, and sometimes instead of it, add considerably to the irregularity. The returns we have received from a number of postmasters shew with what offices most of them are in direct communication, and what postage rates or perquisites are charged to and from each.

Perquisite rates.

Irregularity of the system of rating.

The departures from the rule laid down by law appear from these to be many and striking. The legal rate, for instance, from Halifax to Yarmouth is the same as to St. John, 11 *d.* currency; the distance in the former case being from 225 to 245 miles, and in the latter 270. The actual rate for the shorter distance is 1 *s.* 1½ *d.*, and for the longer, 9 *d.* currency. Between Lunenburg and Shelburne the charge is 9 *d.* for a distance of only 80 miles, the legal rate for which is 7 *d.*

But it is in the case of letters requiring to be remailed that these irregularities are most glaring. From Sydney, for example, in Cape Breton, a letter passes directly to Halifax (some 300 miles) for 1 *s.* 3 *d.*,† but from Sydney to Truro, on the road to Halifax (about 240 miles), where the law clearly allows no more than 11 *d.*, the rate is 1 *s.* 6 *d.*, the usage being, to charge first to Antigonish (140 miles), 10 *d.*, thence to Pictou (50 miles), 4 *d.*, and thence to Truro (40 miles), 4 *d.* From Fredericton, again, to Halifax (about 280 miles) the rate is as it ought to be, 11 *d.* currency; but from the office at Sussex Vale, 70 miles nearer to Halifax, on the same road, it is 1 *s.* 6 *d.*, letters being there mailed only to Dorchester, with a charge of 7 *d.*, and thence forwarded to Halifax, with a charge of 11 *d.* On some other routes, where there is more remailing, the matter is still worse. From Bathurst to Halifax (310 miles), the legal rate is charged 1 *s.* 2 *d.* currency; to Cumberland, not more than 180 miles, the rate (legally 9 *d.*) is 1 *s.* 6 *d.*, letters requiring to be remailed at Chatham; to Antigonish they must be three times remailed, and the rate in consequence becomes 2 *s.* 6 *d.* for 315 miles, instead of 1 *s.*; and to Sydney, in Cape Breton, 140 miles further, a fourth remailing raises it to 3 *s.* 4 *d.* in place of 1 *s.* 4 *d.*, the amount fixed by law! Some of our correspondents complain that the irregularity of these charges is further aggravated by the absence of uniformity in the

\* For many parts of the country, indeed, it would be no easy matter for any one to determine what the rates ought to be, the distances along the roads or paths travelled being almost matter of conjecture.

† The legal rate would be either 11 *d.* currency or 1 *s.* 2 *d.* currency (9 *d.* or 11 *d.* sterling); the former, if the distance is less; the latter, if it is more than 300 miles.

the amount charged between even the same two places; a circumstance which is often (though not always) owing to the mailing postmasters having no fixed rule as to the office on which letters for particular places should be mailed, and charging them therefore sometimes to a nearer, and sometimes to a more distant office. Among other instances detailed in the Appendix, we find one in which it is stated to have been the practice of a postmaster to mail all prepaid letters for a particular office at once to their destination, rated 1*s.* 3*d.*, and all unpaid letters for the same place to an intermediate office with a rate of 1*s.*, to which the forwarding postmaster would add a second rate of 9*d.*; so that by this process the sender of a prepaid letter would have to pay 1*s.* 3*d.*, and the receiver of an unpaid letter 1*s.* 9*d.*

It is not the least of the evils of this state of things that a postmaster may not, and very often cannot, know what rates are charged at any other office than his own, so that in many cases it is impossible, even at a regular office, for the sender of a letter to prepay it to its destination.

At most way-offices it is worse still, as letters can neither be forwarded without prepayment to the nearest regular office, nor yet prepaid beyond it.

With such arrangements it must be impossible, in many parts of the country, to send letters at all to the United States by post, as prepayment to the line is a condition to their being forwarded beyond it; and it can seldom be possible (except at the principal towns) to prepay the American postage, though a letter cannot pass through the United States to Europe without being prepaid. We should infer from one of Mr. Howe's letters, and some expressions made use of by one or two of our correspondents, that no collection of American postage upon letters, &c. for the United States is ever made within the lower provinces, were it not hard to believe that the principal object for which the practice of collecting American postage has been resorted to, the securing of a post communication with Europe through New York, can have been so far overlooked.

Rates on newspapers.

The rate at which publishers in the lower provinces are allowed to compound for the conveyance of their newspapers is lower than in Canada, being only 2*s.* 6*d.* per annum for a weekly publication. Upon occasional papers, pamphlets, &c., we believe that the ordinary charges\* are the same as in Canada, but Mr Howe states, that he derives no emolument from any, except newspapers, as the small sums rateable on other printed matter are charged to the offices upon which the same may be mailed.

Department postage and franking.

Among other consequences resulting from the peculiar position of the department in Prince Edward's Island, we find that the civil departments have there the franking privilege, in so far as regards the inland rates of postage.

In Cape Breton, and perhaps elsewhere, letters to or from public departments, and even country officers, are exempted from the perquisite rates there levied. In Nova Scotia, Mr. Howe states, that the departments of the Provincial Secretary, Adjutant-general of Militia, and Treasurer,† have long enjoyed a franking privilege, in consideration of the sums voted by the province in aid of the post-office, Sir James Kempt having in 1827 instructed the Deputy Postmaster-general to cover the correspondence of the two former, and the revenue returns addressed to the latter, with his official frank. With these exceptions, payment of official postage is required in the lower provinces.

Gross revenue of department in lower provinces.

Mr. Howe's returns state only the aggregate collections of letter postage at the several offices within his charge for the three years ended in July 1840; so that we are unable to compare one year with another, or make any calculation as to the tendency of the revenue towards improvement. They show an aggregate collection for the three years of 27,206*l.* 14*s.* 6*d.* currency, or rather more than 9,000*l.* currency a year, exclusive, of course, of all proceeds of local rates appropriated by couriers and postmasters, as to the amount of which, probably not inconsiderable, we have no information. It does not appear what proportion the British and packet postage collected bore to the provincial, though it must doubtless have been considerably higher than during the same period in Canada. The proportional amount paid for official postage we find to have

Proportion of British and packet postage.

\* In Cape Breton and Prince Edward's Island, and perhaps at some way-offices elsewhere, newspapers as well as letters are subjected to the postmaster's extra charge, so often alluded to.

† The Clerk of the Legislative Council of Nova Scotia further states, that official communications to him pass free through the post-office, but to what extent and on what grounds do not appear.

INTO THE STATE OF THE CANADIAN POST OFFICE. 41

have been much less than in Canada. So far as we can ascertain, there was paid in the three years—

Proportion of official postage.

	£.	s.	d.
For civil department postage, about - -	2,997	17	11 $\frac{1}{4}$
For military " " - - -	4,379	7	6 $\frac{1}{4}$
Making a Total of - - -	£. 7,377	5	5 $\frac{1}{2}$

or 27 per cent. very nearly of the whole sum collected. In Canada, for the same period, it was about 43 per cent.

It is apparent, however, that the amount of private correspondence passing through the post in the lower provinces is considerably less in proportion to their population than in Canada. For the three years, the average contribution of each adult to the post-office revenue is shewn, by a table which we have inserted in the Appendix, to have been not quite 10*d.* currency a year. In Canada, it was about 1*s.* 3*d.*; and for the last year of the three, as we have seen, more than 1*s.* 4*d.* currency. Mr. Howe was unable to furnish an estimate of the number of letters mailed in one year within his charge; and therefore we cannot say with confidence what is the average rate of postage on a single letter; but the presumption is, that it must be higher than the Canadian average rate; for though the country as a whole is less extended, and the rates for short distances are in some parts of it lower, they are certainly not lower between the places which have the most inter-correspondence, and the remailing system greatly increases the amount. We have, upon the whole, adopted the conclusion, that the same amount of revenue would indicate a larger amount of actual correspondence in Canada than in the lower provinces.

Less private correspondence than in Canada.

The table we have referred to further shows the average contribution of each adult to be higher for the province of Nova Scotia than for New Brunswick, where, indeed, it is even found to be considerably lower than in Lower Canada,—a result which it is impossible not to ascribe in a great degree to the comparatively small number of places where letters can be posted or delivered. In the four north-eastern countries, where there are more way-offices than in most of the others, and where the course of trade and travel offers fewer facilities for correspondence by private hand, the average is higher (1*s.* 2*d.*) than for any other district of the lower provinces, except the county of Halifax, where alone we find an average (3*s.* 5  $\frac{1}{2}$  *d.*) at all indicative of a town population. In the counties of St. John and Charlotte, where also from the size and commercial importance of the towns, the amount of postage collected should be large, the average (11  $\frac{1}{4}$  *d.* in the one, and 9  $\frac{1}{2}$  *d.* in the other) is hardly that of Lower Canada. For the other five counties of New Brunswick, the worst supplied with offices, it is lower still; the lowest, in fact, we believe, for any district of equal size in British North America. For Cape Breton, where, however, there is much more perquisite postage paid than anywhere else, and for the eight western counties of Nova Scotia, it is between 5*d.* and 6*d.*, and for the five eastern counties about 8*d.* In Prince Edward's Island it is not far from 7*d.*

Less in New Brunswick than in Nova Scotia.

The best consideration we have been able to give to such returns as bear upon the question of expenditure, leads to the conclusion, that from the 27,206*l.* currency received as postage between July 1837 and July 1840, for the several branches of the service, the expenditure has been in the following proportion :

Expenditure of department.

For administration :	Currency.	£.	s.	d.
Salaries, about - -	£. 5,300			
Incidentals - - -	1,350			
		6,650	-	- currency.
For mail conveyance, about - - -		12,830	-	- „
TOTAL - - -	£.	19,480	-	- „

The balance of about 7,720*l.* is thus accounted for by Mr. Howe : he remitted to the general post-office during the three years, 7,453*l.* 3*s.* 8*d.* currency, at a cost of 264*l.* 14*s.* 10  $\frac{1}{2}$  *d.* currency incurred in the purchase of coin.

Remittances to General Post-office, London.

It is scarcely necessary to observe, that these amounts by no means exhibit the real profits, expenses or resources of the department in the lower provinces.

To shew these satisfactorily, it would be necessary to go into farther calculations like those we have made for Canada, a task which our limited information renders impossible.

Department has, in fact, no surplus revenue.

As to the real profits of the department, it is enough to say that the sums paid by the provinces during the three years in aid of its operations have equalled if not exceeded the amount of the Deputy Postmaster-general's remittances to England, so that it can hardly be said that there was any net income at all. We presume that the new arrangement made in 1840 with regard to the grants from Nova Scotia, must have had the effect, since the period to which our returns relate, of very much lessening these remittances, perhaps of putting a stop to them altogether.

The real expenses of the department for mail conveyance exceeded the sum above mentioned by the amount of the courier's grants and perquisites, which may safely be taken, as we have already shown, to raise them to 21,000*l.* currency. To the expenses of administration, it would be necessary to add the sums received for newspapers, the commission on United States' postage, the perquisite rates levied by keepers of way-offices and by town letter-carriers, and the value of the franking privilege; but on most of these points our information is too imperfect to warrant even a conjectural estimate of their amount.

On this subject, generally, we would direct attention to the details which will be found in the Appendix, remarking only that, so far as we can judge, the number of newspapers mailed bears nearly the same proportion to that of letters as in Canada, though the revenue they yield is considerably less; and that the correspondence of the lower provinces with the United States is less in proportion than in Canada, and therefore contributes less to its indirect resources. The postmaster at St. Andrew's returns his collection of United States' postage for the year ended 30 September 1840, at 1,404*l.* 16*s.* 7½*d.* currency, which is less than one-eighth of the amount collected within the same year in Canada; while the ordinary letter postage revenue of the lower provinces for the three years ending in July 1840, was more than one-fifth of that of Canada, exclusive, indeed, in both cases of official postage, more than one-fourth.

Newfoundland

There is but one post-office in Newfoundland, at St. John, the capital town of the province. A despatch addressed to the late Lord Sydenham by the late Governor, Captain Prescott, which has been referred to us for our information, and which we have inserted in the Appendix, states that the Postmaster, Mr. Solomon, holds his appointment direct from the Postmaster-general, and is allowed by the general post-office a salary of 100*l.* sterling a year. Till last summer the appointment was a provincial one, and its entire emoluments (some 30*l.* or 40*l.* per annum) were derived from certain extra charges on letters and newspapers, authorized by the Governor. Communication is kept up with Halifax by packet-vessels, which meet the steam-ships to and from England, and occasionally letters are sent by other vessels. But there is no inland post conveyance whatever, and Captain Prescott states that the greater part even of the correspondence which passes by mail to and from Halifax and Great Britain is official.

and Bermuda post-offices.

In Bermuda, as we are informed by a similar despatch from Governor Reid, which also will be found in the Appendix, two attempts have been made to establish a local Post-office department by provincial legislation, but the only internal communication established in consequence is between St. George's Island, the landing-place of the English mails, and the central town of Hamilton.

At the former of these places there is a Deputy Postmaster-general appointed, as we understand, by the Postmaster-general, and at the latter a postmaster, whose office was established by provincial enactment. These two officers share between them the proceeds of the inland rates, and the Deputy Postmaster-general has, besides, a salary of 70*l.* a year.

The province further makes them a trifling grant for conveying the mails backwards and forwards.

A line of Halifax packets, in connexion with the steam-ships, keeps up a regular communication to and from the islands.

Leading defects of present system.

The Post-office department in British North America is marked by two leading defects in its constitution—the want of uniformity in the principles upon which it is conducted by two Deputy Postmasters-general of co-ordinate and independent authority, and the absence not only of responsibility to the executive or representative authorities in the colonies, but of all real responsibility to the head of the department in England.

Want of uniformity.

In proof of the first of these propositions, we have only to refer to our statement of the incongruous practices prevailing in Canada and the lower provinces.

The

The commissions and instructions under which the Deputy Postmasters-general act, do not recognize the existence of any local authority to whom they are to report their proceedings, or from whom they are to receive directions. In these documents the Deputy Postmasters-general are regarded as the mere agents of the general post-office, to which all their reports are to be sent, and from whence all orders emanate. In certain exceptional cases, such as the late troubles in the Canadas, the Deputy Postmaster-general may have been directed to place himself, for specified purposes, under the orders of a provincial Executive. Of late years, also, the rule by which he was forbidden to communicate information on the state of the department to committees of the several legislatures has been relaxed or rescinded. Occasionally we have seen that under some peculiar circumstances an Executive or a House of Assembly has influenced, to a certain extent, the action of the post-office. In Nova Scotia, where this influence has most prevailed, although, from a variety of causes, it operated very anomalously, it cannot be denied that it had the effect at least of putting the department on a better footing, and rendering it more popular than in New Brunswick, where, though under the same administration, this sort of influence has been but little felt. Of the provinces of British North America it may be observed generally, that in practice there has been somewhat more intercourse between the Executive and the post-office authorities than the theory would suggest, but it has always been of an irregular and unsatisfactory character.

Deputy Postmaster-general not responsible to provincial authorities.

The responsibility to the head of the department in England, however complete in theory, in practice is little better than nominal. The ordinary proceedings of the provincial post-office are almost unknown to the Postmaster-general, and upon questions of graver importance and more unusual character, the decision of the imperial authorities must be mainly influenced by the report of the Deputy Postmaster-general, even though they affect his own pecuniary interest, the extent of the business of his office, or the manner in which he executes his functions.

Nor yet effectively responsible to Postmaster-general in England.

All applications and complaints are addressed to the Deputy Postmaster-general, and, in the majority of cases, finally determined by him. Whenever an appeal is made from his decision, the Postmaster-general is placed by distance and untoward circumstances in a false and embarrassing position. He has no officer whom he can send to investigate the circumstance on the spot, nor any independent means of inquiring into disputed facts or alleged grievances. There is evidence that, in this respect, the condition of the department has not been considered satisfactory, in the fact that, since the appointment of this Commission, the Postmaster-general has seen fit, on more than one occasion, to refer to us for our report on recommendations sent to his Lordship by the Deputy Postmaster-general.

We beg leave also to refer to two series of correspondence in the Appendix, as evidence of the working of the system. The first arose out of a robbery of the mail in the year 1835, on which occasion a letter covering a remittance of money addressed to Mr. Benjamin Brewster, of Montreal, was stolen, along with the other contents of the mail-bag. The contractors, whose carelessness had afforded to the guilty parties the opportunity of committing the robbery, became liable by the terms of their contract to make good the whole of the loss. They settled the matter by the payment of a round sum to the Deputy Postmaster-general, out of which Mr. Brewster received the amount of his loss without interest, and nearly the whole of the money he had expended in seeking to recover it. The robbery was committed on the 17th February 1835; the money was paid by the contractors on the 23d May 1837, and Mr. Brewster received his share on the 28th May 1838. Some portion of the correspondence, which extends over a period of more than three years, are of an unpleasant and irritating character; and without intending to impute blame to either of the parties, we think it deserving of attention, as showing in how dilatory and unsatisfactory a manner such proceedings in the present condition of the department must necessarily be conducted.

Examples of this.

Mr. Brewster's case.

The other series relates to a matter of greater importance, to which in another part of this report we have briefly alluded. In the year 1840 an arrangement was suggested to the Deputy Postmaster-general, with the object of relieving Mr. Porteous, the postmaster of Montreal, from duties which were becoming too onerous for a gentleman of his advanced years and infirm health.

Recent appointments to surveyorships.

In the absence of a fund for providing retired allowances for old officers of the department, it was proposed that the nephew of Mr. Porteous, then post-office surveyor in Upper Canada, should be promoted to the post-office in Montreal, with an understanding that his uncle should receive an allowance for life out of the emoluments of his new situation. Under the peculiar circumstances of the case, the Deputy Postmaster-general consented to this arrangement, feeling, however, that the proceeding was somewhat irregular, and one which must not be used as a precedent hereafter. Mr. Andrew Porteous consequently resigned the postmastership of Montreal, and Mr. James Porteous the surveyorship of Upper Canada. To the vacant surveyorship thus created, Mr. Stayner appointed his own nephew, Mr. Edward Freer. These appointments, having been submitted to the Postmaster-general, were sanctioned by his Lordship in a letter dated 19 October 1840.

It appears, however, that up to the present day (December 7th, 1841), Mr. Freer has never entered upon his duties as surveyor, but continues to act as clerk in the Deputy Postmaster-general's office at Quebec.

On the 6th January 1841, Mr. Berczy, the postmaster at Toronto, was appointed temporary and "resident surveyor," and is entitled to receive the salary of that office up to the 15th June, on which day Mr. Richardson, the postmaster at Brantford, was selected in place of Mr. Berczy, to perform Mr. Freer's duties.

The opinion we formerly expressed on the appointment of Mr. Berczy to this important office has only been strengthened by time and mature reflection. The phrase "resident surveyor," has always appeared to use little less than a contradiction in terms; and so indeed it must have appeared to Mr. Stayner, for before he appointed Mr. Richardson to the temporary office of acting surveyor, we find him insisting on Mr. Richardson's procuring a temporary substitute to perform the duties of acting postmaster at Brantford. So also it must have appeared to Mr. Berczy, who acknowledges in his letter of the 15th June that the public service was suffering detriment from the arrangement of the preceding January: "There are," he says, "many applications for new offices that I think should be attended to without delay." We observe, also, that whilst Mr. Berczy at Toronto was nominally holding the situation, Mr. Richardson was, on more than one occasion, withdrawn from his post-office at Brantford to perform some of the real duties of surveyor to which Mr. Berczy was unable to attend.

A letter on this subject addressed to the Commission by the Deputy Postmaster-general will be found in the Appendix. To that letter we must refer for the explanation of the views with which these proceedings were adopted. Mr. Stayner has declined laying before us his correspondence with Mr. Berczy, on the ground that it was of a private nature. The final arrangements with Mr. Richardson were conducted orally, and we are therefore unable to state whether Mr. Muirhead, the present acting postmaster of Brantford, is or is not the assistant in Mr. Richardson's office, to whom Mr. Stayner's letter of the 15th June alludes. It has been thought right to conceal from the Postmaster-general all knowledge of the facts that occurred since his Lordship's approval on the 19th October 1840 of Mr. Freer's appointment. His Lordship has been suffered to remain under the erroneous impression that Mr. Freer is discharging the duties of his office in Upper Canada, whilst in reality he is employed as clerk in the post-office at Quebec, and in utter ignorance of the arrangements by which for nearly a year the important duties of surveyor have been irregularly and imperfectly discharged. This concealment appears to us to be contrary to the spirit, if not the letter, of the Deputy Postmaster-general's instructions, which require that he shall, by the first opportunity, "acquaint the Postmaster-general with all the appointments he shall make on the death or removal of any of the deputies" (postmasters).

The Postmaster-general has not been informed of the removal of Mr. Richardson from Brantford, or the appointment of Mr. Muirhead to that office. In the year 1828, when those instructions were issued, the office of surveyor was not in existence; had it been in existence, we cannot doubt that it would have been expressly named in the instructions, and the Deputy Postmaster-general's power of appointment to it subjected to the same regulations as in the case of postmasters.

The distance, it is true, might have rendered it difficult, impossible perhaps, to obtain the Postmaster-general's sanction of all the temporary arrangements  
detailed

detailed in the correspondence ; but that has been one of our chief reasons for dwelling as we have done upon these facts. We think it a forcible argument for the recognition of some provincial authority to which matters of this kind might be conveniently referred, in order that arrangements, calculated to promote the efficiency of the department, may be sanctioned without delay, and that such as might appear irregular in practice, unjust in principle, or likely to prove injurious to the service, may be immediately forbidden.

A department constituted in the manner we have described could scarcely have escaped unpopularity. Power, however purely exercised, if subjected to no popular control, and to but little check of any kind, will always be liable to suspicion. Concealment creates jealousy and distrust, but if to this we add the fact that from some of the colonies, the Canadas especially, a large surplus revenue has been annually remitted to England, the public dissatisfaction will appear natural enough, even though the expediency of the changes we are about to recommend should not be admitted.

It has been already stated that in the year 1834 a Bill was prepared in England, under the direction of the Postmaster-general, for the purpose of remodelling the post-office in these colonies ; amongst other provisions contained in that measure, it was proposed to form the whole of British North America into one charge, and the surplus revenue, instead of being remitted to England, was to have been distributed in certain proportions amongst the several provinces. Had it passed into a law, the effect of that measure would have been to remove some, but not all, the defects of the present system ; but it was prepared unfortunately with a view to its being submitted for enactment to each of the colonial legislatures, an error sufficient in itself to have rendered the success of the project almost impossible.

There was an admitted necessity for uniformity in the leading features of the system, as well in its relations with the several provinces as with the other parts of the empire ; but it was too much to expect that all those independent, not to say conflicting legislatures, each more or less ignorant of the subject, and some influenced by no friendly spirit, would have agreed upon all the details of a very complicated plan. When colonies begin to legislate, one of their first impulses is to make even an unnecessary display of independence by acting to the full extent of their powers, and we have seen accordingly that in every province where the subject was taken up at all, the Parliament evinced a strong desire for an independent post-office, overlooking in their love of self-assertion, all the obstructions, incongruities and extravagance which must necessarily be produced by a conflict of many provincial departments, each having separate officers, accounts, contracts, rates and regulations of its own. The result of this attempt has already been described—it failed completely ; but even if it had succeeded, the proposed measure was calculated to afford only an incomplete remedy for existing defects, whilst on the other hand it would have introduced difficulties from which the present system is free. To erect a post-office which in each particular colony would be the creature of its own legislative act would have been an admission that the paramount authority is vested in the provincial government, whilst the details of the measure inconsistently denied to them the smallest share of practical control over the administration of the department. No single legislature, notwithstanding the concession of this important principle, could have introduced further changes, however necessary in a system the very existence of which depended on its unbroken uniformity throughout the whole of the provinces. The head of the department, with enlarged authority, would have become more independent than ever of provincial control. He would, it is true, according to the letter of the law, be still subordinate to the Postmaster-general, but the authority of the latter would have been impaired, and the control which he is supposed to exercise, virtually abandoned in principle, would soon have become perfectly illusory in practice.

The fact, however, that the imperial authorities had consented to the principles of the Bill of 1834, is one the importance of which we cannot but estimate very highly, inasmuch as by encouraging the hope that the Government will not now refuse to confirm the generous sacrifice of income it was then prepared to make, it emboldens us confidently to recommend the adoption of some of the leading ideas embodied in that liberal though unsuccessful measure. It has almost ceased to be a question with us, whether, with a view to the remodelling of the provincial post-office, the Imperial Parliament should divest itself of any portion of its functions in favour of the provincial legislatures. We see no reason to

Necessary unpopularity of such a system.

Bill of 1834 right in proposing one Deputy Postmaster-general only, and the relinquishment of the surplus revenue ;

but otherwise in error.

Importance, however, of concessions then intended.

Provincial legislation not called for ;

and probably, in-

doubt

deed, no legislation at all.

doubt that the whole, or nearly the whole, of a satisfactory plan might be arranged by the Lords of the Treasury and the Postmaster-general, and carried out by their authority alone, under the extensive powers in relation to colonial matters, already conferred upon them by the Act of the 3 & 4 Vict. ; but at the same time we are of opinion, that the time is now come when the Postmaster-general should consent to transfer to the executive authorities in the provinces some portion of that administrative control which, in his hands, is little better than nominal.

The remedy simple.

We do not conceal from ourselves that the question is surrounded by difficulties ; but much consideration of its tangled details has led us to adopt a very simple view of the subject, which we venture to submit as that to which there are the fewest serious objections, and which we think the best calculated to meet the wishes of those who desire to see the efficiency of the department increased, and its popularity restored by means of safe and feasible reforms.

Deputy Postmaster-general should be placed under the Governor-general's orders.

It has appeared to us, that the mere introduction of a few sentences into the commission and instructions of the Deputy Postmaster-general, requiring him to obey in all things lawful the orders of the Governor-general, as well as those of the Lords of the Treasury and the Postmaster-general, might be made the means of providing all needful subordination to provincial authority. The effect of this alteration would be to confer upon the Governor-general a sort of concurrent jurisdiction (if we may use that phrase), which could never by any possibility clash with that of the authorities at home, or impede the uniform working of the system, but would subject that officer to a real, because no longer a distant, responsibility, and introduce some measure of popular control, by making the local administrations answerable politically for abuses in the direction of the post-office.

Precedents for such an arrangement.

The introduction into the Deputy Postmaster-general's commission of a clause of this sort, though a novelty as regards the post-office, is not without precedent in other departments, subordinate as the post-office is to the Lords of the Treasury, or to the Secretaries of State. By a commission now before us, dated 13th November 1826, appointing John Davidson, Esq., Surveyor-general of Woods and Forests in Lower Canada, he is required "to follow such orders and directions as he shall from time to time receive, relating to the execution of the said office, from our said Commissioners of our Treasury for the time being, or from one of our Principal Secretaries of State, or from our Governor or officer administering for the time the government of our province of Lower Canada ;" and throughout the instructions of the same date, addressed to that gentleman, he is strictly enjoined, in nearly the same words, to obey all such orders and directions. A similar clause is contained in the commission of Mr. William Bowman Felton, the late Commissioner of Crown Lands for Lower Canada, and of Mr. Peter Robinson, late Commissioner of Crown Lands and Surveyor-general in Upper Canada.

There is also something analogous to this in the relations subsisting between officers of the Commissariat and the military authorities at their respective stations. Although the Commissariat is a branch of the Treasury, we believe that no difficulty arises from its being continually placed under the orders of officers whose authority emanates from the Horse Guards.

Arrangements for the lower provinces.

If this suggestion shall be deemed worthy of adoption, there is, in the fact that the administration of the Governor-general extends practically over Canada only, a difficulty to be obviated ; but it is one to which we have not omitted to turn our serious attention, and which we have not found insuperable. We would suggest that it should form a part of the working of the system, that the Governor-general should direct the Deputy Postmaster-general to defer to the wishes of the Lieutenant-governors of the lower provinces in all matters properly belonging to their respective governments, and not at variance with any principle, which, for the sake of uniformity, it might be essential to maintain. The Deputy Postmaster-general should give corresponding instructions to the surveyors for Nova Scotia and New Brunswick, and in this way all matters of minor import might be settled between the resident surveyor and the provincial government, and only those of greater consequence would require to be referred by the Lieutenant-governor to the Governor-general, or by the surveyor to the Deputy Postmaster-general. The Deputy Postmaster-general would become an administrative officer, with authority over the whole of British North America, but with responsibility equal to his power, and corresponding to the local extent of his authority. The several provincial governments would, to a certain extent, control his movements, and thus the post-office would be brought under

General working of the proposed system.

under some such parliamentary superintendence as applies to other departments, without rendering the Deputy Postmaster-general what, as an officer acting in more provinces than one, he could not be, the public servant of any. The patronage of the department might thus be placed in the same hands, and under the same conditions and limitations as other patronage. The whole arrangement would require only an official correspondence between the secretaries of the different provinces and the Deputy Postmaster-general, or his surveyors, which would not cause any material difficulty or inconvenience.

The relations existing between the department and the post-office authorities of the United States could not, it is true, be maintained under the proposed system; but as essential changes in those relations are required on other grounds (which it will presently be our duty to state), we cannot admit that this forms a solid objection to the project. The anomalous arrangement by which several officers of the department have become the paid servants of a foreign government, cannot, we humbly think, be suffered longer to continue.

It might probably be found necessary to the successful working of the proposed system, that the establishments of the Deputy Postmaster-general and the accountant should be permanently fixed at the seat of government in Canada.

The Deputy Postmaster-general's and Accountant's offices should be at the seat of Government in Canada;

We are aware of some plausible reasons which may be urged in favour of keeping these establishments at Quebec; speaking with reference to the whole of British North America, Quebec is more central than Kingston; it is nearer to the lower provinces, where, for some time to come, great changes of system and much attention to its working will be required. Quebec is moreover the terminus of the steam communication direct with England, and the place where the English mails to and from Canada are made up. But these considerations do not appear to us at all decisive of the question. The constant presence of a very active and intelligent postmaster is all that is absolutely required for these objects. The making up of the English mails is essentially a postmaster's duty, and if necessary, Quebec might also be made the usual residence of one of the surveyors. On the other hand, the easy communication of the head of the department with the Governor-general and his secretaries appears to us a much more vital consideration than any object that could possibly be gained by his permanent residence at Quebec. Such communications cannot be too prompt, frequent or unreserved; were they to pass by way of letters between Kingston and Quebec, one of two things must speedily happen,—they would become too infrequent to have the desired effect upon the post-office administration, or else create intolerable delays. In either case the effect would be the same, to reinstate the old irresponsible system; and so, by the disappointment of reasonable hopes, to increase the discontent of the community.

Halifax and Fredericton might each be the usual residence of a surveyor, who would be allowed an office and one or more clerks, in order to render the official correspondence with Nova Scotia and New Brunswick as easy as possible.

And Surveyors' offices at Halifax and Fredericton.

Five surveyors in all would probably be required, one for New Brunswick and Prince Edward Island, one for Nova Scotia, and three for Canada. The present division of Canada into two surveyors' districts allots, we think, too large a share of labour to those officers. The addition now proposed would allow of one of the surveyors spending a great part of the year at Quebec.

Number of surveyors.

Some increase in the force of the Deputy Postmaster-general's immediate office would be required. Perhaps one additional clerk might suffice, as the appointment of the surveyors for the lower provinces would materially diminish the amount of correspondence which the Deputy Postmaster-general would otherwise have to conduct. If some further increase in his establishment be found necessary hereafter, it is among the advantages of the plan we propose, that such necessity would be easily decided upon by competent and impartial authority, and the assistance granted without delay.

Force of Deputy Postmaster-general's office.

The propriety of removing the accountant's establishment to the seat of government is based upon the same grounds. He also should be required to receive orders from the Governor-general; and he certainly ought not to be placed in any way under the orders or direct control of the Deputy Postmaster-general, whose accounts he is charged with auditing. We do not consider this the fittest opportunity for going into a detail of the changes desirable in the routine duties of the accountant's branch; but we may observe that his present force of two clerks is by no means adequate to the discharge of the new duties which

Accountant should also be under Governor-general's orders, and not under Deputy Postmaster-general's.

Increase of his establishment.

which would devolve upon him on the completion of the arrangements we have the honour to recommend.

No revenue to be remitted to General Post-office, London.

We have already intimated an opinion, that no remittance of surplus revenue should hereafter be exacted by England from the provincial office. This is a point on which the public wishes have been so decidedly expressed, that we should have no hope of any arrangement from which this principle was excluded, being satisfactory to the people of British North America.

Arrangement on this head proposed in 1834.

Difficulties in the way of its being carried out.

The Bill of 1834 proposed to divide the surplus amongst the provinces, in proportion to the gross amount of postage collected in each; and in the case of a deficit, to require contributions in the same proportion. We see no objection to this proposal on the score of fairness; but we should apprehend great practical difficulty in carrying out any measure that assumes either surplus or deficit as a matter of ordinary occurrence. On the one hand, if the provincial legislatures are to be taught to look to the post-office as a source of revenue, the temptation to undue interference with the department becomes great, and there will be much difficulty in satisfying all the provinces that it is properly administered. Every increase of expenditure in one quarter of the country will be so much visibly taken from a revenue in which the others were entitled to share. In one province it may happen that a larger revenue is desired; in another a more liberal measure of post-office accommodation; a reduction of rates in a third. But if, on the other hand, a deficit is to be a thing of ordinary occurrence, the difficulty will be still greater and more immediate. Vexatious and injurious delays are to be apprehended at the very time when the money is most wanted; and we are not aware of the existence of any security by which so great a mischief may be prevented. It is scarcely necessary to point out the unpopularity which such demands upon the public purse must needs create, or the solid arguments which might be urged against any measure which would involve the necessity of having recourse to them.

The post-office should support itself, but not yield a revenue.

But if we suppose a middle course to be taken, by which the revenue and expenditure of the department shall be brought to correspond as nearly as possible, some local jealousies, it is true, might still be felt, but it would be in the power of the provincial authorities to secure, by careful surveillance, such a judicious system of management as would prevent all well-founded complaint, and eventually satisfy the public mind.

We are convinced that in a new country where correspondence is limited, and its conveyance therefore costly, the true principle is that, which would make the post-office simply a self-sustaining institution, contributing no revenue for general purposes, and asking no aid from general taxation. On the one hand, no worse tax for purposes of revenue can be devised; and on the other, it is clear that if there be at any time in the public chest more money than the establishments of the country require, a better use might be found for it than applying it to the mere conveyance and handling of letters, by expending it in the improvement of the roads along which they travel; for such improvements benefit the country, as well in its general business and intercourse as in the increase of its post accommodations. The truth of this principle is felt and acted upon in the United States.

Some of our correspondents have formed extravagant hopes from the expected surrender for provincial purposes of the surplus revenue, under the idea that it would be sufficient, or might be made sufficient, for the accomplishment of great improvements in the roads or other internal communications. Some, again, are disposed so to cut down the rates, and to incur such large expenses withal, as to render necessary new taxes for the maintenance of the post-office. But we set aside all such suggestions as inapplicable and extreme. We are of opinion that the postage rates should be so fixed as always to yield income enough, and never much more than enough, to provide liberally for the expenses of the department. If the calculations be carefully and prudently made, there will be no great risk of a deficit on the one hand; whilst on the other, increased facilities and accommodation, or a still further reduction of rates, may be introduced as the income improves.

Present rates universally felt to be too high.

It is felt almost universally throughout these colonies, that the existing rates of letter postage are too high. From every province, and almost from every district of British North America, we have received strong remonstrances against the continuance of the present scale; and how much soever our correspondents may differ as to details, it will be seen from the Appendix, that whether the question be

be treated as affecting the revenue of the department, or the social and commercial interests of the country, they concur generally in urging the necessity of some considerable reduction. The extent to which correspondence is repressed by those high charges must be mere matter of conjecture; but as a chief inducement to the illicit traffic in letters, some idea may be formed of their injurious effect upon the revenue from the following statement, abridged from communications addressed to us by persons of respectable station resident in all parts of the country. The printed correspondence will shew that the names here given are but a selection.

Great amount of correspondence carried on every where otherwise than by mail--

From the western section of what was lately Upper Canada, Colonel Furlong, the officer commanding on the frontier, and stationed at Amherstburg, writes, that letters are there forwarded by private hand on all occasions. Mr. Jones, the registrar for the county of Kent, writes from Port Sarnia, that the letters sent privately within the district (the western) are about one-third of its unofficial correspondence. Mr. Ermatinger, the postmaster of St. Thomas, in the adjoining district of London, estimates them for the route between Quebec and the head of Lake Ontario at nearly one-half of the whole correspondence. Mr. Wilkes, a lawyer residing at Brantford, in the Gore District, thinks, that for the whole province they form at least the half of all letters actually sent. From Hamilton, Mr. Ritchie, the postmaster, and Mr. Ferrie, the late M. P. P. for the town, speak of the almost universal prevalence of the practice.

In Western Canada.

In Gore district.

On the Niagara frontier, Messrs. Hepburne, Stayner and Davidson, the postmasters at Chippawa, Queenston and Niagara, speak of their number as very great. And Mr. Rykert, late a member of the Parliament of Upper Canada, residing at St. Catherine's, thinks them at least equal to those mailed.

In Niagara district.

Mr. Howard, the late postmaster at Toronto, now resident at Trafalgar, thinks that, exclusive of letters franked by postmasters, those sent by private hand equal the number mailed.

In Home district.

Similar opinions are expressed by persons residing at Toronto: by Mr. Berczy, the postmaster, the Honourable John Macaulay, late postmaster at Kingston, the Reverend J. Roaf, Mr. Hawke, the emigrant agent, Messrs. J. S. Baldwin, J. D. Harris, and others; as well as from the country lying behind Toronto, by Captain Steele, M. P. P. of Medonte, and Mr. Hamilton, the postmaster at Penetanguishene.

Mr. E. Perry, a merchant of Cobourg, is of opinion that five-sixths of all the letters passing between places on the lake shore, in summer evade the mail. Messrs. Ferguson and Sandford, of Peterborough, in the rear of Cobourg, the latter the postmaster of the place, represent the proportion there as very large at all seasons. Mr. Bockus, late member of Parliament for the county of Prince Edward, on the Bay of Quinté, writes from Pictou, that not more than half the correspondence of that place is carried by mail; and the Baron de Rottenburg, an officer stationed at Belleville, also on the Bay of Quinté, says, that in that neighbourhood, in summer, the greater part is carried privately by the steam-boats.

And throughout other districts on Lake Ontario.

Mr. Harper, the cashier of the Bank of the Midland District of Kingston, estimates the letters sent by private hand at full one-fourth of the correspondence of the country. Mr. H. Lusher, of Bath, in the same district, thinks, that in summer it amounts to as much as one-half of the whole.

Messrs. Jones and Wood, the postmasters at Prescott and Cornwall, estimate the amount of correspondence sent by private hand, on the route between Quebec and Toronto, the former at one-third, the latter, as far at least as regards business letters, at more than one-half.

In Eastern districts of Upper Canada bordering on the St. Lawrence.

From the districts bordering on the Ottawa, Mr. Pridham, postmaster at Grenville, writes, that he thinks there is more illicit correspondence on the route between Montreal and Bytown than on any other; and Mr. Stevenson, the collector of timber dues, and agent of the Midland District Bank at Bytown, and the Honourable A. Grant, of L'Original, both testify to the great extent to which the practice prevails in their respective neighbourhoods.

And in districts lying on the Ottawa.

The Board of Trade of Montreal give it as their decided opinion, that much less than half the correspondence of the country goes by mail. Mr. Castle, of the City Bank, speaks of the immense amount of correspondence that evades the mail on every route. Mr. Dunscomb, the M. P. P. for the county of Beauharnois, thinks that in summer nineteen-twentieths of all the correspondence

In districts between Montreal and Quebec.

between

## 50 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

between Quebec and Montreal, and one-half on all other routes, is by private hand, in winter perhaps not more than one-eighth. Messrs. Dougall, Stephens, Young, Gethings, Sheppard, and many others in Montreal and elsewhere, all agree in stating the illicit conveyance of letters between Quebec and Montreal to be far more than the mail; and Messrs. Wilson and Cullen, the superintendents of the news-rooms of the two cities, through whose agency most of this correspondence was carried on, give a variety of details establishing the fact in a very decisive manner. The contract, however, for the conveyance of the mail in steam-boats made during the last summer has much lessened this evil, but we are unable to say exactly to what extent.

Eastern town-

From the eastern townships the accounts are more conflicting. Some of our correspondents represent the amount of private conveyance of letters in their neighbourhood as very trifling; others again state the reverse. Colonel Nickle, an officer commanding on particular service, and stationed at Hatley, says the number of letters passing otherwise than by mail is immense on all routes. Mr. Fraser, the Commissioner of the British American Land Company, stationed at Sherbrooke, thinks the proportion large. Mr. Rea, of Compton, a postmaster and magistrate, with extensive means of information, says one-half of all letters in the townships are carried otherwise than by mail. The Reverend Mr. Balfour, of Shefford, makes the amount two-thirds.

And below Quebec.

Below Quebec, the Honourable A. Dioune, of Kamouraska, on the main route to the lower provinces, says the number is very great. The postmaster at Carleton, in the district of Gaspé, Mr. Meagher, and the Grand Voyer of the district, Mr. M'Rae, represent that in summer the great bulk of the correspondence of the district with Quebec, and places above it, passes by coasting vessels.

In Western counties  
of New Brunswick.

It is from the lower provinces, however, that we have received the most startling statements. The postmaster at Woodstock, New Brunswick, Mr. English, thinks that full one-half of all the correspondence of the province is by private hand, and Mr. M'Connell, a member of the provincial Parliament, also resident at Woodstock, agrees with him in that opinion. Mr. G. F. Williams, of the same place, raises the estimate to two-thirds; Mr. Phair, the postmaster at Fredericton, places it at nine-tenths; Mr. A. Scott, of the same place, at three-fourths for the whole western section of New Brunswick; Assistant Commissary-general Robinson, at three-fourths between Fredericton and St. John; Mr. L. A. Wilmot, Queen's Counsel, at 10 to 1; Mr. J. F. Smith, at 20 to 1; and Mr. Asa Coy, at 99 to 1, still between the same two places.

The Honourable G. F. Street, of Fredericton, solicitor-general for New Brunswick, and Mr. G. Wheeler, advocate of St. John, speak of the practice as universal. The Honourable W. B. Kinnear, recorder of St. John, and a member of the Legislative Council, is satisfied that 11-12ths of the law correspondence in the province is carried on by other than mail conveyance.

Messrs. James Whitney, Isaac Woodward, M. P. P., and W. H. Street, write that three-fourths of all letters in the province, and Mr. L. Donaldson, chairman of the Board of Trade, that at least three-fourths on the routes to Fredericton and St. Andrew's, are thus conveyed.

From St. Andrew's in Charlotte county, on the United States frontier, the Honourable Harris Hatch writes, that in summer two-thirds, and in winter nearly half of all the letters of the neighbourhood pass otherwise than by mail; and his opinion is referred to and supported by several other individuals. One gentleman, the Honourable F. Wyer, goes so far as to speak of this correspondence as in summer 100 to 1, and in winter 50 to 1.

Mr. G. M. Porter, of St. Stephen's, in the same county, says, that three-fourths of the correspondence of that place with St. Andrew's and St. John, the places most connected with it commercially, are sent by private hand.

In Eastern New  
Brunswick.

Mr. Bonnell, postmaster at Gage Town, between Fredericton and St. John, says, that no letters are ever mailed in his neighbourhood, except such as may be particularly important, perhaps one-third of all.

Mr. Vail, postmaster at Sussex Vale, on the main route from St. John and Fredericton to Halifax, thinks that less than one-third of all letters passing on his route go by post. Mr. Milner, the postmaster at Dorchester, on the same route, says, that he thinks the proportion is there about half. The Rev. Dr. Jarvis, of Shediac, on the eastern coast, and Messrs. Rankin and Street, of Miramichi, members of Parliament, with a number of other gentlemen of that place,

INTO THE STATE OF THE CANADIAN POST OFFICE. 51

place, concur in fixing the proportion for that section of the country at two-thirds.

From Halifax less is said on this subject than from most other parts of Nova Scotia; but Sir R. D. George, the late provincial secretary, the Honourable H. Bell, of the Legislative Council, and Deputy Commissary-general Hewetson, speak of the proportion of letters not sent by mail as large. The Honourable S. G. W. Archibald, late Attorney-general and Speaker of the Assembly, says, "An immense number of letters is carried by coasting vessels, and also by land travelling, by waggons, stage-coaches, and other conveyances." The Honourable Joseph Howe, the present Speaker of the House, says, "Every boat and coasting-vessel carries letters, so does every teamster and passenger in a stage-coach; the number so conveyed must be enormous."

In Nova Scotia.

Messrs. Dimock and Smith, members of Parliament, residing in Hants county, Mr. Beckwith, another member, living in the county of King's, and Messrs. Ratchford and Hutchinson, the postmasters of Parrsborough and Kentville, also in King's county, rate the proportion in their neighbourhood at about half. Mr. Morton, late a member of Parliament, writes from Cornwallis, in the same county, that the correspondence from the interior is nearly all by private hand.

Counties of Hants and King's.

Mr. Chipman, M. P. P. of Laurencetown, in Annapolis county, rates the letters not sent by mail at two or three to one.

Western counties.

Mr. Gates, M. P. P. of Annapolis, says, they far exceed in number those mailed.

And Mr. Cowling, the postmaster of the place, says, they form a large proportion of those sent from Annapolis in the direction of Halifax, and nearly all those sent to and beyond St. John, New Brunswick.

From Digby, Mr. Stewart, the postmaster, writes, that they are 10 to 1 of all letters sent thence to St. John; and Mr. Holdsworth, M. P. P. of the same place, states, that this is the general opinion; adding, that of all letters sent from Digby eastward, and to the United States, they are four to one, and westward, two to one.

Mr. Clements, M. P. P. of Yarmouth, at the western extremity of the Peninsula, a place only second in Nova Scotia to Halifax in the extent of its commerce, says, that a very large proportion of its letters are carried in all directions by coasters. The Messrs. Sargent, of Barrington, on the southern coast, say, that the proportion of letters so sent from that place is 10 or 20 to 1 during the coasting season. And from Lunenburg, about half way between Halifax and Barrington, Mr. Heckman and several other gentlemen write, that the weekly coasting-packet alone to and from Halifax carries on an average 140 letters a trip, while the mail does not average 20.

Few of our correspondents in the eastern counties of Nova Scotia and from Prince Edward's Island say much on the subject; and probably the proportion is less there than in the western.

In Eastern counties and Prince Edward's Island.

Mr. Ross, however, the postmaster at Pictou, states, that more than two-thirds of the correspondence of that place with Halifax is not borne by the mail; and all who allude to the subject in Prince Edward's Island (among others, Mr. Hodgson, the attorney-general,) concur in stating, that less than half the letters passing between the island and the mainland go by post.

It is not easy to say what precise extent of influence the present rates of postage may have in producing this unsatisfactory state of things. Most of our correspondents speak of them as the main cause, and many seem to be hardly aware of the existence of any other. Public opinion, on the whole, we should judge, rather over-estimates its comparative importance.

To what extent caused by high rates.

In many cases it is clear that other causes, such as a want of post-offices, an inconvenient arrangement of office hours, or the infrequency or slowness of the mail, contribute to produce the result. Still the fact remains unquestionable that the rates of postage are every where thought too high, and that this is every where a chief, although not the only cause of so large an amount of correspondence being unlawfully conveyed.

We may add, that the present rates are most inconveniently complex, both in number and amount;\* that they are considerably higher for most distances than those

Present rates too complex as well as too high.

\* Such as 4½ d., 7 d., 11 d., &c.—amounts which could never have been fixed upon, except as a consequence of the sterling rates of 4 d., 6 d., 10 d., &c., requiring to be converted into currency.

## 52 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

those of the United States; that for all distances beyond 500 miles they exceed the rate to England; and that in the lower provinces they are still more complex, because wholly irregular in amount, besides being almost always higher than in Canada.

One uniform rate for all distances impossible.

Many persons throughout these provinces are desirous of seeing one uniform rate for all distances, but, upon considering this suggestion, supported though it be by the practice now in operation in England, and urged upon us by a number of respectable correspondents, we soon became convinced that, in the present condition of the department, we should not be justified in recommending the introduction of such a measure as would satisfy the advocates of the principle. It must be observed that it is not in uniformity alone, but in reduction also, that most of them desire to see some assimilation to the English practice; but if the necessity of preserving the self-sustaining character of the department be admitted, it will soon be perceived that reduction to such an extent is impracticable.

Cases of Great Britain and British North America not analogous.

In perusing the letters in which suggestions of this kind are offered, it has struck us occasionally that the writers have taken a mistaken view of the principle upon which the recent change in England was founded, and have failed consequently to make due allowance for the great difference in condition between the mother country and her colonies. In England the real question was, whether the monopoly of the conveyance of letters enjoyed by the Government ought to be continued as a source of general revenue. As the department yielded a surplus of more than 1,500,000*l.*, no question could have arisen as to the possibility of the country being called upon to contribute by some other tax to the support of the post-office. The Chancellor of the Exchequer did, it is true, think it right to obtain from the House of Commons a pledge that, if necessary, they would vote some new tax to supply any deficiency in the general revenue that might follow from the proposed reduction, because he did not choose to rely upon the calculations promising even an *increase* of general revenue, which were urged in favour of the penny-rate by the ardent supporters of Mr. Rowland Hill's project. But that was a precaution suggested by the state of the finances alone, and not by any apprehensions of such a falling off in the receipts of the post-office as might reduce them below the expenditure required for that service. It never was doubted that the penny-rate would be sufficient to keep the post-office out of debt. But it is our duty to show that in these provinces a great reduction in the present rates would have a very different effect, and must necessarily bring the receipts far below the expenditure of the department.

Mr. Hill stated on his examination by the Committee of the House of Commons in 1838, that the proportion of the cost of conveyance chargeable upon a single letter was in England less than a farthing, and that the expense of the general management of the department chargeable upon a single letter was about the same. He added, that the difference in the cost of conveyance upon a single letter for the longest or the shortest distance was "so trifling as not to be expressible in the smallest coin we have." The last of these three propositions was urged in favour of an uniform rate; the two former went to sustain the theory that the rate should be very low as well as uniform.

We have shown how different the case is in Canada. Here the expense of each single letter is about  $5\frac{1}{2}d.$ ; that is, for conveyance about  $3d.$ , and for management more than  $2\frac{1}{2}d.$  currency; but the lowest rate at present legally established in these provinces is  $4\frac{1}{2}d.$ ; and as the majority of the advocates of uniformity contemplate a rate lower than the lowest now in existence, it becomes almost superfluous to state that the reasoning by which Mr. Hill's views were supported in England is not applicable here. On the one hand, Mr. Hill's arguments in favour of uniformity cannot be applied to the circumstances of a country where the average rate of conveyance is  $3d.$  for each letter; whilst on the other, the income required for the support of the establishment would be annihilated by the proposed *reduction*. Not for the present alone, but for many years to come, we think it unreasonable to expect the establishment here of an uniform rate upon the English plan; and we spare ourselves, therefore, the trouble of making any calculations having that object in view. But we have turned our serious attention to reductions of a different character, such as will not be inconsistent with the self-sustaining character which the post-office ought to

Extent to which reductions can be safely carried.

to preserve, and may probably tend to promote the financial prosperity of the department by rendering it more popular than at present.

The return we have before cited shows the number of single letter charges (exclusive of Halifax packet letters) made in Canada,\* at each of the rates computed for the year ended in July 1840, with the nearest possible approach to precision. The contribution of each rate to the revenue appears to have been as follows:—

Operation of existing scale.

	Currency.		Single Letters.	Currency.		
	s.	d.		£.	s.	d.
For distances under 60 miles	-	-	416,000	7,800	-	-
from 60 to 100	-	-	130,000	3,791	13	4
„ 100 to 200	-	-	510,000	19,125	-	-
„ 200 to 300	-	-	150,000	6,875	-	-
„ 300 to 400	-	-	120,000	7,000	-	-
„ 400 to 500	-	-	30,000	2,000	-	-
„ 500 to 600	-	-	25,000	1,875	-	-
„ 600 to 700	-	-	12,000	1,000	-	-
„ 700 to 800	-	-	500	46	17	6
„ 800 to 900	-	-	5,500	572	18	4
„ 900 to 1,000	-	-	400	45	-	-
exceeding 1,000	-	-	600	75	-	-
TOTAL	-	-	1,400,000	50,206	9	2

The lowest and higher rates are those in regard to which reduction appears most loudly to be called for; the former having the effect of nearly prohibiting correspondence by post for distances under 30 miles, and the latter for all long distances. Only 74,000 rates out of 1,400,000 are charged for distances beyond 400 miles; and of these, a much larger proportion is levied on bulky official correspondence than is the case with the lower rates.

Where most demanding reduction.

The subjoined scale does little more than fix a maximum rate of 1s. 3d. currency for distances over 400 miles, and a minimum rate for those under 30. Its effect upon the revenue, supposing the number of letters unchanged, would be as follows:—

	Currency.		Letters.	Currency.		
	s.	d.		£.	s.	d.
For distances under 30 miles	-	-	277,334†	3,466	13	6
from 30 to 60	-	-	138,666	2,311	2	-
„ 60 to 100	-	-	130,000	3,250	-	-
„ 100 to 200	-	-	510,000	19,125	-	-
„ 200 to 300	-	-	150,000	6,875	-	-
„ 300 to 400	-	-	120,000	6,000	-	-
over 400	-	-	74,000	4,625	-	-
TOTAL	-	-	1,400,000	45,652	15	6

Conjectured effect of proposed scale, No. 1.

Showing a loss of 4,553l. 14s. 6d. on the year's postage. Half of this loss, however, would be at those offices where the postmasters are paid by an allowance of 20 per cent. ; so that 10 per cent. of it will fall upon the postmasters themselves, leaving the loss to the revenue about 4,098l. 7s. 1d. currency.

A considerable increase of correspondence would doubtless take place under such a scale on distances under 30 and over 400 miles, but the intermediate rates are so slightly affected that no material increase could be looked for on them. Indeed the two very important rates of 9d. and 11d. are not touched at all.

The

\* The want of a similar return from the lower provinces obliges us to base the whole of our calculations on Canadian data.

† This number, two-thirds of the whole number now passing for distances under 60 miles, is taken, because if a reduced rate for 30 miles be adopted, twice as many letters are in our opinion likely to be mailed for distances under 30 miles as for those between 30 and 60. At present this proportion by no means holds.

54 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

The next scale proposes to reduce the 9*d.* rate to 7½*d.*, and the 11*d.* to 10*d.*, and would affect the revenue on the 1,400,000 letters in the following manner :—

Conjectured effect of proposed scale, No. 2.			Currency.		Letters.	Currency.		
			s.	d.		£.	s.	d.
	For distances under 30 miles	- -	-	3	277,334	3,466	13	6
	from 30 to 60	- -	-	4	138,666	2,311	2	-
	„ 60 to 100	- -	-	6	130,000	3,250	-	-
	„ 100 to 200	- -	-	7½	510,000	15,937	10	-
	„ 200 to 300	- -	-	10	150,000	6,250	-	-
	„ 300 to 400	- -	1	-	120,000	6,000	-	-
	over 400	- -	1	3	74,000	4,625	-	-
			TOTAL - -		1,400,000	41,840	5	6

making the loss 8,366*l.* 4*s.* 6*d.*, or, deducting the postmaster's share of one-tenth, 7,529*l.* 12*s.* 1*d.* We are not, however, of opinion that the slight reduction it proposes on the 9*d.* and 11*d.* rates would have much effect in the way of increasing the correspondence for those distances, or satisfying the public mind. A reduction of the 9*d.* and 11*d.* rates to 6*d.* and 9*d.*, and of the rate next below them to 5*d.*, is proposed in the next scale :—

Ditto, No. 3.			Currency.		Letters.	Currency.		
			s.	d.		£.	s.	d.
	For distances under 30 miles	- -	-	3	277,334	3,466	13	6
	from 30 to 60	- -	-	4	138,666	2,311	2	-
	„ 60 to 100	- -	-	5	130,000	2,708	6	8
	„ 100 to 200	- -	-	6	510,000	12,750	-	-
	„ 200 to 300	- -	-	9	150,000	5,625	-	-
	„ 300 to 400	- -	1	-	120,000	6,000	-	-
	over 400	- -	1	3	74,000	4,625	-	-
			TOTAL - -		1,400,000	37,486	2	2

The loss (allowing as before stated for the proportion falling on the postmasters) is 11,448*l.* 7*s.* 1*d.* But the salutary effects to be anticipated from a reduction to this extent of the rates for distances between 100 and 300 miles are in our opinion so great, that we think this scale preferable to either of the preceding. The inter-correspondence of the principal towns falls within these rates, and we, therefore, look upon such a reduction as calculated to add very greatly to the number of letters mailed, and to the general popularity of the department. A material objection to the scale in our view, however, is the number of rates it retains. The subjoined scale makes only five, and proposes some further reduction on the shortest and longest distances.

Ditto, No. 4.			Currency.		Letters.	Currency.		
			s.	d.		£.	s.	d.
	For distances under 30 miles	- -	-	2	277,334	2,311	2	4
	from 30 to 80	- -	-	4	203,666*	3,394	8	8
	„ 80 to 200	- -	-	6	575,000*	14,357	-	-
	„ 200 to 300	- -	-	9	150,000	5,625	-	-
	over 300	- -	1	-	194,000	9,700	-	-
			TOTAL - -		1,400,000	35,405	11	-

Reasons for preferring scale No. 4. The apparent loss by this estimate is 13,320*l.* 17*s.* 2*d.* or rather more than one-fourth of the present revenue; but besides the general advantage of its greater simplicity, we are led to think it will not, in practice, prove to be more hazardous than the last. We question whether, for distances under 30 miles, a 2*d.* rate is not likely to yield as large a revenue as one of 3*d.*; and for distances beyond 300 miles, we have little doubt 1*s.* would prove as productive as 1*s.* 3*d.* There is, besides, an obvious propriety in keeping the highest provincial rate perceptibly below the rate, 1*s.* 4*d.* fixed for English letters.

It

\* Assuming that half of the 130,000 letters mailed for distances ranging from 60 to 100 miles are carried less than 80 miles; and half, more.

INTO THE STATE OF THE CANADIAN POST OFFICE. 55

It is to be observed, that according to this scale the rates are lower than those in the United States, an object which for many reasons we think important; they are more easily convertible into American currency than the American rates are into Canadian; and the distances on which they are calculated correspond as nearly as the distances between the principal towns of British North America will allow with those of the American scale, thus materially facilitating the conversion of rates upon letters crossing the frontier. This will appear from a comparison of the two following scales:—

United States Rates.	Proposed British American Rates.
Under 30 miles, 3½d. currency, or 6¼ cents.	Under 30 miles, 2d. currency, or 3½ cents.
From 30 to 80, 6d.           "       10       "	From 30 to 80, 4d.           "       6¾       "
" 80 to 150, 7½d.       "       12½       "	" 80 to 200, 6d.       "       10       "
" 150 to 400, 11½d.     "       18¾       "	" 200 to 300, 9d.       "       15       "
Over 400,           1s. 3d.     "       25       "	Over 300,           1s.       "       20       "

Comparison of it with American scale.

We have not attempted to state in figures the effect upon the number of letters to be anticipated from the adoption of each of the above estimates, not because we have the least doubt of the tendency of a reduction of rates to cause an increase of correspondence by post, but because we are not in possession of sufficient data to enable us to estimate accurately the proportion such increase is likely to bear to the reduction. For the reasons already stated, we are of opinion that the last scale is not more hazardous than a less decisive measure of reduction would be. It is true that it would lead to little increase of official correspondence, as that is very slightly affected by the rate of postage. Nearly all the additional correspondence to be looked for will therefore be unofficial. And, as in Canada, the official postage for the year we have taken for our calculation was nearly half (about 12-25ths) of the gross receipts, and the probable loss on the 1,400,000 letters has been estimated at rather more than one-third of the revenue they may be expected to yield at the proposed rates, it follows that in round numbers the unofficial correspondence of the province should increase about 66 per cent. to sustain the revenue at its present amount. This we are not sanguine enough to expect at first; but we cannot lose sight of the fact that, without any reduction of rates, it rose 20 per cent. for the last year of which we have any return. An increase of 33 per cent. will leave the revenue to be affected only by the falling off in official postage; and this or a greater increase may be confidently anticipated even for the first year of the new system. A few years under the proposed scale cannot fail, in our opinion, to raise the revenue of the Canadian post-office beyond its present amount. We do not hesitate, therefore, to recommend this scale as the one which combines the greatest amount of public advantage with the least risk of loss to the revenue.

Its probable effect on the revenue.

In these provinces, as formerly in England, the charges of postage are regulated in the following manner: All letters weighing less than an ounce are charged, if consisting of one piece of paper, single postage; if consisting of two pieces, double; and if consisting of three or more, treble postage. All letters weighing not less than an ounce, but less than an ounce and a quarter, quadruple postage; if weighing an ounce and a quarter and less than an ounce and a half, quintuple postage, and so on, adding a single postage for every quarter of an ounce. It thus happens, that as to letters weighing an ounce or upwards, weight is the principle which now regulates the charge.

Rates on double and treble letters, &c.

The objections to the present mode of charging letters weighing less than an ounce are stated in the Third Report of the Select Committee of the House of Commons on Postage (p. 43); they are chiefly as follows:

Objections to system of rating by enclosures.

1st. Its unfairness. A letter, which is only an envelope covering a small drawing on tissue paper, pays double, though weighing only a quarter as much as a thick single letter; it is unjust further, because a double or treble letter does not occasion additional labour or expense to the department in proportion to the double or treble postage.

2d. Its uncertainty, as the number of the enclosures can only be guessed at on a hasty examination; whence it follows, that a number of letters being improperly charged, returns of postage are required, which gives rise to a great deal of trouble, both to the department and to the public.

3d. It leads to a close inspection of letters, and is frequently the cause of such as contain bank notes and bills being stolen in their passage through the post-office.

English weight system universally popular in British North America.

Opinion of Postmaster at Toronto.

Objections of the post-office surveyor for Eastern Canada.

Its probable effect on the revenue at present drawn from military postage.

The taxing letters by weight seems to be desired by the inhabitants of these colonies generally as well as by a majority of the postmasters. The opinions of the latter upon this point carry with them much authority ; for there can be no doubt that whatever advantages the public might derive from the change, would be at the expense of some additional trouble to the postmasters in learning the new practice, and at the risk of some decrease in their income as at present collected. Mercantile men and other persons, whose views are most entitled to consideration, advocate with great unanimity the adoption of the English system.

Mr. Berczy, the postmaster at Toronto, writes in the following terms : “ When the system of charging letters by weight was first adopted in England, I thought that it would much increase the labour of the postmasters, and in consequence, from the time that it came into operation have watched its working, and am now (after many thousands of letters rated in that manner have passed through my hands) of opinion, that instead of increasing the labour, it will have a different effect, and that therefore many more letters can be rated in a given time under that than under our present system. However, as to the effect it would have upon our revenue, I am by no means prepared to say ; but being impressed with the belief that it would be otherwise advantageous to adopt it, I cannot but recommend that it be done. One strong argument in favour of it is, that by our present system letters are looked into to ascertain whether they are single, double or treble, which may create a temptation for fraud, or a wish to pry into the affairs of others ; as no doubt persons, but most particularly in small offices, take advantage of the right they have to look into letters, to pry into their contents.”

Mr. Griffin, one of the post-office surveyors, takes a view somewhat different from that of Mr. Berczy, as to the labour which the change would impose upon postmasters, but is not disposed to weigh that minor difficulty against the more prominent advantages of the weight system. He objects to it, however, on account of the great diminution of income it might produce (especially in the item of military postage) if the English scale of weights be adopted, the effect of which, taking the existing scale as the basis of his calculation, he estimates at 4,500*L.*, and taking scale No. 4 as his basis, at 3,109*L.* upon military postage alone. The following table shows the result of his calculations as to the amount of relief which the action of the weight system superadded to each of the four scales would afford to the military departments.

		Loss on Reduction in the Scale of Rates.	Loss on Introduction of Weight System, estimated at 25 per cent.	Estimated Total Loss on Military Postage.
		£. s. d.	£. s. d.	£. s. d.
Under existing scale of rates	-	- - -	4,500 - -	
Under Scale No. 1	- - -	1,963 13 -	4,009 1 9	5,972 14 9
Ditto - No. 2	- - -	3,436 7 6	3,640 18 1	7,077 5 7
Ditto - No. 3	- - -	4,909 2 -	3,272 9 6	8,181 11 6
Ditto - No. 4	- - -	5,563 12 11	3,109 1 9	8,672 14 8

This, however, so far from being in our eyes an objection to it, is rather an additional recommendation ; for we keep constantly in view that these calculations proceed on the supposition that the Imperial Government will consent to abandon the surplus now annually remitted to England from Canada, and we cannot admit that the introduction of a system, in other respects desirable, ought to be prevented by the consideration that the military departments would benefit by it to a larger extent than the civil, or than the people of the province in their social and commercial intercourse. On the contrary, we should rather rejoice in any alterations which would diminish the weight of the sacrifice ; and, moreover, it may have some effect in influencing the determination of the Imperial Government to find that, in adopting the weight system in conjunction with our fourth scale of rates, we propose to reduce the yearly amount of military postage by so important a sum as 8,672*L.* We think with Mr. Griffin that no material loss is to be apprehended from the adoption of the weight system, except on the item of military postage. Indeed, we incline rather to expect a trifling

Would have little or no effect on other post-office revenue.

# INTO THE STATE OF THE CANADIAN POST OFFICE. 57

trifling gain, from the great encouragement it will hold out to the transmission by post of letters with enclosures and small parcels, and of the increased facilities it will afford.

Assuming these our calculations to be correct, the utmost loss in Canada from the adoption of the two changes we propose may be estimated at 9,000 *l.*, a sum which we think it well worth while to risk for objects so important. Of their effect in the lower provinces we can make no precise calculation; but the irregularities which prevail there are so many, and must be so injurious to the financial interests of the department, that we cannot but anticipate a decided increase of revenue from the introduction of the proposed changes.

Probable loss from adoption of scale No. 4, and weight system together.

It will be observed that we have taken for granted that the present payments of official postage will be continued. We addressed a circular on this subject to the heads of departments, civil and military, in all the provinces, and although the introduction of a system of official franking was strongly recommended by many, we do not find a majority of those who replied to our circular in favour of it. The project is certainly not in favour with the public generally. The great objection to it is, that it would so diminish the revenue as to make any reduction of rates impossible. We see no objection to the continuance of the franking privilege as heretofore enjoyed by the public departments in Great Britain, or as was proposed by the Bill \* of 1834, inasmuch as it can never be a material consideration on the score of revenue.

Official franking incompatible with the support of the departments on a proper footing.

The only question is, whether a privilege so unimportant is worth keeping now that the English precedent on which it stood has been abolished. The principle upon which this suggestion is based is fully recognized by a despatch of the 8th February last, addressed by Lord John Russell to the late Governor-general, and which was referred to us for our information and guidance; the following passage extracted from that despatch appears to us almost decisive of the question:

Payment of the official postage sanctioned by late Colonial Secretaries and Lords of the Treasury.

“It has been therefore suggested by their Lordships that provision should be made by the provincial government for the establishment of efficient post-office arrangements on all the main lines of internal communication, for the use of which, when required for military purposes, or for the service of the general government of the North American provinces, payment may be made in the shape of postage from the funds of each office or department of the public service, as is now the practice in this country, in proportion to the correspondence transmitted through the post-office.”

It has been suggested that an exceptional rate for law papers, land patent deeds, and more especially for papers connected with the system of registry in force in Upper Canada and the lower provinces, and now about to commence in Lower Canada, would afford great accommodation to the public, and produce some increase in the revenue of the post-office. One judicious correspondent (Mr. J. S. Baldwin, of Toronto) has entered fully into the question, and suggests a mode by which the interests of the department might be protected against the commission of frauds under cover of the proposed privilege. Mr. Jones, the registrar of the county of Kent, grounding his opinion principally on the correspondence with his own office, writes in the following terms:—

Exceptional rate of postage on certain law papers.

“I have known, on several occasions, the sending of deeds to the office for registry to be retarded many months, with a view to getting a private conveyance, and saving the postage. I have known as many as 13 to be sent in that way at one time, which had been kept in waiting nearly a year, and I know of many others now in waiting.”

Looking to the importance of an efficient system of registration, and to the fact that the expense is one of the few objections which have been urged against it with any colour of truth, we are of opinion that some such plan as that suggested by Mr. Baldwin, but guarded with any further securities that may be required, might be advantageously adopted.

We do not think that the privilege of sending or receiving papers at the reduced

\* It is worthy of remark that this Bill proposed to extend the privilege of official franking very slightly beyond its then limits. Our attention has been particularly drawn to this point by a claim to the privilege which Sir R. J. Routh, Commisary-general at Montreal, has urged on the strength of the provisions of this Bill in behalf of his department as a branch of the Treasury—a claim manifestly untenable, the Bill containing no allusion to any but officers of departments in Great Britain already privileged, and the heads of a few civil departments in the provinces.

## 58 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

reduced rate ought to extend beyond registrars and other persons connected officially with the administration of justice. Keeping in view this limitation, as well as those contained in Mr. Baldwin's letter, we see no reason why the papers in question should be charged a higher rate of postage than may be charged upon pamphlets, magazines and other printed matter of a like nature.

Newspaper postage

The origin of the present rates of newspaper postage, and the circumstances under which they have become a perquisite of the Deputy Postmaster-general, have been described in the earlier pages of this report. This perquisite, however, sanctioned by time, and countenanced by successive heads of the department in England, has given rise to much agitation and well-founded remonstrance in these provinces. The ruling party in the late House of Assembly of Lower Canada, and the proprietors of newspapers in both the Canadas, protested incessantly against what they described as a tax illegally collected for the exclusive benefit of the Deputy Postmaster-general. In Mr. Howe's charge, where, though the practice is the same, the burthen has been lighter by about one-half of the sum charged, complaints have been less loud and general.

We have been at some pains to learn the state of public feeling on this subject, and to ascertain the views and wishes of the publishers themselves.

should cease to be a perquisite.

It is admitted on all hands that the newspaper postage ought not to be a perquisite of office, and on this point we think it only necessary to observe further, that in 1834 this principle was recognized by the Postmaster-general, the Duke of Richmond, and embodied in the Bill prepared under his Grace's direction.

Free transmission of newspapers by post certainly not required by public opinion,

We have reason to believe that the existence of a perquisite so objectionable in many points of view is one of the chief causes, if not the only cause, of the aversion with which the newspaper postage has been regarded. Some of the publishers urge, on a variety of grounds, a claim for the free transmission of newspapers, but they are far from being supported in it by public opinion. It appears, on the contrary, to be well understood by most of our correspondents, that a journalist has no right, any more than other persons in business, to the gratuitous services of the post-office. The usage in England is not generally considered applicable here. It is well known that when the reduction of the English stamp duty was effected in 1836, the penny duty was retained on the express ground that, unless the newspaper contributed somehow to the revenue, the proprietors could have no claim for its free transmission by the post. It is satisfactory to us to have it in our power to state, that amongst the publishers themselves, the majority of those who have answered our circulars regard as untenable the pretensions set up by some of their own class.

nor even by their publishers as a class.

Rate should be reduced to a half-penny a sheet,

But the rate now charged is generally considered too high, and we see no reason to dissent from that opinion. Whether we consider the question as one affecting the interests of the community at large, or those of the department in particular, we think it would be advisable to reduce the rate to a halfpenny on each newspaper, the amount to which it was to have been fixed according to the Bill of 1834.

and pre-payment should cause to be required.

The regulation by which in all cases prepayment of the newspaper postage is exacted is very generally condemned.

It is disrelished by the public, as having the effect of deterring persons from forwarding the newspaper to which they subscribe to a distant friend, by the publishers, to whom it occasions serious losses; and by the postmasters, whom it deprives of the remuneration to which they think themselves entitled for the trouble of sorting and delivering the papers. It certainly is a hardship upon the publishers, who have great difficulty at times in collecting payment from the country customers, and whose losses in that way are much increased by the necessity of advancing money for the postage. They cite the case of a subscriber removing to another part of the country, or not choosing to continue taking in his newspaper. The postage must still be paid in advance by the publisher, but the papers accumulate in the post-office for months, perhaps, before he learns that the name of the person to whom they are addressed ought to be removed from his subscription list. Directions have been given, it is true, to the postmasters to intimate to the publishers as quickly as possible, by returning one of the papers, that they are no longer taken in; but no precaution of this kind can suffice to guard the publishers from loss. The practice of prepayment is, we think, one of the causes, also, of that carelessness in the delivery, and frequent loss of newspapers, upon which complaints have reached us from all parts of the country, and which would be less likely to happen if it was the duty

duty of the postmaster to receive and account for the postage. We are not aware of any reasons for the continuance of a practice so universally unpopular, and so objectionable in many respects.

The above are the principal changes which we would venture to recommend in the matter of newspaper postage, and we see no reason to doubt that if henceforward the money collected be applied to the general purposes of the post-office, if the charge be reduced to a halfpenny on each newspaper, and prepayment be no longer exacted, these improvements will satisfy the public feeling, and tend to redress those grievances of which the publishers have reasonably complained.

The practice in Canada, and most of the lower provinces, as to the transmission by post of printed matter not published in the colony, is of a very anomalous and rather discreditable character. No printed matter coming from England, except stamped newspapers, which go free through the provinces, can pass through the post, unless charged by weight in the same way as letters exceeding an ounce are charged.

Rates on other printed matter.

In the case of English reviews, magazines and pamphlets, it is scarcely necessary to say that such exorbitant demands act as a complete prohibition. But the pirated American editions of these publications, which, by law, are contraband, and would be seized if it was attempted to pass them through the *custom-houses*, are freely sent through the post-offices on payment of a moderate sum, from which, however, as it is one of the Deputy Postmaster-general's perquisites, the public derive not the least advantage. Original American works which are not contraband, but chargeable with a duty of 30 per cent., are likewise freely transmitted by the post, on payment of the Deputy Postmaster-general's perquisite, to the manifest injury of the revenue, which is thus defrauded of the duty. The public have not complained much of irregularities, however gross, by which they have been enabled to purchase literature at a cheap rate; but our attention having been drawn to them by some sensible correspondents, and especially by important letters from Mr. Jessopp, the collector of customs at Quebec, and the Honourable John Macaulay, the late inspector-general of accounts, it became our duty seriously to notice a practice by which the customs' laws are evaded, and a direct fraud upon the revenue committed, an injustice inflicted on English publishers, and mischievous encouragement given to the literary piracy so extensively practised in the United States.

Prohibitory of British publications, but not of contraband American reprints.

Pamphlets and other publications, in pamphlet form, are now sent under the Deputy Postmaster-general's privilege, at a uniform rate for all distances of 1 *d.* a sheet, without any distinction, such as there is in the United States, between periodical and occasional writings. We have not received from the lower provinces any information respecting the practice there, or the rates of postage upon such printed matter.

Charged if mailed in British North America.

In this, as in the case of the newspapers, we are unable to discover any reason why the money collected for the service rendered by the post-office should any longer be an official perquisite.

We are of opinion that it would be desirable to make prepayment optional, and not compulsory, upon the sender; but we do not think the amount of the present rate objectionable. It is about equal to, or a trifle less than, that charged for the same service in the United States. If the weight system be adopted as the mode of charging letters, it will obviously be convenient to apply it to printed matter also. In that case we would recommend that the amount charged upon every sheet of average weight should not vary materially from the present rate. We have made some calculations from which it will appear that a rate of 1  $\frac{1}{2}$  *d.* an ounce would yield on the average a rise of 15 per cent. on the present charge, and that 1 *d.* the ounce would be equivalent to a reduction of 25 per cent. We are disposed to prefer the latter, feeling confident that such a mode and rate of payment would lead ultimately to an increase of revenue. The only objection which we have heard stated is that it will encourage the use of inferior paper; an objection which does not appear very formidable when weighed against the advantages the change may be expected to produce.

Pre-payments should be optional,

and the charge should be by weight, and low.

However desirable it might be that original American works should be forwarded through the post-office on payment of the present rate, or of that which may hereafter be substituted for it, we cannot shut our eyes to the fact, that the duty of 30 per cent. is evaded by the existing practice, or to the impos-

Difficulty as regards American works, owing to requirements of revenue laws.

sibility

## 60 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

sibility of any arrangement by which the post-office could be enabled to collect that duty.

Rates to and from Great Britain should be as low as possible.

The proprietors of some of the best English periodicals issued some time ago the prospectus of a cheap colonial and foreign edition of their respective publications, an effort in which it appears to us that they deserve any encouragement which it may be in the power of the Government to afford. Much might be effected by enforcing the law against the surreptitious introduction of the American reprints into the colonies, and fixing such postage and packet-rates as would enable the cheap English editions to compete with the smuggled and pirated American ones. But in this case it would be necessary to reduce considerably the packet postage on printed matter coming from England by the Halifax steamers. The present charges are nothing short of prohibitory; but even a considerable reduction of postage would not be sufficient, unless the publishers themselves see the necessity of lowering their prices much beyond those given in the prospectus to which we have referred.

Rates on letters, &c. delivered at the office where they are mailed and on their delivery by letter-carriers, practice to which there are strong objections.

The rates to be charged on letters or packets deposited in a post-office for persons within its delivery, and on general post letters delivered by letter-carriers, also require notice. The various usages which prevail in the absence of any uniform rule on this subject have been sufficiently described. The Deputy Postmaster-general at Quebec has suggested a rule on both these points, to which we see no other objection than that at offices not provided with letter-carriers, he would permit the postmaster to receive the charge on the former class of letters as a perquisite, a practice to which there are strong objections. It is true that the check upon a postmaster for such collections is extremely slight; but we would still rather require him to deal with *all* monies received for postage as postage, than allow him to regard any portion of it, however small, as his own fee.

No great complaint of want of post-offices in Canada, though the number might well be increased.

We do not find any very general complaints in Canada of the insufficiency of the number of post-offices. Whatever complaint there is on this subject comes chiefly from Lower Canada, where the population make so little use of the post that it is impossible to maintain as extensive an establishment as in Upper Canada; we are, however, of opinion that a considerable increase might be made in both sections of the province, with advantage to the department.

In the United States there are about twice as many post-offices in proportion to the population as there are in Canada; and although this inequality may be caused in part by the difference in the habits of the population, we cannot think that cause sufficient in itself to account for so great a disproportion. For the correction of such errors as may have tended to produce this result, we have at present only to suggest generally the adoption of a policy somewhat bolder than that which has hitherto been pursued; the practice has been to wait for an application before proceeding to erect a new post-office; it does not appear that many applications are refused, but there is often considerable delay in making the preliminary inquiries through the surveyor, which, combined with the general vice of the system, its want of popular control, and hence of public confidence, does much to discourage applications. People have long been wishing for a post-office before they can make up their minds to apply for it, and there are instances in which for years they have suffered great inconvenience without ever applying at all in the proper quarter. With the aid of additional surveyors, and the more provincial and popular character we desire to see given to the administration, these evils would be greatly lessened. But the department should, we think, be constantly on the watch for opportunities, instead of waiting for the public to petition for every step that is taken towards the extension of post-office accommodation.

Many more offices wanted in New Brunswick.

Complaints of the want of post-offices are very general in New Brunswick, and there, certainly, a thorough change of system is required. We find only 34 places in the whole province where letters can be deposited or received, and half of these are mere way-offices, where postage cannot be prepaid, nor letters regularly mailed. To place New Brunswick on a par in this respect with Canada, there ought to be about 70 regular offices. At present on the four routes from Fredericton, the capital of the province, the nearest post-offices are Woodstock, in the direction of Canada, distant 64 miles; Miramichi to the north-east, distant 104 miles; Sussex Vale to the south-east, on the road to Halifax, 80 miles; and Gagetown, on the St. John road, 32 miles. No further proof can be required of the necessity for the immediate establishment of a great number of new offices.

Nova

# INTO THE STATE OF THE CANADIAN POST OFFICE. 61

Nova Scotia, perhaps, because it is the province in which the Deputy Postmaster-general resides, is better accommodated. Including way-offices, the average is as high as in Canada; but the proportion of way to regular offices is so large (about 87 to 17, we believe), and the accommodation at the former is generally so imperfect, that the comparison is really much in favour of Canada. There have been no regular offices erected for many years, but we presume that way-offices have been established wherever the people have taken steps to obtain them, though we are not aware of any rule as to the mode of applying for establishing them. We do not doubt that, under an enterprising administration, the amount of accommodation could be much increased, with equal advantage to the revenue and to the public.

And in Nova Scotia a considerable increase.

In Prince Edward's Island, where the provincial government has entire control, the number of offices is 29 (28 of them way-offices), to a population of 42,500; a proportion considerably higher than in any of the other provinces. The number, we presume, is sufficient, as we have not received any complaints on the subject.

In Prince Edward's Island the number probably sufficient.

We have received several letters from places in which it is said that post-offices are injudiciously placed. It was of course impossible for us to satisfy ourselves of the justice or injustice of these complaints, which are all of a purely local character; but it may be remarked, that in a country where post-offices are every day required in parishes and townships in which settlement is only just commencing, it is impossible that their site should be always so well selected in the first instance as not afterwards to admit of a change for the better. The active performance of the surveyor's duties, subject always to the control of the local governments, afford a sufficient and perhaps the only remedy for this evil.

Complaints as to site of post-offices.

The greatest defect, in our view, in the existing arrangements for the establishment of new offices is one of which the public at large has never been in a condition to complain, from want of information as to the interior government of the department,—we allude to the absence of that systematic classification into forwarding, ordinary and sub-offices, which has long been established in Great Britain. We have seen that, in Canada, every recognized post-office makes up mails direct for every other, and accounts directly to the general office at Quebec, and, though this is not the practice in the lower provinces, that the distinction between regular and way-offices, and between offices that correspond with each other and those that do not, is wholly arbitrary. The inconveniences resulting from this state of things are so many and various, that we feel bound to urge the adoption of the English system in all its integrity, as among the first and most essential reforms to be undertaken.

Necessity of promptly introducing the English forward and sub-office systems.

We have shewn how much the want of the forwarding system adds to the labour of postmasters in despatching and receiving mails; but this is neither the whole nor the worst of the evil. It is to some extent the cause, and to a still greater, the excuse of those delays in the travel of the mail, which are the subject of such loud and universal complaint. A postmaster, who must examine the whole contents of a large bag, that he may select from them an indefinite number of parcels addressed to his office, and who has then to replace these by a number of parcels of his own addressed to other offices, will always take his time; and a delay of this sort occurring every few miles on a long route becomes a serious hindrance. The number of parcels, moreover, in each bag, and the small size of most of them, make it almost a hopeless task to trace a missing letter, or detect fraud or negligence. The very accounts rendered to Quebec are made so complex by the number of offices with which each postmaster is in communication, and the small amount of postage in most instances, that no supposable force in the accountant's office could audit them in an effectual manner.

A judicious distribution of forward offices would go far to remove all these difficulties. Postmasters at most of the other offices would find their duties greatly lessened, from having to make up and overhaul fewer mails, and to keep fewer accounts; the duties would be better performed than they are now, and it would consequently be easier in new districts to find men able and willing to undertake them.

The mails would generally be overhauled at country offices in less time, and, with ordinary care, they might be traced from office to office in a manner which would render easy the detection of carelessness or dishonesty. The accounts of the department might, by the mere use of the common cross-post or square sheet,

be

## 62 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

be checked with ease and precision, and that, too, by a moderate force of clerks in the accountant's office.

It would contribute still further to all these ends, if a number of the smaller post-offices, such more particularly as lie off the leading routes, and with no others beyond them, were classed as sub-offices, and made dependent on a neighbouring office, the postmaster at which should incorporate their accounts with his own. The establishment of these, however, should not be, as is now the case with the few sub-offices existing in Canada, the mere act of the postmaster. They should be recognized like other offices by the department, and placed under its rules.

The same system should be extended to the lower provinces, and in that case the whole of the present arrangements regarding the inter-correspondence, and accounts of the regular and way-offices, will require to be remodelled.

In bringing this change into effect, it may be expected that some difficulties and confusion will occur at first. The first step ought to be the appointment of the full complement of surveyors, and before the change is made they ought to have the opportunity of making a tour of their respective districts to explain the new system to the postmasters.

Perhaps it might be desirable to proceed gradually, first in one surveyor's district, then in another, and so on; but in whatever manner it be effected, the necessity of such an improvement appears to us unquestionable.

Office hours,

It is a matter of complaint at many offices, that the public are not sufficiently accommodated in regard to the hours at which post-offices are kept open for the receipt or delivery of the mails. The Deputy Postmaster-general's printed regulations fix the hours for the larger offices at from seven o'clock A.M. to seven P.M. in summer, and in winter at from eight A.M. to four P.M. With the exception of the closing at four in winter, which at the principal places seems unreasonably early, we see no objection to this regulation; but at the minor offices there are practically no regulations at all; and from the smallness of the postmaster's remuneration, it is hardly to be expected that rules could be strictly enforced. Where an office is kept in a shop, the public will probably have access to it at all reasonable hours; when that is not the case, all that can be done is to insist upon every postmaster's giving the public as much accommodation as can reasonably be desired.

And hours for closing mails.

Another subject of general complaint is the unsuitableness of the hours fixed by postmasters for making up their mails; in consequence of which it is alleged that letters often cannot be received at an office, except on payment of a fee, for several hours previous to the actual departure of the mail,—a practice which is productive of much inconvenience and dissatisfaction, particularly in cases where another mail arrives in the meantime, or so near the hour as to make it impossible to reply to letters received by it. It must be admitted that some of the complaints made to us on this score are not altogether reasonable. A postmaster can neither be expected to make up his mails at uncertain hours, to suit the chances of a courier's arriving earlier or later than his usual time, nor (except at a few of the most important offices) during the night, or at a late hour in the evening. But there are cases which call loudly for amendment. The postmaster is allowed a fee on all late letters, and yet he is left to fix his own hours, subject only to their being changed by the Deputy Postmaster-general on complaint formally made and sustained by evidence; but making such complaints is always an invidious, and sometimes a troublesome proceeding, not free from difficulty even when the case is clearest. The postmaster's report has naturally an advantage over a remonstrance. The addition to the number of the surveyors, and the increased responsibility to public opinion, under which the other changes we have suggested would place the department, would suffice, we think, to effect the desired reform, by making the rules of the department more strict, and ensuring their more punctual observance.

Complaints of incivility and inattention of postmasters.

This remark applies equally to the complaints against postmasters on the score of incivility and inattention, which have been in some cases brought before us. Constituted as the department now is, with its postmasters so poorly paid, and so imperfectly controlled, complaints of this nature cannot be altogether without foundation. We look forward, however, to an improvement in these respects.

Appointment of shopkeepers, &c. as postmasters.

Complaints have been frequently urged against the appointment of shopkeepers as postmasters. It is asserted that a postmaster in trade enjoys an undue advantage

advantage over other tradesmen in his franking privilege, in the opportunities he has of getting his letters earlier, and of writing later than his rivals in business, and in the knowledge he must have of the persons with whom they correspond. It is also stated that the secrecy of letters is very often violated. Some persons object, on the same grounds, though certainly without equal reason, to the appointment of lawyers and notaries. We are not prepared to defend the practice of appointing tradesmen on any other ground than that of necessity. Wherever the emoluments of a post-office are sufficient, it would obviously be desirable to command the undivided services of a competent person; but it must not be forgotten that this can be the case at but few places in these provinces. Even in England, a great number of the smaller offices are kept by shopkeepers. Were they excluded here, fit persons could not be found to discharge the duties, for the best remuneration they could possibly receive, at more than half the offices in the country. All that we can venture to recommend is, that others should be appointed where they can be found; that the postmasters' privilege should be rendered as little objectionable as possible, and their abuse guarded against by strict attention to the discipline of the department.

The insecurity of money-letters has been much pressed on our attention. It is not to be wondered at that, under the present mode of mailing, they should sometimes be lost, and that when lost it is sometimes found impossible to trace them. In these cases, it is felt as a hardship that the department through whose fault the loss may be said to have taken place should not be held answerable for it. It is obvious, however, that no change of the rule on this head can be made with safety to the department. The complainants forget that the rates of postage are not rates of insurance, but simply a charge to cover the actual transport and delivery. It has been urged that the department should not merely register, but ensure money-letters at some fixed rate of premium; and to this we see no objection in principle, though we are not prepared to recommend the project. We think, however, it might be well to require a postmaster to give any person mailing a money-letter a certificate of his having done so, provided the contents of the letter are enclosed in his presence; and for this service a moderate fee might be allowed.

Rules of department  
as to money-letters.

The greater safety that would be ensured to the mail by the general changes of system we recommend will have the effect, we doubt not, of preventing many of those losses.

The adoption of the English system of post-office orders for money has been suggested; but looking to the small sums received on account of the department at the majority of offices, we think it would not be easy to effect such an arrangement, however desirable it would be as an accommodation to the public.

By some of our correspondents, a practice of violating the secrecy of letters is said to prevail in post-offices. An inquiry into some charges of this nature has recently been instituted in the Bathurst district, but we have not as yet been made acquainted with the result.\* Other circumstances of strong suspicion, but not sufficiently proved to justify us in a more specific allusion, have been brought under the notice of the Commission, and some irregularities connected with a series of letters on public business, addressed to one of ourselves, are certainly of a nature to warrant us in noticing the matter. Our duty to the public forbids us to pass over these complaints in silence; but we feel, at the same time, that we shall sufficiently acquit ourselves of that duty by directing attention to the fact that such complaints do exist, and are not, we fear, altogether destitute of foundation. The horror with which such actions inspire every honourable mind will be sufficient in itself to impress upon the head of the department the necessity of great vigilance in the detection of offenders, and unrelenting severity in the punishment of postmasters proved to have been guilty of such disgraceful crimes.

Violation of the  
secrecy of letters.

It would be difficult to discuss the question of conveyance, and the improvements that may reasonably be looked for, in the speed and number of the mails, without some reference to the state of the roads and other communications; but

Mail conveyance,  
state of the roads,  
&c.

we

\* Since the above was written, the report of the surveyor who was charged with the inquiry has been furnished us by the Deputy Postmaster-general; but unfortunately, all the documents connected with the case were lost in the burning of the Quebec post-office. The surveyor acquits the postmaster; but in its present form, the report is not worth printing.

## 6.4 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

we do not consider it necessary to enter at any length into the state of the internal communications in these provinces. In a new and thinly-settled country, where, from the severity and extreme vicissitudes of the climate, the roads, however well made originally, must often be almost impassable, sometimes blocked up with snow, at other seasons interrupted by a considerable depth of mud; where the rivers and lakes are closed for months, and where the land travelling requires, in winter, a class of carriages totally different from those used in summer, it would be vain to hope for any great degree of regularity in the travel of the mails. By no possible outlay of money can they be carried at the same rate of speed all the year round, any more than they could be carried always in the same conveyances. Poverty and the thinly-scattered population of the country have, it is true, forbidden the making of roads so good as they might be, even in this climate; but the same causes have operated with still greater effect to prevent the post-office from possessing a revenue applicable to these objects, or to any purposes beyond its own immediate functions. Future improvement in the roads will necessarily lead to corresponding facilities in the transmission of letters; but for the present, and for many years to come, we see no reason to think that any portion of the post-office revenue could be judiciously or with propriety expended in the improvement of roads.

We cannot doubt, however, that the slowness and irregularity of the mails, of which so many have complained, are in a great measure to be ascribed to the bad state of the roads; and we have observed with satisfaction that the several provinces appear to be doing much, as much, perhaps, as could reasonably be expected, to remove that evil. The large appropriations lately made by the Canadian legislature will furnish the means of vast improvement on all the principal lines; whilst the powers conferred upon the newly-created district councils can hardly fail to secure results not less satisfactory on routes of minor importance. In Nova Scotia and New Brunswick, the roads are generally much better than in Canada. We have reason to believe that the system now in operation in these provinces is working well, and bringing the roads into a condition to stand comparison with any on the American continent.

But there are means quite independent of improvement in the roads by which the conveyance of the mails may be greatly improved both in speed and regularity. To some of these we have already adverted. The adoption of the forward-office system would simplify the proceedings at the country offices, and produce a great saving of time. An efficient force of surveyors would enable the department to exercise a more vigilant control over its postmasters and contractors. Many causes of delay would thus be removed, in the lower provinces more especially, where hitherto there has never been any real check upon either the postmasters or the couriers.

Impossibility of  
generally employing  
guards.

The introduction of the English practice of placing the mails under the charge of guards is very generally desired; and if the expense were not beyond the present means of the department, it would undoubtedly be a valuable improvement. It would provide an effectual check upon postmasters and contractors, and contribute not less to the security than to the speed and regularity of the mails. We regret, therefore, to be compelled to report our opinion, that the expense would be greater than the financial condition of the department would warrant. The severity of the winters, and the fatiguing character of the travelling at all seasons, would render necessary a much larger number of guards on a given distance than is required in England. Wages, also, are so high comparatively, that it would be impossible to engage trustworthy persons, except at prices far beyond the English salaries. In addition to these considerations, the mails are so much smaller, and the postage so trifling in amount, as to render the systematic employment of guards almost impossible. Two guards were employed last summer on the steam-boats between Quebec and Montreal, and, we believe, with great advantage; but this was a peculiar case, and, except for mails so sent, we are not of opinion that in the present condition of the country it would be practicable to introduce the English custom.

Contracts,

Considerable improvement might be effected in the mode of contracting for the conveyance of mails, and much advantage derived from a stricter enforcement of contracts when made. Attention to these points, we are persuaded, would be rewarded not only by a great increase of speed and regularity, but also by a considerable diminution of expense.

Written contracts for a term of years do not appear to have ever been in use in

in the lower provinces. In Canada the practice has latterly been different, and nearly all the mail service is now performed under contract; but the contracts are not made by advertisement and tender, except on the more important routes, and not always on those, and it has been usual so to frame the terms of the contract as to admit of its being varied or indefinitely continued by private agreement. The effect of this is to give to a contract, which cannot be too stringent upon the parties, or too much exposed to public inspection and competition, the character of a mere private transaction between the Deputy Postmaster-general and the contractor. It may happen that parties whom the department must employ, because no others offer, may be unwilling to enter into a regular contract, and on some routes the service and remuneration may be so trifling as hardly to require a formal instrument. But we are strongly of opinion that a contract should not be dispensed with wherever it can be had, and that all contracts, without any exception, should be offered by public advertisement to general competition. We cannot admit that any supposed advantages of the secret method, such as the opportunity it may afford of promising to a meritorious contractor a renewal or an amendment of his contract and the like, are sufficient to balance the waste of public money and the jobbing to which secrecy may give rise, or the great evil of public discontent and suspicion which it can hardly fail to create.

Contracts should be formally made for all mail service and by public competition.

It may possibly be found necessary, with a view to the maintenance of that control which the department should exercise over those whom it employs, to insert commonly a condition by which the Deputy Postmaster-general shall have the power of varying within certain limits the terms of the agreement; but this, which is the exception, should never be suffered to become so far the rule of the department as to militate against the principle of written contracts binding upon both parties, and of public competition.

It would be difficult, and if practicable, it would hardly be desirable, to fix upon one period of time for which all contracts should be made. There are obvious reasons why it would be inconvenient that the whole or any large proportion of the number of contracts should be allowed to expire at the same time. They might be made to run generally for a term of from three to five years; but these and other similar details may, under an improved system of management and supervision, be safely left to the officers of the department.

There is, however, one point upon which we feel we ought to express a decided opinion—the necessity, whatever may be the terms of the contract, of insisting in all cases upon its strict fulfilment by the contractor. The loose manner in which these agreements are dealt with is a great defect in the present management of the Canadian post-office.

And their strict fulfilment should always be enforced.

The penalties which the Deputy Postmaster-general is authorized to levy ought to be levied upon every infraction of a contract, and remitted only in such cases as may present some extraordinary circumstances of justification; but instead of this, we have reason to believe that the practice in Canada is, not to levy the fines at all, except for some extraordinary infraction, which may appear to justify an unusual degree of severity. It can scarcely be necessary to suggest what injurious effects must flow from a practice, the obvious tendency of which is to raise in the minds of contractors an impression that they are not so much bound by their written engagements as by some vague understanding with the Deputy Postmaster-general as to the extent to which they may be violated with impunity. It has been urged that a strict enforcement of contracts would render it extremely difficult to find persons who would engage for the performance of some of the services required for such remuneration as the department has usually offered; but this seems to us to be only another way of stating that the terms of the contract are wrong, and ought to be changed. We can regard a contract in no other light than as an engagement by the conditions and penalties of which the parties are prepared, and, if necessary, should be compelled, to abide. If a necessity for some modification in the terms of existing agreements be shewn, it will be easy to effect the necessary changes; but we cannot doubt that a strict enforcement of contracts will tend to a great increase of speed and punctuality in the conveyance of the mails.

The mode of carrying the mails must necessarily continue to vary on different routes and at different seasons. This is a matter which must, we think, be left to the discretion of the department, and the only suggestions we feel justified in making are that foot-posts should as soon as possible be discontinued in those

Mode of carrying the mails.

few places where they are now employed, and that steam-boat and railroad conveyances, where attainable, should be preferred to all others.

Passenger conveyances must generally be used.

Some of our correspondents (principally persons residing upon the main routes in Upper Canada) are desirous of having the conveyance of land mails separated altogether from that of passengers. That course has been successfully pursued with regard to the land mail between Quebec and Montreal, and it has much to recommend it in cases where the circumstances of the country will allow it to be practised; but we question whether it could be practised on any other route. If the mail is carried in any kind of vehicle, the contractor will be sure to demand a far higher price if he is to be debarred from making the most of equipage by carrying passengers. It cannot be denied that the accommodation of passengers interferes with many desirable arrangements; it interposes sometimes to prevent the mails from stopping at those places only which the department would prefer, and sometimes regulates inconveniently the hours of departure and arrival; but these we regard as the necessary evils of an establishment in a new country, where on many routes the amount of the postage received and the number of letters are insufficient to cover the expense of their carriage.

From the lower provinces (where there is less accommodation for passengers than in Canada), the suggestions are generally the other way; and it happens curiously enough that stage companies on particular routes are in the receipt of legislative bounties, whilst the mail is often carried over the same road with the coach which receives the grant, but in another and generally a slower vehicle. In such cases, of course the complaint is that the stages do not carry the mails, and the demand is for some aid from the post-office in support of their stages.

It is obviously the policy of the department to avail itself of the existing means of communication, and in doing so to endeavour to improve them to the utmost, but not to attempt to create new ones for its own use alone. Some valuable suggestions upon this subject will be found in a letter from Mr. Stockley, a gentleman who has had a long experience in such matters in Ireland. It can hardly be expected in Canada that vehicles should be devoted exclusively to the mails, when we consider that even in England the use of mail-coaches on all the principal routes shews that the utility of the practice was felt even when a necessity for it could not be said to exist.

Though under stricter regulations than at present.

But, nevertheless, we are not disposed to deny that the present mail stage system in these provinces requires very considerable amendment; that is a subject upon which we have received many and apparently well-founded complaints. The number of passengers and the weight of luggage should be strictly regulated, and strong efforts should be made to restrain the irregularities of the stoppages, and the intolerable delays upon the road.

Frequency of the mail.  
In the Canada charge no great change is called for.

We do not feel called upon to offer any suggestions on the frequency of the mail in the Canada charge. The arrangements now existing or in contemplation appear to us to offer all, or nearly all, the accommodation in this respect which in the present circumstances of the country could be expected. The only route not served as often as once a week (a part of the communication between the district of Gaspé and Quebec) is shortly to be made a weekly route. As population or commerce increases in any particular district, it is to be hoped that an improved administration of the post-office will afford a proportionate increase of facilities for correspondence; but in the lower provinces we cannot but think that there is much more reason to complain, and we are of opinion that there a considerable increase in the number of mails is required. Between Halifax and the principal towns in the western part of New Brunswick, St. John's, Fredericton and St. Andrew's, the mail ought to travel daily. The towns along the eastern coast of New Brunswick, several of which have become places of considerable importance, should certainly communicate with the western towns and with Halifax three times a week. From Halifax to Yarmouth, the principal town in Western Nova Scotia, and the second in point of trade in the province, there should be two if not three mails a week; and to Prince Edward's Island and Cape Breton, two at least.

Daily mails required from Halifax to Western New Brunswick. From Eastern New Brunswick to Halifax, three mails a week. From Halifax to Western Nova Scotia, two if not three. And to Prince Edward Island and Cape Breton, at least two.

We do not think that the department would suffer in a financial point of view from these changes, but the reverse, especially if they be adopted in conjunction with some others we have recommended. The information we have received from various parts leaves no doubt upon our minds that the want of accommodation, together with other great defects in the establishment, have almost driven the mail out of use as a means of ordinary correspondence throughout all this section

section of country, and that it is scarcely ever employed unless in cases where there is some absolute but occasional necessity for resorting to it.

It has been suggested that there should be an unbroken daily mail communication from Halifax along the whole of the main route to Canada, a project which would no doubt be most desirable. But at present much of the country between Fredericton and Quebec is far too wild and unsettled to admit of this being accomplished without incurring an expense beyond the means of the department. The utmost that can as yet be done will be to maintain two or three mails a week, securing always the transmission of the English mails in winter by express, without reference to the days or the rate of travel of the ordinary mail.

Daily mail from Halifax through to Quebec at present impossible.

A few respectable correspondents demand that the travel of the mail and other operations of the post-office should be suspended on Sundays; their desire appears to be in general, that in their own particular neighbourhood the mail should not start, arrive, or be delivered on Sundays. But we doubt whether many of those gentlemen are prepared to carry to its full extent the principle upon which their recommendation is based; they do not ask, and we may therefore presume they do not desire, that the operations of the department should be suspended on that day throughout all parts of the country.

Question of Sunday mail service.

And yet if the principle is to be insisted upon to the extent of stopping the mail in any one place for 24 hours on the long routes (and in British North America all the leading routes are long), this is the conclusion to which it must necessarily lead. During the early part of last summer the mail between Montreal and Toronto was not allowed to leave either of those places on Sunday; but it left both places on the Saturday, and passed through to its destination without stopping, so that at all the intermediate places there was of course nearly as much Sunday travel as though there had not been this observance of the day at the *termini* of the route. At Kingston, about half way between the two places, the Sunday arrivals and departures were precisely those of any other day; but on Monday there was no mail either way, and no steam-boat, because none had started the day before from Montreal or Toronto. In like manner no mails were allowed to start on Sunday from Montreal for Quebec, or from Toronto for the West. One consequence of this arrangement was, that a Toronto letter for Quebec, if mailed on Saturday morning, would travel all Sunday and reach Quebec on Tuesday morning; but if mailed on Friday, after having travelled most of Sunday, to reach Montreal on the Sunday afternoon, it would be detained there until the Monday afternoon, and be there overtaken by the letter mailed on the Saturday. With letters from Quebec or east of Quebec, to places west of Toronto, or *vice versa*, the case was still worse. Six mails a week, for example, started from Quebec for the West, and from Hamilton for the East; but yet the Quebec mail could arrive at Hamilton, and the Hamilton mail at Quebec, only four times a week, one mail being detained for the Sunday at Toronto, and another at Montreal. But in all places except these two, the travel of the mail went on just the same on Sunday as on Monday, and is interrupted just as much on Monday as on Sunday. Great anomalies arise from the partial adoption of this principle, and intolerable inconvenience would result, we fear, from its complete adoption. The choice lies, we think, between the stoppage of the post-office business *everywhere* on Sunday on the one hand, and an effort on the other, to lighten the Sunday labours of the department, wherever it can be done, without great public inconvenience. The former alternative is hardly feasible; it would delay more than half of all the letters passing through the post-office in British North America more than 24 hours *in transitu*; many it would delay 48 hours; and some, in winter, 72. The latter alteration would admit of a great curtailment of office hours at all places, and of an arrangement of mails which would require no travelling on Sunday upon the side routes. But upon the main lines of communication we doubt whether Sunday travelling can be suppressed, and whether it would be reasonable to attempt its suppression.

We feel that the question of the routes by which the mail should travel is not properly within the scope of our present duties, but that it will hereafter belong to the Deputy Postmaster-general and his band of surveyors to suggest such improvements in this respect as their experience may show to be necessary. We may, however, state our opinion, founded upon the information collected in the course of this inquiry, that the routes now followed in Canada are generally well chosen.

Mail routes.

## 68 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

In the lower provinces, we believe, there is greater room for improvement; but for this, we look with confidence to the establishment of that supervision which the head of the department, with surveyors at command, will hereafter be enabled to exercise.

From Halifax to Quebec, the mail should travel *via* Annapolis and St. John's.

We cannot, however, forbear from noticing the circuitous and ill-chosen route by which the Halifax mail travels to Quebec round the head of the Bay of Fundy, instead of taking the direct course to Annapolis or Digby, and thence by steam-boat across the Bay of Fundy.\* We think that, ere long, it will be necessary to effect this alteration, and the sooner the better. It will be productive of great advantages, direct and indirect, to the western counties of Nova Scotia, as well as to New Brunswick, and we see no reason to doubt that it would afford the means of effecting a saving of two days or more between Halifax and Quebec,—an improvement the importance of which cannot be too highly estimated.

A separate English mail for New Brunswick suggested.

There is one point upon which the inhabitants of New Brunswick are very desirous of some improvement, and upon which we think it not impossible to comply to a certain extent with the views strongly urged by many of our correspondents in that province. In making up the mails in England to be sent by the Cunard steamers, the bags are addressed only to Halifax and Quebec, all letters for the lower provinces being placed in the former, and everything for Canada in the Quebec bag; an arrangement which is productive of unnecessary delay in the delivery of the New Brunswick letters brought out by the English mail. The Canada mail is forwarded immediately upon the arrival of the steamer at Halifax, and so might that for New Brunswick be, if it was made up in a separate bag, instead of being mixed with the Nova Scotia letters, and therefore detained for the purpose of sorting at Halifax. We do not agree with those who suppose it possible for the postmaster at Liverpool to make up separate mails for any considerable number of places in British North America; neither are we prepared to recommend, according to a suggestion which has been made by some parties, the employment of sworn clerks on board the steamers, whose sole duty would be to sort the letters on the passage. But we cannot help thinking that a great boon, at a slight expense of trouble, would be conferred upon the people of New Brunswick by making up a separate bag of English letters directed to that province.

The inhabitants of New Brunswick suffer under the present arrangement the mortification of seeing, during the winter months, the English mail for Canada pass their doors sometimes more than 48 hours, before their own letters (though brought by the same steamer to Halifax) are forwarded to their destination. If this suggestion should appear worthy of adoption, we are of opinion that the separate mail for New Brunswick ought to be addressed to St. John, the place of most consequence, and the site of the principal post-office of the province.

The increase of accommodation which this arrangement would produce would, we have reason to believe, be sensibly felt and thankfully acknowledged by the people of New Brunswick. In case of its adoption, the New Brunswick mail would of course follow the route we have suggested above, as an improvement on the route now used between Halifax and Quebec.

But to a claim which has been put in by some persons residing in Prince Edward's Island and the district of Gaspé, we are not prepared to yield the same assent. They ask that during the summer months the steam-boat which carries the English mails between Pictou and Quebec should call at Gaspé and Prince Edward's Island. Before this could be effected, it would be necessary to have separate mails made up for those places at Liverpool, which, as regards Gaspé, we do not think it would be reasonable to expect. But we think the delay it would cause in the travel of the Canadian mail is in itself an insuperable objection to the suggestion.

And (if possible) for Prince Edward's Island also.

If it should be found practicable to make up a separate mail for Prince Edward's Island (and as it is a distinct province, perhaps that question may be taken into consideration), that mail would travel to Pictou along with the Canadian

---

\* It will be perceived that some of our correspondents in the north-eastern counties of New Brunswick insist strongly on the Metis line as the best for the main route between Halifax and Canada. A glance at the map will suffice, we think, to show its inferiority to the one we have recommended.

# INTO THE STATE OF THE CANADIAN POST OFFICE. 69

Canadian mail, but from Pictou it must be sent separately to Charlotte Town. If it be determined to make up a separate English mail for the province of New Brunswick, it would obviously be a great accommodation to the inhabitants of Gaspé that their letters should be put up with the New Brunswick instead of the Canada mail, so as to avoid the great loss of time caused by sending the letters to Quebec and thence back to Gaspé.

English letters for Gaspé might go with New Brunswick mail.

A great deal of importance has been attached to the establishment of a daily mail between Halifax and Western New Brunswick by the improved line suggested above. We have inserted in the Appendix the report of a commission of three gentlemen appointed by Sir John Harvey, the late governor of New Brunswick, to inquire into this subject. We cannot participate in the expectations entertained by those gentlemen of the productiveness of the proposed route, considered with reference to the correspondence between Halifax and St. John and the intermediate places; neither do we regard productiveness as the criterion by which so important a project should be tested. We are disposed to view it as a link in the great line of communication through the country, rather than as a mere local improvement; and in this wider view, it appears to hold out advantages sufficient to entitle it to serious consideration. But this, as well as the details of the proposed plan upon which great difference of opinion will be found to exist, is a matter which may best be decided upon by the head of the department when the necessary inquiries shall have been made upon the spot by competent surveyors.

Importance of direct daily mail from Halifax to Western New Brunswick.

There is one defect in the conveyance of the English mail from Halifax to Canada during the winter, to overcome which we trust that a strong effort will be made, though we are not sure that the means of the department are quite equal to the remedy. The great bulk of the newspapers mailed renders it impossible, under the present contracts, to forward them at once with the letters, and they are sent off, consequently, in instalments by the two, three or even four next ordinary mails. The people of Canada thus receive their newspapers irregularly, by twos and threes, at uncertain intervals, sometimes of not less than a fortnight. This great inconvenience will doubtless operate prejudicially by discouraging the use of the British press in this province.

English newspapers as well as letters should be forwarded promptly for Canada from Halifax.

But while we admit the extent of the evil, and are greatly desirous that a remedy might be found, we cannot but doubt whether the department can reasonably be expected to make a heavy outlay for the quicker transport of an article which pays nothing towards the expense of its transmission through the province.

Many persons residing in the western parts of Canada desire that the power of receiving and sending their English letters for the steam-ships through the United States should be restored to them; they urge that throughout the year much time would thus be saved for all the country west of Toronto, and as far east as Montreal during the winter months. To this it may be replied, that as regards the Cunard steamers, any one may now avail himself of the United States' route *viâ* Boston, who is content to submit to its charges and inconveniences; the postage must be paid both ways *as far as Boston*, but cannot be paid through either way. It varies in amount, but commonly averages twice or thrice as much as the postage by way of Halifax. The travel of the mail through the United States to most parts of Upper Canada is indirect, and in winter neither certain nor expeditious. We question, in fact, whether it is even now worth while, except in some peculiar cases, to mail English letters *viâ* Boston; but on the other hand, we think it quite possible so to improve the main route through the provinces from Halifax (for which purpose we have already submitted some suggestions), as to remove whatever inducement may now exist for preferring the route through the United States.

Demand in Western Canada for English letters to be forwarded through the United States for steam-ships.

It might indeed be possible to make an agreement with the American government, through which a great saving of time could be effected without either risk or difficulty, by a mode to which we shall presently advert in discussing the state of the post-office relations existing between the provinces of British North America and the United States.

The relations of the two post-offices are, we regret to state, at once anomalous and unsatisfactory. The American department enjoys in Canada facilities even greater than those which it possesses at home, and pays its Canadian agents (our postmasters) by a per centage regulated upon the scale of remuneration for their own officers. The amount of American postage received in this way for the last

Unsatisfactory character of post-office relations with the United States.

## 70 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

year of which we have a return, was 11,316*l.* 5*s.* 8*d.* currency, and the allowance for agency was 2,315*l.* 17*s.* 6½*d.* currency. Of the latter sum the Deputy Postmaster-general's share was 603*l.* 10*s.* 9*d.*, and most of the remainder was divided amongst nine postmasters. Mr. John Stayner received at Queenston, 493*l.* 7*s.* 2½*d.*; Mr. Deacon, at Kingston, 304*l.* 3*s.* 10*d.*, and at Toronto, which has only recently been established as an exchange office, Mr. Berczy calculates upon deriving an increase to his income of 250*l.* from the change.

Under these circumstances it is not surprising that every possible facility should have been afforded to the American department; but it does not appear that the American authorities have ever been disposed to meet us in a spirit of reciprocal accommodation; neither do we see much reason to believe that their unfairness in receiving from us services which they pertinaciously refuse to perform for us in return, has ever been pressed upon them in a tone of becoming remonstrance. We find, at any rate, that nothing has been done to redress the well-founded complaints of our people, although there is no subject upon which complaint is more general, or the press more unanimous, than upon the injustice the provinces are thus compelled to suffer.

The American Postmaster-general will not allow any of the officers of his department to keep accounts of British postage; no letter, consequently, posted in the United States, to be delivered in Canada, can be prepaid to its destination. The American postmaster *cannot* receive the Canadian postage, and the writer need not pay the American unless he chooses; but the person in Canada who answers the letter *must* pay the postage of his answer to the lines, and may if he like pay it the whole way, for our officers are paid by the Americans for keeping accounts of their postage, although they will not suffer their officers to keep accounts for us; this is very loudly, and we think not less justly complained of.

Should be placed on a footing of reciprocal accommodation.

The evil is one for which there would not be much difficulty in providing a sufficient remedy. We see no reason why the department in each country should not engage to collect the postage for the other, at a fixed rate of per centage. If such an arrangement were effected, the exchanging postmasters alone would be required to keep separate accounts for foreign and domestic postage; the other postmasters would treat all postage as domestic, and the returns from the frontier offices would enable the two departments to regulate their accounts with each other. So far as we can perceive, the only practical difficulty which has heretofore stood in the way of this arrangement on the part of the United States, has been the necessity it would impose upon postmasters of calculating the foreign postage on prepaid letters. Under the present complex scale of rates in British North America it has been urged, with some reason, by a late Postmaster-general at Washington, that it would be impossible for his postmasters to make these calculations. But the scale which we have recommended is at least as simple as the American; and it should be remembered that in Canada every postmaster has long been required to keep most vexatiously complicated accounts of United States' postage.

Desirableness of a light express mail from Boston to Canada for steamship letters.

Were it possible to obtain from the American government permission to send a light mail express from Boston on the arrival of the steam-ships to Kingston and Montreal, a great saving of time might be effected by the arrangement. It would, in our opinion, be very desirable that an attempt should be made to induce the American government to enter into a convention similar to that by virtue of which the overland mail from India to England is carried through France. If the proper steps were taken, we cannot think there would be any serious difficulty in arranging with the United States the terms and conditions upon which such a permission should be accorded, so as to secure to the inhabitants of this part of the country all the advantages they can possibly derive from the great establishment of Atlantic steamers, without trenching upon the right of postage enjoyed by the United States. If such an arrangement should hereafter be contemplated, it would be found necessary, we think, that the messengers carrying this express should be in the employ of our establishment.

Delays between Montreal and New York.

The rate should be uniform, but necessarily much higher than the charge upon letters sent by way of Halifax. The delays between Montreal and New York are much and justly complained of. With a little co-operation on the part of the United States' government, which could not fail to derive great advantages

advantages from the improvement of this line, the grievance might easily be removed.

Some increase in the present number of exchanging offices is also required ; but even in this matter, though apparently calculated to advance the interests of both establishments, great difficulty is found in inducing the department at Washington to enter into the necessary arrangements.

Increase of number of exchanging offices.

The truth is, that to afford a reasonable prospect of success in negotiations of this kind, it is absolutely necessary that they should be undertaken as a national affair, and urged as such by the British minister at Washington. In his hands we should be sanguine in anticipating a favourable result ; but no head of a provincial department, under any circumstances, and least of all under such as exist at present, can have sufficient weight with the American government to induce them to enter upon negotiations for placing the two departments on a footing of reciprocal accommodation. The establishment and the great success of the Cunard line of steamers has placed it within our power to offer as well as ask for facilities ; heretofore the asking has been all on our side ; the Americans had already obtained all that they desired.

Negotiation on all these points should be carried on by British minister at Washington.

As regards the post-office communications between the four provinces of British North America and other countries, we have little or nothing to remark. With Newfoundland and Bermuda, the communication *via* Halifax is as regular and frequent as it need be ; and the rates recently established are as low as they can safely be made. With the West India Islands the communication *via* England is somewhat indirect, but the correspondence is certainly not sufficient to warrant the establishment of a direct line of packets on its account.

Post communications with Newfoundland, Bermuda, &c.

Governor Reid has strongly recommended, on national grounds, a line of steam-vessels from Halifax to some of the West India Islands, to touch at Bermuda ; a suggestion which, for the reasons he assigns, we should be glad, if possible, to see carried into effect.

The internal arrangements of the post-office in Newfoundland and Bermuda we have considered a subject foreign to our inquiry ; but we cannot pass from it without referring to the very judicious recommendations of Governor Reid for the improvement of the establishment in the latter.

Internal arrangements of department in Newfoundland and Bermuda.

It remains for us to notice the emoluments of the officers of the department.

Emoluments of officers of departments.

Of late years those of the Deputy Postmaster-general have swelled to an amount quite disproportioned to the general range of incomes, private or official, enjoyed by persons of the highest station in British North America. Upon this subject there has been an expression of public sentiment so unequivocal as to convince us that much of the unfriendly feeling towards the department existing in many quarters may be traced to this one fact alone.

Of Deputy Postmaster-general.

It will not, we believe, be disputed that the time has arrived when the office of Deputy Postmaster-general must be placed upon a different footing as to income ; regard being had, on the one hand, to the great importance of the office, and to the station which the incumbent is supposed to hold in society ; but, on the other hand, to the standard of official income enjoyed by other servants of the Crown in these colonies.

As a general rule, we would recommend the abolition of all perquisites and privileges,\* and, as far as possible, the payment of officers by fixed salaries, liberally proportioned to the amount of labour and qualification required in them.

Looking to the suggestions we ventured to offer in a preceding part of this Report, as to the best mode of securing the efficiency and popularity of the department, we are of opinion that it would be prudent to leave it to the Governor-general to decide upon the amount of salary to be attached to the office of Deputy Postmaster-general. We feel that it would be difficult, if not presumptuous, for us now to offer an opinion upon the amount of remuneration—a point which depends so much upon the nature and extent of the duties which the Deputy Postmaster-general will hereafter be required to perform.

In

\* The only exception to this rule that occurs to us is in the case of services rendered by a postmaster solely at his own cost or responsibility, and not as a part of the accommodation the department is called upon to render by his means ; such as keeping accounts for postage, mailing late letters, giving receipts for money-letters (should that system be adopted), and fitting up post-office boxes wherever the department may not be prepared to furnish them.

In accordance, also, with the same recommendation, we think that the provincial executive should be charged with the responsibility of deciding whether any and what compensation should be awarded for the loss of those perquisites of which an improved system will deprive him.

In the event of our recommendation being acted upon, and the whole of British North America placed under one Deputy Postmaster-general, the unquestionable claim of Mr. Howe to compensation ought, we think, to be considered, and the amount settled in like manner, by executive authority within the colonies.

Emoluments of officers on the general establishment.

We have already stated to what extent we are prepared to recommend an addition to the force of the Deputy Postmaster-general's, surveyor's and accountant branches of the department.

The Deputy Postmaster-general has laid before us suggestions for an increase of salary to several officers on the establishment; these estimates will be found in the Appendix; but we think that upon all details of this character the provincial government should be allowed to decide, after due investigation of the facts. We are not in possession of sufficient information to warrant us in making any specific recommendation respecting them. Should the funds of the department, however, admit of it, we venture to recommend that the salary of the accountant should be increased, as at present it is hardly commensurate with the importance and responsibility of his situation; and as a general rule, we think that the principle of allowing the salaries of clerks in the accountant's office to increase, like those of the Deputy Postmaster-general's, with length of service, can scarcely be called in question.

Emoluments of postmasters at present generally too low; and franking privilege very objectionable.

A perusal of the postmaster's correspondence in the Appendix must show the obvious insufficiency of the incomes derived from the business of the minor offices, and the objectionable character of the franking privilege, which operates, however, in many instances as the only inducement to undertake the duties of postmaster for a very inadequate money payment. Amongst the postmasters a favourite remedy for the mischiefs of the present system is the introduction of the system of fixed salaries; but to this we fear there are serious objections.

The frequent and rapid changes which belong to a new country would render necessary a constant revision of those salaries, under which the system would be too likely to degenerate into one of mere caprice and favouritism. It will be observed that at many of the offices the receipts are so small that any assignable salary must necessarily exceed them. For these reasons, amongst others, we are not prepared to recommend a departure from the principle of a per centage on receipts, but the scale might be improved in several particulars, and we think it ought to be made more liberal to the postmasters.

In the first place the per centage should be reckoned upon the whole receipts, and not, as at present, on the British and provincial letter postage only. The effect of adopting our recommendations respecting newspaper postage would be to throw the collection of it almost entirely into the hands of the delivering postmaster; and if the United States' postage is brought into the general account, the effect of reckoning the same per centage on these new sources of income would materially improve the position of the postmasters, and redress a grievance of which they have reason to complain.

Proposed scale.

But the amount of the per centage might be raised also. Mr. Stayner has proposed to make it 25 per cent. on the first 10*l.* collected in every quarter, and 20 per cent., as at present, on the remainder. Mr. Griffin, taking this question in connexion with that of abolishing the franking privilege, proposes 30 per cent. on the first 10 *l.* in each quarter, and 20 per cent. on the remainder, as a means of accomplishing both objects. He has shown the effect it would have on the incomes of postmasters by selecting a number of cases which he thinks afford a tolerably fair criterion. We are of opinion that this suggestion might be advantageously adopted. It is impossible to think of compensating each individual postmaster for the loss of this privilege; but to those who use it in moderation, Mr. Griffin's plan would afford full compensation. Those who are largely benefited by the privilege would probably regard the proposal in a different light, and some might resign their situations; but we do not doubt that competent persons could be found to take their places, and in all such cases the revenue would gain considerably.

In connexion with this subject, it should be remembered that the adoption of the

# INTO THE STATE OF THE CANADIAN POST OFFICE. 73

the "forward" and "sub-office" systems will greatly diminish the labour at most of the minor offices,—an effect which ought not to be lost sight of when considering the necessity of raising the incomes of postmasters at such places. At the forward offices themselves it would be necessary to establish a graduated scale of salary, over and above the per centage, in consideration of the additional labour which the new system would impose upon the postmasters; and we would extend the principle of extra payment to all places where an unusual number of mails are made up, or where much night-work is required. On these points the Deputy Postmaster-general has offered suggestions. We are not prepared to express an opinion upon the details of his project, but we think the principle might be carried out unobjectionably, and at a moderate expense.

At the larger offices, where a permanent establishment of clerks is required, the postmaster should be placed on a suitable salary, and the appointment and payment of the clerks should belong to the department. We cannot undertake to pronounce an opinion upon the number of clerks or the amount of salaries to be allowed to the several offices at present belonging to this class. The general changes we have recommended are of a nature to effect so materially the amount of labour to be performed, that no calculations made on the basis of the present system could be relied upon for any length of time afterwards. But with the check which the superintendence of the local government would impose, we see nothing to prevent these arrangements being made in a satisfactory manner, as the condition of the department shall from time to time appear to require them. It is not the least of the advantages to be expected from this superintendence, that the system will easily accommodate itself to new exigencies, in a country where new exigencies are of every day occurrence.

Establishments at larger offices.

At the smaller offices the postmasters must continue to select and pay their own assistants.

Amongst those which will require either a fixed establishment of clerks or an allowance for extra duty, will of course be the offices which shall have to exchange mails with the United States. A question has been raised as to the right of the postmasters who now enjoy the large emoluments derived from this service to compensation from the British or provincial government, under the system we have proposed; having given to this matter our best consideration, we have formed a decided opinion against the claim. The system is one which ought not to have been suffered to grow up. A mere private arrangement entered into for their own benefit by certain public servants of our government with the authorities of a foreign country, if found to be incompatible with the interests of the government they serve, cannot be said to furnish a just claim to compensation. These gentlemen should receive a fair remuneration for their labours as frontier postmasters; we do not consider them entitled to more.

Offices exchanging with United States.

It is not in our power to submit an estimate in figures of the effect of our various recommendations upon the financial condition of the establishment, but after maturely considering the whole subject, we have arrived at the conclusion that the proposed scale of rates will yield a revenue sufficient to enable the department, in the exercise of a judicious economy and foresight, to adopt the principle we have suggested in the payment of all its officers, and at the same time to enter upon a liberal system of mail extension. Taken in connexion with the abolition of the postmasters' franking privilege, we believe that our scale of remuneration will not be found more costly than the present. From the appropriation of the newspaper postage to the general fund, we anticipate a considerable increase of revenue; and the increase of correspondence which may be expected to arise from the establishment of a system of reciprocity with the United States will not add to the expense of that service. We do not regard the proposed addition to the cost of the Deputy Postmaster-general's, the surveyors' or the accountants' establishments, as by any means an unproductive outlay; it cannot fail to effect great improvements in every branch of the service, and especially in the facilities it will afford for checking the postmasters' accounts; neither can we consider increased mail accommodation, which has a natural tendency to promote the efficiency of the department, in the light of a mere expense.

General result of recommendations in a general point of view.

We have already stated that from the proposed reduction of rates we do not anticipate any formidable diminution of revenue, even for the present, in Canada. In the lower provinces we have no doubt that it will immediately

produce

## 74 REPORT OF COMMISSIONERS APPOINTED TO INQUIRE

produce a material improvement ; but throughout the whole of the provinces the decided tendency of the revenue to keep pace with the increase of population and the expanding resources of the country, affords gratifying proof that in a few years the aggregate revenue of the department cannot fail to exceed its present amount.

The rates we have suggested are lower, it is true, than those collected in the United States, but it should be remembered that the cost of mail communication is also considerably less in these provinces, and that postmasters in the United States, in addition to a scale of remuneration somewhat higher than that we recommend, enjoy to an unlimited extent the franking privilege, which we propose to abolish. In the United States, not only do all the departments of the federal Government, and all members and officers of Congress enjoy the franking privilege, but the department gives a special allowance to postmasters for the trouble of delivering franked letters and parcels, although it receives nothing for them. We have not recommended that any correspondence, except that of the department itself, should pass free. With so many points of difference between the two systems, we do not fear to propose a lower scale, and we do so with the more satisfaction, because we think it likely to promote the contentment of the people of these provinces,—an object which we have ever kept in view in deliberating on the various matters which have formed the subject of our inquiry.

All which is most respectfully submitted.

31st December 1841.

---

I sign this Report, because I believe it to be my duty to do so *under any circumstances* ; but differing, as I decidedly do, from the other Commissioners in some statements of fact, and in many of the most material of the opinions and recommendations expressed in the document, I am preparing a Protest or Statement, containing my views on the points alluded to, which will be completed so soon as I am supplied with certain papers for which I have written to Kingston, and I shall then respectfully request that my Statement may receive from his Excellency the Governor-general and Her Majesty's Government the same consideration that they bestow upon the Report.

(signed) *T. A. Stayner.*

Quebec, 3d February 1842.

MR. STAYNER'S STATEMENT.

To his Excellency the Right honourable Sir *Charles Bagot*, Knight Grand Cross of the Most Honourable Order of the Bath, one of Her Majesty's Most Honourable Privy Council, Governor-general of British North America, and Captain-general and Governor-in-chief in and over the Provinces of Canada, Nova Scotia, New Brunswick and the Island of Prince Edward, Vice-Admiral of the same.

May it please your Excellency,

THE fire which destroyed the General Post-office on the 29th of November last, and with it every document belonging to the department, has thrown such an increased amount of labour upon me that it has not been in my power sooner to enter upon the duty which circumstances have created of submitting for your Excellency's observation my views upon the post-office question of these provinces, in opposition, as in some important particulars they are, to those of the gentlemen with whom I was associated in the late Commission.

I can assure your Excellency that I engage in this task with no common feelings of reluctance and diffidence, for there are reasons connected with it which make the effort more onerous than under ordinary circumstances such an undertaking would be; the most prominent of these is the disadvantage of my position in appearing in the light of an interested party in discussing subjects which ought to be decided upon general principles, and the difficulty even in the phraseology which I may employ of maintaining a proper distinction between my two capacities of Deputy Postmaster-general and Commissioner; for however it may be supposed that in the communication I am now preferring, I have no right to speak but as a Commissioner dissenting from the opinions of his colleagues, I find it will not be possible, consistently with the obligations I owe to myself and the department over which I preside, to confine myself altogether to this latter character.

I have been placed upon my trial by my colleagues, and a judgment pronounced upon some of my acts as chief officer of the department which I will not submit to without remonstrance, and an appeal to higher and more competent authority; added to these, (perhaps) inevitable causes for a very natural anxiety, others, not necessarily arising from my position, have occurred in the course of my connexion with the Commission of a nature extremely painful to me, and from the influence of which it may not be possible for me altogether to divest myself in making my statement; should I therefore not prove quite successful in maintaining a course free from objection (and which I would fain pursue), I must throw myself upon your Excellency's indulgence, with this apology for entreating your Excellency's favourable consideration of my humble attempt to vindicate my opinions, as well as my character, in relation to the very important matters under discussion.

I shall now proceed to remark, in the order in which they stand in the Report (so far as may be practicable), upon those points on which my observations appear to be necessary.

The first in the series seems to be that relating to the accountant of the department.

The Report states that the accountant is bound (by his instructions) "generally to receive orders from and obey the directions of the Deputy Postmaster-general," and in page 47 it says, "he certainly ought not to be placed in any way under the orders or direct control of the Deputy Postmaster-general whose accounts he is charged with auditing."

Accountant: see Report, pp. 12 & 47.

But one interpretation, either in theory or practice, was ever put upon this part of the instructions to the accountant by any individual in the post-office, and that is the obvious one, that he should obey the orders of the Deputy Postmaster-general, *when those orders are not incompatible with his duty to the authority by which he was appointed.*

The Postmaster-general, from whom the instructions proceed, was perfectly aware when framing them, that with officers whose duties are so intermixed as are those of the Deputy Postmaster-general and the accountant, cases would be

perpetually

perpetually occurring in their relations together in which the authority of the Deputy Postmaster-general must be exercised—either the Deputy Postmaster-general or the accountant must be the superior officer! And were it otherwise than it now is, I do not see how the business of the department could proceed; but the exercise of the Deputy Postmaster-general's discretion in the manner signified by the instructions, by no means impairs the independence of the accountant, or weakens the salutary effects which his appointment was intended to produce.

*The accountant cannot be controlled in the free exercise of his duties by any act of the Deputy Postmaster-general; if the latter were to attempt any thing of the kind, an appeal to the common superior of both would at once secure the proper remedy.*

The accountant makes what reports he pleases to the Postmaster-general without reference to the Deputy Postmaster-general; he moreover has *not* the final auditing of the Deputy Postmaster-general's accounts, which might be inferred from the Report; he examines the accounts and makes observations thereon, and calls for such authorities as may be required; finally, he compiles them into abstract form; but they all undergo two more scrutinies, the first by the Accountant-general of the post-office, London, and lastly by the Auditor-general (Treasury), and the Deputy Postmaster-general receives observations upon them from both these officers.

The actual working of the system, however, to which I with confidence appeal, is at once the best proof of the right judgment of the Postmaster-general who formed it, and of the inexpediency of such a change as the Report recommends.

As I am not satisfied with the conditional manner in which the accountant and his clerks are recommended in the Report to the consideration of the Government, I avail myself of this opportunity to request your Excellency's notice of my communication to the Commissioners upon this branch of the establishment, as it appears in the Appendix, part I. In submitting the above to the Commission, I was influenced by a mere sense of justice to Mr. King, the accountant, who is a most excellent officer, to represent the insufficiency of his salary of 300*l.* a year, and the fairness, likewise, of increasing the salaries of his clerks, who have served nearly eight years in the department without any improvement in their pay.

The Report admits that the salary of the accountant is hardly commensurate, even at present, with the importance and responsibility of his situation.

I think, therefore, that with the increased labour preparing for him, there can exist no reasonable question as to his claim for an improved income; and the same argument, in a limited degree of course, added to their length of service, must apply to his clerks.

Under other circumstances than the present, I should not, for obvious reasons, consider it proper for me to prefer opinions such as these in regard to the accountant's establishment; but seeing that the gentlemen composing it are unrepresented by any one acquainted with their claims, at a time when the demands and interests of the rest of the department are undergoing revision, I hope the course I am adopting may not be deemed objectionable.

No fixed office hours  
at country offices:  
*see* Report, p. 15.

As regards *office hours*, the Report states, in reference to article 24 of their instructions, that at country offices "it is to be presumed postmasters keep just such hours as they find most convenient to themselves." This conclusion is not quite correct, for although the circumstances of the country render it impossible, as indeed it is *unnecessary*, in the case of most of the smaller offices, to enforce the observance of regular office hours, postmasters are not suffered to consult exclusively their own convenience in the matter; the language employed in the article quoted in the Report conveys, also, as I conceive, a reverse impression to that signified in the Report; but apart from this, the surveyors, and I myself, whenever a question on this subject comes before us, never fail to explain that every reasonable accommodation on this score shall be afforded to the public, and this, as I believe, is generally understood throughout the country, and acted upon.

Regular office hours in towns are necessary and indispensable; but in the rural districts, even if they could be enforced, they would not afford to the inhabitants the amount of accommodation which a postmaster, who construes his instructions in a proper spirit, now extends to those who correspond through his office.

Farmers and others living at some distance from a post-office, and whose labours occupy them during the day, go *for* or *with* their letters at what cannot be

be considered office hours (or frequently on Sundays), and I believe it is rarely indeed that they are not attended to.

The Report states, with reference to the 25th and 26th articles of my instructions to postmasters, which direct that, where it can be done, the office is to be kept in a separate room, and that no bar or public room in a tavern be so used, that "in a large proportion of cases the former of these regulations is inoperative," and that "there is reason to believe the latter is frequently evaded."

And often no separate room as an office, p. 15.

This may be perfectly true, and yet reflect no reproach upon me or any one.

I have been compelled, under circumstances which every respectable individual in the country conversant with the history of the post-office will admit to have been replete with difficulties, to open up mail routes, and establish post-offices in places where it would have been utterly impossible to insist upon the rigid observance of many of the rules which form part of my general scheme of management; in homely language, where I could not have things exactly as I could wish, I have taken them on the best terms they could be obtained: the inhabitants have been benefited, and have expressed thankfulness for the advantages thus rendered to them, imperfect though in some cases they must be; yet knowing how a post-office should be kept to be perfectly effective, I never lose sight of the necessity for progressive improvement as the condition of the country advances.

I am frequently obliged in the newer settlements to accept for postmasters men whose business acquirements are of a very low grade, and it may be more easily imagined than described what labour and vexation the blunders of such persons entail upon the offices of the Deputy Postmaster-general and the accountant; still a great measure of good is in the meantime rendered to the inhabitants; and as the character of the population is gradually improving, I avail myself of the first opportunities that arise to choose better qualified persons as my deputies, when of course the business is better conducted.

This is the plan of management which I set out with when I took charge of the department in 1828, and I have constantly adhered to it since, so far as the means at my disposal have permitted.

With more surveyors more could probably have been done as well in this as in other objects requiring improvement, and one good which I look to as the result of the suggestions of the Commission, notwithstanding that I dissent from so many of the notions expressed in the Report, is that there will be such an increase to the force of this very important branch of the department throughout British North America as will enable the chief officer to give proper effect to a well-considered system of management. Necessary as post-office surveyors are found to be in England, they are even more indispensable in this new country.

The Report here states that the postmaster of Toronto has, since a period therein referred to, been appointed post-office surveyor to fill the vacancy occasioned by the removal of Mr. Porteous, and in a note it says, "this appointment has since been cancelled."

Postmaster of Toronto's appointment as acting surveyor: Report, p. 44.

I respectfully beg your Excellency to bear in mind the terms which are made use of in introducing these facts to your knowledge; they are preliminary to an accusation of a very grave character circumstantially advanced against me in page 43, and which I shall not fail to meet when in due course I arrive at that part of the Report; for the moment, it is unnecessary I should say anything more upon the subject.

There is no point in the whole economy of the department which calls for a change more than this, nor one perhaps so difficult to dispose of satisfactorily.

With very many of the postmasters (I may say indeed with by far the greater proportion) the privilege is esteemed beyond its money value, and I should fear that the withdrawal of it would deprive the establishment of numbers of its best officers; still it is an evil of so great a magnitude that I think it should be done away with as soon as may be practicable.

Postmasters' franking privilege: see Report, p. 22.

The question appears to be very properly treated in the Report, in connexion with the commission (as salary) now granted to postmasters generally, and I am not prepared to offer any new suggestions on either head further than this, that if the franking privilege is at once to be done away with, postmasters (not paid by fixed salaries) should receive 30 per cent. on the first 10 *l.* collected in each quarter, and 25 per cent. on the remainder.

It may not be improper to introduce here, as I am not aware that it is stated in

78 STATEMENT OF MR. STAYNER RELATIVE TO

in any part of the Report, that all postmasters in the United States are paid upon the following scale, which is much higher than that suggested by me.

On the first \$	100	of letter postage collected in a quarter,	30	per cent.
On the next \$	300	„ - - - „	25	per cent.
On the next \$	2,000	„ - - - „	20	per cent.
On the remaining amount	„	- - - „	8	per cent.
On newspaper and pamphlet postage	-	- - „	50	per cent.

Mail contracts, how entered into, &c. : Report, pp. 23 & 64.

As a general rule, I consider it advantageous to the Government to call publicly for tenders for those services, and in the cases of large undertakings I have for the most part pursued this plan ; but the frequent changes found to be necessary with a view to the improvement of the mail conveyance (arising from various causes incidental to a new and rapidly improving country) often induce me to modify the terms of original engagements to suit altered circumstances, and to keep a contract for two or three, or even more years beyond the term first agreed upon, in the hands of an old contractor. I have found, indeed, that a rigid adherence to the plan of depending upon open competition for the conveyance of the mails was not in every instance so beneficial to the post-office as a private engagement.

In the case of old established routes, where the contractors have been known to the department for a long time, I am persuaded that the course I have pursued of governing myself according to circumstances has been productive of the best results.

When a contractor has reason to know that the chance of his contracts being renewed depends mainly upon the manner in which he discharges his duties, it is certain that he will exert himself to give satisfaction ; further, too, such a man (having his equipments already provided) will generally be disposed to renew an engagement upon lower terms than another individual who may have his appointments to purchase, for it must be observed that there are very rarely rival lines of transport in existence at the same time on any route, the *mail money*, with some few exceptions, being the main consideration with persons engaged in public land conveyances, and the individual who secures *that*, is likely to keep the business in his own hands.

I beg it may be distinctly understood that I do not defend the practice I have been pursuing on any other ground than that it is the best suited to the *existing* condition of the country, and that by it more good has been effected than could have been obtained by constantly depending upon public competition. The circumstances of Canada, and of all British North America, are rapidly changing, and the time is probably not far distant, when it may be judicious, even as an invariable rule, to call for public tenders for the conveyance of the mails every few years ; that time, however, in my opinion, has not yet arrived, nor do I apprehend that it will be advisable, when the period for a change does come, to make it general at once ; it should be brought about gradually, and as may be warranted by the altering circumstances of the various sections of the country, the capabilities in some parts being much in advance of others.

Report, p. 24.

In describing the communications between Quebec and the lower provinces, I think it may be proper to add, after the words 200 *l.* currency, the fact that “ during the season of navigation (which, as regards Mr. Cunard’s contract, is understood to extend from 1st May to 31st October) the English mails are conveyed between Halifax and Pictou (Nova Scotia) 100 miles by land, and thence by steamer to Quebec.” The whole time occupied between Halifax and Quebec at that season is generally about four days. On such occasions a provincial mail is always conveyed with the English.

Route between Port Daniel and Gaspé Basin, p. 26.

The route between Port Daniel and Gaspé Basin has since last summer been made a weekly line ; at this moment there is no route within my charge served less frequently than once a week.

Report, p. 30.

The report says, “ *in the United States where the public departments enjoy the franking privilege.*” I beg to observe, and indeed the fact will be found stated in a subsequent part of the Report, that the departments of the federal government *only* possess this privilege ; the state departments and the state legislatures pay their postages pretty nearly upon the same plan that prevails in Canada.

The

The Report states "that the postage rates in the United States are rather lower than in Canada." Comparison with the United States: Report, p. 30.

I consider that, for the distances on which the greater part of the correspondence is sent, the rates are lower in Canada than in the United States; for instance, the chief correspondence in both countries is between large towns separated by distances under 300 miles, and it will be seen by the comparative scales below,\* that our rates, under that distance, are upon an average less than those of the United States.

The Report says, "the improvements in the service since then (meaning the 5th October 1840) must have done much to augment the gross receipts of the post-office, as the accounts for the current quarter will doubtless show, though it is probable, also, that they will exhibit some falling off in the net receipts." Post-office revenue, p. 31.

It is probable there will appear an increase in the gross revenue, but I am persuaded it will not be in proportion to the increased expenditure, and that the falling off in the net revenue will be very considerable.

The expense of the steam-boat service of the mails is very heavy, and I am disappointed at finding, from the cursory examination of the accounts which I have been enabled to make, that the revenue has not increased under the operation of this improved mode of conveyance, as I had hoped it would have done; and I am forced to the conclusion that, notwithstanding the effort thus made to accommodate the public, the illegal transmission of letters still continues to be practised, particularly between Quebec and Montreal, to a serious extent.

The Report says, "that the post-office department in British North America is marked by two leading defects in its constitution;" the first is stated to be "want of uniformity in the principles upon which it is conducted by two Deputy Leading defects of present system, p. 42.

721.

Deputy Postmasters-general;" and secondly, "the absence, not only of responsibility to the executive or representative authorities in the colonies, but of all real responsibility to the head of the department in England."

To the first proposition I fully assent, nor can there, as I conceive, be a difference of opinion as to the necessity for a change of government in this particular in the mind of any one who has had an opportunity of witnessing the working of the present system, if "system" it may be called.

His Grace the Duke of Richmond, then Postmaster-general, had nine years ago arrived at a similar conclusion, and in planning a new constitution for the department in British North America had provided accordingly; the increased intimacy of the relations between Canada and the lower provinces which has arisen since that time, has but augmented the evils then found to result from the anomalous nature of the local administration of the establishment; but as regards the second position, I consider the language of the report to be altogether too strong, and as leading to conclusions which not only cannot be maintained by any facts that have ever come before the commission, but which are absolutely contradicted by the proceedings which properly indicate the principles upon which the department (in Canada) has been conducted for a number of years past.

I freely admit that the responsibility to the local government is not of that kind which obtains in *provincial* departments, nor is it necessary, as I conceive, that it should be so, or indeed possible; but that there is a direct and practical accountability to the head of the provincial government, the history of my conduct of the department for a considerable time back abundantly testifies; and that it was not always so, anterior to the time to which I refer, is to be attributed, not to a defect in the constitution of the department, nor to any undue assumption of independence on the part of the Deputy Postmaster-general, but simply because the Governor-general did not think proper to exercise the authority over the department which he possesses in right of his commission. Whenever that authority has been put forth, I have cheerfully yielded to it, and so far from evading or shunning its exercise, I have sought it; and sure am I that no Governor-general has ever had cause to be otherwise than satisfied with the manner in which I have attended to his wishes, on any and every subject relating to the duties entrusted to my management. It is very true that the commission and instructions under which the Deputy Postmaster-general acts do not recognize, or rather I should say do not *name*, any local authority to whom he is to report his proceedings, or from whom receive orders; but it is not to be supposed that any person of ordinary intelligence holding such a charge as that of a Deputy Postmaster-general can be so entirely ignorant of the nature of his position, and the spirit of the commission under which he acts, as to imagine that he is independent of the authority of the head of the local government; indeed the concluding paragraph of the Report upon the subject almost allows the truth of the views I have here expressed, for it says that "*in practice there has been somewhat more intercourse between the Executive and the Post-office authorities than the theory would suggest*," but, as if fearful of having admitted too much, it adds, "but it has always been of an irregular and unsatisfactory character."

I repeat, that if it has been irregular and unsatisfactory, no blame on that score can attach either to the Postmaster-general or his Deputy, or to the constitution of the department, or the instructions alluded to.

The assumption that there is no real responsibility to the head of the department in England is as indefensible as the other. The author of the Report, after a research of 15 months, with every facility at his command for the most scrutinizing inquisition into my administration of the department for a period of 14 years, and after having, as I believe, received more than 1,000 communications expressive of their opinions from all classes of people in the country, many of those persons, from causes which I could not control, imbued with no friendly feeling towards either me or the department, has been able to find but two cases upon which he could pretend to build up what I believe to have been a preconceived opinion, namely, that the Deputy Postmaster-general possessed a power which *could* be abused, or at all events *perverted* to ends contrary to the intentions of the government and the interests of the public; what these cases are, and the spirit in which they have been dealt with, I shall presently have occasion to show; and having done this, I shall leave it to your Excellency and Her Ma-

jesty's

jesty's Government to decide as well upon the justice rendered to me by my colleagues, as upon the value of the evidence which these two cases are stated to afford of the evil working of the present system of administration.

Before entering into the details of the two accusations against me, which commence at page 43 and continue to page 45, I must be permitted to repeat that I am fully alive to the impropriety, under ordinary circumstances, of obtruding into public questions, personal feelings, motives or influences, and that I am compelled, notwithstanding this conviction, to speak of myself or others individually, I deliberately charge to the two gentlemen with whom I was connected in the Commission, though certainly not to them both in the same degree, for from one of them (so far as personal association extended) I have experienced unvarying courtesy, but I have been placed upon my trial by those gentlemen jointly, upon accusations relating to matters really of a nature which left me no other course than that which I pursued, and a sentence thereupon has gravely been recorded against me, in relation to one of the cases at least, which, if unremoved, would stamp me as a betrayer of the trust confided to me, and as unworthy of the future confidence of a Government which I have served faithfully for more than 30 years, without experiencing in that long period the mortification of a censure from one of my superiors. These considerations compel me, in adverting to this part of the Report, to view my colleagues together.

I shall now, as briefly as the nature of the cases will permit, proceed to give a narrative of them, stating all the circumstances, as I know them to exist, in truth, and placing in juxtaposition the colouring given thereto by the other Commissioners, with the conclusions to which they have arrived; following these with a very few remarks, I shall consider my duty discharged as regards this portion of the Report.

The first of the cases alluded to, is the matter of a money-letter belonging to Mr. Benjamin Brewster, of Montreal, which was dropped from the mailsleigh with the bag in the year 1835, and subsequently rifled.

I respectfully solicit your Excellency's perusal, in the Appendix, of the correspondence connected with this loss, which shows the grounds upon which Mr. Brewster ultimately obtained payment of his claim, with the exception of the demand for interest, which was disallowed by the Postmaster-general. The Report winds up the case by saying, "We think it deserving of attention, as showing in how dilatory and unsatisfactory a manner such proceedings in the present condition of the department must necessarily be conducted." Here there is no *direct* blame, as I understand it, imputed to me; but the case is made use of to prove that the present administration of the department is vicious, and that a different responsibility is requisite.

I shall have no difficulty in establishing that this case does not prove *all* that it undertakes to do, and that the greater part of the delay alluded to would have occurred had the subject in question been submitted for the judgment of the Executive of the province, instead of to the Postmaster-general.

The facts are as follows:—It became necessary to institute legal proceedings against the mail contractors for the penalty incurred under their contract by the loss of the mail. I placed the case in the hands of the late Mr. O'Sullivan, the solicitor-general; he was met in the first stage of the action by the difficulty of ascertaining the names of the several partners belonging to the stage-coach company by whom the mail was carried.

I addressed repeated letters to the solicitor-general, and sent the post-office surveyor to him more than once, to urge on the matter; but still the difficulty continued, and Mr. O'Sullivan alleged, that unless all the names of the copartnership could be procured (and they were understood to be numerous), the action would fail.

After much time had been thus consumed, as greatly to my annoyance as it could have been to that of Mr. Brewster, or any of the other individuals who had suffered by the robbery, the managing partner of the mail-coach company came down to Quebec to see me on the subject, and proposed, as a compromise to the action, to pay 250*l.* to the department.

I thought it prudent to accept this offer, and did so, immediately reporting the circumstances to the Postmaster-general, and recommending that I should be authorized to reimburse (out of the money so recovered) to the several persons who had suffered by the robbery the respective sums which they had lost, carrying the residue to the credit of the revenue, to cover, so far as it might,

the

the heavy expenses in various ways to which the department had been subjected in the pursuit of the robber, the prosecution, &c.

The Postmaster-general approved of this suggestion of mine at once; but it unfortunately happened, that the packet-ship by which his Lordship's authority was forwarded was lost; and several months passed before I suspected that the letter had miscarried, and had recalled the attention of the secretary, Sir Francis Freeling, to the subject, when a duplicate of the authority was sent out, and the matter, so far as rested with me, was at once disposed of.

The loss of time sustained by the failure of the packet would certainly have been avoided, had the question been to be decided by the Governor-general; but that was a small proportion of the time consumed; and under the improved system of packet-conveyance which now prevails (enabling us to exchange letters in six weeks), the delay of communicating with the general post-office cannot be put forward with much effect as an argument for any object in connexion with this department.

It is only right I should state, as well in justice to my colleagues of the Commission as to myself, that I do not recollect having been questioned by them upon this subject. I knew that Mr. Brewster had addressed the Commission, claiming interest for a certain time for the money he had lost; but the subject not having been brought forward by the chairman (for I repeat that I think it was not), and not having any suspicion that it was intended to make use of it in the manner that has been done, I gave it no consideration until I read it in the Report.

Report, p. 43.

The other case is one of much greater importance in the estimation of the two Commissioners; and to the introductory part of it, at least, I should not have objected, but for the unnecessary allusion to Mr. Edward Freer's being the "own nephew of the Deputy Postmaster-general"! omitting to notice a fact of quite as great importance, and known to them upon equally good authority, namely, that *he was a meritorious officer of the department of several years' standing*. This, however, I shall not dwell upon (it is of no consequence, except as a manifestation of feeling); but it is with the overstrained inferences deduced from certain facts connected with this case, and the consequent incorrect general conclusions of the other Commissioners, that I have to do; and if, in the prosecution of this disagreeable duty, I should be more burthensome to your Excellency than I ought to be (an error, however, which I will endeavour to avoid), I must again beg of your Excellency indulgently to bear in mind the painful position in which I have been placed by the Report, and the obligations imposed upon me now, whilst the opportunity is open, of repelling what I conceive to be a most unwarrantable imputation levelled against me.

Report, pp. 43 and 44.

I request your Excellency will be pleased to read, in the first instance, that portion of the Report on this subject which commences at page 43, and is continued to page 44.

Report, p. 44.

I shall observe here, that there is a mis-statement of fact in the page last mentioned, which is doubtless the consequence of an error of memory on the part of the chairman of the Commission; but which, nevertheless, it is a duty to myself to correct emphatically. The language is, "Mr. Stayner has declined laying before us his correspondence with Mr. Berczy, on the ground that it was of a private nature." *I did not decline* laying this correspondence before the Commission; on the contrary, I offered to produce the correspondence in question, if permitted. It is quite true I stated that it was of a private nature, and that I had preserved no copy of my letter asking Mr. Berczy to take the resident duties of the surveyor for a short time; but I added, I could procure the original from Toronto, and that I had no objection to show it, as well as Mr. Berczy's answer, if they could afford any satisfaction to the Commission. Mr. Dowling's notice of this offer was in the following words—both the tone and language (upon which it is unnecessary to comment) I perfectly well recollect: "Sir, I want to see none of your private correspondence!"

This, however, is of little consequence compared to what follows.

The Report, in page 44, proceeds to sum up my delinquencies in this matter thus: "It has been thought right to conceal from the Postmaster-general all knowledge of the facts that occurred since his Lordship's approval, on the 19th October 1840, of Mr. Freer's appointment. His Lordship has been suffered to remain under the erroneous impression that Mr. Freer is discharging the duties of his office in Upper Canada, whilst in reality he is employed as clerk in the post-office

post-office at Quebec, and in utter ignorance of the arrangements by which for nearly a year the important duties of surveyor have been irregularly and imperfectly discharged."

These are serious charges, and if I did not possess the power of divesting them of the guilty complexion which the terms employed in the Report are calculated to convey, they might well form an argument, not merely for a change of system, but for showing that I have criminally abused my trust, and rendered myself undeserving of future confidence; but it is now for me to state the circumstances of a transaction, from which Mr. Dowling and Mr. Davidson have attempted to draw such grave deductions, preliminary to the recommendation of certain views, and to show that the whole of it from beginning to end was not only justifiable, but actually the only course left for me to take under the peculiar difficulties of a position into which I was thrown by causes which I neither created nor was accessary to.

That I did not report to the Postmaster-general the facts which had occurred since his approval, on the 19th October 1840, of Mr. Freer's appointment until a recent period, the 5th December 1841, is perfectly true. I will add, that even then I mentioned them only incidentally, but when I have stated the reason of my silence (not "concealment," as alleged in the Report), I think your Excellency will be disposed to admit that I had full and imperative cause for it.

My statement is as follows: I recommended Mr. Freer, who was the first clerk in my office, for the situation of surveyor, about to become vacant, upon the grounds of his having stronger claims for the promotion than any other person in the department. The Postmaster-general was pleased to approve of the appointment on the 19th October 1840.

On the 26th of that month the Post-office Commission was organized, and I was compelled to take up my abode in Montreal.

At this time, when consulted by the late Governor-general and the chief secretary, Mr. Murdoch, as to the probable duration of the proceedings of the Commission, I stated that I conceived two or three months would be sufficient to do every thing that was required, and so fully was I impressed with the belief that more time could not be needed, that when I left Quebec by one of the last steamers for the season, I gave the people in my office to understand that I should return and resume my duties by mid-winter.

As I could not, however, remain away from my office even for those probable two or three months, without leaving a competent force there to conduct the duties, I had no alternative but to arrange that Mr. Freer should remain in charge of my correspondence; and I explained to Mr. James Porteous, then conducting the surveyor's duties in Upper Canada, that he must continue where he was, and his uncle, the postmaster of Montreal, where *he* was, until I could carry out a permanent arrangement. All parties cheerfully acquiesced, and it was my intention, so soon as I should be relieved from my attendance upon the Commission, to report to the Postmaster-general what steps it had been necessary for me to take to meet the exigency which had arisen, and at the same time, as a measure of justice to Mr. Freer (whose labours were greatly increased, and who was deprived of the advantages pertaining to the surveyorship), to submit to his Lordship that he should receive some extra compensation.

Such were my first arrangements, and I knew that they were the best that could have been made, and I felt perfectly assured, also, that they could not be otherwise than satisfactory to the Postmaster-general, who, in approving of the alterations consequent upon Mr. Andrew Porteous's resignation, must, as a matter of course, have intended to leave it to me to carry them into operation at my convenience.

Early in December the elder Mr. Porteous became importunate to be relieved from the duties of postmaster of Montreal, alleging that his health was failing, and entreating that I would let his nephew come down from Toronto and take his place. This was a great annoyance and disappointment to me, because I still hoped that in a short time I might be suffered to return to Quebec, and carry out the original design by sending Mr. Freer to Toronto; however, as I could not insist upon Mr. Porteous's continuing in charge of the Montreal office longer than was agreeable to him, I told him he should be relieved at the end of the quarter, and as the occasion pressed, I immediately wrote off a hurried letter to Mr. Berczy, the postmaster of Toronto, who had formerly been the surveyor for Upper Canada (and who was the most likely to aid me in the exigency), to ask him if he thought

he

he could oblige me by conducting the surveyor's *resident* duties for a short time after the 5th January, explaining in a few words how awkwardly I was situated, and the necessity I was under of adopting some provisional plan.

The *resident* duties of the surveyor in Upper Canada, I beg your Excellency to understand, are laborious and important; in this capacity he maintains an extensive correspondence, and pays nearly the whole of the contract services, besides attending to other objects with the detail of which I shall not swell this paper. I stated to Mr. Berczy, in my communication, that if he could undertake this portion of the duty, I thought I could easily provide, by other means, for such travelling services as were likely to be called for in the probable brief period that the arrangement would last, as I should see that Mr. Porteous got his ordinary travelling work well up before he came to Montreal; I, of course, told Mr. Berczy that he should be properly compensated for this extra duty.

Mr. Berczy promptly acceded to my request, stating, so far as my memory serves me (for his letter was destroyed by the late fire), that by providing an extra clerk to assist in some of his office duties (which he did at his own expense), he could meet my wishes.

On the 6th January, Mr. Berczy took the duty in question and discharged it, as he has done every duty I have ever entrusted to him, to my entire satisfaction.

Whilst Mr. Berczy had this task in hand, two occasions only, I think, occurred in which it was found absolutely necessary to employ a travelling agent, and Mr. Richardson, the postmaster of Brantford, who had frequently before been engaged for similar objects (*they related to missing money-letters*), was then despatched, and he executed the services perfectly well.

This arrangement continued from January until early in June,\* when finding that instead of closing its proceedings, the Post-office Commission seemed destined to an unlimited duration, and that I should be obliged to continue with it at Kingston, still leaving my duties at Quebec to be got through with as best they might, I found it necessary to make another change, and I proposed to Mr. Richardson, the postmaster of Brantford (the person before alluded to), to give up his post-office and devote the whole of his time to the surveyor's duties, so long as I might find it necessary to employ him, he receiving all the advantages appertaining to the appointment of surveyor.

This arrangement still continues in force, in consequence of my being compelled to retain Mr. Freer at Quebec, to assist me in meeting the difficulties arising from the late unfortunate fire.

So far I have been under the necessity of troubling your Excellency with what may be termed a narrative of my proceedings, as they relate to the arrangements themselves, connected with the matter in question.

I must now enter upon the more painful task (painful, because I must speak of the injustice rendered to me by a party to whose authority circumstances for a time subjected me) of explaining why I for so long a period abstained from reporting to his Lordship the Postmaster-general the provisional arrangements I had made in relation to the surveyor's duties in Upper Canada, and to which the Report attaches so much importance.

I have already observed, that in the first instance I expected my absence from Quebec in attendance upon the Commission would have been but for a few months, two or three, and that when I could return thither and send Mr. Freer to Toronto, I would report my temporary arrangements to the Postmaster-general.

I should observe likewise, that I took one of my clerks with me to Montreal, to assist me with my correspondence, which I conducted under the disadvantage of a separation from nearly all my office records, involving the necessity of perpetual reference to Quebec, and keeping me engaged with but little intermission from early in the morning until midnight.

I was

---

\* I conceive it proper to state here, that the whole amount of Mr. Berczy's claim for the services rendered to the department whilst conducting the resident duties of surveyor between January and June was - - - - - £. 66 15 -

Out of which he paid from his own funds for the assistance of an extra clerk taken into the post office during the same time - - - - - 33 10 -

Sterling - - - £. 33 5 -

---

Leaving Mr. Berczy the sum of 33*l.* 5*s.* as his entire compensation for an amount of labour which would not have been adequately paid for by less than thrice that sum.

I was compelled, also, for a great part of the winter to have with me Mr. Griffin, the surveyor for Canada East, to aid in preparing the numerous statements and calculations required for the Commission, the whole of which work does not appear in the Appendix.

I mention these facts to afford your Excellency some idea of the difficulties under which I have conducted my office duties whilst in attendance upon the Commission, and the consequent necessity I was under of keeping Mr. Freer at Quebec. It might have been thought that a knowledge of these difficulties during this lengthened period (for they could scarcely have been ignorant of them) would have induced the gentlemen with whom I was connected in the Commission to have made some allowance in my behalf, and to have given me the benefit thereof in the Report for failing, in their opinion, *in one instance* in a point of duty; not so, however; the occasion, poor as it was, was eagerly caught at to support a position not sustainable, as I conceive, by sound argument; and in the pursuit of this object they have exerted themselves to the utmost to present circumstances in a light unfavourable to me.

That your Excellency may the better estimate the value of the imputation that I could have intended from any unworthy motive to conceal from the Postmaster-general my proceedings in the matter in question (for nothing short of this is meant), I beg to say, that I could not bring one shilling of the expense incurred in these temporary arrangements into my accounts without first submitting the vouchers for the special approval of his Lordship.

I have paid all those expenses out of my own funds, nor can I be reimbursed until the Postmaster-general is satisfied to approve of what I have done; but to show even more strongly, if possible, how little ground there existed for charging me with *concealment*, and for "suffering the Postmaster-general to remain under the impression that Mr. Freer was in Upper Canada, whilst he was actually at Quebec," I beg to state, that during the many months I was kept away from Quebec, *Mr. Freer, under his own signature, in my behalf, was by every packet in the practice of making reports to the secretary of the general post-office.*

I felt that the Postmaster-general was aware that the circumstances in which I was placed would compel me to make various arrangements for a time upon my own discretion, and that he had sufficient confidence in me to trust for a satisfactory explanation (when the time for it should arrive), of any delay which might occur in reporting to him, and I have consequently been free from anxiety upon this part of the subject.

Having already explained why I did not think it necessary to report to the Postmaster-general my provisional arrangements for conducting the surveyor's duties in Upper Canada, and of my own at Quebec, during the first few months of my absence from Quebec, I shall now crave your Excellency's further attention whilst I state my reasons *for abstaining to report one word upon the subject after it was taken up by the Commission.*

*See my letter to Post-office Commission, in Appendix.*

I think it was in April last, after Mr. Berczy had been managing the duties of acting surveyor for about three months, that application was made to the local government\* by some gentlemen of political influence in Upper Canada for the situation of post-office surveyor (presumed by them to be vacant) for Mr. Howard, formerly postmaster at Toronto, who was dismissed from his office by Sir Francis Bond Head in 1837, in consequence of his suspected connexion with the rebellion.

Upon a question on the subject of this supposed vacancy being put to me by Mr. Dowling at a sitting of the Commission, I informed him that the appointment was *not vacant*, and proceeded to state exactly how the matter stood, and what I had done in consequence of being unable to spare Mr. Freer from Quebec. Being conscious that throughout the whole of my proceedings in the case in question I had consulted the best interests of the public, I supposed my explanation would have been satisfactory; not so, however, for I was questioned and cross-questioned about it by Mr. Dowling in so offensive a manner, that I desired permission to lay before the Commission, in *writing*, a statement of the transaction as it occurred, which I immediately did.

Notwithstanding the undisguised and full explanation then afforded, and which I am quite sure would have exonerated me with the Postmaster-general from the slightest

\* It is proper I should state, that I do not know officially, nor indeed certainly, that this application was made to the head of the Government, but I have reason to believe that it was, and I am quite prepared, if called upon, to state the grounds for this belief.

slightest blame, Mr. Dowling, the chairman of the Commission, with a precipitancy and want of decorum, hardly excusable, as I conceive, under any circumstances, still less in our relative positions, thought proper to say the transaction was "*a job*," or looked like "*a job*," with phrases of a similar character, equally ill-judged and out of place; my first impulse naturally was, under so gross a provocation, to abandon the Commission as a member; but I was dissuaded from this by the advice of judicious friends, who represented to me, and I am sure justly, that if I took any course which should have the effect of breaking up the Commission, it would be believed that I had done so because the inquisition into my conduct was more searching than I could endure, and that I had resorted to stratagem to get rid of it. I, therefore, under a protracted state of vexation, which I would not submit to again for the value of my Commission, continued to sit at the Board, and to lend my assistance to the business in every manner in my power for several months longer, until my health actually gave way under the annoyance which I was enduring, and I returned to Quebec early in August, leaving behind me at Kingston (with the consent of Lord Sydenham), Mr. Griffin, the surveyor for Lower Canada, who was perfectly equal to supply my place for all that was required to be done; he was detained there some three months or more, before he was permitted to take his departure.

Your Excellency will, I trust, give me credit for being actuated by a right feeling, when I resolved, after the language alluded to had been used by the chairman of the Commission, to make no communication whatever to the Postmaster-general on the subject in question whilst the Commission should be in action; had I done otherwise, I should naturally have expected that the same tendency to put the worst construction on my proceedings which had been previously manifested by the chairman would have led him to say, that finding myself in a dilemma, I had sought to escape from the consequences, by entrapping the Postmaster-general into an approval which his Lordship would not have afforded, had he known all the circumstances of the case as they would appear in the Report.

I beg leave here to draw your Excellency's attention to the fact, that though this case is ostensibly brought forward as a powerful illustration of a great inherent defect in the existing constitution of the department, it does not, even as set forth by my colleagues, tend to such a conclusion; but rather resolves itself exclusively into an impeachment of the Deputy Postmaster-general for having overstepped the discretionary power vested in him, and in fact for having deliberately violated the instructions which form a material part of the above constitution.

To have led to the desired inference, it should have been demonstrated that the existing system was so defective as to enable me to escape or evade the consequences of my proceedings in this case. It cannot be shewn that I could entertain any such expectation, nor other reliance than my trust in the impartial consideration of my Lord the Postmaster-general, of the circumstances of peculiar difficulty in which I had been placed. If I am right in my view of the case, I think it will be admitted, that the main argument of Messrs. Dowling and Davidson drawn from it falls to the ground.

I shall now, may it please your Excellency, bring to a close all that it appears necessary for me to say with regard to mere personal defence in the matter of the Report; my statement under this head has extended to a length much beyond what I anticipated when I commenced, and it may not be free from objections on other grounds. I must however repeat my hope, that in consideration of the peculiar circumstances of my position, which has indeed been one of singular difficulty, your Excellency will be disposed to make such allowance for the course I have pursued as I may be entitled to. Had Lord Sydenham (by whom the Post-office Commission was constituted) survived, it was my determination, before he left the country, to have represented to his Lordship every thing which I am now laying before your Excellency, with many other particulars, indeed, with which it would have been right he should have been made acquainted, but with which it is unnecessary to trouble your Excellency.

There is an assumption here that the Postmaster-general is not satisfied with the nature of the responsibility of his Deputy, which I conceive his Lordship, when the remark meets his observation, will not fail to disprove.

The Report says, "There is evidence, that in this respect the condition of the department has not been considered satisfactory;" and again, "Since the appointment of this Commission, the Postmaster-general has seen fit on more than one occasion

occasion to refer to us for our report on recommendations sent to his Lordship by the Deputy Postmaster-general."

It is quite true that, pending their sittings, his Lordship the Postmaster-general deferred to the judgment of the Commissioners two or three cases involving expense—the establishment of the Montreal office was one of the cases; this I conceive was quite natural under the circumstances. It was proper, indeed, that every question of the kind that could be subjected to the judgment of the Commissioners should have the benefit of their consideration; but I think I may safely say that the fact does not bear out the inference drawn from it by my colleagues.

I shall now, with permission, take up that part of the Report, page 45, which undertakes, after having endeavoured to shew that I have abused the trust reposed in me, to draw a general deduction from the premises; it says, "Power, however purely exercised, if subjected to no popular control, and to but little check of any kind, will always be liable to suspicion. Concealment creates jealousy and distrust; but if to this we add the fact that from some of the colonies, the Canadas especially, a large surplus revenue has been annually remitted to England, the public dissatisfaction will appear natural enough, even though the expediency of the changes we are about to recommend should not be admitted."

No one, I fancy, will be disposed to dissent from the abstract truth of the above propositions, but I believe the Report to be wrong so far as Canada is concerned, at all events in supposing that the "power" alluded to in its general application to the business of the post-office has had much to do with the dissatisfaction described.

I think that *three* causes have operated to prevent the attainment of that degree of popularity to which the department might fairly have laid claim, had there existed no counteracting cause, from the great improvements that have been introduced within the last few years, and which are generally admitted; and they are, firstly, the charge against printers for the transmission of their papers, or rather the enforced prepayment of that charge, and its appropriation to the Deputy Postmaster-general as a privilege of office.

This exaction is supposed to bear injuriously upon printers; by it they are constantly brought into irritating collision with the department, and it can scarcely be necessary to do more than state this fact, to account for the dissatisfaction expressed, and the little disposition that there has been to speak favourably of the post-office. With the whole public press, actuated by a direct personal feeling against any establishment, popularity, in the ordinary acceptance of that word, is not to be expected. I have long been convinced, therefore, that both the mode of paying for newspapers, and the application of the proceeds, required alteration; and it is well known that I have for many years advocated the necessary change.

The second ground for dissatisfaction is the remittances of the surplus revenue of the department. This surplus revenue has undoubtedly resulted from military postage, paid by the several army departments; and there have not been wanting arguments to show, that under the circumstances, the British Exchequer was well entitled to a return into it of money expended in the postages of an army stationed in the colony for its defence.

The public generally has been ignorant of the fact which I have stated above; the great amount of military postage has not been known or suspected; and the common belief is that some 12,000*l.* or 15,000*l.* a year remitted to England as post-office revenue comes from the pockets of the inhabitants of the provinces, although it can be demonstrated that this is an error,

The third cause for dissatisfaction has been the high rates of postage, more especially the rates for great distances, and this dissatisfaction has gained strength rapidly since the introduction of the general penny rate in England, and the reduction of the postage on our correspondence with Europe; for, as a correspondent of the Commission very justly observes, "Charges for postage will always be referred for comparison to the lowest rate with which the people are acquainted."

If the three causes for dissatisfaction above described were removed, and the same attention to the general improvement of the department which has obtained for the last several years continued, I entertain not the slightest doubt that the post-office would become as popular as could be desired.

I agree with the other Commissioners in their reasoning (commenced in page 45) upon the Bill sent out in 1834. The course adopted on that occasion was radically wrong, and not suited to accomplish the desired end. I think, also, that the whole or nearly the whole of a satisfactory plan might be arranged by the

Report, p. 45.

Report, p. 47.

Lords of Her Majesty's Treasury and the Postmaster-general, and carried out by their authority alone; but I do not see any good reason for the Postmaster-general's transferring to the executive authorities in the provinces any portion of his administrative control over the department, if by this is meant, as I believe it is, to take from the Postmaster-general or his Deputy the right of appointing to office people for whose conduct the latter individual is accountable! The intention itself is only named in *words*, and as it were incidentally, nearly at the close of the general argument in page 47; nevertheless it is the great question upon which I am at issue with the other Commissioners; it is the question whether the Postmaster-general shall be deprived of all substantial power in the department, that of appointing his own officers, or whether those officers shall be appointed by the respective Governors of the provinces, and the department be made (to the destruction of its usefulness) an arena for political partisanship!—for that I have no doubt it *would* become.

I can conscientiously say, that when reflecting upon this most important branch of the question, I have endeavoured to divest myself of every consideration arising from my present position in the department, and my firm impression is that to take from the Postmaster-general or his representative the right of appointing to office, will not only weaken its efficiency in its working operations, but effectually prevent the establishment's acquiring what after all is the principal object to be looked to—the confidence and favour of the public.

I consider that the proper policy to be pursued with regard to the post-office in these provinces is to make it a common link of union between the Government and the people, and that neither its own action nor the choice of its officers should be made subservient to political party objects.

I can easily conceive that it might be a convenience to the Executive for a time, and that some apparent immediate advantage might be derived, were the several Governors to appoint their political adherents to the situations of surveyors, postmasters, and to the superior clerkships; but the character of the department would thereby sink in public estimation, and become in a short time what it is in the United States, where of late we have witnessed the extraordinary fact of the highest functionary in the Government (the President) brought to a conviction of the pernicious consequences springing from a post-office influenced by political considerations, and repudiating in a public document what has notoriously been the guiding principle of that establishment.

Any and every other department, in a country peopled as these provinces are, may with more safety than the post-office be made accessory to the advancement of any course of policy which the Government may be pleased to advocate; but the post office, for reasons just stated, and others which I think must come home to every man, should if possible remain sacred from even a suspicion of being under party bias; it is upon its unquestionable integrity in the minds of all classes that the post-office must mainly rely for its character and prosperity.

It may be supposed, notwithstanding my protestation to the contrary, that I am biassed in my views by the situation I happen to hold in the department, and that I wish to perpetuate a system which has been advantageous or convenient to myself; I do not think, however, that I am obnoxious to such a charge, nor do I think that the continuance of the “patronage” of the department, as it is called, where it has hitherto been, can necessarily expose the government to injury, for there can be no doubt that the Executive of the country has at all times the power of suspending from the exercise of his functions any Deputy Postmaster-general who may be found abusing the authority entrusted to him; no other idea can for a moment be seriously entertained, and with such a power the responsibility of the post-office to the local government of the country is as positive and actual as it can be for any useful object.

The Report goes on to say, page 46, “It appears to us that the mere introduction of a few sentences in the commission and instructions to the Deputy Postmaster-general, requiring him to obey in all things lawful the orders of the Governor-general, as well as those of the Lords of the Treasury and the Postmaster-general, might be made the means of providing all needful subordination to provincial authority; the effect of this alteration would be to confer upon the Governor-general a sort of concurrent jurisdiction which could never by any possibility clash with that of the authorities at home, or impede the uniform working of the system, but would subject that officer to a real, because no longer a distant responsibility, and introduce some measure of popular control by making the  
local

local administration answerable politically for abuses in the direction of the post-office."

The Report continues—"The introduction into the Deputy Postmaster-general's Commission of a clause of this sort, though a novelty as regards the post-office, is not without precedent in other departments, subordinate as the post-office is to the Lords of the Treasury or to the Secretary of State;" and a Commission of the Surveyor-general of Woods and Forests in Lower Canada and the Commission of the Commissioners of Crown Lands are cited as instances. The relations existing between the Commissariat and the military authorities at their respective stations are also supposed to constitute a precedent for the application of a concurrent jurisdiction in the case of the post-office.

I have no objection, whatever, to urge against the introduction of the "few sentences" suggested in the Commission of the Deputy Postmaster-general, for I do not see that these words would in any degree affect the accountability which the Deputy Postmaster-general owes to the provincial Executive, but I would respectfully protest against these sentences being construed to deprive the Postmaster-general of any portion of his prerogative as now exercised, and this should be clearly explained. The change recommended is not necessary, and would in its effects be bad, nor can I see that the original argument for it is in any degree strengthened by the references to the Wood and Land departments.

The post-office is necessarily an imperial establishment (not a provincial one), because its government and operations must pervade the several provinces.

The Wood and Land departments are strictly local, confined in their accountability to one province, and the orders of the Governor are sufficient for every relation coming within the sphere of their operations.

It is unnecessary to enlarge upon the different character of the post-office in this respect; further, I conceive it to be quite an erroneous assumption that the provincial jurisdiction "*could not by any possibility clash with that at home,*" if the former is to be exercised in the manner and to the extent evidently aimed at by the authors of the suggestion.

The Commissariat is a better illustration of the kind of concurrent jurisdiction which ought to prevail in the post-office, *so far as the different nature of its character and service would permit*; my opinion indeed is, as already stated, that it does exist at present, but if it would conduce to the public satisfaction (*and I think it might*), I should be glad it were formally proclaimed; but I must again enter my solemn protest against the introduction of any change that would identify the post-office in its action with the political movements of the country, or that would have the effect of making the Deputy Postmaster-general a political character.

The next proposition advanced by the other Commissioners is that the "establishments of the Deputy Postmaster-general and the accountant should be permanently fixed at the seat of government in Canada." Report, p. 47.

My opinion is, that the proper position for the central establishment is at Quebec. The Report has given the outline of my arguments, but adds, "these considerations do not appear to us at all decisive of the question; the constant presence of a very active and intelligent postmaster" (at Quebec) "is all that is required for these objects."

The more I consider this matter, the more am I convinced that Quebec is the natural and proper station for the managing officer of the department. If a central government is required, it is of the first moment that it should, as nearly as possible, be *geographically* central. Should the government of Canada continue at Kingston, and the Deputy Postmaster-general of British North America be stationed there, he would be 1,300 miles away from one extremity of his charge, and only 450 from the other! and it is certain that the organization of the lower extremity, meaning the country east of Quebec, will require three times as much of his direct superintendence as the upper part. The disadvantages which must result from conducting his operations at such a distance, I humbly conceive, form a consideration which should outweigh every other in deciding this question.

I admit the advantage of an easy communication with the Governor-general, but it is not in my opinion a vital consideration that he (the Deputy Postmaster-general) should always reside in the same town with his Excellency. I think he should be so situated as to be within easy call of the Governor-general and the Legislative Assemblies of Canada; and further, I consider it highly advisable that his office business should be so arranged, as to permit him, without injury to it,

to visit occasionally the several provinces, and see that the surveyors are doing their duty, and to consult with the several Lieutenant-governors upon the improvement of the Post-office establishments within their respective provinces; this, perhaps, more than anything that could be devised, would have the effect of increasing the efficiency of the department generally, and of rendering it extensively popular.

Report, p. 47.

The five surveyors, as recommended in page 47, would probably suffice for some time to come, but if possible, I should wish to avoid keeping a surveyor at Quebec for any great length of time; he ought to be differently occupied, more especially if Quebec should remain the station of the Deputy Postmaster-general.

Hitherto Mr. Griffin, the Lower Canada surveyor, has been obliged to remain too much at Quebec in order to assist the Deputy Postmaster-general in his duties, which otherwise he could not have got through with; this, I repeat, ought not to be necessary, and one serious objection to it is, that it is an injustice to the surveyor himself, who receives pay only at the rate of 150*l.* a year whilst at his head quarter station,—a very insufficient compensation if he continues stationary for a considerable portion of the year.

Force of the Deputy  
Postmaster-general's  
office, Report, p. 47.

The Report says, with reference to there being one central office for British North America, that perhaps "one additional clerk might suffice" for the Deputy Postmaster-general's office, and adds "that if some further increase in the establishment be found necessary hereafter, it is among the advantages of the plan we propose, that such necessity would be easily decided upon by competent and impartial authority."

In one of my communications to the Commission, I observed that in the event of annexing the lower provinces to the Canada charge, I should require another clerk in my own office. I stated this without pledging myself that it was all that would be necessary. I should require that addition at once; but the task of assimilating the duties of the lower provinces to those of Canada, and of subjecting the whole to a system that would work well, will be a very heavy one, and until it is fairly entered upon, I cannot venture to say what additional force will be necessary as a permanent establishment.

I should think, however, that the Postmaster-general would be as competent and as disinterested an authority to decide upon a question of this kind as could be found, and I consequently cannot see the collateral advantage claimed in the Report as likely to be realized in this instance from the adoption of the change of management. In any event the opinion of the Deputy Postmaster-general, except all confidence is to be withdrawn from him, must have weight in a question relating to the duties of his own office. The great fear of the Commissioners, however, seems to be that the Deputy Postmaster-general should be trusted to for any thing, and their chief object to place him in a position where, although his responsibility is to remain, he is permitted no free action; but surely some confidence ought to be reposed in the judgment and good intentions of an officer who has attained to his rank, and standing too, in the particular position in which he does; nor is it possible to work a department of this kind effectually unless a large share of discretionary power is vested in him, or in some officer, by whatever other name he may be called, entrusted with his duties.

I hold it to be perfectly right that the Deputy Postmaster-general should be rigidly watched by the Governor-general and by the Legislature also, and that he should be obliged to render ample explanations of his conduct and proceedings whenever these high authorities may deem it necessary, and that it should be a part of the system that full periodical reports, in such form as may be satisfactory, should be furnished by him; and further, that it should be distinctly made known to the public that to this extent he is responsible, and that for abuse of his power or neglect or incompetency, he may be suspended by the Governor-general; but to trammel him in the practical discharge of his duties by any checks beyond these, and what exist in the surveillance of the Postmaster-general, the Audit-office, and more immediately in the Account branch, would only tend to defeat the reasonable expectations of the Government and the public.

I think it may be advantageous at this stage of the question to solicit your Excellency's notice of part of a letter from the Honourable John Macaulay, inspector-general of accounts in Upper Canada, which appears in the Appendix, and which goes immediately to the point now under consideration.

Mr.

Mr. Macaulay was, for several years, postmaster of Kingston, and during that time he devoted his attention not merely to the operations of his own office, but to a study of the Post-office system generally, the working of which, as well in the United States as in the British provinces, he thoroughly understands; added to this recommendation, the opinions of this gentleman upon all matters of departmental business are acknowledged to be of the highest order; I consider, therefore, I am justified in now referring to what he says in regard to the management of the post-office.

The language is: "In order, however, to ensure the steady progress of improvement in all branches of the department, I am under an impression that its chief officer in this country should be endued with larger responsibilities and higher powers than I apprehend it has hitherto been the policy of the superior metropolitan authorities to concede to him. He should, I think, be permitted to act in reasonable conformity to his own views of the general advantage, and to the desire of the head of the local government upon any special matter, without a previous and perhaps a very dilatory reference to London. The colonial executive should be allowed a control over the department to a certain extent, which, however, should be so defined as not to go the length of sanctioning any sort of executive interference with appointments to office in the department. The patronage should exclusively appertain to the Deputy Postmaster-general, who it is clear would be careful in the unfettered exercise of his own discretion to select his deputies according to the opinion he might be led to form of their integrity and ability, and with little reference to any other consideration. Were the executive government in any manner to exert an influence over the appointments, they would become political, which is the last thing to be desired in such a department of the public service."

Appendix, Part II.

I do not differ so materially from the other Commissioners in their statements on this head as to render it necessary for me to record my impressions at any length in opposition to theirs.

Postage rates, arguments for reducing, &c., Report, p. 52.

I have already remarked, with reference to what is said in pages 30 and 52 with regard to the United States' rates, that my opinion is, that for those distances upon which the greatest amount of correspondence is conducted in both countries, the rates in the United States are higher than those in Canada! A very material difference, however, in favour of the United States' tariff, and that which impresses the public most strongly when contrasting the rates of the two countries, is, that in the United States they have a maximum rate, and it is comparatively a low one; the charge does not increase after 400 miles. I have always considered this principle a good one, and that it might be advantageously applied to these provinces.

Having myself devised the four scales of postage described in the Report, and, upon a comparison of the merits of them all, given the preference to No. 4, I unite in the recommendation that it should be adopted (and the weight system also), but I cannot, consistently with my own credit and the obligations I owe to the public, concur in that recommendation in the unqualified manner that is done in the Report, nor without earnestly entreating your Excellency, before giving to so very material a question the weight of your voice in sending it to Her Majesty's Government, to consider the disastrous consequences that will ensue, if, upon the application of these fundamental changes, *without any previous provision being made for a want of funds to carry on the business of the department*, a deficiency should arise! For that an actual deficiency will be the early consequence of those changes I am well persuaded, nor can I see upon what grounds the other Commissioners have ventured to estimate (as they have done in page 57) "the utmost loss in Canada from the adoption of the two changes" at 9,000 l.

Recommendation that Scale of Rates, No. 4, should be adopted, &c. Report, p. 54.

I beg to lay before your Excellency the scale, No. 4, with my remarks thereon, as originally prepared for the Commission, wherein you will perceive, Sir, that I stipulate (if I may be permitted to use the term) for a provision against the probable deficiency that may be expected to follow the alteration for some time.

When draughting the scale just mentioned (No. 4), I was not called upon to take into account the operation of the weight system, as alluded to in the Report, page 56; but without having in view the loss which I consider as inevitable therefrom, I see enough in other causes, more especially in the rapidly increasing expenditure for steam-boat service, &c., to teach me that if such a scale as

No. 4 is adopted, an extraordinary fund should be provided to enable the Deputy Postmaster-general to fulfil his engagements.

The year's statement of the Canada post-office revenue up to July 1840, as laid before the Post-office Commission, was, in its appearance, very encouraging, and calculated, when compared with the previous year's, to warrant the feasibility of a considerable reduction in the postage rates; but the expense of steam-boat mails, and several other heavy items of charge for improved mail service upon land routes, did not then exist.

Had it not been for the fire which destroyed the general post-office in November last, I should have it in my power, as I fully believe, to show that the surplus revenue of the Canada charge for the year ending January 1842, was only about half, or more probably less than half, what it was for the year before cited. I very much doubt, indeed, if the British postage were subtracted from it for the last year (and this postage must of course be subtracted if the new system is adopted), whether the actual surplus revenue for the year ending in January last will exceed 7,000 *l.*, whilst the *possible* loss arising to the year's revenue from the adoption of scale No. 4, is computed at 13,320 *l.* 17 *s.* 2 *d.* currency! and this, it must be borne in mind, is independent of any loss that may accrue from the adoption of the weight system.

I should not think I had discharged my duty, whilst upon this branch of the subject, if I did not refer to the condition of the United States' post-office in illustration of my argument, that the department in British North America would be unable to sustain itself under the proposed changes, and that it would consequently require extrinsic aid.

The elements for the self-sustainment of a post-office in the United States are unquestionably far greater than they are in these provinces,—I should think upon an average nearly as two to one; and yet it is certain that for some years past the expenditure there has considerably exceeded the income, so that the Postmaster-general has been compelled to reduce the amount of post accommodation throughout the extent of his charge; in these provinces, a reduction of accommodation could not be borne; the constant demand is for its increase.

Except, then, I am altogether wrong in my calculations and arguments, I think your Excellency will admit that it would be criminal in me not to protest against an unconditional adoption of the two changes recommended in the Report, *i. e.*, the weight plan, and the new tariff of rates. I should be happy, under a proper provision against failure in the revenue, to see both changes introduced; but that provision, wherever it is to come from, *ought to be ready whenever the necessity for its use shall arise*; for, even supposing that the several provincial legislatures would be willing, as I trust they would, to supply the deficiency upon an exposition of the accounts, the establishment might be bankrupt before relief could be obtained. I am persuaded, indeed, that in three months or less such a conclusion would arrive.

The rates to be charged on letters or packets deposited in a post-office for persons within its delivery, and on general post letters delivered by letter-carriers:

The plan suggested by the Deputy Postmaster-general is not approved of by my colleagues.

As I do not know of any better mode of providing for the convenience of the public in the matter in question than that suggested by me, I respectfully solicit your Excellency's notice of the paper in which my views are contained: Appendix, Part I.

The argument used in the Report against fees is quite right when large and regularly constituted post-offices are in question, but this argument cannot be extended to the numerous petty offices which constitute by far the greater portion of the establishment in British North America, and whether upon the postage of the letters alluded to you allow a commission or grant the whole as a fee or perquisite, there can be in neither case a check.

I agree in the opinion that it is advisable to make the postage on newspapers a halfpenny each currency, payable either by the sender or receiver, and I would apply this tax as well to papers printed in this country as to British, United States, or other papers, passing by the post otherwise than by the regular packet mails.

Rates on letters, &c. delivered at the office where they are mailed, and also by letter-carrier, Report, p. 60.

Newspaper postage, Report, p. 58.

As

As regards newspapers for or from England by our packet mails, which now pass free of any charge from one extremity of the provinces to the other, I am strongly inclined to think, bearing in mind the heavy and rapidly increasing cost of the communication between Quebec and Halifax (through an unproductive route of nearly 700 miles), that some tax should be imposed upon those papers, if only as a salutary restraint upon the unreasonable use that is now made of the accommodation by numerous individuals, who recklessly send huge files of such papers, evidently without any regard to the great difficulty and expense which attends their transport at that season when the steam conveyance is suspended, which is for about half the year. It is no uncommon occurrence for a private individual in Canada to receive from 40 to 50 British newspapers by one packet; these newspaper mails are large and heavy, they already constitute a weight of from three-quarters of a ton to a ton, and there is no saying to what extent this will go on augmenting; even at present it requires three or four trips of the couriers to bring one of these mails, and when I state that through great part of New Brunswick and Nova Scotia the post-office pays from 2*s.* 9*d.* to 4*s.* 9*d.* a mile for the conveyance of this mail (limited as the weight by each trip necessarily is), your Excellency may form some idea of the burthensome expense attending the service, and what it is likely to become; but, as above-mentioned, the whole of the newspaper mail is not now brought by "one despatch," neither does it come with a sufficient expedition to satisfy the public,\* and if the demands for improvement in these respects (which are reasonable enough in one point of view) are to be fully complied with, the charge of the Halifax communication will become enormous, exceeding beyond all proportion the revenue resulting from it.

Report, p. 69.

The intention of the Government in affording this great facility for the free transmission of newspapers was no doubt founded on enlarged and liberal views, and I am most loath to do anything to injure the full effect of the beneficent intention; but if the department is to be thrown entirely upon its own resources, it appears to be but reasonable that these papers should contribute something towards the revenue.

This idea is very judiciously treated by one of the correspondents of the Commission, Mr. Freer, of Quebec, to whose communication I would respectfully refer your Excellency.

Appendix, Part II.

Whilst upon this subject, I think it may be useful to affix to my statement a notice which I have recently cut from a newspaper,† describing the intentions of the United States Postmaster-general with regard to the size of newspapers passing through the post in that country; a corresponding check should be in force in the provinces.

In speaking of the creation of new offices, the Report says, "It does not appear that many applications (in Canada)-are refused, but that there is often delay in making preliminary inquiries through the surveyor, which, combined with the general vice of the system, its want of popular control, and hence of public confidence, does much to discourage applications."

No great complaint of the want of post-offices in Canada, though the number might well be increased, &c. Report, p. 60.

I protest against this averment, for I do not believe that there has been for years any backwardness on the grounds alluded to in applying for post-offices and other post-accommodation. It is well known that every application is received courteously by the department in Canada, and I think its present compared with its former position (going some 10 or 12 years back) will shew that an amount of

of

\* The mail is now brought through from Halifax in from six to eight days, according to the state of the roads and weather; 14 years ago it generally occupied 18 days.

† "Boston, March 21.—The Postmaster-general has submitted for the consideration of the Committee on Post-offices, &c., two Bills. The one proposes to change the rates of postage so as to make them conform to the federal coin. The rates now charged are 6 cents, 10 cents, 12½ cents, 18½ cents and 25 cents for single letters. It is proposed to charge 5 and 10 cents, 20 and 25 cents. This is, in fact, an important reduction upon all rates of postages below 18½ cents. It is proposed to charge letters, now paying 18½ cents, 20 cents, and reduce the rate of 12½ to 10 and 6 to 5. This is as great a reduction as it would be safe to make at this time. The other Bill is designed to reach the evil and relieve the department from the burden, or, in other words, to indemnify it for the expense of transporting these immense mammoth sheets assuming the name and appearance of newspapers, but which, in fact, are in most cases a reprint of books. Mr. Wickliffe says, 'I have adopted the principle of charging newspapers by the square inch. I would suggest the largest size newspaper printed in the United States as the size which is to pay the rate of postage now charged upon newspapers by the law of 1825. All sizes above are required to pay one cent for every five square inches over that size.'"

of improvement has been introduced at least equal to the advance of the country in other respects; this is even admitted in the Report itself; the only cause that a single complaint exists of a real want of post-office accommodation is that the Deputy Postmaster-general has not had a sufficient force in surveyors to attend to every case immediately. I think besides that, as a general rule, it is better to wait for an expression of public opinion with regard to increasing post-office facilities, rather than to anticipate it; such accommodation is always asked for sufficiently early in the districts within my control.

The prevalent desire in Canada now is, not so much for more post-offices, as for more frequent mails upon the established routes, and greater expedition.

Report, p. 63.

A practice of violating the secrecy of letters is said to prevail in certain post-offices.

I cannot pass over this portion of the Report without comment.

Amongst so many offices, the services of which are frequently left to clerks in the absence of their principals, it would be a cause of surprise rather than otherwise if such delinquencies never occurred; but I believe the instances of crime of this sort are as rare in the Canada establishment as they are in any other, and in proof of this, I have only to point to the numerous reports of inquiry into the Post-office establishment instituted by the Assemblies in Upper and Lower Canada! Those inquiries were oftener than otherwise, under the conduct of such persons as M'Kenzie, Duncombe and O'Callaghan (men who have all been driven from the country), prosecuted in a spirit of rancour against the establishment, and every fault that could be got at was prominently thrust forward; yet no imputation of the kind alluded to has ever been advanced, and I cannot believe that the department, since the time when those inquiries were pursued, has sunk in its moral character.

The true cause from which the suspicion of the violation of letters sprung is very simply explained. During the political troubles of 1837 and 1838, when the post was notoriously made use of by the disaffected for the advancement of their revolutionary projects, it became necessary at all the principal offices, and some of the minor ones, to open suspected correspondence; persons formally qualified to perform this onerous but imperative duty were appointed by the Governor-general in Lower Canada, and by the Lieutenant-governor in the upper province, and all suspected letters were opened and examined; this was continued in some parts of the country so late as 1839. It is not surprising that people whose correspondence was subjected to so offensive an inquisition should feel sore, and that some of them, in ignorance, should direct their resentment against the post-office, and, without making allowance for the original cause, should have arrived at the conclusion, that it was a systematic practice for which that establishment was answerable. That this reasoning has prevailed to a considerable extent, I had cause to know long before the Post-office Commission was appointed, and I have painfully felt the unmerited odium it had entailed upon the department.

I stated all this to the chairman of the Commission, who, having recently come to the country, I supposed might not have known the facts; and I cannot but think that when placing the *imputation* upon record, and recommending in such very emphatic terms the necessity of vigilance on the part of the head of the department, to detect and punish the disgraceful crime, it was his duty to have adverted to my testimony, as Deputy Postmaster-general, upon a question of so much moment.

Other circumstances in connexion with the discussion of this subject transpired before the Commission, which, at the time they occurred, I had resolved, in justice to myself, to bring under the notice of the Government. My great dislike, however, to encumber the proceedings with any matter of a nature personal to myself, that can possibly be avoided, has induced me to waive that resolution; and I shall content myself with saying that, as the head of the department in Canada, no one can view with greater "horror" than I do, the crime of violating the correspondence entrusted to the post; nor is any argument beyond what belongs to my own conviction necessary to teach me the paramount importance of vigilance in the detection of offenders in a matter of this nature, and of signally punishing any individual of the department found guilty of so vile an abuse of his trust.

Emoluments of  
Deputy Postmaster-  
general,  
Report, p. 71.

I had hoped not to have found it necessary to make any observations upon this portion of the Report; but when I see it proposed as a debateable point, whether

whether the Deputy Postmaster-general is to receive "any" compensation for the deprivation of his privileges of office, I cannot abstain from saying a few words upon the subject.

It is said that the emoluments of the Deputy Postmaster-general have swelled to an amount disproportionate to the general range of incomes in the country. Admitting this proposition to its utmost extent, and that persons could be found willing to relieve that officer from his charge, for one-half or one-quarter the income he receives (and there are, no doubt, abundance of such persons), I am not inclined to think that Her Majesty's Government will place me, for the time to come, exactly upon the footing that might be very equitable and satisfactory in the case of a new appointment to office.

My emoluments as Deputy Postmaster-general have grown with the general business of the department, and the gradual improvement of the country. I have never drawn anything my right to which has not been repeatedly recognized by competent authority; and I have by the same authority been promised, that when the period for relinquishing those privileges should arrive, I would be allowed compensation according to the scale which in similar cases prevails in the general post-office at home! Further than this, the late Lord Sydenham distinctly assured me, that when such an alteration in the system should take place as would deprive me of my privileges or perquisites, I might rest easy as to a satisfactory compensation for the same.

This principle was admitted, and recommended to the Government for adoption, in a joint address to his late Majesty by the Legislative Council and House of Assembly of the province of Upper Canada, in March 1837.

In discussing the claim for compensation to postmasters (including, as I have a right to suppose, the Deputy Postmaster-general) for the loss of the income at present derived by them from the collection of United States' postage, the Commissioners have pronounced that they have no claim! adding, "the system is one which ought not to have been suffered to grow up;" and again, "a mere private arrangement entered into for their own benefit by certain public servants of the Government with the authorities of a foreign country, if found to be incompatible with the interests of the Government they serve, cannot be said to furnish a just claim to compensation."

Compensation to postmasters for loss of commission on United States' postage, Report, p. 69.

There is scarcely a point among the many in which I differ from the other Commissioners, in which their mode of treating the subject has surprised me more than this. It might really be supposed, from the language employed, that the department in British North America had been guilty of criminal misconduct in its arrangements for conducting the correspondence with and through the United States, than which no idea can be more unfounded. Whatever the decision of Her Majesty's Government may be upon this or any other question affecting me, I am prepared respectfully to bow to it; but I cannot suffer the views upon our intercourse with the United States, as given in the Report, to go forth without an attempt to correct them.

It is altogether wrong to suppose, as must be inferred from the language of the Report, that the chief advantage of the intercourse in question has been gained by the United States; on the contrary, the chief advantage has been derived by us *in the provinces*. We had a boon to ask, and nothing to offer as an equivalent; but owing to the great liberality of the United States' government, in trusting to the individual responsibility of the Deputy Postmaster-general, we obtained what we required (previous to the establishment of the Cunard line), namely, the means of a regular and convenient correspondence with the British isles through the American merchant packets.

The provinces are now independent of the United States in this respect; and so far a different character applies to the existing arrangement, which it is now reasonable to expect should be modified in such a way as to confer reciprocal benefits, and impose corresponding obligations upon the post-offices of the two Governments.

I must take leave further to say, that the intercourse in question has grown from what some 15 years since was a very insignificant item in the post-office business to its present importance. The system, such as it is now, was, by the very nature of our position at the period it commenced, forced upon us; it was a necessary first step towards a more perfect treaty or arrangement, such as I trust will ere long be brought about; and I contend that the Commissioners were not justified

justified in asserting or insinuating that the existing plan was entered into for their own benefit by postmasters.

This allegation, if correct, might indeed form a strong support to the dictum that *the postmasters have no claim to compensation*; but I do not believe that in *any instance* those communications were formed for the convenience or profit of postmasters. I opened several of them myself, at the desire of the inhabitants, and for their accommodation, and my own emoluments from United States' postage being confined to what is collected at Quebec and Montreal, it is clear that *I* derived no personal benefit from thus multiplying the channels of intercourse with the American territory, but, on the contrary, I subjected myself to increased responsibility and labour.

With the statement of facts in relation to our post communication with the United States, the truth of which I can substantiate, I cannot but think it extremely improper that such imputations as appear in the Report should have been made, nor can I see justice in the proposition that I or others should be deprived of a source of income such as this without compensation therefor, in some shape or degree.

It is right I should state (otherwise it will not be suspected), that under the present arrangement I have been exposed to and have sustained heavy losses; besides minor sums, the large amount of 1,300*l.* due to me by a deceased postmaster for American postage is now in extreme jeopardy, and may be lost to me altogether. This money, under my agreement, I was bound to pay over to the American post-office, though never received by me, *and although I never derived any portion of the commission accruing to the postmaster whose debt I was thus compelled to assume.*

As to the *measure* of remuneration due to the Deputy Postmaster-general and others for the loss of commission on United States' postage, I have never considered that it should be equal to the advantage that it has afforded; but *something*, I conceive, will be due to those persons, if the deprivation takes place, and I have little doubt that it will be so determined by your Excellency and Her Majesty's Government. So far as this question applies to the several postmasters concerned, I had proposed what I deemed an equitable consideration in the plan of establishments for the principal offices prepared by me, which the Commissioners have not judged it necessary to publish in the Appendix: for my individual claim, I am quite willing to leave it to the decision of the Government.

I have just alluded to the fact that the Commissioners have not judged it necessary to publish in the Appendix the estimates for the principal offices as prepared by me; I have felt considerable disappointment at this omission, because I have believed that it was an especial point of their duty to take cognizance of so material an item in the general economy of the establishment, and to pronounce a positive opinion thereon, and I know, besides, it was the expectation of his Lordship the Postmaster-general that they would do so. Impressed as I am with these convictions, I cannot hesitate to submit for your Excellency's observation, copies of the estimates alluded to, which were drawn up by me after the best consideration I could bestow upon the subject. It is the more necessary I should do this, because the existing arrangements are not satisfactory either to the postmasters or to myself, and there can be no doubt they require early consideration.

Certain remarks of mine, in my capacity as Deputy Postmaster-general, which will be found in the Appendix, Part I. originally included observations on the estimates in question, but the Commissioners have not published this portion of my observations, nor have I now the means of supplying the deficiency.

Under this head I cannot repeat too decidedly an opinion which will be found in different words in other parts of this statement, namely, that I do not concur in the belief that the adoption of the new system of rates proposed by the Commissioners will furnish means for a self-sustainment of the department, either in Canada alone or throughout British North America; on the contrary, the more I consider the matter, the more convinced am I that it would be a suicidal act to adopt the recommendation of the Report on this subject *in extenso*, without a previous provision for meeting a *probable*, I may say, indeed, a *certain* deficiency of revenue. It is, of course, impossible to demonstrate the truth of my views by figures, but with the experience I have had in the working of the post-office in British North America for so many years, I do not think it is presumptuous in

me

\* General recommendation of the commission, Report, p. 73.

me to say that I know, as it were intuitively, what the general result of the experiment would be.

I am a friend to many points of the reform suggested, to a degree quite equal to my colleagues, but I will never put my hand to a recommendation with the conviction strong upon me, as it is in the present case, that its adoption would involve consequences of the most mischievous nature.

The Commissioners have not, I am persuaded, attached sufficient importance to the consideration that the expenses of the establishment are in a rapid course of increase from the improved means of conveyance required to satisfy the demands on all hands for a more speedy and more perfect transmission of the mails; the increased cost, indeed, attending the acceleration of the pace of a mail is seldom properly estimated, except by those who have had actual experience in the business. The communication between Quebec and Halifax alone in the conveyance of our English mails (already referred to in page 93) is of itself a very heavy charge on the revenue, and is constantly augmenting, as well from the increasing weight of the newspaper part of the mail (altogether unproductive as a source of revenue), as from the incessant calls of the public for greater expedition.

I beg to observe that the route last alluded to is the most important we have, inasmuch as it is the principal channel of our intercourse with the mother country during six months of the year, and until it is improved to the utmost extent of its capabilities, the public will not be satisfied. I may add too, that there is a strong disposition in the inhabitants of Canada, especially in the mercantile classes (and I think it a commendable one if not carried too far), to require a very large and perfect post accommodation generally. Our close proximity to the United States, where it has been the study of the Government for many years to gratify the taste of the people in this particular, has served to create and keep alive this inclination, and assuredly it is a point not to be lost sight of when contemplating the possible effect of a very important alteration in the tariff of rates.

It may naturally be expected that, having expressed such strong objections to the unqualified adoption of several of the most material of those suggestions of my colleagues which are likely to affect the revenue, I should be prepared to place my own views thereon in a more precise shape than I have yet done; this I shall now attempt to do.

It is adopted as a fundamental principle in the Report, that the revenue of the department should be maintained as nearly as practicable at a self-sustaining point; that while on the one hand the creation of a surplus would be objectionable, the existence of a deficit should be avoided; in this I fully concur, and it is from my firm conviction of the wide departure from this governing principle, in which the unconditional adoption of these recommendations would involve the establishment, that I am led to dissent from them in the shape in which they appear in the Report.

I have already stated that I should be well pleased to see both the weight system and the scale (No. 4) of rates as described in the Report, pages 54 and 59 in operation, but that I was convinced that the unassisted resources of the department would be found totally inadequate to the immediate accomplishment of these objects in their full extent.

I will now proceed to show what I conceive may be prudently attempted in these branches of reform with the revenue of the department, keeping in view the large expenditure which will inevitably follow the proposed change of system in the eastern provinces, and which I am persuaded cannot immediately draw forth a reimbursing income.

I would propose that the minimum and maximum rates of the scale No. 4, that is, the twopenny rate for all distances under 30 miles, and that of 1s. for all distances over 300, be put in operation as soon as convenient, say from 6th of January 1843.\* That from the 6th of January 1844 the reduction of the intermediate rates

be

\* The scale of rates would then stand thus:—

For distances up to 30 miles inclusive	-	-	-	2d. currency.
„ from 31 to 60 „	-	-	-	4½d. „
„ „ 61 to 100 „	-	-	-	7d. „
„ „ 101 to 200 „	-	-	-	9d. „
„ „ 201 to 300 „	-	-	-	11d. „
„ over 300 -	-	-	-	1s. „

be adopted, and from the 6th of January 1845, the weight system. Time would thus be afforded to the revenue between each change to recover its elasticity, and derive the advantage which the impulse given to correspondence by these several reductions of charge to the public may reasonably be expected to produce; and though a deficit might and very probably would follow upon the final accomplishment of the scheme, it would not, I trust, be considerable, more especially as I should propose that any surplus accruing in the two years of transition should be applied as a fund to meet the impoverishing effect of the adoption of the weight system in the third year. But under this or any other plan I must be permitted to repeat my earnest recommendation that even a possible deficiency in the revenue should be provided for; and I think that the only safe mode, as I view the subject, by which these important improvements could safely be put in train of speedy attainment, would be for Her Majesty's Government to lay before the several provincial legislatures, in the clearest and most distinct terms, their intentions with regard to the reforms contemplated, explaining amongst other things that the department in British North America should have the full benefit of the receipts of provincial postage; that the general management, as being essential to the interests of all the provinces, and to an impartial distribution of post-office accommodation throughout their whole extent, should continue with the Postmaster-general of the Empire, subject to such a surveillance of the respective provincial governments as shall be found consistent with his Lordship's control, and conducive to the well working of the establishment. That an account of the English postage collected in the provinces shall be kept, and the amount remitted to the General Post-office, London; and that as regards the introduction of the weight system, and the reduction in the postage scale, that it should be stated that these measures, however cautiously approached, would entail a material risk of a deficiency in the post-office revenue; that in the event of such an exigency, the Postmaster-general's deputy, upon application through the Governor-general, shall obtain, upon his Excellency's warrant from time to time, imprests from the Commissariat chest of such sums as he may require to carry on the service, and that at the end of the year, when the post-office annual accounts are made up, each province shall be required to make good the loans from the Commissariat chest, in proportion to its population. That it would depend on the expression of the opinion of the legislatures in this regard whether these important improvements should be introduced gradually, as the financial means of the department warranted, or whether they shall be immediately adopted in their full extent, upon the understanding that the provision for the material deficiency which might then be *certainly* looked for would be made in the manner just described.

These conditions are plain and simple, and withal, I think, so equitable, that they can hardly fail to be satisfactory to the several legislatures; and should an unreserved guarantee for possible deficiencies in the resources in the department be obtained, then every obstacle to continued and enlarged improvement throughout the extent of the country will have been removed.

Further, I beg to say, that I do not consider it at all necessary to wait the result of an appeal to the provincial legislatures before adopting the changes recommended with regard to newspapers and pamphlets, and with regard, likewise, to a change in our mode of dealing with American postage.

I am quite willing, so far as I am concerned, to surrender the privileges I enjoy under both these heads, trusting to the Postmaster-general and Her Majesty's Government for such compensation as I may be considered entitled to therefrom, as well as for such increase to my fixed salary as it may be deemed just to allow me under a new arrangement.

The American postage to be merged in our revenue upon the principle suggested in my Report to the Postmaster-general, dated 25th September 1837, 2d, 3d and 4th articles.—*See Appendix.*

A national treaty, such as suggested in the Report, page 71, to be the subject of attention afterwards.

I submit, also, that immediate steps should be taken to improve the surveyors' and accountant's departments, and the force in the Deputy Postmaster-general's office.

The establishments of all the larger offices should be speedily looked to and placed on a proper footing; and the forward system, with an attendant scale of compensation to the postmasters in charge of forward offices, be adopted as soon as practicable; in like manner the night-work should be provided for.

*See the Deputy Postmaster-general's suggestions in the Appendix, Part, I.*

## THE STATE OF THE CANADIAN POST OFFICE.

99

The change in the scale of compensation to the deputies generally, calls likewise for early attention ; but perhaps it may be found expedient to postpone the final consideration of this part of the subject until the Government shall be prepared to pronounce upon the adoption of the new tariff of rates and the weight system recommended in the Report ; at which time, also, the question of abolishing the franking privilege to postmasters, noticed in page 77 of this communication, will, I trust, be decided upon.

Humbly submitted.
